"The New School knows that no man can teach well, nor should he be permitted to teach at all, unless he is prepared 'to follow the truth of scholarship wherever it may lead.' No inquiry is ever made as to whether a lecturer's private views are conservative, liberal, or radical; orthodox or agnostic; views of the aristocrat or commoner. Jealously safeguarding this precious principle, the New School stoutly affirms that a member of any political party or group which asserts the right to dictate in matters of science or scientific opinion is not free to teach the truth and thereby is disqualified as a teacher.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Rice Production

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at New Orleans, La., on May 12, 1956, at the 57th annual meeting of the Rice Millers' Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR ALLEN J. ELLENDER OF LOUISIANA, AT NEW ORLEANS, LA., ON MAY 12, 1956, AT THE 57TH ANNUAL MEETING OF THE RICE MILLERS' ASSOCIATION

It is indeed a privilege and a pleasure to be present here with you today. It is a privilege, because I can always be sure when I am with this group that I will come away from your meeting having learned a great deal; it is a pleasure to be with you because I count so many of you among my personal friends. Those of you whom I do not know personally, I hope to meet and chat with informally some time in the near future. I invite all of you to visit me should you come to Washington.

May I say that I am very much pleased to be away from Washington, if only for a few short hours, to discuss with you a subject in which we all have a great and abiding interest—rice.

I am not going to glorify rice today; the good Lord and you folks who grow, mill, and market rice have already done that. On the other hand, I am not going to gloss over the problems our rice industry faces this year, and probably in the year to come. Instead, I want to talk to you straight from the shoulder.

Just a little more than 5 months ago I had the opportunity of visiting throughout the Louisiana Rice Belt. As a matter of fact, during last fall I visited almost every agricultural belt in our country, talking with farmers, and getting their views in an effort to help draft a farm program which would halt the drastic decline in farm income. Net farm income in 1951 was $14.8 billion and as of the last quarter of 1955, it had fallen to $10.3 billion or a net decline of $4.5 billion over the last 4 years. Falling farm income has become an infectious disease, one which is gnawing away at the economic health of our entire Nation. Farm income has fallen even as corporate and labor income have continued to reach record highs—this in spite of the fact that agriculture is basic—that it is the single most important segment of our entire economy.

To a very large extent, the hearings I held, as chairman of the Senate Committee on Agriculture and Forestry—hearings which drew farm opinion from every major agricultural region of this fertile country—were the basis of the President's farm message of January 9. They provided the raw material from which Congress drafted, approved, and sent to the White House a farm bill which the President promptly vetoed.

As you are well aware, among the provisions of this bill was a two-price plan for rice, a program which you, the rice millers, and other segments of the rice industry suggested and helped us draft. It was aimed at three specific objectives: First, to make available to the American consumer an abundant supply of rice at reasonable prices; second, to increase the income of rice farmers and protect them against further drastic cutbacks in acreage; and, third, to restore the American rice industry to its traditional competitive position in world markets.

The two-price plan for rice was your industry's idea; it had its genesis at the grassroots of the American rice-producing States. It was, I believe, a sound, forward-looking approach—a new look in agriculture. It has been vetoed, but the fight is not yet over.

As a matter of fact, the fight has only begun. Just the day before yesterday, the Senate Agriculture Committe reported a new farm bill, one which contains a soil bank. But, even more important, it contains provisions which are designed to return economic vigor to the American rice industry.

One of the new rice provisions empowers the Secretary of Agriculture to institute a 2-year trial of a 2-price plan for rice before 1959. The Secretary could declare that the 2-price program would go into effect in 1957, to run through 1958; he could, in the alternative, choose 1958 as the initial year, and operate the 2-price plan over the years 1958 and 1959.

In the meantime, rice acreage for 1957 and 1958 would be frozen at present levels; this freeze would affect not only the national rice acreage allotment, but the State allotments as well. No State would have to suffer an acreage reduction over the next 2 years.

There is also one other little gadget in the new bill, one which was in the measure President Eisenhower vetoed, and one which I think is a must. That provision specifies that no rice-producing State's 1956 acreage allotment would be less than 85 percent of its 1955 allotment.

Of course, there are still three big hurdles for us to jump. First, the Senate must pass our committee's bill; second, we must preserve in conference our amendments, particularly those affecting rice, such as the minimum rice acreage and optional two-price plan provisions. Third, the President of the United States must sign the bill.

Perhaps I am an optimist, but I think that if the President will just sit down and read the bill himself—if he will just give it a little more independent thought than he gave the first farm bill, he will sign the measure into law.

Several weeks ago I took time off from my regular work on the Senate Appropriations and Agriculture Committees to talk a little commonsense to the Secretary of Agriculture and to President Eisenhower.

I told them this:

I said it was unfair, unwise, and plain bullheaded for them to come to Congress with a straight soil-bank bill and expect us to approve it as submitted, with nothing else in the way of relief for the rank and file farmer. I told them I thought it was unconscionable for them to expect the Congress to become a rubberstmap. As chairman of the Senate Committee on Agriculture and Forestry, I am more than willing to meet the administration halfway in an effort to bolster farm income now, immediately, this year. But I am going to insist upon one overriding objective. I want to see all American farmers treated as equally as we can. I want to see that no area, no commodity, no one group of farmers, gets the cream while the rest get whatever happens to be left over.

Therefore, I want to assure you that before I cast my vote on final passage of a soil-bank bill, I am going to do my utmost to see that it contains the two-price plan and minimum rice-acreage provisions voted by the Senate Agriculture Committee. I want to see all commodities given a square deal.

I announced this position several weeks ago. Subsequently, some of my Republican colleagues came to me and said: "Senator, what are you trying to do? We do not know what you mean about treating commodities equally. Did the President not treat them equally, even after he vetoed the bill?"

My answer to that was "No—emphatically no."

Let me tell you why I think President Eisenhower's veto of the farm bill was a political veto, that it was directed not at the merits or demerits of the bill, as it purported to be, but, rather, was aimed first and foremost at capturing votes in the November elections.

I have never undertaken to speak harshly of President Eisenhower before. On the other hand, I think that you, as vital members of the American rice industry and the American agricultural economy—I believe that each of our citizens, everywhere—should be familiar with the President's veto message, what it meant, and what it accomplished. I think it should be understood that the veto message was a sham, a collection of platitudes, generalities, inconsistencies, and misstatements of fact. The message demonstrates that the President of the United States neither studied nor understood the bill he vetoed.

Let me briefly review some of the reasons the President gave for vetoing the farm bill. Let us see how these so-called reasons measure up with the facts, and with actions subsequently announced by the President.

First, President Eisenhower said that the farm bill's 1-year, 1-shot, emergency 90 percent of parity price supports for the basics would have increased agricultural production.

The bill would not have increased production; you know it, I know it, and President Eisenhower should know it. The Senate bill reinstated 90 percent of parity price supports for 1 year, 1956. Acreage allotments for 1956 had been promulgated, distributed, and placed in effect as of the time the bill was passed. Many of these allotted acres had been planted at that time. Our bill provided for no increase in acreage; it provided only that on basic crops produced from allotted acres, farmers would receive price support of 90 percent of parity, for 1 year only. There was no possible way for the farm bill, the bill vetoed by the President, to have increased production of the basic commodities.

Of course, Secretary Benson has theorized that if price supports are increased, if commodity prices are raised, then farmers will pour the fertilizer to their land. He has said 90 percent of parity price supports will inspire farmers to coax maximum production from each acre they are permitted to plant. This may sound good to an arm-chair, ivory-tower farm expert, but let us look at it from the point of view of the dirt farmer.

Put yourself in a typical farmer's shoes. Imagine that your acreage allotment for rice is 100 acres. You know that you are going to have to wring from that 100 acres enough income to pay your fixed operating costs, to buy your food, to clothe your children, to meet your mortgage payments. If you must produce 2,300 hundredweights of 90 percent of parity rice to break even, then if price supports are reduced 15 percent, you will coax 15 percent more production from your 100 allotted acres. You will do your best to produce 2,645 hundredweights of 75 percent of parity rice. This is more than just human nature, it is practical business sense. When Ford or General Motors or Chrysler find themselves with a surplus of automobiles, they don't cut prices; no indeed, they cut back on production. Ladies and gentlemen, the whole Benson philosophy is fallacious; it has dragged American agriculture to the brink of ruin. If General Motors has found that price cutting is no solution to overproduction, then the American farmer is certainly in the same boat. Here is one time when I agree that what is good enough for General Motors should be good enough for the farmer.

Not only has the American farmer found that price cutting—income cutting—is no way to increase farm profits, but the President of the United States seems to be convinced, as well, for he has thrown the Benson sliding scale right out the White House window.

You will recall that in vetoing the farm bill, President Eisenhower said that the conference farm bill was a step backward from, and I quote, "the sound and forward-looking legislation in the Agricultural Act of 1954." I do not concede that the 1954 Agricultural Act is either sound or forward looking; however, if President Eisenhower thinks it is, he should establish price-support levels which are consistent with his convictions. Having declared that the only way to solve our farm ills is to move ahead under the sliding scale—since he has stated that the new farm bill had to be vetoed because it contained rigid price supports—it is inconceivable that, in almost the same breath, President Eisenhower would abandon the flexible price-support program.

But that is precisely what he did. President Eisenhower vetoed the farm bill because it reinstated rigid price supports for 1 year, yet, in that same message he announced that the Secretary of Agriculture would place in effect his own system of rigid price supports for 1956.

How, you may ask, did he manage to do this since the 1954 flexible price-support law specifies that as surpluses increase, support levels must fall?

In almost every law, particularly one as complicated and complex as the agricultural support program, there is at least one loophole. The President and Secretary Benson found this loophole and lost no time scooting through it, like mice after cheese—or like politicians after votes. That loophole in the Farm Act now on the books provides, in effect, that whenever any commodity important to the national welfare is not bringing the price it should under the sliding scale, then the Secretary can fix a new support price. Of course, this is what the Secretary of Agriculture and President Eisenhower did. I wonder, however, how Mr. Benson must have felt when his boss told him to do so; I wonder, because only 2 years ago the Secretary was making speeches to the effect that the six basics were receiving preferential price-support treatment. He even had his Department print up a little booklet stating that only about 25 percent of our total farm income is derived from the basic commodities. Suddenly, however, Mr. Benson has seen the light; he has discovered that this 25 percent has such a far-reaching effect upon the national economy that he must invoke authority contained in one of the sliding-scale loopholes in order to raise support levels. It evidently took a Presidential order to force Mr. Benson to recognize something you and I have known for a long, long time—that the six basic commodities are, indeed, basic to our farm economy.

Acting under this emergency authority, the President had Secretary Benson institute his own program of rigid price supports. In lieu of 1-year, rigid legislative price supports, the President decreed 1-year, rigid, lop-sided administrative price supports. He supported cotton at rigid 82½ percent of parity; wheat at rigid 84 percent of parity, peanuts at rigid 86 percent of parity, tobacco at rigid 90 percent of parity, and rice at rigid 82.7 percent of parity.

Here is the interesting part, however. Corn, the sixth basic, gets a little different treatment. Corn eats high on the hog. Corn gets not just a single rigid price support, not just a two-price program, but corn gets a rigid, three-price program for 1956.

Under the support schedule announced by the President in his veto message, corn in the noncommercial corn area will be supported at about 64.6 percent of parity.

Corn in the commercial corn area will be supported at two levels. First, for those corn farmers who comply with their acreage allotments, support will be available at 86.2 percent of parity. However, for producers who choose to not comply, and who decide to overplant their allotments, price support will still be available at 72 percent of parity.

Compare this with rice, where producers must content themselves with support at 82.7 percent, provided they comply with acreage allotments. If they do not comply, then they are penalized. Rice farmers who overplant their allotments do not receive price support on production derived from lands over and above their allotted acres. In addition, they are penalized 50 percent of the parity price for each hundredweight so produced. Corn farmers in the commercial belt, however, get price support at 86.2 percent of parity if they remain within their allotted acres. They can also get support at 72 percent of parity on all the corn they desire to produce, from all the land they desire to plant. They are eligible for this support level with no controls, no quotas, no allotments, no marketing penalties, no nothing.

For the first time in the history of our farm program, noncompliance corn in the commercial area is to be eligible for price support. Why? Is acreage planted to corn going to hit an all-time low? It is not. Quite the contrary is true.

In testimony before the Senate Agriculture Committee, during an executive session on the farm bill, Department of Agriculture experts predicted that corn farmers in the commercial corn belt would probably plant 56 million acres this year. This compares with a national acreage allotment of 43 million acres. Boiled down, this means corn farmers are expected to overplant their acreage allotments by at least one-third.

Let us consider another inconsistency in the veto message. President Eisenhower said he veoted the farm bill because it would have supported feed grains at 85 percent of parity. Yet, as a result of his veto, feed grains are now supported at 70 percent of parity. This 15 percent drop in feed grain supports will not reduce production. The conference bill, on the other hand, would have cut production. Under our bill, if a feed grain producer desired the 85 percent of parity price support, he would have been required to reduce his base acreage by 15 percent and, in addition, put the equivalent of 15 percent of his base acreage into the soil bank. Now, however, feed grain supports are set at 70 percent of parity on unlimited production. The sky is the limit on this year's production of corn and feed grains, with price support available nevertheless.

I am convinced that the present corn and feed grain support programs will increase the production of both; feed grain and corn prices will be kept low.

Who will this program benefit?

The Government? Of course not; we will end up this year with corn and feed grains coming out of our ears.

The feed grain producers? I do not believe so, because they are going to have to work off their surplus sometime in some way.

The feeders? Of course, they will benefit. They will be able to buy feed at cheap prices.

Do the commercial area corn producers benefit? Certainly. They can flip coins with the Government and be assured they will always win—86.2 percent of parity on allotted acres, or 72 percent on all-out production.

The President's farm program, as announced in his veto message, creates an agricultural "elite"; corn stands out alone; it receives treatment head and shoulders above that given the other producers. The feeders, too, get a bonanza. They are assured of cheap feed, the market is assured of an eventual oversupply of meat, and the Government is assured of having to undertake another costly meat purchase program.

I have never been one to engage in political prognosticating, but I have a hunch that the President's farm program—a program which is designed to benefit principally the corn producers and the cattle feeders—was hatched in the fertile minds of the Washington lobbyists for one national farm organization—the only major farm organization which sought a veto of the farm bill—the only farm organization for which the welcome mat is always out at the White House and Mr. Benson's office.

This national organization, it should be noted, draws almost one-half of its total membership from 12 farm States—all of which are corn States, and all of which are cattle feeding States. The President's farm program is a support program by corn, for corn and of corn. Everybody else gets a "sop."

Despite this sorry picture, the President of the United States has piously announced that he does not believe in playing politics with the welfare of our farmers. Well, let us look a bit deeper into the President's veto message and see who is playing politics with what.

The President stated in his veto message that the two-price plans for wheat and rice would bring hardship upon our consumers and would injure our foreign relations.

Would the rice program have injured the consumer? It most emphatically would not. You, as millers, would have bought rough rice at the market price. Before you milled the rice, you would have purchased from the Government a marketing certificate equal to the difference between what you paid on the market and 90 percent of parity. No miller would have had more than 90 percent of parity invested in the rice he milled.

Of course, the President might say that 90 percent of parity raises consumer prices. But, if he does, what happens to his often-expressed objective of farmers obtaining 100 percent of parity in the market place? How does he square his veto message with the objective of the soil bank, which is, as I understand it, to create artificial shortages, raise prices, and increase farm income to as near parity as possible? Parity is parity, whether it be achieved by way of price supports, in the market place, or through the soil bank. It is unbelievable that the President vetoed the two-price plan for rice because it might have cost consumers 10 percent less than his avowed objective of 100 percent of market place parity. This does not make good sense, but then, neither does the President's veto message.

Would a two-price plan hurt our foreign relations? Well, it might hurt some feelings in a few Far Eastern countries, but it would also bring us some friends, particularly in Japan, the Philippines and Indonesia, to name only three. It would certainly improve the competitive position of American rice.

Since 1953, the Department of Agriculture and the administration have been preaching that farm commodity prices must fall before American agriculture can once again compete in world markets. Yet, when we attempt to make our farm exports competitive without further bankrupting our farmers, we find the administration saying "No."

I think it is high time we began to put our own welfare first, to ignore the extremely sensitive feelings of our foreign competitors—feelings which become sensitive only when we cut off our gifts or seek to compete on equal terms in world markets. It is time for rice, cotton, wheat, and other farm commodities for which there is export demand to compete on equal terms with foreign products. We must permit American rice to be sold where we can find buyers.

You know and I know that the State Department does not like this idea. Not long ago I discussed the problem of foreign rice sales with a gentleman in the Department of State. He was most emphatically opposed to our selling rice to Japan, to the Philippines, and other deficit areas on the basis of the best price getting the business. He said that the Department preferred placing the rice we shipped abroad, so that we would not injure the feelings of a few neutralist countries. The administration, of course, prefers to sell rice under Public Law 480 so they can use local currency proceeds for economic aid. This is one means of bypassing Congress.

If the alternative to having a few injured international feelings is the creation of a huge, centralized, Government selling agency—if we must buy foreign friendships by slashing our domestic agriculture to the bone and bleeding our farmers white—if the basic theory of competitive selling is to be abandoned in favor of an all-powerful program of foreign sales, handled by Federal bureaucrats—then I think a two-price plan for rice is necessary for another reason. We need it to bring commonsense and free enterprise back into our Government operations.

Recently, national news magazines quote Prime Minister Nehru of India as stating that he liked to deal with the Russians because they had something to sell, not to give away. He said the Russians "drove a hard bargain."

Let us, then, begin to do the same. Why should we not obtain some of this same friendship and respect by selling rice instead of giving it away. If the neutralist nations like to deal on a business basis, let us deal with them as businessmen. Let us turn off the spigot which has poured billions of dollars of American tax money into their treasuries. Let us abandon the philosophy which has funneled our rice production into warehouses because selling it abroad might make somebody mad.

I have had my fill of this administration preaching the virtues of increased competition, only to find that when the Congress takes steps to make farm products competitive, the administration has its veto stamp ready for immediate use.

I have taken up much of your time, but before I conclude, I want to mention the soil bank. The soil bank, you will recall, is something the President said he desired very much. Of course, he vetoed a bill that had the Eisenhower soil bank in it, but he still wants a soil bank this year.

The President has said that quick action on a soil bank will permit him to increase farm income by a half-billion dollars this year, by paying farmers in 1956 for soil bank participation in 1957. This, ladies and gentlemen, is poppycock. Soil bank advance payments will not increase farm income—they will only increase farm debt. The entire purpose of the soil bank is to pay a farmer who does not plant his land about the same net amount he would have earned had he put that land into production instead of the soil bank. The soil bank theory is not complicated. Under it, production will be cut; artificial shortages will eventually be created; prices will rise; surpluses will be reduced, and farm income will increase. Let no one be fooled, however; farmers could, generally speaking, obtain just as much income from planting their land as putting it in the soil bank. Therefore, when the President of the United States speaks of increasing farm income by soil bank payments, he is talking through his hat.

Paying farmers in advance this year for soil bank participation next year will not help raise income; it is simply another form of Government loan, because any advance a farmer might receive in 1956 will be deducted from his 1957 earnings.

Let me tell you this, and I hope somebody sends Ike a copy of this speech:

The entire program announced by the President in his veto message was a political farm program, designed to benefit, first and foremost, a favored few, principally the producers of corn. The President's plea for an advance-payment soil bank was an outright admission that the Chief Executive neither understood nor appreciated the purpose or operation of the soil bank program.

Within a very few days, the President will have on his desk a new farm bill, one which is aimed at strengthening our sagging farm economy, and restoring to our farm price programs the concept of equal treatment for all farm commodities.

I hope it will contain the rice acreage freeze, and, in addition, the optional two-price plan for rice. I am going to do everything in my power to see that these provisions stay in the bill. I am also going to leave no stone unturned to see that the bill finally approved by the Congress provides for a similar freeze on cotton acreage at the State level.

I am going to continue my fight to eliminate at least the major portion of the favored treatment accorded corn under the President's administrative support plan. I want to see feed grain producers given a fair program, one which is workable, and one which will not further aggravate our surplus of these commodities. Corn produced in the noncommercial corn area, such as the corn grown here in Louisiana, should be given a little fairer treatment.

We have tried to achieve these objectives in the Senate version of the bill. It is not my personal idea of perfection, particularly with respect to its corn and feed grain provisions, but it is a fair compromise. As such, it should be acceptable to the President—provided, of course, he is desirous of helping our farmers.

I want to serve notice on the President, on his Secretatry of Agriculture, and on anyone else who may be pressing for some kind of pay-in-advance soil bank that I am not going to support any such scheme. The pay-in-advance proposal is an attempt to use soil-bank payments as political propaganda, to turn the soil bank into an installment-plan vote-buying device.

I hope that as I wage this battle, I am going to have the support of the rice industry; I hope that as I continue to fight for increased rice exports, you, the millers, are going to be at my side, as you have been in the past.

I worked long, long hours on the farm bill that was vetoed by the President; I have done the same on the new bill. I have done my level best to keep our farm program out of politics and to keep politics out of the farm program. I want you to know that I shall continue to do so in the future.

We are faced with a serious crisis in agriculture. Our farmers are in precarious economic health. You, as millers, know that if our farm economy is permitted to deteriorate further, the end result will be chaos for you, for the national economy, for the Nation as a whole. I feel very deeply that the very roots of our American way of life are found on our farms. We must keep these roots strong and healthy we must shield them from the blight of partisan politics—we must guard them against economic stagnation—we must make them immune to the dry rot of unrestricted "bigness."

Thank you for inviting me to speak here today.

Observance of Armed Forces Week and National Broadcasting Co.'s Wide, Wide World Program

---

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. BIBLE. Mr. President, the week from May 14 to 20 marks this country's observance of Armed Forces Week. I want to call the attention of the Senate to an outstanding tribute paid to our soldiers, sailors, marines, and airmen on Sunday, May 13, by the National Broadcasting Co.'s Wide, Wide World television program.

Conceived on the theme of power for peace, this program inaugurated Armed Forces Week, and enabled some 35 million viewers from coast to coast to observe nationwide demonstrations by the Army, Navy, Marine Corps, Air Force, and Coast Guard.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some further observations of mine about this program and Armed Forces Week which I believe are timely.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BIBLE

Using some 83 television cameras, the largest number ever assembled for one program, Wide, Wide World established the dedicated theme of Armed Forces Week when Dave Garroway, the narrator, said:

"There's nothing free about freedom. We don't inherit it as we would a building and just move in and live. It has to be bought and cherished and maintained. Each of us can add to the strength of the Nation—morally, economically, politically, and militarily. And out of this strength will come power—out of this power will come peace."

In presenting the various services, Wide, Wide World first introduced the Chiefs of Staff and Commandants of all our Armed Forces at the Pentagon. They, in turn, explained to the viewers the role played by each service in the defense of this country and as a deterrent to war, later presenting their commanders in the field in live demonstrations of "power for peace."

Through the eyes of television on last Sunday afternoon, the viewers of this Nation were able to see an Army demonstration from Fort Benning, Ga., an infantry-tank-artillery demonstration team in action, showing modern techniques and weapons used by today's Army and also, an airborne

assault where the viewer was present with live cameras in the plane as the paratroopers prepared to jump and actually took part in the jump as one of the men carried a portable signal corps television camera with him in a graphic exhibition of combat television.

The Navy's participation included a special run by the U. S. S. *Albacore* off Long Island with live cameras above and below decks, a visit to the aircraft carrier *Essex* off San Diego as a parade of Navy jets were brought up from below decks and launched into the air.

At Quantico, Va., the Marine Corps portrayed its newest assault methods of vertical envelopment, as helicopter assault units flew over simulated beach defense areas and seized vital points of land with concentrated firepower.

The Wide Wide World cameras again went into action at San Diego, this time showing the Coast Guard's watch on sea and shore to protect the lives and the property of our countrymen. Here the viewers participated in an air-sea rescue mission.

The pentagon of power needed to keep our country strong and free was completed from Eglin Field, Fla., where the Air Force paraded before this great television audience the plane designed to give this country the superior global airpower on which the security of the free world depends. The Air Force also showed how planes are tested under Arctic conditions.

To complete this American story of "power for peace," the live television cameras allowed the millions of viewers to pay their first visit to the Combat Operations Center of the Continental Defense Command in Colorado Springs. This dedicated defense mission portrayal was climaxed with a training mission in which an unidentified plane was intercepted at sea and downed by rocket power.

This week marks the seventh year that we have celebrated Armed Forces Day and appropriately enough through the live television cameras of NBC's Wide Wide World, millions of Americans were able to participate in this salute to the men and women of our Armed Forces. These men and women and their comrades in arms stationed all over the world are America's visible strength.

Together they make up the ultimate all-American team in maintaining power for peace.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared relative to Rumanian Independence Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HRUSKA

May 10 was, in brighter years, the most hallowed national holiday to Rumanians. May 10 is Rumanian Independence Day, the anniversary of Rumania's uniting her provinces into one nation and declaring her independence.

May 10 is no holiday on the Communist calendar. There were no celebrations, no ceremonies, no reminders of this revered holiday. But no communistic rule will ever stamp out the heritage and meaning of this independence day.

Rumanian Independence Day is being perpetuated in the hearts of freedom-loving Rumanians now living under the Communist yoke. It is to them another inspiration to sustain them to the day of liberation. A people who has known freedom cannot forever be kept in bondage with chains no matter how strong, or with a police state no matter how ruthless.

Americans of Rumanian descent continue to keep alive the spark of freedom behind the Iron Curtain. May 10 was marked in the United States by traditional ceremonies and celebrations as were held in Rumania before the Communist aggressor subjected this gallant nation. It was an inspiration to hear an outstanding Rumanian-American, the Reverend Father Eugene Lazar, pastor of the Rumanian Orthodox Church, Gary, Ind., deliver the opening prayer as the United States Senate convened on May 10. Its text is as follows:

"O Heavenly King, spirit of truth, who art present everywhere, treasure of blessings, and bountiful giver of life: Come Thou and abide among us, as we pray that unto our God-fearing President, and the Members of this House, and all civil authorities, and our Armed Forces, Thou wilt grant a peaceful life, health, salvation, and conquest over the enemies of these United States of America.

"O Almighty God, our help and refuge, fountain of wisdom and tower of strength, who knoweth that we can do nothing without Thy guidance, direct us to divine wisdom and power, that we may accomplish whatever task we may undertake, faithfully and diligently, as we beseech Thee, O Master, to remember those who live in oppression and fear, in countries behind the Iron Curtain, as they seek the same freedoms Thou hast bestowed upon us so generously, who are judged and condemned to prison and exile and bitter slavery, and who have need of Thy mercy.

"As as Thou desirest, O Lord, that all people be free, we ask that Thou especially remember the God-fearing people of the Kingdom of Rumania, on this memorable day, and as in the past they found and enjoyed the gift of freedom, assist them to find the same road to recovery, to liberation, and to freedom from injustice and the yoke of tyranny, and that Thy blessings be upon them as upon us in this hour.

"This we ask in the name of the Risen Christ our Lord and Saviour. Amen."

John Lord O'Brian

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Hon. Simon E. Sobeloff, Solicitor General of the United States, at a meeting in Buffalo of the Bar Association of Erie County, N. Y., in honor of the Honorable John Lord O'Brian, a very distinguished citizen of New York, and a very great American.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SIMON E. SOBELOFF, SOLICITOR GENERAL OF THE UNITED STATES, AT A MEETING OF THE BAR ASSOCIATION OF ERIE COUNTY, NEW YORK STATE, HONORING JOHN LORD O'BRIAN, BUFFALO, N. Y., MAY 11, 1956

It is not necessary to point out the appropriateness of having this meeting in Buffalo, but even while acknowledging your special interest in Mr. O'Brian because he had the good taste to be born here, I nevertheless claim him on behalf of all good men everywhere. In a lifetime of exemplary conduct and by the wide range of his interests and the heroic proportions of his public services he has impressed himself upon the minds and hearts of people throughout the Nation.

In every generation there are a few leaders of unusual distinction, but several generations have appreciated Mr. O'Brian's leadership. It is a leadership that has embraced many worthwhile professional, civic, educational and religious interests. We are grateful because it has been given and continues to be given with selfless devotion and with a wise and lofty comprehension of the crucial problems that confront us today.

I shall speak of only a few aspects of this personality whom we regard with such affection and esteem.

As this is a gathering of lawyers, it is in order to speak first of Mr. O'Brian the lawyer. The mention of no name excites greater respect. In him our profession's loftiest ideals are exemplified.

Wonderful legends cluster about Mr. O'Brian as a trial lawyer. He is a great technician in the law. Planning and precision are a passion with him, but no advocate is more flexible than he in meeting the vicissitudes, or alertly embracing the opportunities, which present themselves at the trial table.

All who have observed Mr. O'Brian know what power he derives from the measured use of language. His briefs and oral arguments completely avoid the sensational and the flamboyant, just as they shun the trite and banal. In him this is more than an aspect of his style and competency as a lawyer. It inheres in his very character and discipline in life. Where another might be tempted to declaim his contentions with bombastic superlatives and excessive emphasis, he would be content to recite the facts as lucidly as possible, and add simply, "it might therefore appear that" thus and so. He prefers to leave it to his hearer or reader to recognize and apply for himself the inevitability of the suggested conclusion.

If there is anything in the idea that practicioners of an art may learn from the mode of a master, I venture to commend this bright example to you, my professional colleagues. In every court where he has ever appeared (including that which is at the summit of our judicial system), Mr. O'Brian enjoys a well merited reputation for cold understatement in his contentions and meticulous accuracy in his facts. This has notable practical advantages. Seldom does a judge interrupt to challenge his recital of the record. Rarely, too, is there dispute as to the relevance of the case he cites.

Likewise even in private conversation he has no need for strong language as a verbal crutch to give emphasis to what he has to say. An admiring coworker, who is, of course, a witness of the highest credibility, vouches that by actual count he has heard Mr. O'Brian say only two "damns" and three "hells" in the course of an association that stretches over a long span of years. Those who work with him know that when Mr. O'Brian listens to a suggestion and quietly observes, "I wonder", he means what someone else might mean by declaring more bluntly, "That doesn't seem to make sense." When a point has been made and elaborated, and he comments, "May we pass that?" it is the O'Brian equivalent of what another man might express less elegantly: "That's just

plain foolishness!" I am told that in conference with Mr. O'Brian he habitually avoids directly rejecting anyone's point of view, and he never blows up, but that he is an acknowledged master in gently casting a chill.

Never engaging in personalities, he doesn't fritter away time allowed for argument by resorting to useless circumlocutions. When an adversary had perpetrated a flagrantly rambling, discursive, and incoherent speech, Mr. O'Brian began his reply with devastating directness and simplicity. "Perhaps," he said, "this court would like me to tell them what this case is about," and proceeded to do just that, to the immense relief and enlightenment of the men on the bench.

Moderation in speech is indeed his characteristic mark. On the day Robert Lincoln O'Brien died, our O'Brian was in the elevator when a fellow passenger remarked, "too bad about John Lord O'Brian; he'll be missed." The living—the indestructible—O'Brian said not a word to the speaker, but turning to a companion with complete calm and objectivity, and with a merry glint in his eye, dryly observed, "This fellow is frequently confused."

Mr. O'Brian is timeless. For a number of years he was one of the magnificent trio at the pinnacle of the Supreme Court bar. The other two were John W. Davis and William D. Mitchell, who, like Mr. O'Brian, had once occupied high office in the Department of Justice. Now that Mr. Davis and Mr. Mitchell are no longer with us, Mr. O'Brian is the acknowledged dean of the appellate lawyers of this country, vigorous in health, his mind shining, and the peer of the best in the profession, regardless of age. Only last evening, before flying to Buffalo, my private FBI reports, he took the deposition of a key witness in a major railroad reorganization.

So much for O'Brian, the lawyer, although I am conscious that what I have said is hopelessly inadequate.

The term "liberal" has been subjected to so many strange uses and abuses that I do not know whether Mr. O'Brian would acknowledge the label. It is well known, however, that his preoccupation with the freedom of the individual is nothing new. It is not a dilettante interest indulged as an intriguing exercise in legal scholarship. He has fought on the barricades. Almost 40 years ago, in the First World War, when hysteria swept over the land, Mr. O'Brian, as head of the War Emergency Division of the Department of Justice, held vast power over the liberty of aliens and citizens. With rocklike firmness, he stood for a lawful administration of the laws, opposed the internment of persons without at least some evidence of guilt, and insisted that mere suspicion should not be sufficient to invoke the exercise of this necessary but drastic power. He did much to allay apprehension, to discourage unreasonable war emotions, and to prevent unnecessary discrimination and hardship to the law abiding and loyal.

When later, under a new Attorney General these policies were radically changed and wholesale and indiscriminate raids resulted, Mr. O'Brian left the Government. He did not leave, however, without first preparing a memorandum which is a distillate of the wisdom gained in dealing with the complex problems of protecting the national security without impairing personal freedom. This has been a source of strength to those in Government who seek under admittedly difficult conditions to perform their duty according to constitutional standards of fair play.

Only a free nation is called on to face the dilemma which existed when Mr. O'Brian was in the Department of Justice and which likewise presses upon us today. In an autocracy, whether of the Fascist, Nazi, or Communist variety, there are no questions about protecting individual freedom. The only aim of officials is the security of their regime. Their thinking is not complicated by any need to consider the rights of the individual citizen. He, in fact, has no rights against the Government, and any act or thought of which those in power disapprove is ruthlessly suppressed. This is accomplished by intimidation or, if need be, by the sudden disappearance of the dissenter or potential dissenter.

But in a land of freedom there arises an inescapable problem: How to protect the Nation against enemies from without and from within, and still not to work injustice or destroy freedom of the individual.

One difficulty is that so many people tend to line up with one extreme position or another. Either they blind themselves to the workings of traitors, denying the plain evidence that danger exists; or they fall into a panic, lose all balance and perspective, and tolerate no disagreement with their own opinions. Such division and distrust, suppression and confusion, is exactly what the enemy would like to spread among us, for it weakens us and serves his purpose.

It is important not to drift into this attitude toward those with whom we happen to disagree. In a democracy it is vital not to discourage the free exercise of the freedoms, because that is the source of our strength.

Sanity and safety are not to be found at either extreme. On the one hand we must not be soft-headed in dealing with treason; and on the other, we must discipline ourselves to respect the rights of those who honestly differ with us, and to accord fair treatment and due process even to those of whose bad faith we are convinced. In defending democracy against its enemies we must remember that democracy itself implies opportunity for the interplay of diversities of opinion, of cultures, of ideals, and that the utmost tolerance should never be denied to sincere thoughts or proposals merely because they are unpopular. In our proper and necessary job of exposing and prosecuting Communists, we must avoid destroying the liberty we are fighting to protect.

National security and the preservation of individual rights—these two—can and must be achieved together. The goal is to survive as a nation, as a nation of free men. We cannot hope to have freedom if a foreign tyranny overwhelms us; and it is equally certain that we shall not have freedom if we destroy it ourselves. If in our pursuit of evildoers we ourselves should pull down the edifice of freedom, wherein would be our triumph?

The problem of the preservation of freedom has been the constant concern of John Lord OBrian. There is not time, nor is it necessary, to do more than refer to Mr. O'Brian's latest work on "National Security and Individual Freedom." I merely point out that it springs from a lifetime of patriotic devotion and embodies convictions developed by deep and sound thought, refined in the fire of active experience, and molded by intimate contact with the pressures and stresses of war and the dislocations that follow in its wake.

Again and again in recent years Mr. O'Brian has been cited by learned and patriotic institutions for his tireless and fruitful dedication to the cause of the freedom of man. It is gratifying to point out that this recognition came early and has continued with accelerated force. He is the holder of the Presidential Medal for Merit from our country, has been decorated by foreign governments, was awarded the Chancellor's Medal by his alma mater, your University of Buffalo, and was honored by innumerable legal and other societies.

There is no need to recount to you Mr. O'Brian's continuing and expanding civic activity in this community between the two wars—including a fling in politics which, however it turned out, fortunately left him free when the Nation again wanted him. Like Cincinnatus of old, who was called from his plow in a time of his country's need, Mr. O'Brian was recalled from his law practice here in Erie County to organize and to head the War Production Board's legal staff. He made only one condition—that he should be free to choose his lawyers without interference and solely according to professional merit and fitness. They say that when Mr. O'Brian asked Mr. William Knudson if he consented to these terms, he answered in Danish accent but in good American spirit and idiom, "It's a deal, Judge."

There is a story, perhaps apocryphal, yet vouched for by a reliable source, about a legal adviser serving another agency. When this man was asked by the agency head if there was power to do a certain thing he coined a masterly formula: "It depends," he gravely said, "on what answer you want. There are 3 possible opinions—1, is that can do it; 2, is that you cannot do it; and 3, if you prefer, I can fudge it. Which of these do you wish?" There was nothing of that sort in the O'Brian shop at the War Production Board.

The legal staff Mr. O'Brian welded together has long ago passed from Government service into private practice, but it survives in the enduring memory of many as a monument to Mr. O'Brian's work in the Second World War. Each member of the group is to this day his devoted friend. When he undertook to raise $3 million to save the Harvard Divinity School, these former associates showed their affection for him by raising a half million dollars to establish a John Lord O'Brian chair at the divinity school.

Those of you who have been privileged for so many years to know Mr. O'Brian and to work with him here could not have been surprised by his role in the rejuvenation of the divinity school. He has been, as you, his neighbors, of course know, chancellor of this diocese of the Protestant Episcopal Church. But his interest is not merely sectarian. His devotion to religion is but another facet of his deep and abiding solicitude for humanity.

One of the basic doctrines which our Nation's Founding Fathers sought to embody in our fundamental law is the separation of church and state. For more than 16 decades we have been ever admonished to insist on that separation. This is necessary, according to the American idea, to protect the State from domination by the church and, as wise religionists recognize, it is no less needed to save religious organizations from being made soon or late subservient tools of the state.

The lessons of history which led to the writing of the first amendment were plain. Too often in European lands had church and state been merged to a greater or lesser degree, to the detriment of the true purpose of both. These foreign examples had been followed in some of the American colonies, too, with unhappy results to both religious and secular interests. The complete divorcement of church and state, decreed in our Constitution, therefore marks a notable advance in human affairs. There are few who regret it.

Yet this proper insistence must carry with it important obligations. If government is to attain its highest purpose it needs a moral orientation. It must not be assumed that we are driven to choose between equally intolerable alternatives: one, a church that declares dogma and establishes policy for the government; and the other, a government that controls for its own political ends the religious concerns of the people, ruled solely by power objectives and unqualified by the humanizing doctrines taught by ethics and fostered by religion.

There can be a moral orientation without breaching the wall of separation between church and state or implying any government commitment in respect to religious doctrine or dogma. The principles of human conduct which are the precepts of religion can play a significant role in the establishment of a just order in our public as well as private life. It is still true that "where there is no vision, the people perish."

The harmony between our religious ideals and those of democracy has often been pointed out. We recognize that the foundation of democracy is moral even as its structure is political. The political theory expressed in Jefferson's phrase about the unalienable rights of man and what the religionist calls the dignity of the human personality are one and the same thing. Stripped of formal features, is it not the underlying objective of government to restrain the strong from aggression against the weak; to prevent violence, exploitation and fraud, to establish a modicum of decency and fairness in the relationships among individual men, and among groups and collectives of human beings? These are certainly also the goals of religion.

True democracy does not merely count heads. It is enlightened by certain ethical principles. These put a curb upon the strongest majority in dealing with the sanctities of life, which may not be abridged or taken from the weakest or poorest individual.

While religious creed should not impose itself upon government or in turn be dominated by government, our guest of honor has taught by word and deed that a vital interpretation of religion demands a concern with the way our Government operates in our daily lives. The things we do in private business and under the sanction of Government, and what our Government does in managing our relations with other peoples, all present moral problems. Democracy accepts as fundamental the religious doctrine that righteousness exalteth a nation. And so, while church and state are rightly kept separate, there need be, there must be, no separation between religion's ethics and the life of the people. Our Bill of Rights is not only a legal document, it is also the embodiment of the highest religious teachings as to the nature of man and the ethical basis of human conduct.

That Mr. O'Brian's teachings in the field of law and government are akin to these views as to the role of religion in our public life, was fittingly indicated by the award made him by the National Conference of Christians and Jews last February.

In much of what John Lord O'Brian has done and lived there can be found, like a golden thread running through a majestic tapestry, this tolerance for the thoughts and the beliefs of others. Perhaps here is the key to what some think is the paradox of the man, and others a real insight into his greatness.

Here is prudence, good humor, a passion for justice, charm and warmth, and unspoiled, modest simplicity. Emerson said, "Nothing is more simple than greatness. Indeed to be simple is to be great."

Here, if you please, is a quiet man, but one of high purpose and rare capacity. He commands the affection and esteem of industrialists and labor leaders, tough agnostics and devout divines, pedantic scholars and the most down-to-earth practical men. They agree on nothing, save in their regard for him.

Seldom has any lawyer attained comparable professional eminence and at the same time won such great love in his community and Nation. It was my sad privilege to preside at the memorial meeting of the bar in the Supreme Court for Mr. Justice Jackson, who, like our guest, also spent much of his youth in western New York. Mr. O'Brian revealed his own philisophy when he said in his address on that occasion: "He (Jackson) exemplified the old truth that the greatest happiness is derived from a life filled with responsibilities."

May I conclude this modest tribute to a good citizen and a cultured gentleman by recalling a text from ancient Hebrew literature. In the "Aphorisms of the Fathers," it is declared, "There are three crowns: one is the crown of Torah, or Learning; another is the crown of the Priesthood, or Spiritual Dedication; the third is the crown of Kingship, which is Governmental Authority; but excelling them all is the crown of a Good Name." Though written long centuries ago, these words could not be more fitly applied to anyone than to John Lord O'Brian.

Amendments to the Employee Relations Section of the Postal Manual

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made last night by President Leo George and Legislative Director E. C. Hallbeck, of the National Federation of Post Office Clerks, about recent amendments to the employee relations section of the Postal Manual released by Post Office Department Officials under date of April 25.

Mr. President, these Post Office Department amendments are dictatorship in its most vicious form, and must and will be withdrawn.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WASHINGTON, May 16.—Top officials of the largest Government union lashed out at the Post Office Department today with a charge that "wholesale revision of postal regulations has been deliberately timed this week to intimidate, mislead, coerce, discredit, and censor union members and union activities at the very height of efforts in Congress to obtain minimum bargaining rights and recognition for Federal workers."

President Leo George, of the National Federation of Post Office Clerks (AFL-CIO), said amendments to the employee relations section of the Postal Manual, just circulated, are "an insult to the dignity of organized postal workers everywhere and a flagrant violation of their rights."

"This is union-busting on a grand-slam scale," he added.

The revised regulations dealing with union membership, the right to petition Congress, time off, distribution of literature, and canvassing for new union members were circulated today over the signature of Deputy Postmaster General Maurice H. Stans under date of April 25. Mr. George pointed out the revisions were received at a moment when over 300 union delegates from every corner of the Nation are in Washington on their own time to testify before the Senate Post Office and Civil Service Committee in support of the Johnston-Rhodes bill to formalize Federal union recognition by the Government.

Mr. George, whose union consists of 115,000 postal clerks, was joined in his attack on the Post Office Department by the union's national legislative director, E. C. Hallbeck, who listed four specific areas in which Federal officials "apparently are out to cripple legal union activities both openly and by indirection.

The list follows, together with Mr. George's and Mr. Hallbeck's joint comment:

1. Revisions emphasize in sections 741.1 and 741.2 that while there is no law providing for recognition of representatives of unions, there shall be no denial or interference with employees' rights to petition Congress or individual Members. A special subsection adds, however, that "petitions and proposals may be presented to the official in charge of an installation by either an employee or an employee organization representative."

"Here is a thinly veiled effort," said George and Hallbeck, "to insinuate that the Post Office Department really doesn't have to treat with unions and that members would be well-advised to go through postal channels in petitioning Congress. Such a suggestion is misleading and intimidating."

2. Revisions of section 741.3, subsection .32, state that "time for attendance of employees at meetings in which management does not have a part or has not scheduled will be charged to annual leave or leave without pay."

"This means," the union leaders said, "that unless a meeting is literally scheduled by management a postal worker can be financially penalized for even taking up a local grievance with management. The section considers meetings scheuled by management as working time but not otherwise. These regulations lend themselves to all kinds of coercion."

3. Revisions of section 741.4 require that union literature for distribution or posting within work areas may not be critical of any agency, individual or activity of the Federal Government and first must receive prior approval both of content and method of distribution or posting from the postal official in charge, and may only then be posted or circulated on off-work time.

"This is outright censorship," said the George-Hallbeck statement. "It comes with singular arrogance from the Post Office Department which does not hesitate to use its free mailing privileges constantly to circularize postal employees in outrageously blatant propaganda efforts. Only a few days ago, the Post Office Department used a fancy blue-tinted folder printed and circulated at the taxpayers' expense in an attempt to draw postal employees into the postal rate increase controversy. This Government-subsidized pamphlet was not only deliberately deceptive in trying to persuade readers that postal employee organizations favor higher postal rates but also implied that improved working conditions were somehow tied to the increase. Actually, no major postal organization has taken a position either for or against the rate increase. The Post Office obviously believes in free speech only for itself and then abuses its own license."

4. Revision of section 741.5 puts a ban on canvassing or solicitation of organization membership or collection of dues. The same section also bans the use of penalty envelopes (free postage) in mailing union election ballots.

"The point here is," said the George-Hallbeck statement, "that the post office is tilting at windmills in an apparent effort to discredit unions by banning nonexistent abuses. The fact is that in its 50-year history, the National Federation of Post Office Clerks has never wanted or sought the privilege of using penalty envelopes and would not accept such a privilege even if it were granted. Membership canvassing and dues collections under the conditions mentioned, while never officially sanctioned, have, of course, taken place over the years in many installations

without damage to the postal service. A ban at this late date can only be considered as further evidence of the Post Office Department's antiunion determination to flex its muscles over the most trivial procedural details."

"It is this sort of penny-ante sharpshooting under the current administration," Mr. George added, "which has reduced morale of post-office employees to its lowest ebb in decades—to a point even where many installations can't find people willing to fill clerical jobs.

"It casts significant light on why and how our union delegates, meeting here in Washington this week, adopted resolutions so critical of the Post Office Department in areas widely ranging from seniority abuses, deterioration of working conditions and inhuman speed-ups to violations of promotion rights, sick leave, and censorship of activity and ideas.

"Our special conference unanimously approved a bill of particulars condemning the Post Office Department for its oppressive, unwise, and illegal actions and actions destructive of sound personnel-management relationships.

"We look now to Congress for redress and ultimately to the people who as patrons of the post office service are the ones whose interests are in the long run most vitally affected."

Moving Our Surpluses Into Use

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an address by Mr. Francis C. Daniels, general sales manager of the Commodity Stabilization Service. Mr. Daniels' address was given before the annual meeting of the Delta Council at Cleveland, Miss., on May 8. The Delta Council is one of the foremost agricultural organizations of the Midsouth. Mr. Daniels' statement was of particular interest to the Delta Council membership, so vitally concerned with the recapture of our export market for agriculture, but it is of equal significance to all of us, for this is a matter of prime importance to our entire Nation.

The address follows:

MOVING OUR SURPLUSES INTO USE

(Remarks by Francis C. Daniels, General Sales Manager, Commodity Stabilization Service, Commodity Credit Corporation, U. S. Department of Agriculture, at the 21st annual meeting of the Delta Council, Cleveland, Miss., May 8, 1956)

It is indeed a pleasure for me to be with you today. For you folks, on the other hand, my appearance here must seem more in the nature of a novelty, for I am sure that in all the 21 years that the Delta Council has been holding these annual meetings it has never before found occasion to invite a Government sales manager to take part in the program. The reason for this, of course, is that never in all those 21 years has there been such a person in the Department of Agriculture for the council to invite.

For this reason, too, with your kind indulgence, I am going to spend a part of my talk today telling about the new kind of job the Department has given me to do. I'll get to cotton before I am through—I promise you that—but first I think it is important that all of us see clearly the setting in which the Department's expanded sales efforts for all commodities, including cotton, have to take place.

The office of the General Sales Manager was established in the United States Department of Agriculture in July of last year for the purpose of strengthening, coordinating, and expanding sales efforts directed toward moving commodities out of the inventory of the Commodity Credit Corporation (more commonly known to all of you as CCC) and into useful consumption. This strengthened sales action gave recognition to the fact that a surplus-commodity situation was going to be with us for a long time unless we took more aggressive steps than had been taken to do something about it.

Technically, my responsibilities include the formulation and direction of policies and programs for expanding sales of CCC's surplus commodity holdings. In this capacity I serve on the immediate staff of the Administrator of the Commodity Stabilization Service, and through the Administrator I consult and advise with the CCC Board of Directors on the policies and sales programs for which we may be seeking approval or to which the Board has already given approval. In the main, though, my job—as you might surmise from my title—is to direct and expand sales.

Our sales staff, quite in contrast to the size of the CCC inventory, is surprisingly small. There's a good reason for this. Just as the CCC Board of Directors depends on the Commodity Stabilization Service for the actual operation of its price-support programs, so we work closely with the operating Divisions and area Commodity Offices of CSS in moving into consumption any price-support commodities acquired by CCC that are surplus to national reserve needs.

We also work closely with the Department's Foreign Agricultural Service and the agricultural attachés stationed throughout the world. We try to keep these attachés fully advised of our sales programs as we develop them as well as of progress under them once they are put into operation. The agricultural attachés, in turn, keep us informed of developments in foreign markets, of sales methods in the countries to which they are assigned, and of foreign reactions to our sales or to the prices at which we make them.

But we work most closely of all with American buyers and sellers—the people who trade either here or abroad in the commodities we have to offer. Legislation requires that we work through regular channels of trade insofar as practicable, rather than deal directly—in the matter of export sales, for example—with foreign governments, but we do this from preference as well as from law, for it is the only course that really builds soundly for the future. Our governmental sales efforts are temporary, designed to meet a situation that won't last long if we do our job effectively; but a healthy and growing foreign trade carried out through private dealings is something we believe to be a vital part of our national economy, and we can't have this kind of foreign trade unless we continually strive to develop it. We want future as well as present markets for our surplus-farm commodities, and we realize as you do that the promotion of healthy, continuing markets abroad in the years ahead depends on mutual confidence created now and at every possible occasion between United States businessmen and foreign businessmen continually working with one another on a strictly commercial basis.

The same general idea applies to our domestic sales. Our governmental purpose is to expand sales, not to supplant them, and so we must be continually on guard to see that our sales do not interfere with the normal commercial trading in commodities that is the foundation of our economic system. This means dealing honestly and openly with all potential buyers. We will be very scrupulous in this respect. We keep the list of commodities we have for sale well advertised so that all who may be interested in them may know about them, and we report regularly to the trade and general public on how sales are progressing. We are glad to send to anyone interested the CCC Monthly Sales List, which gives the list of commodities available for sale during the current month and the basis on which they are available. In fact, we issue reports regularly, not only on our sales but also on our transfers to other agencies or governments, our barter transactions, and our donations. We feel that private as well as public confidence is built up between buyers and sellers by this public reporting of what is going on.

And, of course, we also feel a real sense of achievement when we are able to report that we no longer have a given commodity available for sale or donation. It may surprise many of you to know that in the course of the last year we removed from the list of available commodities, because our stocks were depleted, such items as cottonseed oil, of which we once had more than a billion pounds in the CCC inventory; cottonseed cake and meal; linseed oil; broken rice (although we expect to have more of this later as we mill our takeover from the 1955 crop); soybeans; flaxseed; dry whey; and a number of varieties of dry edible beans and of hay and pasture seeds.

Just a week ago we removed butter from the list of commodities available for foreign donation because our committed CCC stocks were down to zero in late March, and in late April—in the flush butter production season—totaled only 6 million pounds. At their peak in July 1954, CCC butter holdings reached 466 million pounds. During the past two marketing season, through aggressive action, including a well-planned and vigorous foreign and domestic donation program, we have been able to move considerably more butter into food uses than we have been required to buy under the price-support program for dairy products. In the marketing year just ended—April 1955-April 1956—useful outlets were found for approximately 415 million pounds of butter, whereas price-support purchases amounted to less than half this amount, 178 million pounds.

It will also surprise most of you, I think, to learn that CCC's showcase of commodities available for sale isn't nearly as extensive as most people think. In saying this I do not mean to minimize the seriousness of the surplus situation we are currently dealing with. Our surpluses in some commodities, particularly cotton and wheat, are tremendous—and I'll have more to say about cotton in a moment—but if you add to these two commodities rice, cheese, tobacco, and possibly corn, you will have covered all the really burdensome surplus items in the CCC inventory.

I say possibly corn because even though we have a large CCC inventory of corn—currently more than 700 million bushels—and may take over another sizable quantity from 1955-crop corn now under CCC loan, the total of corn by itself is not alarming when you bear in mind that our annual consumption of corn is more than 3 billion bushels.

As regards wheat, cotton, rice, and tobacco the sales problem is a tremendous one. All of these items are potent world export trade commodities; and the unfortunate part of the present situation is that we aren't the only country faced with surpluses of these commodities. They are in abundant supply throughout the world, and to a great extent consumer demand for each of them is inelastic. As a result, world supplies have reached a point where under present consumption conditions an increase in United States exports is likely to displace

trade rather than increase it; and there comes a time when such displacement, however strong the justification for it, creates serious international economic and diplomatic problems.

The Department has assured friendly nations that we are not going to disrupt their economies, which we have been helping to build up since the war, by dumping our surpluses. We have also made clear to them, however, that the time is at hand when we must try to move our surplus commodities at prices competitive with those of other sellers in the world market. We will first of all try to sell for cash, but in areas where cash is not available we will supplement these efforts through barter for strategic and other storable materials we are interested in. Further, we will attempt to increase consumption in many friendly areas through sales under Public Law 480, which provides for acceptance of local currencies in payment for surplus commodities when the sales are over and above the area's normal commercial trade in these commodities.

These alternative approaches to increased exports of our surplus commodities have been made possible through new legislation—the Agricultural Trade Development and Assistance Act of 1954—which gives us greater flexibility in our selling approach to varied and different problems and situations. Trade for dollars is our normal way of doing business, and we will continue to try to do business that way, but the authority to make sales for foreign currency is a most useful one when we have potential customers in nations that do not have foreign exchange adequate to meet their import requirements. In a like manner, barter helps under certain conditions. In addition to giving us strategical and critical or other materials we need in exchange for commodities we have in surplus, it helps to reduce our storage problem because the items we get in exchange are both less bulky and less perishable.

We depart from commercial practice, of course, when we donate agricultural commodities, but this method of reducing our surplus can be an effective means of stimulating consumption in a way that also stimulates an opening for future increases in commercial trade. Voluntary United States relief agencies have done a good job of meeting humanitarian needs through distributing our food surpluses without a measurable disruption of normal commercial trade. In all cases recipients are selected on the basis of a need they cannot fulfill themselves. Dairy products—I have already mentioned the large donations of butter—have moved most effectively in this way. To the extent that this free distribution contributes to economic recovery in the recipient countries, then we are entitled to hope for expanding future trade.

I'd like to say just a word about the general program for sales on credit that we announced early in February. The program was developed as a result of ideas we got from banking groups and members of the export trade. Heretofore, CCC has never sold on credit; it has always insisted on "cash on the barrelhead" as soon as it delivers its commodities to the purchaser. But with credit so increasingly important in modern selling, and in keeping with our determination to use and develop more and better merchandising techniques, we have laid the groundwork for a new credit approach.

The basic idea is this: Instead of requiring cash upon delivery of CCC commodities, CCC is allowing up to 3 years time for payment provided it has assurance from a United States bank that payment of the principal plus interest will be made by the end of the credit period. This bank assurance may be in the form of an irrevocable letter of credit from the bank, such as is now required of the purchaser on a cash sales; an endorsement on a note executed by any party to the sales transaction, including the foreign importer; or some other recognized form of bank assurance.

It is expected that even though the credits are extended only to United States exporters, maximum benefits from the credit will be passed on to the foreign importer. In fact, the extent to which the benefits are passed on by the United States exporters will be considered by CCC in approving the credit transactions. CCC hopes to benefit by the reduction in storage costs that will result from the earlier reduction in its inventories that should be made possible by the credit sales.

I know you are anxious to have me discuss the CCC program for selling cotton and how this program fits into our overall sales program. I am sure that I don't have to tell you folks who know cotton that each commodity has its own particular marketing problems. And I'm sure, too, that you would agree that the problems incident to cotton export marketing are about the toughest any commodity has had to face in recent years. The reasons are many and altogether understandable, and I need not take time to go into them here.

The cotton export program as announced is an aggressive sales program on a competitive bid basis, the first ever used for Government sales of cotton. Our aim is a return to our historic commercial share of the world cotton market. It is not a dumping program. We do hope, however, that it will serve to curb any further expansion of cotton production in other countries at our expense—an expansion that has been taking place under the price-umbrella afforded by our domestic price support program. As President Eisenhower expressed it: "The United States cannot be satisfied with a position of holding its own supplies off the market and accumulating surpluses while other countries dispose of their entire production. Accordingly, the United States will offer its products at competitive prices. At the same time, the United States will not use its agricultural surpluses to impair the traditional competitive position of friendly countries by disrupting world prices of agricultural commodities."

In our first sales announcement under the new export sales policy for cotton we offered for export on a competitive bid basis a million bales of CCC cotton stocks of all grades having a staple length of fifteen-sixteenths inch or shorter. Within 2 months the entire million bales had been sold, and at prices that held firm throughout the sale. There was no depressing of prices on either foreign or domestic cotton markets. In fact, as you know, domestic market prices even strengthened a little during the sale.

On February 28 of this year we announced the second step in the new sales program. We announced that sales would be made each 2 weeks, on a competitive bid basis, of all qualities of upland cotton in the CCC inventory without regard to staple length. Under the provisions of the program the cotton purchased cannot be exported before the beginning of the new marketing year for cotton, which is next August 1. Just about 3 weeks ago—on April 17—we announced that that first offers under the new program would be received on April 24, and just last week we announced acceptances under these bids. These acceptances totaled only 10,487 bales, but that was not surprising in that both the seller and the numerous potential buyers need a little time to determine the most practical sales levels. Even though the number of bales sold was small, the large number of bids received was decidedly encouraging.

Since we are just at the beginning of this new and broadened sales effort on CCC-owned cotton, it is not possible to evaluate it as yet. I won't attempt even a guess as to what the eventual results will show. I do feel, however, as I am sure you do, that this matter of recapturing our historic export markets for cotton is going to be a long and difficult task. We can't be as aggressive as we would like to be about it, either at home or abroad. Abroad we must consider diplomatic as well as trade relationships, and here at home we must recognize that producers and others in the cotton trade have cotton to market too, and that they have priority on sales, particularly during their regular marketing seasons. We certainly won't aggressively merchandise Government cotton if it means depriving the producer of an equivalent amount of his normal market. There would be no net gain in that for anyone. Our CCC sales operations are going to be carried out with their companion price-support operations always in mind. Our stocks of agricultural commodities are acquired as a result of price-support operations, and to undo or impair these price-support operations by subsequent price-depressing sales would be to throw away with one hand any gains we had made with the other.

Also I feel—and I think you folks must, too—that the Government's strong sales role in this international play for world cotton markets is temporary. If king cotton's traditional role in the world of fibers is going to be maintained, it is going to be done mainly by folks such as you. The Government can lend a strong hand at times, as we are doing now, but in the continuing year-to-year go-round the eventual victory is going to be decided by the drive and stamina that only private initiative and private incentive can bring to the battle. We can help you regain your historic markets, but it will be up to you to keep them.

With the increasing competition from synthetics on the one hand, and the increasing yields in recent years on the other, the net result is a tremendous inventory in Government stocks. The national carryover of old-crop cotton as of next August 1 is currently estimated to total more than 14½ million bales, and that's a lot of cotton to be carrying on top of the new crop that will be available at that time.

There will always be honest differences of opinion regarding the details of any Government program, but there is one point upon which I feel sure we can all agree:

We know how to raise cotton and we know how to store cotton. Now we must get busy and get out and develop sales for our cotton.

It has been a real pleasure to be with you here today. I thank you for your kindness in asking me to come.

Wage and Hour Act Extended Coverage

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 18, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram sent by George J. Burger, vice president of the National Federation of Independent Business, relating to Wage and Hour Act extended coverage.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WAGE AND HOUR ACT EXTENDED COVERAGE

George J. Burger, vice president, National Federation of Independent Business, today expressed the interest and concern of the

members of the federation in the wage and hour law extended coverage now being considered by the Senate Committee on Labor and Public Welfare, and directed the following wire message to the Honorable PAUL DOUGLAS, Democrat, Illinois, chairman of the subcommittee now considering the legislation.

The complete text of the telegram follows:

"In lieu of personal appearance before your committee which is now holding hearings on numerous bills extending wage and hour coverage to include additional retail establishments, we request that this message be read into the record of the public hearings and made a permanent part of the hearings.

"As Members of Congress well know, the federation membership is comprised exclusively of independent business and professional men, all voting members, numbering approximately 100,000, which membership is located in all the 48 States.

"Small individually owned retail establishments are facing a struggle to exist due to the inroads of large corporate interests operating in the retail field. They are also plagued with increased taxation from local, State, and National levels, which adds further to their inability to maintain their establishments.

"The truth of the matter is, as we review the situation from actual experience of owning and operating independent establishments, that any independent businessman owning and operating his own retail establishment must, as a first requisite, have the loyalty and good will of his employees. Otherwise he will speed his own destruction. It is our belief from close contacts with small independent business establishments that the successfully operated businesses have no need for Government intenvention through regulations insofar as employer-employee relations are concerned, be they financial or harmonious working conditions within the establishment.

"We would urge your committee in its present study of wage and hour extended coverage to make a thorough survey of the administration of the present law to see that undue hardships are not created through improper interpretations at the local level and that when the rule is applied at the local level it should apply to all in an area in a particular business, and all such businesses should be so notified, and before any interpretation is placed as to whether a certain line of business comes under the wage and hour act there should be a commonsense approach to what constitutes interstate business, in the full sense of the word.

"We thank you for your cooperation and again request that this message be read into and made a permanent part of the public hearings before your committee.

"GEORGE J. BURGER,
"Vice President, National Federation of Independent Business, Washington, D. C."

Fielding L. Wright

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include two editorials eulogizing the late Fielding L. Wright, former Governor of Mississippi. One editorial is from the Delta Democrat-Times, Greenville, Miss., and the other from the New Orleans (La.) Times-Picayune:

[From the Delta Democrat-Times, Greenville, Miss., of May 6, 1956]

FIELDING L. WRIGHT

The "good gray Governor" is dead; the State, and the Delta in particular, mourn his passing with shock at its suddenness. Fielding L. Wright was a stalwart statesman who stood by his convictions and who not infrequently stuck his neck out for them.

Never a flamboyant politician, he lent a special dignity to the position he held in Delta leadership and to the post he served so well as Governor of our State. We could not always agree with him but there could never be any rancor in our disagreements.

He tried earnestly to solve the most trying problems of our age, and he never compromised a principle in doing so. He was as conservative as a grey flannel suit but he projected his calm personality in such a way that he won both confidence and affection from his fellow men.

We shall miss Fielding Wright.

[From the New Orleans (La.) Times-Picayune of May 8, 1956]

FIELDING L. WRIGHT

The death of Fielding L. Wright, scarcely before reaching the age of 61, removes a Southern statesman who had a long record of faithful legislative and gubernatorial service in Mississipi and whose leadership on behalf of States' rights and against the imposition of force bills upon the South will be long remembered.

In 1948, as vice-presidential nominee of the States' Rights Party, he loaned himself valiantly, after the soul-searching which tore the breasts of so many lifelong, dedicated Democrats, to the cause of protest against the Democratic Party's strife-stirring platform. It was not thought the electoral votes the party might receive in the South would in themselves make the difference between Republican and Democratic victory, because the Republican victory was taken for granted.

In Louisiana, 1 of 4 States this ticket carried, the States' Rights Party became the Democratic Party, and received 204,000 votes to the 136,000 the Truman-Barkley ticket (which finally, in generosity and fairness, got a place on the ballot) mustered. In 1952 the vote for Eisenhower fell 38,000 short of the vote for Stevenson.

The recent death of Senator Barkley, the opposite number of Governor Wright on what in 1948 were the only tickets seriously considered in the South; and now, so soon after the death of Governor Wright himself, accent in memory those stirring, stormy, troubled times—times whose resolution remains seemingly still far away.

More Glory for CAP

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MACK of Illinois. Mr. Speaker, I was recently pleased to meet and chat with Civil Air Patrol Pilot Jan Wood, a physical-education instructor at Birmingham High School, Reseda, Calif., who is on sabbatical leave for 1 year on a 30,000-mile trip around the world. On long distance over water she will go by boat and the plane will be taken aboard ship, as was done from New York to Europe. At the present time she is visiting in Turkey, Greece, and Italy, and during the summer months her mother and father will visit with her in Europe. After that she will entertain the CAP cadets from California who worked with her in preparing for her journey.

The occasion was reminiscent of the anxious moments spent in preparing for my own round-the-world flight of not too long ago.

CAP can be proud of men and women volunteers such as Miss Wood who contribute so much in time, efforts, and private funds in serving their country and promoting and maintaining national interest in aviation.

CAP's official publication, Contact, recently published an interesting résumé of her journey. Under leave to extend my remarks, I would like to offer the article for publication in the RECORD in its entirety. The article follows:

CALIFORNIA ROUND-THE-WORLD FLYER VISITS CAP NATIONAL HEADQUARTERS

WASHINGTON.—California CAP member Jan Wood visited national headquarters in the Nation's Capital and made final plans before starting on the next leg of her 30,000-mile trip around the world.

The 34-year-old Los Angeles high-school teacher left California recently in her Cessna 170, a single-engine, four-passenger plane, with her sole traveling companion, Cindy, a 3-year-old police dog. Miss Wood made stops at Phoenix, El Paso, Dallas, Atlanta, and Norfolk prior to landing here.

The physical education instructor is training officer of the Van Nuys Group 25, California Wing of Civil Air Patrol. She has been recommended for promotion to the grade of captain in the CAP.

MEETS GENERAL AGEE

Shortly after her arrival here Miss Wood met with Maj. Gen. Walter R. Agee, United States Air Force, CAP's national commander, and members of CAP's National Capital wing. The national commander praised the pioneer spirit of Miss Wood as she revealed her travel plans to him. The general lauded the trip as an unofficial goodwill mission for the Civil Air Patrol and a praiseworthy event for light aircraft.

The CAP commander, wishing her every success, told the Californian that he would look forward to receiving reports of her progress on the tour. He pointed out that she may have the opportunity to meet many of the American Civil Air Patrol cadets who will go abroad this summer to participate in the annual international cadet exchange.

Miss Wood told General Agee of plans for what she termed her private cadet exchange program. During the summer vacation period, she said, two 16-year-old Van Nuys CAP cadets, Lt. Barbara Martin, commander of Van Nuys Squadron No. 2, and Cadet Sgt. Connie Beneke, will join her for a tour of the Scandinavian countries. This plan evoked additional praise from the general.

MEETS REPRESENTATIVE MACK

Later the aviatrix met Representative PETER F. MACK, JR., Democrat, of Illinois, a licensed commercial pilot and World War II Navy pilot. Currently, the Congressman holds the rank of lieutenant commander in the Naval Reserve and is qualified to fly all types of aircraft, ranging from single-engined planes to jets. Representative MACK himself flew around the world alone in a single-engined plane.

During a whirlwind tour of the Nation's Capital, with the assistance of Maj. Ray Martin, PIO of the National Capital Wing,

Miss Wood appeared on several radio and TV programs and was featured in press stories.

Miss Wood's Cessna 170 will be crated in New York and shipped overseas to Rotterdam, Holland, where she will pick it up late in March and fly around Europe in short 100- and 200-mile hops, landing and seeing the countryside via bicycle.

Later in the fall, Miss Wood will meet her parents, Mr. and Mrs. Jess Wood, of Pasadena, Calif., for a month's tour around Europe. Then she will nose the Cessna along the Mediterranean toward Turkey and India.

SKIING IN ALPS

After a taste of skiing in the Alps and skin diving in the Mediterranean, Miss Wood plans a try at wild game hunting in Borneo. Her itinerary places her among the islands near Java and New Guinea sometime in December as she flies her way toward Australia.

Once again her plane will be temporarily grounded aboard ship as it is sent to Santiago, Chile. When Miss Wood and her Cessna are reunited in South America, she will proceed up the coast across the Caribbean and to Florida. She plans to complete the globe circling tour by landing in Van Nuys, Calif., sometime in March 1957.

A CAP emblem will be displayed on Miss Wood's Cessna during most of her flight.

Segregation Is a Wooden Leg

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, May 18, 1956

Mr. SPARKMAN. Mr. President, the Manufacturers' Record of May 1956 published an editorial entitled "Segregation Is a Wooden Leg." The editorial deals in a most realistic manner with one of the great problems facing the South today. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEGREGATION IS A WOODEN LEG

If there is an editor in the South—or elsewhere, for that matter—who hasn't written an editorial on the segregation issue he enjoys a rare distinction. For, in our opinion, segregation today is one of the most overworked topics receiving attention of the free press.

Both on editorial pages and in news columns the issue is being subjected to an overdose of coverage in news media throughout the Nation. This excessive coverage in itself now constitutes a major barrier to easing of tensions and intelligent study of the problem.

Overemphasis by the press plays directly into the hands of the extremist on both sides. It makes heroines of propagandists and heroes of reactionary politicians. Neither contribute to progress.

The South today is somewhat comparable to a robust young man who wears a wooden leg as a result of a childhood accident. Except for this one handicap, the young man is of sound mind and limb, capable of leading a perfectly normal life.

In fact, there is every reason to believe that this young man, with proper therapy, can ultimately overcome his handicap completely and become a superior citizen. The speed of his recovery hinges on the effectiveness of the therapy.

Now it is well established that in the treatment of such cases the psychological conditioning is just as important as the physical conditioning. We go out of our way to be considerate of people who have suffered such physical infirmities.

It is considered exceedingly bad taste to call attention to an artificial limb, a withered arm, or even a mole on the cheek. It would be unthinkable to expose a patient to public ridicule.

Yet today the Nation is carelessly gossiping about every aspect of the South's wooden leg, regardless of the effect on the patient. The critics are sitting around discussing the length, weight, shape, and finish of the artificial limb. Some are even speculating as to whether it might be infested with termites.

In fact, the leg is getting so much attention that the rest of the young man is being virtually ignored. The fact that the South is pacing the Nation in many fields of industrial, scientific, and civic progress is being lost in the increasing barrage of segregation news.

This is about as reasonable as writing a biography of Franklin Roosevelt and describing his polio affliction in great detail while failing to mention his other activities. It is like identifying Winston Churchill as "a fat man who lives in England."

Recently we have seen a classic example of overemphasis of the South's segregation problem by nationally syndicated columnist Sylvia Porter. In a Charlotte datelined column she suggested that racial difficulties will materially reduce industrial development in the region.

We happen to have the facts on the development of the South. And they do not support Miss Porter's view to the slightest degree.

The major factors in the industrial development of the South are markets, materials, and manpower. Many other factors such as transportation, utility services, water, and taxes are more important in site selection.

Since Miss Porter's column appeared we have queried several dozen top developers and plant location experts, and they have told us most emphatically that the segregation issue seldom comes up for even a brief discussion. R. M. Cooper, director of the South Carolina Development Board for many years says "we have never had an inquiry which even referred to the matter."

Miss Porter's column started a lot of rumors, but as yet we have not been able to find a single confirmed case of a plant location project deferred or adversely affected by the possibility of segregation difficulties.

Moreover, it is clear that plant location activity in the South today is at an all time high. This was borne out in facts and figures in the 1956 Blue Book of Southern Progress released last month.

And key southern developers are highly optimistic about the future. They are confident that the region's many attractions for industry will continue to promote expansion in the years ahead.

As H. V. Allen, Jr., director of the Mississippi Agricultural and Industrial Board puts it, "We believe the purchasing power of an expanding southern market, the availability of major physical resources including water, and the productiveness and enthusiasm of southern manpower are too firmly fixed in the minds of industrialists to allow the controversy on segregation to interfere with the continued industrial growth of the area."

This does not mean, of course, that southern industrial development cannot be adversely affected. But it is clear that if plant location factors are viewed in proper perspective the South will continue to enjoy a favorable competitive position.

We think it is in the interest both of the Nation and of the region to have more discussion of southern progress and to have less careless talk about the wooden leg. H. M. C.

Life's Saving Salt

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, May 18, 1956

Mr. SPARKMAN. Mr. President, in the Washington Sunday Star of May 13 there was published a very interesting article entitled "Life's Saving Salt," written by the Chaplain of the Senate, Dr. Frederick Brown Harris. As Senators know, Dr. Harris publishes a column in the Star each Sunday under the title "Spires of the Spirit." On this particular occasion he dealt with the life and conduct in the Senate of our late great friend, Senator Alben W. Barkley.

Because I believe every Senator who has not read the article will enjoy reading it, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT
(By Dr. Frederick Brown Harris, Chaplain of the U. S. Senate)

LIFE'S SAVING SALT

Long ago a truism became proverbial. It is the assertion that humor is the saving salt sprinkled upon life's vicissitudes. Humor saves from many things. It will save one from magnifying a speck into a specter. It is a magic restorer of perspectives. It will keep one from taking himself too seriously. Humor is a vent to prevent one under heavy strain and pressure from going all to pieces. A laugh will often pierce dark clouds of antagonism like a sudden shaft of light. Humor may break through in some subtle and clever turn of a phrase. A pun often transforms frowns to smiles. A joke may change straight-set lips, the prelude to angry biting words, to loud guffaws which may alter the climate of a conference as if refreshing windows had been thrown wide open.

The Nation mourns the loss of one of its best-loved leaders who exemplified in rich degree the saving salt of humor. Whatever the situation, Alben W. Barkley dealt in smiles and laughter. The funny side of things convulsed him and he was a past master in picturing for others what amused him. No statesman faced with greater solemnity and seriousness the thorny national and international problems of our troubled times as he served in posts of vast importance. No one was more conscious that the decisions he was helping to make in these crucial days involved the very survival of the United States as a free Nation. Yet, Senator Barkley never hung his harp of humor on weeping-willow trees. Facing the worst he could still laugh and make others laugh. He loved stories shot through with merriment which were mirrors to reflect some contemporary human foibles.

It was truly said at his funeral service in Washington, in the presence of the President and Vice President and a brilliant galaxy of public servants: "With unbowed head and unimbittered heart, he met life's losses gallantly and yet found fun in living and reveled in laughter." The address he was delivering to a multitude of smile-wreathed students when death instantly ended his earthly career, bubbled with humor. It could be said of the Nation's only "Veep" as was said of another: "He went laughing up to God." It might well be asked as somebody did when Artemus Ward, who constantly dealt in smiles, fared forth into the

heavenlies: "Is he gone to a land of no laughter, who made mirth for us all?"

Long after the last human eyes looked on Lincoln, there is still heard across the years the laughter in his Cabinet meetings during the War Between the States. There were some high officials in those White House conferences whose faces were sullen and shocked at the hilarity as the man that was to save the Union told yet another story. Lincoln declared: "With the fearful strain that is on me night and day, if I did not laugh I should die." A study of our greatest leaders seems to confirm the dictum of Coleridge: "No mind is thoroughly well organized that is deficient in the sense of humor." In that respect man is but a child of nature although it is only man who really laughs. But it has been ordained that always close to weeping is laughter. The universe is serious enough but its surface everywhere ripples with gaiety. It seems always ready for a laugh.

Of course, all laughter is not wholesome. There is laughter which jeers and hisses, stings and ridicules. The Good Book warns that there is the laughter of fools which is like the crackling of thorns under the pot. Like thorns, that sort of perverted laughter can tear and lacerate human spirits. There is a world of difference between laughing at people and laughing with people. Dr. Powell Davies, one of the Capital's outstanding preachers, does not exaggerate the matter when, in scanning the wide fields of history and literature, and impressed with the preservative power of the salt of humor, he declares: "Laughter is an integral part of life—a very important part. It is a shaping force in human affairs—it can influence events—it can mold character. It is interwoven with everything else—one of the basics of experience—an indissoluble part of human life."

An ancient proverb as old as King Solomon sums up this 20th-century statement in one sentence which has survived the destruction of the famed temple: "A merry heart doeth good like medicine." But one greater than Solomon, whose glad eyes saw in common flowers a wardrobe surpassing that of the most royal adornment, kept His irrepressible joy even when the next step brought Him to the Cross. Theology has too often labeled Christ as the Man of Sorrows, but the sorrows He bore were not His own. How have so many missed the gladness of Jesus at the Galilee springtime, His rapture at the song of the birds and the beauty of the flowers, His amused joy at children dancing in the market place, His humorous reply to the long-faced religious leaders, who asked reprovingly why He and His followers were so gleeful? All this is as much a revelation of religion as His most solemn words concerning sin and sorrow in death. His parables take merrymaking as their natural background. Pity it is that across childhood's indelible record is written: "Jesus wept." It is perfectly evident that that entry was made because it was so exceptional. To be sure the New Testament never says Jesus laughed. The truth is He laughed so frequently it was not worth calling attention to. Always with Jesus, with many a twinkle in His eye and humor in His speech, the atmosphere was joyous and jubilant. That was characteristic to the very last as He prayed that the joy which had always permeated His own heart might abound in the hearts of those dear to him. He was now leaving. In a lovely English cathedral dedicated to the Master of Men who met every situation with the salt of humor is hung a prayer. Who can doubt if that One in sandaled feet should enter this house of prayer bearing His name, He would be likely, with a smile, to read the petition approvingly even before He made his way to the high altar. And here is the cathedral prayer:

Give me a mind that is not bored,
That does not whimper, whine, or sigh,
Don't let me worry overmuch
About the fussy thing called I.
Give me a sense of humor, Lord,
Give me the grace to see a joke,
To get some happiness in life,
And pass it on to other folk.

A Hot Meal for Older People Who Need It

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. REUSS. Mr. Speaker, an interesting suggestion has been made in a letter I have recently received from Theda L. Waterman, executive director of the Central Agency for Chronically Ill of Milwaukee, Wis. The Central Agency for Chronically Ill is a Red Feather service receiving support from the annual Community Chest campaign in Milwaukee County. Miss Waterman, formerly coordinator of health services at the Tuberculosis Institute of Chicago, Ill., has been director of the Public Health Nursing Association, of Woonsocket, R. I. Miss Waterman's suggestion will be of interest to all who are concerned with better care of our older people. Her letter follows:

Congressman HENRY S. REUSS,
New House Office,
Washington, D. C.

DEAR CONGRESSMAN REUSS: I know you are extremely interested in the development of adequate facilities for the aged.

During the present controversy of farm legislation and surplus foods, I have thought again of a project which from time to time I have suggested to other people.

Briefly, it would be a project of one hot meal a day sold at cost to the ambulatory aged who are living in rooming houses where there are inadequate cooking facilities—such a project to be similar to the school-lunch program and like this program to use some of the surplus foods. The meals might be served at schools or in settlement houses at noon when the older people could go to the central place. We all know that many of these oldsters, because of their inability to shop and the lack of cooking and refrigeration equipment, live on sweet rolls and coffee with the result that their health is impaired. Such a program as I visualize it would be attractive to them not only because they could have a well-cooked meal at cost, but they would have the social life associated with eating in a group.

I realize that there would be many problems to be ironed out, but I think such a plan has possibilities and could be developed.

Personally, I would like to see an experiment made.

Very sincerely,
THEDA L. WATERMAN,
Executive Director.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Daily Digest

HIGHLIGHTS

Senate passed farm program bill (soil bank), and adopted conference report on Federal employees claims.

Senate committee approved Agriculture and State, Justice, Judiciary appropriations bills.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 7582–7594

Bills Introduced: 16 bills were introduced, as follows: S. 3878–S. 3893. Page 7583

Bills Reported: Reports were made as follows:

H. J. Res. 261, to make transfers of available supplies and equipment to The Citadel, Charleston, S. C., with amendments (S. Rept. 2018);

H. R. 8904, to amend certain laws relating to grade of certain personnel of Army, Navy, Air Force, and Marine Corps upon retirement (S. Rept. 2019);

S. 1637, to extend the time limit within which recommendations for and awards of certain military decorations may be made, with amendments (S. Rept. 2020);

S. 1961, conveyance of part of Ethan Allen Air Force Base, Colchester, Vt., to the State of Vermont, with amendment (S. Rept. 2021);

S. Res. 250, authorizing printing of a pamphlet entitled "Laws Controlling Illicit Narcotics Traffic" as a Senate document, with amendments (S. Rept. 2022); and

H. R. 11177, fiscal 1957 appropriations for Department of Agriculture and Farm Credit Administration, with amendments (S. Rept. 2023). Page 7583

Military Dependents' Medical Care: Senate insisted on its amendments to H. R. 9429, to provide medical care for dependents of members of the uniformed services, agreed to hold conference thereon, and appointed as conferees Senators Russell, Byrd, Johnson (Texas), Saltonstall, and Bridges. Page 7593

Committee Assignments: Senator Douglas was excused from further service on Committee on Labor and Public Welfare and was assigned to Committee on Finance; and

Senator Long was excused from further service on Committee on Interior and Insular Affairs and was assigned to Committee on Foreign Relations. Page 7582

D. C. Transit: Senate disagreed to House amendment to S. 3073, the D. C. transit bill, asked for conference with House and appointed as conferees Senators McNamara, Morse, Bible, Beall, and Case of New Jersey. Pages 7611–7613

State, Justice, and Judiciary Appropriations: Committee on Appropriations was authorized until midnight Monday, May 21, to report H. R. 10721, fiscal 1957 appropriations for Departments of State and Justice, the judiciary and related agencies. Page 7583

Farm Program: Senate passed, with amendments, H. R. 10875, Agricultural Act of 1956 (soil bank), after taking the following additional actions on amendments:

Adopted: By 49 yeas to 31 nays, Young amendment authorizing CCC to sell annually 100 million bushels of feed wheat; modified Aiken amendment providing transitional parity for basic commodities frozen during 1957; Mundt amendment excepting from prohibition against production on Government lands of price-support crops in surplus supply where such production is necessary to maintain satisfactory wildlife populations; O'Mahoney amendment providing penalty in certain cases for increasing livestock production on grazing land set aside for soil bank; by 73 yeas to 14 nays, modified Holland amendment to remove feed grains outside commercial area from soil-bank payments but setting price supports therefor at 76 percent of parity this year and the same next year if commercial area corn is supported, and setting price supports this year for corn grown outside commercial area at 82½ percent of level for commercial area corn (after rejecting Daniel amendment as a substitute therefor); Anderson amendment respecting acreage allotments for cotton, as amended by adoption of Stennis amendment thereto providing that in application of national acreage allotment for cotton, no State shall lose more than 1 percent of its acreage; and Byrd amendment exempting from penalty, producers of wheat for use on own farms; and

Appendix

For Human Betterment—Address by Hon. A. Boyd Campbell, President, United States Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following address by the Honorable Boyd Campbell, outgoing President of the United States Chamber of Commerce, which was made during their annual convention on April 30, 1956. It is a thought-provoking address and I commend it to the House:

Three hundred sixty-six days and one hundred twenty thousand miles ago we were in this room together.

Since then, I have been across the length and breadth of our national landscape.

From Albany to Austin, from Poland Springs to Pasadena, and from Wichita to Williamsburg, I have met wonderful people, so many thousands of wonderful people.

It has been a thrilling experience. No American could emerge from it without becoming a better American, or without acquiring a more perceptive knowledge of the real strength of our country and of the character, the spirit, and the purpose of our people.

As never before, I have realized the deep reservoir of good will which attaches to the Chamber of Commerce of the United States—this great federation of chambers of commerce and trade associations, with its underlying membership of more than 1,700,000 business men and women.

If you had shared the salt—as I have shared the salt—with those who implement the national chamber's purposes and vitalize its policies—you would have gained—as I have gained—a new respect for the validity of our purposes and the integrity of our policies.

To you and to a great host of others like you, I express the sincere thanks and the most cordial appreciation of the board of directors, the officers, and the staff—and for myself—the gratitude of my heart for your beautiful courtesies and your boundless cooperation.

In 124 communities, I have visited with you and talked to you—singly and in groups.

More importantly, you have talked to me. You have talked about the current issues and public questions that affect the well-being of our beloved country.

By you, I mean Mr. and Mrs. Average American—God-fearing, home-loving, tax-paying, community builders.

Wherever I have met you, north or south, east or west, there was a striking similarity in your thinking.

You spoke the same language. The accents may have varied, but the meaning did not.

Because your words were far more eloquent, and because your thoughts were far more signficant than any that I could possibly assemble, I shall tell you what you said.

And so, I appear today as a reporter.

First of all, you talked about business—as it was, and as you thought, or hoped, it would be.

Last summer and fall, you looked forward to the turn of the year in anticipation that 1955—by national standards—would prove to be our finest business year—and it was.

In planning for 1956, you were hopeful and confident. Now, here we are, with one-third of the year behind us, and most of our economic forecasters believe that 1956—on balance—will be a better year than 1955.

You frequently raised the question about the continuance of good business.

You recognized your own responsibilities for a stable and expanding economy, and you were making plans accordingly. You also recognized that higher levels of business would depend, in large degree, on wise tax policies and sound fiscal policies of Government.

While you did not spell it out in so many words, I am convinced that you share my opinion that our high level of prosperity is an almost perfect tribute to the working of a free economy.

Furthermore, I think you will agree that there was never a more appropriate time to appraise the quality and scope of our economic stewardship.

This appraisal should be a continuing process, and I firmly believe it is becoming so—not only to the advancement of our dynamic system of enterprise, but also to the betterment of all mankind.

You were concerned—and very genuinely so—about the plight of your friends, the farmers, your fellow businessmen in agriculture. You were troubled because agriculture was not sharing in the prevailing prosperity.

You felt that the farm problem had been vastly complicated because politics had become so interwoven with it.

If I am reporting your opinions correctly, you are convinced that the problem may get worse before it gets better.

You know, however, that the economic softness of agriculture cannot continue indefinitely without becoming a hazard to our national welfare.

You have not claimed to know all the answers, but this you do know: any real answer to the farm problem must be based upon economic principles rather than political considerations.

There exists among the men of agriculture a tremendous fund of good sense, good judgment, good will, patriotism, and economic understanding.

When we add these priceless qualities to a high faith in the long-range future of farming, there will emerge a real solution to the farm problem—if—and this is a big if—political eager beavers will take a vacation.

Then—taxes. Everywhere I went, you talked about taxes.

What did you say about taxes?

Surely you would not expect me to quote your exact language in this company.

In essence, however, you said: "Taxes are too high."

Maybe you've always said taxes were too high. I've never heard you say taxes were too low—or even just right.

A system of taxation that puts a premium on tax angles rather than upon good management, undermines your confidence in its equity, and without equity, no system of taxation is tolerable or enforceable.

I could drop the subject of taxes right there, but I would be closing on a negative note. The fact is that your thinking leaned very definitely toward the positive.

You were worried not only about the tax burden itself, but about what our tax structure does to initiative, to venture capital, and to opportunity.

And that means that you are for a system of taxation that inspires initiative, magnetizes venture capital, and broadens opportunity.

You are thinking about tomorrow, and what it holds for young people. There is nothing negative about that.

You expressed strong opinions about Government in business. First, last, and always, you are against the competition of Government in economic areas where private capital is able and anxious to do the job.

Instead of amplifying your opinions, however, I shall condense them into one emphatic, unequivocal statement:

You said: "Let Government get out of business."

Repeatedly, you brought up the topic of social security. You approved the principle, but you were amazed at its complexity and alarmed at its implications.

Because the social-security program is full of heart appeal, it is also full of political allure. You recognized its attractions for the articulate and plausible—sometimes uninformed—and sometimes unprincipled office seekers who attempt to buy votes with your money by constantly raising the social security ante.

Your deep concern was indicated by the number of times you posed the question: "How far can we go?"

Can we contain the program at its present levels and supplement it by private plans, or will we be led—insidiously but pleasantly—along a primrose path toward a security mirage until we reach the point of no return?

Is it conceivable that the great humanitarian concept of providing basic security for our senior citizens and for widows and orphans could become an economic albatross about the neck of our body politic?

Now this leads us directly to the recommendations of the Hoover Commission. What did you say about those recommendations?

Not enough. Not nearly enough.

True, 99.44 percent of you were for the recommendations of the Hoover Commission—which we usually call the Hoover report—just to simplify the reference.

While you were emphatic and highly articulate on the subject of taxes, the same emphasis did not carry through on the Hoover report.

This is paradoxical because the adoption of the report would provide the tax relief which you so earnestly seek.

Likewise, it would accomplish your vigorous demand that the Federal Government remove itself from competition with private business.

Not only does the Hoover report provide the means of bringing these long-sought objectives into reality, it proposes the modernization of our National Government, which is a consummation devoutly to be wished.

This magnificient audit of Government, produced by the best talent in America, after a prodigious amount of study, however highly respected, is not self-enacting.

To get its recommendations translated into law will require the full force of your informed, united, and sustained effort. It will take leg work, head work, and heart work.

I do not share the opinion of those who feel that this is not the time to press this matter. It is too important to delay—under any consideration.

And now—the labor merger.

We are confronted with the accomplished fact of a union between the American Federation of Labor and the Congress of Industrial Organizations, comprising a membership of about 15 million.

In many groups, in many States, I have sat in on conversations in which you attempted to appraise the impact of the merger on industry—on politics—and on the public weal.

If I have correctly gaged your thinking, you look upon the labor merger as a possible menace—and as a possible promise.

Labor's objectives, in many respects, run counter to our own. Labor tends to the idea of more government in our economic system—more concentration of power in Washington.

We have been working in exactly the opposite direction. We believe that one of freedom's greatest safeguards lies in the dispersal of authority, and we will never surrender that conviction.

Labor's vast power has been concentrated—and if I may interpolate a suggestion in at this point, I would recommend that while you are in your capital city, you have a look at the magnificent new buildings the unions have recently constructed—and those they are now constructing. There are some 15 in all.

Those buildings are solid evidence of labor's growing strength and of its entrenchment in Washington to present its views to government under the constitutional right of petition.

You have expressed no quarrel with that. You only hope that as labor comes into a realization of its great size and strength, it will be as zealous in policing itself for the general well-being as it has been zealous in pressing its economic demands.

You believe that the American public's awareness of the potential danger in bigness—big government, big business or big labor—is a safeguard to the abuse of such power.

You have hailed the high-principled statements of Mr. George Meany—President of the AFL-CIO. He has said—with emphasis—that as labor grows bigger and bigger, that it must discharge its responsibility to the community as a whole in a manner that will bring credit to the union movement.

Mr. Meany will have your great good wishes if he moves against the intolerable evils in the secondary boycott—that malignancy in the body of our economic-social system.

If Mr. Meany mobilizes his power and influence to clean up terrorism and racketeering in unprincipled unions, he will not only enhance the stature of American labor, he will perform a service of incalculable value to our country.

And then, you spun the globe:

You have been intrigued, amazed—and if I am not mistaken—somewhat amused at at the fantastic Russian spectacle—the so-called new look.

The ghost of Stalin has been hailed before the court of his successors and charged with every crime in the book.

No one is easier to convict than a ghost, and so, the present masters of the Kremlin, serving in the triple capacity of prosecutor, judge, and jury, have convicted "good old Joe." He is solely responsible, so they say, for the lies, deceit, duplicity, and murder and all the other sins against society—upon which the Soviet regime was built.

Among the many grotesque contradictions in this situation is that the same old gang is ruling Russia—minus Stalin. It is the same old gang with a brand new look.

They are playing that new look for everything it is worth—and let's face it—they are getting away with it in too many corners of the world.

Day after day we are deluged with stories of the back-slapping and baby-kissing tours of Russia's ruling clique. Synthetic goodwill is simply oozing from their pores.

But—as its present masters parade across the world behind their masks of benignity—you have not forgotten the real character of the Russian apparatus.

No, you have not been fooled. You have not been enticed by the song of the Russian Lorelei—because in that direction lies disaster.

There is nothing you would welcome more than a true change of heart in the rulers of the Kremlin,-because deep down inside each of you is a love of peace—and the hope that it may eventually prevail throughout the world.

You cannot envision, however, such a change among the men who were part and parcel of the great Russian blood-lettings.

You are committed to the principle of St. John the Divine, that men should be judged by their works—and so you are in favor of keeping America's defense impregnable while we watch and wait for more convincing evidence of the Soviet's regeneration.

When Russia has reversed all the entries of double dealing—

When she has released the thousands of slave laborers and war prisoners who are being held in captivity in violation of law and human decency—

When she has freed her satelite nations and done everything possible to expirate her crimes against civilization—

When she has repudiated her diabolical purpose to rule the world—then perhaps it will be time to take her new look seriously.

How about your views on education?

There was never a time in our history when education was so important to our national vigor, to our very survival, as it is today. The ideological and physical conflicts which embroil the world will be resolved in the realm of the mind and spirit.

You know this. You have come into a new realization of the value of education, and you have a sense of compulsion to do something about it—just what, you are not too sure.

The towering problems of teacher shortages, of tremendou s manpower demands, particularly in the fields of science and engineering and always the problems of finance, do not lend themselves to easy solutions.

Always, in talking about education there arose the subject of Federal aid.

And what is your attitude about Federal aid?

You want no part of it, and you understand clearly why.

You understand that just as livestock lose weight on a long trip to market, so does your tax dollar lose weight on a round trip to Washington.

But that is not your main objection to Federal aid for education. Your objection goes much deeper than that.

You believe in the dispersal of power, particularly with respect to education. You know that if and when local and State authorities surrender their responsibilities for the support and control of our schools, freedom will have lost one of its mightiest citadels.

The Founding Fathers allocated only 17 powers to the Federal Government. The responsibility for education was not one of them. That responsibility was left to the individual States and the people. The architects of our Constitution believed in a government close to the people and in the philosophy of maximum self-determination.

You are familiar with the recent exhaustive studies of the Commission on Intergovernmental Relations in which it was found that not a single State in this Union was unable to finance its educational responsibilities.

The White House Conference confirmed this finding, although in the much discussed report of the conference, this significant fact has not had the emphasis that it deserves.

If I might be permitted to add a footnote to my interpretation of your attitude toward Federal aid to education, it would be this:

The increasing demand for Federal aid has its genesis in the failure of the States to meet educational needs. It can well be that there has been too much emphasis on States' rights and not enough on States' responsibilities.

If the States do not proceed at once—now—to close the gap between what is and what ought to be in education, we will have Federal aid. Children cannot wait, and the national welfare is involved.

Finally, the election year—the year in which a legion of candidates are advancing their personal and party claims to public office.

Among them are those who seek election to the most powerful position in the world—the Presidency of the United States.

This leap-year could be a stimulating and inspiring proposition, a reexamination of governmental practices, a reappraisal of political and economic policies and a reassessment of social accountability. In short—it could be a workshop on citizenship.

But, you say, that such is not the case. You seem to feel that our political campaigns all too frequently take the form of a promising match.

You believe our democratic concepts would be reinforced if we had more leadership and less followship.

You want the kind of leadership that makes us think—instead of followship that tells us what it thinks we want to hear.

We have often wondered—you and I—just what would happen if a politicial Daniel should come to judgment. What would happen if this man, possessed of the God-given power to "make interpretations and dissolve doubts," should announce for public office?

Suppose that he should promise nothing but the equivalent of the Churchillian promise of blood, sweat, and tears.

Would he be heeded—or hung in effigy?

Suppose he should be elected, and suppose that upon some momentous issue with tremendous public appeal, he should say—as did Senator Lamar of my own State—many years ago—"Today I must be true or false."

And then suppose that he took a position for integrity instead of expediency.

Would he be returned—or retired?

You are looking for men like that in public office because—here in Amercia—is the desire of the people to do justice, to love mercy, and to walk humbly with God.

And now—I close the book on my report.

I conclude, as I began, by saying that no one could emerge from my experience of the past 12 months without becoming a better American.

Whenever I have been abroad, and the hour for returning finally arrives, my thoughts turn to these magnificent lines of Henry Van Dyke:

"Oh, it's home again, and home again,
America for me!
I want a ship that's westward bound to
plough the rolling sea
To the blessed land of room enough be-
yond the ocean bars
Where the air is full of sunlight and the
flag is full of stars."

Here in America—the air is full of sunlight—and the flag is full of stars.

I have never been so proud to be an American.

Armed Forces Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. KEATING. Mr. Speaker, on Saturday, May 19, we celebrate a day heavily charged with overtones as to the future of our Nation, Armed Forces Day. The numerous displays of our strength and publicity concerning how our defense effort works, should go a long way toward increasing public understanding of our defense program.

Armed Forces Day is particularly timely this year because it follows so closely on the heels of the passage of the Defense Department appropriation bill here in the House. There were several aspects in the consideration of that measure which deserve the attention of everyone concerned with the future of our Nation.

If there ever was a subject that ought to be completely nonpartisan and nonpolitical, our national defense effort is it. Yet there has been in recent months a good deal of headline-grabbing and wild charges with political overtones, centering around the President's policies with respect to the development of our medium and heavy bomber force.

Mr. Speaker, everyone agrees that we cannot permit our Defense Department, and particularly our Stategic Air Force, to become second best. But this is a matter for the experts. What the Russians are really doing, and how our total defense organization compares with them, is something that only our military and intelligence experts can balance out for us. And so far as I am concerned, there is not a man in this country better qualified to do this than President Eisenhower himself. The President rightly cautioned against letting ourselves be misled by what he characterized the "numbers racket" in this field.

The House Appropriations Committee concurred with the President when they made their report on the Defense Department budget. Because these men have been studying this whole situation with minute care, their judgment is doubly significant at a time when our defense preparations are under partisan political attack from snipers who, unlike the members of this committee, have no responsibility for study and determination of what is an adequate and proper figure to fix for our national defense.

Let me quote a few lines from the committee report:

The committee, after extensive hearings * * * feels that, barring unforeseen developments, the amount appropriated is generally adequate to fully implement our projected military requirements for the fiscal year and will enable the Department to continue to give the country an increasingly strong and well-balanced force. The 1957 military budget, perhaps more so than any previous budget in our history, reflects changes and improvements in methods of warfare which we have been forced to develop in an attempt to retain superiority over any possible aggressor.

Mr. Speaker, I hardly think it necessary to remind the Members of this body that the vote on final passage of the defense budget was 377–0. This smashing victory represents a well-deserved vote of confidence from both sides of the aisle in our defense leaders and their work. It is to be hoped that from now on we will have a lot more cooperation with and trust in our military experts and a lot less partisan pettiness and wild charges.

As we celebrate Armed Forces Day let us remember these things and continue to work to keep our defenses strong. We must never forget that our Armed Forces represents a powerful force for world peace, because they are the greatest deterrent to possible aggression.

I hope that public understanding of our national defense program will be increased by Saturday's activities and that the world will more and more come to see in our strong defenses not a threat to the world, but an affirmation of America's peaceful aspirations.

Problems of a Small Farmer

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. DAVIS of Georgia. Mr. Speaker, on April 26 Mrs. Robert F. Baxter, of Lumpkin, Ga., wrote a letter to the Letters to the Editor column of the Atlanta Journal.

Mrs. Baxter, living on Lilac Hill Farm, is naturally interested in the farmers' viewpoint, and has ably presented that viewpoint in her letter.

In the last paragraph of her letter she pays a well deserved compliment to her Representative in the United States Congress from the Third Georgia District, Hon. E. L. FORRESTER. He is an able, competent and highly respected Member of the United States House of Representatives, and is a tireless and effective worker not only for his agricultural constituents, but for the welfare of the entire Nation. I join Mrs. Baxter in the wish that we may have more brave men of the caliber of Congressman FORRESTER.

Under unanimous consent I attach herewith the above mentioned letter of Mrs. Baxter:

LILAC HILL FARM,
Lumpkin, Ga., April 26, 1956.

The EDITORS,
Atlanta Journal,
Atlanta, Ga.:

I did not need to read completely through the letter captioned "Could Farmers be a Little Bit Greedy" in yesterday's letters column to know there would be no signature. Yes "Mr. (or Mrs.) Name Withheld," if expecting to get a decent return for the crops we grow to enable us to have the necessities and a few of the pleasures of life is being "a little bit greedy" I suppose 98 percent or more of America's farmers are greedy. Most of the people who express their learned opinions on how much the farmers are making know very little about the situation. If they checked the price farmers must pay for their seeds, fertilizers, equipment, averaged with the years it rained too much or didn't rain at all and learned how much "take-home pay" the farmer really gets, there would be less criticism and more sympathy. But few farmers want sympathy. They merely want to be left alone and not be the subject of a political tempest in a tremendous teapot. Evidently there is a widespread misconception of the word "parity" (even though your paper has done a vital public service by repeatedly explaining it in detail) and I feel sure if our small friend can read, his dictionary will explain to him his error in using the phrase "90 percent loan" indiscriminately.

Farming is a hard and, in the case of small farmers, often a financially unrewarding one. Your obvious question then—why do we farm? First, because both my husband and I grew up on farms and we love it. We find a change of pace and constant challenge in wresting our livelihood from the soil. We gave up a promising career and financial security of the city almost 4 years ago, and came home to the farm as the third generation of my family to till this soil. We are making a success of it and we will continue to do so if the selfish people, who believe the stories constantly making the rounds of how much profit farmers make and how little work they do. We aren't starving and you aren't likely to hear of any farmer willing to use the hands God gave him, starving. But few farmers are making a decent margin of profit in comparison to the other industries.

So, in behalf of all our farmers, won't you look at the problem not only from the side section of your pocketbook from which you must pay a higher price for the produce you buy than a few years back but also from the farmers' angle of getting the same or perhaps a little more for his produce as a few years back but who also must pay the same prices for things his farm will not produce. We are not a down-trodden, ignorant class of people as many of the tired old jokes would have you believe. We are as intelligent and well read and enlightened as any other class of people as a whole. We are far too smart to be yelled or ridiculed into submitting uncomplainingly to an intolerable situation not of our own making. Why should there be any necessity for the phrases "country bumpkins" or "city slickers" for the same God made us all and we are almost all engaged in seeking to insure a measure of health and happiness for ourselves and our families. If we do not work together and help each other we have missed the entire concept of life in a free nation.

When people speak so freely of the Government aid to farmers, I wonder if they have stopped to examine the aid, either directly or indirectly, given to their particular industry or profession.

Our Nation's economy would fall overnight if all the fields were idle, but many, many other industries could cause the same effect if they ceased. But you rarely read of a farmer suggesting that an automobile dealer or an insurance broker or similar endeavor lowering their prices because we realize, perhaps better than most, that although we do

not enjoy paying high prices for their products, that the cost of producing the product or service would make such a step prohibitive.

Are farmers, then, being unreasonable for wishing that someone who has no political ax to grind or fear in their hearts that some class might make a penny more than they, examine the farm situation earnestly and prayerfully and come up with a workable solution? We realize it is a tremendous problem, and it will take someone far wiser than we to solve it. We wish with all our hearts we had more brave men of the caliber of our Third District Representative, the Honorable E. L. FORRESTER, who has fought so long and tirelessly for a workable solution fair to both the farmer and consumer.

Sincerely,

FRANCES NEWMAN BAXTER.
Mrs. Robert F. Baxter.

Katyn

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. MADDEN. Mr. Speaker, a couple of weeks ago, the Associated Press carried a dispatch from Warsaw, Poland, stating that the present Communist Government proposes to launch an investigation to determine the facts as to whether the Soviet Government massacred thousands of Polish military officers and civic leaders in the Katyn forest at the beginning of World War II.

On May 3, Polish Constitution Day, I filed a resolution asking the Congress to request the State Department to forward the reports, findings and evidence recorded by the select committee which investigated the Katyn massacre in the 82d Congress. If the Polish Communist Government is serious in exposing the international crimes of Joe Stalin the testimony of 220 sworn witnesses taken in America, England, and Europe during the Katyn committee hearings should be of great value to inform the world again about the Kremlin crimes.

The following resolution presented by Vincent A. Basinski, of the Polish Army Veterans' Association, was adopted unanimously at their meeting held in Gary, Ind., in September of last year:

RESOLUTION ADOPTED ON THE SIXTH ANNIVERSARY OF THE FIRST PUBLIC COMMEMORATION OF THE KATYN FOREST MASSACRE

Assembled on this 18th day of September 1955, in Gary, Ind., at the Polish Home, 1600 Pennsylvania Street, to commemorate the first public protest in America against the savage acts of genocide that were, and are being perpetrated by the Soviet Union against the Polish Nation, as exemplified by the unprecedented in history, and most bestial mass murder of 15,000 Polish officers in the Katyn Forest, Kozielsk, Starobielsk and Ostashkov areas by the Russian secret police, we, the representatives of various veterans', civic and fraternal organizations, unanimously resolve to bring before the forum of public opinion certain facts and grievances that came into being during the 6 years of our endeavors to bring justice and Christian morality into international affairs, to wit:

1. We assure the martyred, persecuted and enslaved Polish Nation, that we will not cease in our attempt to bring the perpetrators of the Katyn massacre to the bar of justice either at the General Assembly of the United Nations, or the inernational tribunal, or a special judicial body competent to render at least an advisory opinion.

2. We cannot agree with, nor can we condon in silence the position taken by a State Department's functionary, Mr. Thruston B. Morton, who in a letter to Representative RAY J. MADDEN, dated May 14, 1953, and cloaked in fine and empty legal terminology, revealed impotent expediency of the State Department and its unwillingness to bring the Katyn findings of the select committee for a discussion in the United Nation General Assembly. We strongly feel that the principle of elementary justice and decency was pushed aside in fear of offending the Kremlin tyrants with innocent Polish blood on their hands, when said State Department's functionary advised the select committee of the 82d Congress not to press resolution 63 which demanded that the Katyn mass murder be brought at least for discussion before the United Nations General Assembly.

3. Again, we express our most sincere thanks and grätitude to Representative RAY J. MADDEN from the First Indiana District, who took the Katyn matter into his heart, delivered several addresses before the House of Representatives, published several Katyn resolutions in the CONGRESSIONAL RECORD, and then became chairman of the select committee to investigate the Katyn Forest massacre. In this work, Representative RAY J. MADDEN has shown statesmanlike wisdom and courage rarely to be found in our diplomatic personnel.

4. We wish to highly commend the work of the chairman of the First Katyn Observance Committee, Mr. Vincent A. Basinski, whose untiring efforts resulted in the Katyn commemorations on September 18, 1949, in Gary, Ind.; on May 6, 1951, in South Bend, Ind., and today's meeting in Gary, as well as several resolutions passed through his inspiring work at conventions, meetings, and observances of the Indiana Department of the Polish American Congress, Inc.

5. We pledge our civic endeavors toward the end that the Katyn massacre perpetrators be brought to justice, other acts of genocide revealed and prevented on the face of the earth, thus making this world a safer and more orderly place in which to live—in peace and justice, and under the eternal precepts of Christian ethics.

Committee of resolutions:

JOSEPH WIEWIORA, *Chairman.*
ZYGMUNT STARKO, *Cochairman.*
W. WAWRZYNIAK, *Secretary.*

Passed and unanimously approved by all participants of the third solemn commemoration of the Katyn massacre.

Presiding officers:

T. S. KUBIAK, *Chairman.*
SOPHIE DORSCH, *Secretary.*

The President's Health

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times, Monday, May 14, 1956:

THE PRESIDENT'S HEALTH

After still another close and thorough checkup there is a further report on the health of President Eisenhower. It is detailed and precise. What is most important is that it is completely favorable.

We have occasion to congratulate the President upon his fine recovery. We also congratulate ourselves upon the restored health of our Chief Executive. We are happy for him, for his family and for the Nation.

This whole matter of the President's illness has been handled in an unusual way. Never before in our history has the public been so completely and carefully informed of the character of a President's illness and every step in his recovery. Since we know the sort of person he is we cannot believe that the President has had any feeling of chagrin or resentment over this continuous personal and even intimate publicity. He has obviously felt that his fellow countrymen had a right to be concerned over his health and that they had also a right to be fully informed. We appreciate his generosity and applaud his good judgment.

This latest complete report on his condition should go far to take the issue of the President's health out of the current presidential campaign. This should be a good thing, not merely because unpleasant and even morbid personalities can be avoided. It will make it possible to concentrate closer attention on what are and ought to be the real and big issues.

The voters are being asked to judge an administration and its accomplishments. They will be voting, if indirectly, on such questions as foreign aid, national defense, farm policy, fiscal responsibility, and administrative integrity. It is right that their attention should be focused on such questions and not diverted by something that is now most happily, no longer an issue.

It is also fortunate that this favorable report on the President's health should come out at this time because of its undoubted impact on the whole field of foreign affairs. President Eisenhower has become a very real symbol of a troubled world's search for peace. He occupies an unusual position in the esteem of other peoples. His word carries weight, not merely because of the great country for which he speaks, but because the sense of his own integrity has been translated into terms that people all over the world seem to understand.

At the time of the President's initial illness there was a veritable torrent of messages from every part of the earth. They expressed a deep concern over the well-being of a trusted friend. With his steady recovery there has been also a worldwide feeling of thankfulness and relief. The President's health is an international concern.

So we are glad to get this good report. We wish the President many more years of a happy and useful life.

Eugene J. Butler

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. CARRIGG. Mr. Speaker, it is my sad duty to inform the Members of the House of the passing of Eugene J. Butler, an eminent Catholic gentleman and layman, who was known to so many of us

as the executive director of the legal department of the National Catholic Welfare Conference.

Probably no layman within our memory has accomplished more on behalf of his church and his country than has Mr. Butler, for he was devoted in his service to both. The greatest tribute that I can pay to his memory is to include in the extension of my remarks, the eulogy that was delivered at his funeral this morning by His Excellency, Right Rev. Emmett M. Walsh, bishop of the diocese of Youngstown, Ohio:

TEXT OF SERMON OF BISHOP WALSH

REQUIEM—EUGENE J. BUTLER

Your Excellencies, and so forth, Brethren in the Lord:

"Lord, Thou didst deliver to me 5 talents, behold I have gained other 5 over and above. His Lord said to him, "Well done, good and faithful servant, because thou hast been faithful over a few things, I will place thee over many things; enter thou into the joy of thy Lord" (Matthew 25: 20–21).

Our hearts are sad today in the presence of death, the death of one whom we have loved in life for his wholesome Christian manhood and his warn personality rich in wisdom as well as charm, endowed with a genuis for understanding and generous friendship animated by Christian charity.

Not the least of his virtues was the fortitude with which he walked for months with full knowledge of his true condition of health, down into the valley "in the midst of the shadows of death." His most intimate friends heard no word of complaint. He was always "fine" when they inquired. His work went on day by day, his mind was keen, his interest and effectiveness seemed never to diminish, until the end was almost at hand. "I am now in the hands of God, and I need the prayers of my friends." These were his words as he took to his bed for the long and weary weeks of suffering he bore so patiently and humbly in union with the sufferings of his crucified Lord.

His faith and confidence were in Christ Jesus our Lord, "in whom the hope of a happy resurrection has shone upon us," according to the words of the preface of the Mass of Requiem, "so that those whom the certain fate of dying renders sad, may be consoled by the promise of future immortality. For with regard to thy faithful, O Lord, life is changed, not taken away, and the house of this earthly habitation being destroyed, an eternal dwelling in heaven is obtained."

Those of us who had the privilege of knowing Eugene J. Butler in life understand his courage to live with confidence and, with unperturbed mind, carry on his work as the shadows deepened and the house of his earthly habitation was falling in ruins around him. For he was a man of living faith in Jesus Christ, the Son of God, and in all the truths He revealed with divine authority and in His promises of eternal life. We can remember occasions when life challenged Mr. Butler's faith and he would, with calm and steady eyes and smiling countenance give the Catholic answer by word or deed. A loyal soldier of Jesus Christ in full health, shirking none of life's responsibilities, he was in failing health faithful and true to the end.

He loved God and had an abounding charity for his fellow men. He was a devoted son of Holy Church. The church's voice was ever to him the voice of Jesus Christ teaching. The church's ministrations were to him, as to every true Catholic, the saving ministrations of Jesus Christ our eternal High Priest. We who knew him and loved him in life have the consoling hope that he now knows and enjoys the good things that God has prepared for them that love Him.

Yet we must remember the words of St. Paul, "But to me it is a very small thing to be judged by you or by man's day. But neither do I judge my own self. For I am not conscious to myself of anything. Yet am I not hereby justified, but he that judgeth me is the Lord" (I Corinthians 4: 3, 4).

So let us remember those other words of Holy Scripture, "It is therefore a holy and wholesome thought to pray for the dead, that they may be loosed from their sins" (2 Maccabees 13: 46). Let all of us who knew Eugene Butler as a friend, all who esteemed and loved him in life, remember him often before the altar of God and pray that God grant him eternal rest and peace and let perpetual light shine upon him.

But on this sad occasion, I must have more to say, because Mr. Butler was more than an exemplary Catholic. He was a servant of the church distinguished by his singular devotion to her cause, no less than by the high degree of excellence of the service he rendered. He was an able lawyer with a unique genius for discerning the church's true interests in the fields of legislation and public policy. He had expert knowledge of the legislative process as well as of administrative and judicial procedures, and profound respect for these American institutions.

With these gifts and accomplishments he was utterly dedicated to the service of the church. His personal integrity, engaging personality, and innate honesty, as well as his realistic understanding of the problems of men in public life, gave him ready access to all with whom he had to deal, when he came to discuss the church's interests or her position on public questions. They knew he came to make no deals and to ask nothing that would compromise the public welfare or the individual conscience. He came to present the church as she really is, to give a forthright explanation of the church's God-given rights and her legitimate interests, as for instance, in education and in social legislation, social welfare policies, public morality, the protection of the morals of our youth, and the preservation of our Christian traditions and sound religious values in law and public policy.

In a very true sense, Mr. Butler was an ambassador of good will and understanding and often seemed to have a special "grace of office" to serve God and His holy church and at the same time contribute to our country's welfare. His prestige with official Washington over a period of almost 3 decades was remarkable. In his humility he would say that his prestige was that of the bishops, whom he represented. The truth, however, was that he was jealous of the honor of the church. He had a profound sense of responsibility to represent the church truly and well and he dedicated his life and his talents without reservation to the church's cause. The quality of his service enhanced the prestige of the church and her influence for good in our land.

As a legal adviser to the bishops, Mr. Butler enjoyed their utmost confidence through the years. When decisions were in the making he could be relied upon for a realistic appraisal of all the elements involved, a competent presentation of the law and the facts that were pertinent, and prudent counsel as to the appropriate course of action. His advice was objective and wise, and characteristically was always presented as the advice of the legal department, with full credit to his associates for their contribution.

I am sure the cardinals, archbishops, and bishops of the United States would have me pay tribute to his memory in their name. They have known through the years the invaluable service that he rendered them in the discharge of their responsibilities for the welfare of the church. They have always appreciated his splendid Catholic manhood, his clear and sound Catholic mind illumined by faith, his high professional competence, his wise counsel, his zeal for the welfare of the church, and his profound spirit of dedication to her service. They honored him with their complete confidence. They held him in esteem, which deepened through the years. With his passing into eternity they are conscious of a deep sense of loss, and all over our country archbishops and bishops are offering holy mass for his eternal repose. They would have me say these words of sympathy and consolation with Mr. Butler's family.

Here, we have united with the archbishop in offering the holy sacrifice of the mass for the repose of the soul of our departed brother. In the spirit of prayer it is not hard for us to imagine him rendering an account of his use of the talents given him by his Lord. Nor is it hard to imagine our Lord saying to him, "Well done, good and faithful servant, because thou hast been faithful over a few things, I will place thee over many * * * enter thou into the joy of thy Lord."

For this happy reward he labored in life, and we, his friends, devoutly pray.

Why No More Helicopter Subsidy?

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. SHELLEY. Mr. Speaker, I include herewith for the RECORD, an editorial published in the San Francisco Examiner on May 1 concerning the need for helicopter service for the San Franciso International Airport—one of the largest airports in the United States. I include with it a copy of a speech made by James S. Ricklefs, president of Rick Helicopters, Inc., of San Francisco. These articles point out the necessity for a review by the Civil Aeronautics Board and Civil Air Administration of our present airport facility programs in view of the forthcoming development of jet liners and the possible further removal of metropolitan airports from nearby downtown areas. Our highways are crowded every hour of the day and frequently more time is lost in transportation to and from airports than is consumed in actual flight. The use of the helicopter may conceivably be the answer to this problem. I submit these articles so that they may be reviewed by the members of the CAB and CAA and appropriate committees of Congress:

[From the San Francisco Examiner of May 1, 1956]

TRUTH, JUSTICE, PUBLIC SERVICE

Every major airline serving San Francisco has now placed orders for jets or turboprops or both. The near advent of these high speed planes makes more necessary than ever a helicopter passenger service radiating from San Francisco International Airport to all principal cities of the Bay region.

The turboprop will shave 28 minutes off the Los Angeles-San Francisco flight time, doing the run in 1 hour and 7 minutes. But if the flight is completed at a morning or evening rush hour, as many of them are, a traveler bound for Berkeley will need another hour and seven minutes by car to get there. A helicopter could do it in less than 15 minutes.

The pure jet will knock 3 hours off the New York-San Francisco flight time, making it in 5 hours. After that swift journey, a crowded airport bus on a crowded freeway will seem a horse and buggy to the traveler. A helicopter could deposit him downtown in 7 minutes.

Three cities—New York, Chicago, and Los Angeles—now have such 'copter service. Every large metropolitan area needs it, for it is the one way to outwit surface congestion.

Thus far, however, the Civil Aeronautics Board and Post Office Department have refused to grant mail subsidies for helicopter operations in additional cities. Without subsidy the service is not possible.

Such cities as Detroit, Philadelphia, Boston, and Cleveland have the same interest in this matter as San Francisco. We suggest our Bay area officials and Congressmen take the lead in forming these cities into a bloc that can make itself heard before the CAB and Postmaster General.

WHY NO MORE HELICOPTER SUBSIDY?

(Speech by James S. Ricklefs, president, Rick Helicopters, Inc., San Francisco International Airport, San Francisco, Calif., for presentation at the 12th annual forum of the American Helicopter Society, Sheraton-Park Hotel, Washington, D. C., May 2, 3, 4, 1956)

SUMMARY

In the light of the billions of dollars spent by the Federal Government to subsidize various segments of the American economy and in the light of the past subsidies given to the transportation industry to foster its development in its early infancy, this paper seeks to prove that the Civil Aeronautics Board should reexamine its present policy of granting a limited subsidy on an experimental basis to the helicopter transport industry. When the current relatively large subsidy payments to the local service air carriers are considered along with the responsibility of the Civil Aeronautics Board to continue the development of air transportation, the author believes that it is in the interest of public welfare; the interest of national defense; and the interest of consistent national transportation policy that we justly ask the question—Why no more helicopter subsidy?

INTRODUCTION

According to Webster's dictionary, subsidy is defined in several ways, two of which are particularly applicable for present purposes. The first definition states that subsidy is: "Any gift of money or property made by one person to another by way of financial aid." The second definition and one which is often overlooked, calls subsidy "A grant of funds or property from a government * * * to a private person or company to assist in the establishment or support of an enterprise deemed advantageous to the public."

Unfortunately a subsidy is in many instances considered to be merely a handout, as implied in the first of the definitions, even though the grantor is the Federal, State, or local government. In a larger sense, all Government expenditures are of the nature of subsidies, for directly or indirectly they are meant to serve, and indeed they exist for the very purpose of, public welfare. This fact only too frequently escapes notice. This oversight on the part of many people is doubtless responsible for the derogatory connotation that may attach itself to the term, even though we dwell in the midst of subsidies, direct or indirect.

It is the object of this speech to analyze objectively and, where possible, quantitatively, the factors which have had an impact on more obvious types of subsidies in the United States in order to determine the relative position and magnitude of the subsidy paid to the aviation industry, and especially to helicopter service.

GENERAL GOVERNMENT SUBSIDIES

We are surrounded by subsidies in various forms. There are farm subsidies which have taken the form of parity payments, and in the early days of our Nation, homestead land grants to encourage the development of new farmlands. During the dismal decade of the 1930's, farmers were given direct cash payments for reduction of output, by virtue of which the crop producers obtained a larger return than sole dependence on market prices could give. A different purpose was served by the subsidies granted to the farmers during World War II. In this case, the objective was to hold down consumer prices by compensating food producers for a rollback in their selling prices to a level below that prevailing in the open market. The subsidy was paid the farmers and benefited the public, which was protected against high prices.

Here then are three ways in which farmers have been subsidized; the subsidies have shared the common purpose of furthering public welfare. The homestead grants opened new sources of food supply; the output reduction payments contributed to market stability and redistribution of income; and rollback subsidies gave lower prices to consumers. The difficulty in reaching any definite amount one can set as the subsidy to the agriculture industry via these three methods can be appreciated by examining the huge list of legislation in past history which has provided these subsidies. By using the limited definition of the "Current Expenses for Aids and Special Services" in the annual Federal budget, such Government expenditures for agriculture in the fiscal years 1949 to 1955, inclusive, have totaled $3,773,000,000.[1] This figure does not even include the losses incurred under the Commodity Credit Corporation's price support program of over $1 billion.

The tariff, of course, is another form of subsidy, although it is commonly thought of as a protector of the American standard of living, and it benefits many industries and agriculture in this country, but costs consumers many millions. Included in these tariffs are all the infant industries which, through tariff protection, are shielded against competition from foreign exports. Most notable example of this is the sugar tariff during the 1930's, which cost consumers on the average of $273,632,755 a year.[2] The reasons for these huge figures become clear when it is realized that domestic producers of sugar refine only about 20 percent of the consumption, thus raising the price of all imported sugar by the amount of the tariff. It was estimated by the Temporary National Economic Committee in 1941 that at that time it was fair to place the approximate amount of the tariff subsidy for all products at a conservative figure of $1 billion a year.[3]

Labor, too, has been subsidized in various ways. During the early part of the New Deal administration, the work relief programs of the Works Progress Administration and the Public Works Administration, and the tree-planting activities of the Civilian Conservation Corps were all forms of temporary subsidies, granted to keep our economy from bogging down. These subsidization policies were followed by others of a more permanent character such as social security benefits and low-cost public housing. Again looking at the Federal budget account for "Current Expenses for Aid and Special Services," Government expenditure for labor in the years 1949 to 1955, inclusive, was $1,435,000,000.[4] These social security benefits including unemployment insurance and old-age pensions can be justified on the grounds of assuring the industrial working population of a more regular and somewhat augmented participation in the national real income produced annually.

Footnotes at end of speech.

During the same 6-year period, according to the same source, the Federal Government made payments to the veterans of the United States Armed Forces of over $32 billion, most of which was spent immediately and fell directly into the cash registers of business.

Figure 1 illustrates the relative position and magnitude of the various types of direct and indirect subsidies, as defined earlier, paid by the Federal Government in the fiscal year of 1955. These figures are designed to represent conservative estimates compiled by the House Committee on Agriculture and other governmental agencies. The majority of subsidies illustrated in the exhibit are mostly of the indirect type, since the Government is seldom frank about calling a subsidy by its true name. Of particular interest and significance is the small spectrum at the far right in the exhibit. This minute column represents the tiny $2 million subsidy paid in 1955 for helicopter service.

If time and the listener's patience permitted, a list of subsidy recipients could be expanded. However, since we are considering the aviation industry and helicopters, let us note first how the transportation industry as a whole has been subsidized and then turn our attention to helicopters.

TRANSPORTATION SUBSIDIES

Promotional activities and financial aids by the Federal Government for the development of transportation facilities have a long history which dates back to the early periods of constructing canals, harbors, roads, and railways in this country. State and local agencies have likewise participated widely in fostering improved means of transportation to meet their expanding needs and to enhance their agricultural, commercial, and industrial opportunities.

While George Washington was President, subsidies for canals and roads were voted by Congress and later the Pony Express was also supported by this means. From 1850 until 1871, railroads were granted land in the great undeveloped regions of the West and Midwest, to aid in opening up that territory for settlement. By 1930 total land grants to the railroads by Federal and State agencies aggregated 176,030,259 acres, at a total value of approximately $422 million.[5] In addition, cash contribution and stock and bond subscriptions came to nearly $200 million. As a result of the increased value of the lands donated, in 1950 the total value of all aids received by the class I railroads was $1,070 million, representing about 4 percent of the investment in this class of railroad.[6] This figure compares with a subsidy of close to 85 percent in the case of waterways. Although the railroads under present conditions do not receive financial help from the Government, it has been shown that they did receive considerable aid in and during their period of infancy with the help of strong political pressure groups in Congress.

Shipping over our inland waterways has received and is receiving subsidies in large amounts. Although these activities date back more than 160 years to 1790, it is significant that the great bulk of the aggregate expenditures has occurred in comparatively recent years—over three-fourths since 1920 and more than 60 percent since 1930. Findings of a Government agency investigating the subject indicate that in the 160 years, total waterway expenditures for river and harbor improvements amounted to nearly $4 billion. Unlike the railroad land grants, there are no offsets to this subsidy, and the users of the waterways (except for the Panama Canal) pay nothing for their privilege. Since the Army Corps of Engineers maintains some 190 harbors, 400 locks and dams, and 27,000 miles of improved channels, it can be seen why the annual subsidies spent in keeping the waterway system in operation are substantial.[7]

Footnotes at end of speech.

Subsidies for ocean shipping are of a different nature and now have the distinction of being called by their true name in the Merchant Marine Act of 1936. Prior to that year, ship operators had been subsidized by authority granted the Postmaster General to make grants-in-aids to ocean shipping, without requiring the transportation of a single pound of mail. From 1847 to 1936 such subsidies amount to over $55 million.[8] Since 1936, the Federal Maritime Board is authorized and directed, when requested by a steamship operator, to make up any disadvantage which an American-flag company might suffer in competition with foreign operators. Since the latter are frequently able to offer lower rates because of lower construction and operating costs of their vessels, our shipping would be at a disadvantage without the subsidies granted. In the 6 prewar years 1936–42, the total net operating subsidy (after certain repayments) was $17 million. In the 7 postwar years 1947–54 (after the program had been suspended and renewed) the comparable figure was $203 million. Currently, prospective subsidies are running between $65 million and $70 million a year.[9]

Under the same legislative act, the Government may contribute, as a construction differential subsidy, the difference between the cost of building vessels in American and in foreign yards. This contribution is nominally limited to a third of total cost. But where there is convincing evidence that American yards cannot compete on this basis, it may be raised to half. And where a ship is designed to include features that increase its potential usefulness for national defense, the fraction may be even higher. The liner *United States* was built at a cost of $76,800,000. Of this $43,900,000 was put up by the Government as a subsidy and only $32,900,000 by United States Lines.[10] This subsidy payment alone was more than the entire domestic aviation industry received during 1955.

Commercial highway users, namely trucks and buses, have been and are being subsidized to the extent that the registration fees, toll charges, and fuel or special taxes paid to the governments providing the roads and highways do not cover the share of maintenance costs assignable to the commercial vehicle operators. According to a public-aid study made 3 years ago, these costs amounted to $45 billion from 1921 to 1950.[11] Much of the use made of highway facilities is by private automobiles and military traffic, a circumstance which complicates the problem of determining what portion of the highway costs should be borne by truckers and bus operators.

AIR TRANSPORTATION AID

Turning now to air transportation, we find that governmental aid has taken four forms: airways, airports, and other navigational facilities have been furnished; aeronautical research and development have been carried on; taxation concessions have been given; and airmail payments have been made far in excess of what could be reasonably considered as compensation for mail service alone.

Since 1926, the Federal Government has furnished the domestic airlines with various airway aids, such as intermediate landing fields, lights, radio markers, weather reports, communication facilities, and recently, instrument landing systems and radar controls. These aids have been supplied at no cost to the users, which include private and military flyers as well as commercial pilots. Airports have been constructed and maintained by both the Federal and local governments, with only a portion of the costs assignable to the scheduled airlines covered by landing fees and other payments. During the 1930's alone, various Government agencies spent $704 million building or improving 3,029 airports, exclusive of military airports on which was spent another $400 million.[12] In the fiscal year 1955, this subsidy is currently costing the Federal Government around $90 million annually.[13]

Aeronautical research is conducted for the benefit of aviation in general and not for commercial air transport alone. While this class of user undoubtedly derives great value from the activities of the National Advisory Committee for Aeronautics, which carries on this research, it is impossible to measure the amount of these benefits in terms of dollars and cents.

Taxation concessions to air transportation fihave been granted by many States but not by the Federal Government. Gasoline used by aircraft is either declared tax exempt or a partial or total tax refund is given the purchasers in several States having an aviation fuel tax. In some instances a third form of concession is given through taxing aircraft gasoline at a lower rate than that applying to other motor fuels.

Last, but by no means least, our airlines have been subsidized through payments made by the Post Office Department. The air carriers have occupied a unique position in the field of transportation, since they are the only type which, by act of Congress, were set up in business largely by mail pay. This policy is almost entirely confined to our country although foreign airlines have received other forms of aid from their respective governments. These forms include government investment of capital, direct cash payments, provision of flying equipment and ground facilities, taxation exemptions, and training of personnel at government expense.

Aid to air transportation through mail pay had its origin some 30 years ago, when these payments were more than 80 percent of total airline revenues. Thus the Federal Government, once again, chose to subsidize an infant industry which was vital to sound national transportation policy. It should be noted that not once was the early airline industry placed in an experimental stage in order to improve its cost structure or competitive position. Rather it grew rapidly, regardless of high operating costs, at the expense of the Government. Through fiscal year 1954 the airline industry had received over $300 million in mail-pay subsidies alone.[14] Therefore, it is easy to conclude that during most of the past 30 years, mail-pay subsidies have been the lifeblood of the air-transport industry.

A glimpse of the present airline-subsidy picture may be seen in figure 2. This figure illustrates the comparative subsidy as a percent of total mail pay for the fiscal year 1955. It is significant to note that 94 percent of the mail pay received by the local service carriers is a subsidy. This compares with 86.5 percent for helicopters, and 57 percent for the average of the entire industry. A slightly different comparison is shown in figure 3. In this figure the actual dollar amounts of mail pay for the different classes of domestic air-carrier groups are separated into two groups—service pay and subsidy. This new plan of separation went into effect late in 1951 and gives a much clearer picture to airline subsidies. Thus it may be seen in this exhibit that the local service carriers (groups 3–6) receive the majority of subsidy payments. For comparative purposes, the helicopter lines are more nearly like these feeder or local service carriers than domestic trunk carriers with respect to two important operating ratios, percentage of scheduled miles completed, and average daily utilization of revenue-producing aircraft. Furthermore, both of these types of carriers conduct a short-haul, common-carrier service and have a great deal of the same characteristics and problems. The first local local-service airline was certificated by the Civil Aeronautics Board in 1946 to provide, on a regional basis, air service among the smaller communities and to link these small communities with major terminals. The local-service carriers have grown very rapidly since 1946 despite high operating costs, and currently are receiving a subsidy of over $23 million annually.[15]. In comparison, the first helicopter service authorized by the Civil Aeronautics Board was certificated in 1947. Only 2 more such helicopter services have been authorized and all 3 are on an experimental basis at the present time, receiving less than $3 million annually.[16]

The major reason for this limitation being placed on the growth of the helicopter industry is the high operating costs in comparison to other forms of transportation. Yet the Honorable Oswald Ryan, former member of the Civil Aeronautics Board, stated in a speech before the National Aeronautics Association in late 1954 the following comments concerning the operating costs of the local-service carriers:

"Now the problem of accomplishing lower operating costs * * * is a difficult one in times like the present. But operating expense is only one aspect of the local-service problem, although it is an important one. The other aspect is the necessity for obtaining greater revenues, and it is my own opinion that the most important problem in the local-service picture is the enlargement of the carriers' revenues. I doubt very much if we may expect, under present conditions, any very great improvement in costs, but there is plenty of room for development of more revenues, and this means more traffic from the communities they serve." [17]

It would seem that this statement should also be applied to the helicopter services. Why should one type of air carrier be exempt from the importance of maintaining a low-cost structure and receive a tremendous subsidy payment, while a similar type of carrier is penalized for incurring relatively high operating costs and operated on an experimental basis still receiving a very small subsidy?

Similarly in January of this year, Mr. Raymond Sawyer, Executive Director of the Civil Aeronautics Board, stated in a speech before the eighth annual convention of the Helicopter Association of America regarding future CAB policy concerning helicopter subsidy:

"When American industry has met that challenge, and we have a multiengine, economic, 35- to 50-place helicopter, which has a reasonable chance of operating commercially without Government subsidy. * * * I am certain you will find the Civil Aeronautics Board not only willing but anxious to join with you in doing its part to further the new dimension of air transportation." [18]

In the light of past subsidy payments to the transportation industry, what would have been the effect of such a policy upon the growth and development of the American maritime and aviation industries in their period of infancy? Why must the helicopter industry be placed in an experimental category until it finds a helicopter which can operate commercially without Government subsidy? Sound national transportation policy, as well as national defense, requires that the helicopter industry be allowed to expand now, and become an aggressive and progressive industry.

The Civil Aeronautics Act of 1938 gave the Civil Aeronautics Board the authority to determine and prescribe the rates of compensation to be paid the carriers. In setting the rates the Board was directed to take into consideration "* * * the need of each such air carrier for compensation for the transportation of mail sufficient to insure the performance of such service, and together with all other revenue of the air carrier, to enable such air carrier under honest, economical,

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

and efficient management, to maintain and continue the development of air transportation to the extent and the character and quality required for the commerce of the United States, the postal service, and the national defense." [19]

If the helicopter was not a vehicle of such potential and value in the civil defense, disaster, and transportation service, then it would not be deserving of Government support, but such is not the case. As a past example of subsidy that paid tremendous dividends in both money and life, let's recall to mind the civilian pilot training program started by far-thinking and courageous men in the 1930's over much economic objection. The value of having trained pilots when war broke out could not be measured in dollars. How much it shortened the war; how many lives it saved, can only be a guess. In the event of national disaster the helicopter will be one of the few remaining links in transportation and communication. Should we wait until this day to start building and metropolitan helicopter fleets, the maintenance facilities, the trained personnel, the heliports, the routes and the navigational aids? Should we be penny-wise and pound-foolish?

In conclusion, having considered the billions of dollars spent by the Federal Government to subsidize various segments of the American economy, having considered the past subsidies given to the transportation industry to foster its development in its early infancy, having considered the relatively large subsidy payments made to the local service air carriers, and having considered the responsibility of the Civil Aeronautics Board to continue the development of air transportation, I believe that it is in the interest of public welfare; the interest of national defense; and the interest of consistent national transportation policy that we justly ask the question, Why no more helicopter subsidy?

Declaration of Convictions by Citizens of Prince Edward County, Va.

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. ABBITT. Mr. Speaker, the people of Prince Edward County, Va., faced with the gravest crisis ever faced by the people of that county, have made their decision, a decision with which I am in entire accord and one that I am proud of.

As a result of the decision of the so-called Supreme Court of the United States of America on May 17, 1954, the school system of our State was wrecked; the rights of our people mutilated; and the sovereignty of our State desecrated. Somewhere along the line, it become necessary to meet the issue head-on. This the people and officials of Prince Edward County have done. They have drawn the line. They have gone about the matter in a calm, deliberate, and Christian manner. It remains to be seen whether the officials of this State and the other people in the State have the intestinal fortitude, the will to preserve our way of life, and the ability to analyze the situation so as to preserve the rights of our people and the sovereignty of our State by standing four-square behind the citizens of Prince Edward County.

I hereby call on all people of this great country of ours, who believe in the freedom of the individual, who believe in the dignity of the individual, and who believe that the government is a servant of the people, to take time enough to thoroughly understand the situation confronting the people of the South and to search their hearts and souls in an endeavor to realize fully the seriousness of our problem and to make up their minds whether or not they desire the individuals and the States to be taken over and molded into creatures following the political philosophy of an arrogant, despotic Supreme Court of the United States of America which no longer represents an arm of the Federal Government that one can look upon with pride and a feeling of security, but rather one that we must look upon with alarm and shame.

Under leave to extend my remarks, I desire to include herewith a copy of the affirmation signed by over 4,000 citizens of Prince Edward County, a copy of resolutions passed by the Board of Supervisors of Prince Edward County, and a copy of the declaration of convictions adopted on May 3, 1956, by the citizens of Prince Edward County, Va., in a mass meeting assembled at Farmville, Va., which are as follows:

AFFIRMATION

We, the undersigned citizens of Prince Edward County, Va., hereby affirm our conviction that the separation of the races in the public schools of this county is absolutely necessary and do affirm that we prefer to abandon public schools and educate our children in some other way if that be necessary to preserve separation of the races in the schools of this county.

We pledge our support of the Board of Supervisors of Prince Edward County in their firm maintenance of this policy.

NOTE.—This affirmation has been signed by 4,216 citizens over 21 years of age in the county which is 1,000 more than the total qualified registered voters.

RESOLUTIONS

At a regular meeting of the Board of Supervisors of Prince Edward County held at the courthouse thereof, on the 3d day of May 1956, at which meeting all members of the board were present, the following resolutions were adopted unanimously:

I

Be it resolved by the board of supervisors, That we do hereby express to the people of Prince Edward County our gratitude that they have made known to this board so clearly their views upon the grave problems with which we are confronted with respect to our schools. The support of our people makes the burden of our responsibilities lighter and the course of our future action clearer. We trust the people of the county will continue to make known to us their views as we go forward to meet our problems together.

II

Be it resolved, That the Board of Supervisors of Prince Edward County as the elected representatives of the people of Prince Edward County, do hereby declare it to be the policy and intention of said board in accordance with the will of the people of said county that no tax levy shall be made upon the said people nor public revenue derived from local taxes shall be appropriated for the operation and maintenance of public schools in said county wherein white and colored children are taught together under any plan or arrangement whatsoever.

III

Be it resolved by the Board of Supervisors of Prince Edward County, That the Governor of Virginia, the superintendent of public instruction, and the State Board of Education are hereby requested to pay any State revenue to the School Board of Prince Edward County in support of public schools in accordance with the policy adopted by the board of supervisors of said county for the payment of local revenue to said school board.

IV

Be it further resolved by the Board of Supervisors of Prince Edward County, That the "Affirmation" signed by citizens and school patrons of the county is hereby received and directed to be filed with records of the board and it is further resolved that the "Statement of Convictions and Purposes" adopted by the citizens of this county present at this meeting (being approximately 250 in number) be received by the board and it is directed that the same be filed with the records of the board.

And the clerk of this board is directed to prepare copies of the affirmation with a statement attached thereto showing the number of the citizens whose names are signed thereto together with copies of the "Statement of Convictions and Purposes" and that one copy of each be transmitted to

the School Board of Prince Edward County, the Governor of Virginia, the superintendent of public instruction, the attorney general of Virginia, the State Board of Education, Representative J. H. Daniel and Senator J. D. Hagood, together with a copy of this resolution, and of the resolution this day adopted stating the policy and intention of this board with respect to the levy of taxes and appropriation of local revenue for school purposes.

V

Be it resolved by the Board of Supervisors of Prince Edward County, That the Governor be and he is hereby respectfully requested not to call a special session of the Legislature of Virginia for the purpose of presenting any legislative plan which would require, permit, or authorize under the laws of Virginia the teaching of white and Negro children together in the public schools of Prince Edward County.

HORACE ADAMS,
Clerk of the Board.

DECLARATION OF CONVICTIONS

(Adopted May 3, 1956, by citizens of Prince Edward County, Va.)

The power of the Federal courts being once again invoked against the administrative officers of our public schools for the purpose of causing children of the white and Negro race to be taught together therein, we the people of Prince Edward County, Va., deem it appropriate that we should make known to all men our convictions and our purposes.

We first affirm our deep and abiding loyalty and devotion to our country and its institutions. We acknowledge the Constitution to be the supreme law of the land and the bulwark of our liberties, ever subject to the sovereign powers reserved by it to the States and to the people. We know that the liberties of all Americans of all races rests upon the Constitution and the division of powers ordained therein. We deem it the obligation of free men to preserve the powers reserved under the Constitution to the States and to the people and to preserve the constitutional separation of the powers of government in the legislative, executive, and judicial branches separately.

We believe that the educational, social, and cultural welfare and growth of both the white and Negro races is best served by separation of the races in the public schools.

We believe the tranquillity, harmony, progress, and advancement of the Negro and the white races, who must live together in Virginia and in Prince Edward County, is absolutely dependent upon the mutual good will and mutual respect of each race for the other.

We believe that a policy which undertakes to force the association of one race with the other against the will of either, by court decree under threat of fine or imprisonment, is destructive of mutual good will and respect, breeds resentment and animosities, and is injurious to the true interests of both races.

EDUCATION PARENTS' DUTY

We believe that the molding of the minds and characters of our children is the sacred duty and the priceless natural right and obligation of parents.

Freedom of decision with respect to these considerations touching as they do the most intimate relations of the people of our community and the most cherished natural rights and duties of parenthood is absolutely essential to the maintenance, operation, management, and control of our public schools. We conceive this freedom to be among the sacred rights "retained by the people" under the ninth amendment of the Federal Constitution.

Among the reserved rights and powers of the States guaranteed to the State of Virginia under the 10th amendment, is the power to maintain racially separate public schools. We do not perceive that the exercise of this power has ever been prohibited to the States by any provision of the Federal Constitution. We believe that this power can be prohibited to the States only by the States themselves. To concede the right of a Federal court to withdraw this power from the individual States is to concede that all rights and powers of the States and of the people are enjoyed at the sufferance of the judiciary and that the guaranties of the liberties of the people are no longer fixed in the Constitution itself.

We do not intend to speak disrespectfully. The gravity of the issues requires that we speak plainly. By its decision of May 17, 1954, and subsequent decisions the Supreme Court of the United States has flagrantly exceeded its lawful and intended authority, trespassed upon the rights of the people and dangerously encroached upon the reserved rights of the States.

Holding these convictions, it is not possible for us to submit the children of Prince Edward County to conditions which we most deeply and conscientiously believe to be pernicious. Nor can we as the heirs of liberty, purchased at so great a sacrifice by those who have gone before, submit to this judicial breaking of the constitutional chains forged to restrain tyranny for all generations of Americans. We, therefore, pledge ourselves firmly to use every honorable legal and constitutional means at our command to oppose this assault upon the Constitution and upon the liberties of our people.

PROHIBIT FUNDS

Therefore, if courts refuse to recognize these most fundamental, intimate, and sacred rights and the profound necessity that they be respected, then we proclaim our resort to that first American tenet of liberty—that men should not be taxed against their will and without their consent for a purpose to which they are deeply and conscientiously opposed. We ask our board of supervisors as our legislative representatives to proceed at the appropriate time to enact and adopt whatever ordinances and resolutions may be required to prohibit the levying of any tax or the appropriation of any funds for the operation of racially mixed schools within Prince Edward County to the end that all public schools of the county may be closed upon the entry of a court order requiring the mixing of the races in any school of this county.

We further call upon our school board to make known to the district court the determination of the people of Prince Edward County here expressed. The issues are too profound and the consequences to our people too grave to leave any doubt of the impossibility of our compliance or of the resolute mind of our people. An order to mix the races in our schools can only result in the destruction of the opportunity for a public education for all children of this county.

MONTH-TO-MONTH BASIS

We also call upon the Governor of Virginia and all officials of the Commonwealth in control thereof to pay State revenue to Prince Edward County for school purposes in accordance with the policy adopted by the board of supervisors for the payment of local funds for school purposes, thus and thereby giving effect to the interposition resolution of the General Assembly of Virginia, adopted on February 1, 1956, fixing the policy of this Commonwealth, "to take all appropriate measures, honorably, legally, and constitutionally available to us, to resist this illegal encroachment upon our sovereign power."

It is with the most profound regret that we have been forced to set this course. The history of the people of Prince Edward County demonstrates their love and appreciation of the value of educational opportunity. We act with no animus toward any man or body of men. We do not act in oppression of the Negro people of this county. We propose, in every way that we can, to preserve every proper constitutional right of all the people of Prince Edward County. However deeply convinced as we are of the wrongness and imprudence of intimate racial integration, we cannot and will not place merely supposed rights, newly created by judicial mandate, above the conscience of our people and above rights and powers, which for generations have been exercised honorably and constitutionally by the people of our county.

It is our earnest hope that other counties and the Commonwealth of Virginia will repudiate the spurious allurements of expediency and stratagem in order that Virginia may stand as she has always stood, dedicated to the protection of the rights of a free people against tyranny from any quarter. If we fail in this solemn obligation now our rights will be extinguished one by one.

West Virginia Honors a Statesman—Remarks of Hon. Robert C. Byrd Before the West Virginia Society Honoring the Memory of the Late Senator Harley M. Kilgore

---

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to have included the following tribute to the late Senator Harley M. Kilgore of West Virginia delivered by my colleague the Honorable ROBERT C. BYRD before the West Virginia society on the occasion of their paying tribute in absentia to a great statesman:

My fellow West Virginians:

"Near a shady wall a rose once grew,
Budded and blossomed in God's free light,
Watered and fed by the morning dew,
Shedding its sweetness day and night.

"As it grew and blossomed fair and tall,
Slowly rising to loftier height,
It came to a crevice in the wall,
Through which there shone a beam of light.

"Onward it crept with added strength,
With never a thought of fear or pride.
It followed the light through the crevice's length
And unfolded itself on the other side.

"The light, the dew, the broadening view
Were found the same as they were before;
And it lost itself in beauties new,
Breathing its frangrance more and more.

"Shall claim of death cause us to grieve,
And make our courage faint or fall?
Nay! Let us faith and hope receive;
The rose still grows beyond the wall.

"Scattering fragrance far and wide,
Just as it did in days of yore,
Just as it did on the other side,
Just as it will for evermore."

Tonight we honor the life and memory of one of West Virginia's greatest men. The late Hon. Harley M. Kilgore was born in Harrison County and reared in Marion Coun-

ty. He was a graduate of the West Virginia University law school, and he moved to Beckley in 1915 and established a law practice. There he married Lois Lilly. He served in the United States Army during and after the First World War. He was elected Judge of the Criminal Court in Raleigh County, and he served 8 years in this office until he was elected to the United States Senate in 1940. Senator Kilgore served with distinction in the United States Senate, and he became known, respected, and loved, not only by his fellow Americans but also by the people of many nations.

The scriptures say, "A man that hath friends must show himself friendly." Harley Kilgore had a multitude of friends. Someone has said, "There can be no true greatness without humility." Harley Kilgore possessed this virtue. In him the elements of love and humility and kindness and brilliance were so mixed that it truly can be said: Here was a man. "When comes such another?"

He was the kind of man Emerson had in mind when he wrote:

"Not gold, but only men, can make
A nation great and strong,
Men, who for truth and honor's sake,
Stand fast and suffer long.

"Brave men who work when other men sleep,
Who dare while others fly,
They build a nation's pillars deep,
And lift them to the sky."

I am told that Benjamin Franklin's favorite scriptural quotation was a passage from Proverbs: "Sees thou a man diligent in his business? He shall stand before kings." Harley Kilgore was diligent in his business, and he walked with kings and presidents and the great men of the earth; yet, he never lost the common touch, and perhaps it was this that so endeared him to the people of our own State. They thought of him as a true son of the mountains; one who had breathed the fresh air of liberty one who had traced the greatness of his Creator in the stars of West Virginia heavens; one who had known the pain and sweat of honest toil; one who had experienced the joys, the sorrows and the sufferings that crowd the common way of life.

It is not the privilege of every man to build for himself a great shaft of granite or to engrave his name upon a plate of bronze, but it is within the power of each of us to so live as to plant an everblooming flower within the bosom of all whom we meet. Harley Kilgore so lived, and the fragrance of the flower of his life will never cease to shed itself within the lives of those who knew him. It was Tennyson who said, "I am a part of all that I have met." Each of us is a part of Harley Kilgore.

He seemed to be dedicated to the task of serving others, and this could well have been the secret of his greatness.

" 'How far away is the temple of fame?'
Said a youth at the dawn of the day;
He toiled and dreamed of a deathless name,
And the hours went by, and the evening came,
Leaving him feeble, and old, and lame,
To plod on his cheerless way.

" 'How far away is the tmple of good?'
Said a youth at the dawn of the day;
And he strove in the spirit of brotherhood
To help and succor as best he could,
The poor and unfortunate multitude,
In their hard and dreary way.

"He was careless alike of praise and blame,
But after his work was done,
An angel of glory from heaven came,
And wrote on high his immortal name,
To proclaim this truth that the temple of fame,
And the temple of good are one.

"For this is the lesson that history
Has taught since the world began;
That those whose memories never die,
But shine like stars in the human sky,
And brighter grow as the years roll by,
Are men who live for man."

Several months ago the West Virginia Society decided to honor Senator Harley M. Kilgore as West Virginia's most outstanding, most noteworthy, most derserving son of the year, and so it was planned to present him with a token of appreciation and esteem upon this occasion. But the Creator and Giver of life altered these plans, and so this evening we pay tribute to one who is no longer with us but the memory of whom will always live in our hearts. His companion is with us, and so we have chosen to present to her that which we had intended to give to him. With Mrs. Kilgore here tonight are her son and daughter and Senator Kilgore's sister. We are happy that all of them could be present.

As I prepare to present the plaque to Mrs. Kilgore, may I say to this audience that Senator Kilgore was my neighbor. Raleigh County was our home. I had an opportunity to observe his life, and mine has been enriched thereby.

"The roses red upon my neighbor's vine
Are owned by him, but they are also mine.
His was the cost, and his the labor too,
But mine, as well as his, the Joy—their loveliness to view.

"They bloom for me, and are for me as fair
As for the man who gives them all his care.
Thus I am rich because a good man grew
A rose-clad vine for all his neighbors' view.

"I know from this that others plant for me,
That what they own, my joy may also be.
So why be selfish, when so much that's fine,
Was grown for me upon Harley Kilgore's vine."

Mrs. Kilgore, we were proud of your husband, and we are proud of you and your family. I know that I speak the thoughts of every person present. On behalf of the West Virginia Society, I present you with this plaque as a token of the love and the pride possessed by all West Virginians whose hearts have been warmed and made glad by the services of your illustrious husband. May you cherish it forever, and may it not only recall to your memory the many good things he did for all of us but also may it constantly remind you of the way we feel toward West Virginia's great statesman and great son.

The Desert Game Range, Nevada

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. YOUNG. Mr. Speaker, the announcement made recently that the United States Air Force is giving careful study to the possibility of expanding its gunnery ranges in southern Nevada has aroused great interest on the part of the citizens of my State. The reason for this that one proposal under consideration by the Air Force would involve taking over 680,000 more acres from the desert game range, a large portion of which is already being used by the same agency.

While in Nevada recently, I met with Frank C. Craighead, Jr., refuge manager of the Desert Game Range, United States Fish and Wildlife Service, who is well acquainted with the area now under study by the Air Force, and who in response to my request sent me a letter which well summarizes the values which may be impaired if the Air Force decides that this area should be acquired and its request is approved. Because Dr. Craighead's letter so well describes the problem and values involved, under leave to extend my remarks, I would like to insert it at this point:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
FISH AND WILDLIFE SERVICE,
DESERT GAME RANGE, P. O. BOX 432,
Las Vegas, Nev., April 20, 1956.

Hon. CLIFF YOUNG,
Representative at Large, House of Representatives, 421 House Office Building, Washington, D. C.

DEAR CONGRESSMAN YOUNG: In the course of our conversation of April 3 you asked if I would briefly summarize for you the biological and recreational values of the Desert Game Range. As you know I feel that the people and particularly the sportsmen of Nevada should be made fully cognizant of these values in view of the pending Air Force withdrawals.

From the biological standpoint the Desert Game Range has three vital functions:

1. It serves as a refuge or haven for preserving and protecting a rare, possibly vanishing species, the Nelson bighorn mountain sheep, along with a relatively untouched segment of its desert environment.

The Desert Game Range was set aside by Executive order primarily for the preservation and protection of the Nelson bighorn mountain sheep. To date it has admirably served this purpose for the sheep have increased from an estimated 300 to an estimated population of several thousand. The majority of these animals are to be found in the Sheep Mountains of the Desert Game Range. It is this entire mountain range and sheep habitat that the Air Force now wishes to take over. It currently supports the single largest concentration of Nelson bighorn in existence.

2. It serves as a population reservoir for restocking nearby mountain ranges and for providing transplants to repopulate former habitat in the Southwest.

The sheep of the Desert Game Range have now more or less reached the carrying capacity of the area and are slowly moving out to repopulate adjacent mountain ranges. We are just attaining one of the primary goals for which the refuge was established.

We have underway a major trapping and marking program. Each year a certain number of these trapped bighorns will be transplanted to former or to low density sheep habitat in Nevada and neighboring States. The Desert Game Range will be the nucleus for obtaining the animals needed to repopulate former mountain sheep habitat. It is in fact the only area with a sufficient population to do this.

3. It provides an exceedingly important study area for research relative to the ecology of this splendid game animal. Comparatively little is known about the desert bighorn and conditions now existing on the Desert Game Range offer an unusual and possibly the only opportunity to systematically gather the biological data that is essential to the proper management of this animal throughout its range. The needed information cannot be gathered in small relatively restricted areas or in areas of low sheep population.

The Nelson bighorn sheep found in the Sheep Mountains of the Desert Game Range

are a self-contained, self-sufficient population living in a relatively untouched wilderness-type habitat. This is a rare condition among populations of many species of big game animals today. A great deal will be lost if this opportunity for a field research study is abandoned. It cannot be carried out in an area where Air Force restrictions are imposed. We have learned this the hard way in regard to the Pintwater Range, now within an Air Force restricted area.

The United States Fish and Wildlife Service together with the Nevada Fish and Game Commission and other cooperating agencies has initiated a 3- to 5-year field study relative to the management of the Nelson bighorn sheep. The Fish and Wildlife Service alone plans to put two two-man teams working on this full time. We feel that the optimum point of population recovery has been attained and that now is the time to concentrate on gathering this important management data on the desert bighorn. The value of this information to future Nevada sportsmen and conservationists can hardly be overestimated. It will play an important part in developing a unique and well-rounded outdoor recreational program for this rapidly growing part of the country. The day is not far in the future when the mention of the desert bighorn sheep will be immediately associated with Las Vegas and the Desert Game Range just as elk or wapiti are now associated in the public eye with Jackson Hole and Yellowstone Park.

We anticipate, in fact have recommended annual controlled sheep hunts in the Sheep Mountains of the Desert Game Range. We have now reached a point where the scientific management based on an active field research program the available trophy hunting in the refuge as well as in adjacent repopulated areas should steadily increase. In connection with these hunts much practical biological data can and will be gathered. Many Nevada sportsmen have been anxiously awaiting this time and through their interest and support have contributed to its attainment.

From the standpoint of outdoor recreation the entire desert game range has tremendous untapped resources. I believe its value can be better appreciated if I comment first on this resource in a general way.

One of the major and ultimate aims of much of our wildlife, timber, land, and water conservation programs is to provide a variety of outdoor recreational opportunities and facilities for the American people. This may take the form of hunting, fishing, picnicking, camping, rock hunting, hiking, riding, or the purely esthetic appeal of a day spent outdoors close to the land, the water, or the beauties and mysteries of nature and of life itself. Many of these values, though great, are intangibles and have fared poorly in the past when pitted against monetary values or military needs. Such recreational values, however, are with better understanding becoming more and more recognized as the principal resource of many areas.

The system of wildlife refuges contributes materially to this type of recreation in both a direct and an indirect way. They preserve and protect many forms of our renewable resources. Because of its large size the desert-game range is providing and can continue to furnish a considerable and varied opportunity for outdoor recreation.

Outdoor recreation is an American heritage. It is the natural followup to the pioneer experience of the explorers, trappers, prospectors, cattlemen, homesteaders, and others who built our country. This pioneer experience has had a profound influence in shaping the destiny of our people. It developed the qualities of courage and enterprise that was necessary to the tremendous undertaking. If the character of our people is to continue in the mold of the past, fostered largely by the pioneer life in early America, it is essential that we preserve this outdoor heritage.

Nevadans who have prospected in the upper reaches of the Sheep Mountain canyons, who have hiked or ridden beneath the towering yellow pines, in not one but in numerous "hidden forests," who have stalked and watched a band of majestic wild rams among the junipers and pinon pines, or out on the rocky ledges where they are so much at home, well realize what loss of this area will mean to Nevada citizens as well as to the millions of tourists, many of them outdoorsmen. In 1955 alone, Forest Service and Fish and Wildlife Service personnel estimated from records that the area embraced by the desert-game range had a total use of over 150,000 visitor days. This is only a beginning.

Throughout the country, resources for outdoor recreation are decreasing, although our population is rapidly increasing. Urban communities in many areas now face a serious shortage of outdoor recreational areas and facilities. This is not yet the case in southern Nevada, but a permanent loss of potential recreational lands combined with an unusual population and industrial growth could readily bring this about. The inseparable biological and recreational values of the nearby Sheep Mountains of the desert-game range are essential to the health and welfare of an expanding Las Vegas community. Nevadans are indeed fortunate that this large area is now being held and managed for them by the Federal Government with a realistic knowledge of its present and future value to our citizens.

Little would be gained, and much would be irrevocably lost should this unique bit of desert land be turned over to the Air Force as a bombing range and restricted area.

I appreciate your interest in getting the facts on both sides of this controversial issue. I know that you will consider the values I have mentioned before committing yourself to either side of the question and that your stand will be taken only after a weighing of the values in regard to alternatives and to the overall welfare of our citizens. I hope that the Air Force's arguments for withdrawal can be made public.

I hope that the information I have given you will prove helpful. If I can be of further aid, please do not hesitate to call on my services.

Sincerely,

FRANK C. CRAIGHEAD, Jr.,
Refuge Manager, United States Fish and Wildlife Service, Desert Game Range.

Statement by George McLain, President, National Institute of Social Welfare

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement made before the Senate Committee on Foreign Relations by Mr. George McLain, president, National Institute of Social Welfare:

STATEMENT BY GEORGE MCLAIN, PRESIDENT, NATIONAL INSTITUTE OF SOCIAL WELFARE, MAY 18, 1956

To the Honorable Members of the Senate Committee on Foreign Relations:

Mr. Chairman and members of the committee, my name is George McLain. I am appearing before you in the capacity of President of the National Institute of Social Welfare with offices located at 300 New Jersey Avenue SE., Washington, D. C., and with western headquarters located at 1031 South Grand Avenue, Los Angeles, Calif.

As a citizen of these United States and as the representative for a quarter of a million members of old age pension and social welfare organizations in this country, I wish to raise my voice in protest against certain distinct inconsistencies in the attitude of our Government.

We, the inarticulate countrymen of yours, find it very difficult to understand your benevolent and extravagant concern for the peoples of the world while at the same time allowing misery and want to exist among some 16 million needy Americans comprising those on social security public assistance, direct relief, unemployed, migratory workers and low-salaried heads of large families.

President Eisenhower and his aides are asking that Congress appropriate $4,300,000,000 for economic and military aid to foreign countries. This means a further tightening of the belts of the American people with a resultant lower standard of living.

The sacrifices that we Americans have been called upon make for other countries since World War I under the guise of national security is almost too fantastic to believe. Had our foreign giveaways been used, instead, for improvements in our own country such as modern highways, dams, sanitation, medical research, health institutions and hospitals, public housing, and schools, it would have assured the American people of a prosperous way of life that the people of all the world, instead of fighting each other, would have been too busy trying to copy us.

We spend billions of dollars each year directly and indirectly trying to impress every other human being on earth with our superior form of government, our universal prosperity. Our international byword seems to have changed from "land of plenty for all" to "land of plenty for all and then some." These people in foreign nations are supposed to think that such is the result of our form of government.

But, I ask you, what is the good of spending all of these billions of dollars when the salfsame foreign people can pick up their newspaper most any day and read where some poor soul in this country has died of malnutrition or starvation?

There is a great nationwide resentment, gentlemen, over our Government being so lavish to foreign countries while neglecting the plight of our needy here at home.

President Eisenhower has asked Congress to increase foreign aid and keep it flowing for years to come.

He proposes spending $4,300,000,000 next year for foreign aid—of this huge amount $2,500,000,000 would be for direct military support, and $1,800,000,000 in economic and technical aid for the nations lined up with the United States.

Sometime back, a couple of Russian leaders by the name of Khrushchev and Bulganin made a visit to India. They made a tour of the country and were well received. In their speeches they blasted the United States and made a lot of promises on what the Soviet Union could do for India.

According to our newspapers at that time, our State Department fell apart like a dollar watch. The very fact that Khrushchev and Bulganin were cheered and applauded along their way in India by crowds of people seemed to react on our State Department, headed by Secretary of State John Foster Dulles, like a hot poker.

Now, it's not as if we have been neglecting India while helping all of the other nations friendly to us. Far to the contrary, we have during the past years appropriated and contributed more than $324 million for

economic aid to India on top of which in 1951 we gave them a loan of $190 million worth of wheat and approximately $21,500,000,000 worth of United States surplus food.

Therefore, it's hard to understand why our State Department will ask Congress for an additional $60 million in United States aid to India and carry on as if the world would come to an end if India did not get this money, all because two Communist leaders smiled at India.

After all, if the vocal promises of these two men can upset all of the aid to India that the American taxpayers have sweated and slaved to produce, then I say something is wrong with the way our State Department is spending our money abroad, and Congress should do something about it before they appropriate the billions now being asked for by President Eisenhower.

I am sure that President Eisenhower and his aides would not be so insistent that you gentlemen appropriate these billions of dollars for foreign aid if he didn't think that the Nation could well afford this expenditure.

But, I ask you—is aid good or bad? Can we afford it, or can't we?

I have heard all too many lawmakers declare on one hand "That aid to needy Americans costs too much money"; "That we don't have enough money to take care of needy Americans such as the old, blind, physically handicapped, and dependent children"; and "That economic aid to needy Americans is apt to destroy their self-reliance, and that if they are (grudgingly) given such aid, they should first have to take the pauper's oath."

Later from the same lawmakers we hear of plans for giving vast sums of money to the governments of foreign countries with no strings attached—so they won't think we're giving it grudgingly—"after all we must let them maintain their self-respect and realize that Uncle Sam is just a great, big, generous fellow who wants to see that none of the peoples of the world suffer deprivation."

Here you have the paradoxical attitudes which seem to be the basis for the domestic aid policy and the foreign aid policy of our Government.

Why?

Is it because our lawmakers think a hungry child in the Far East or Europe is more worthy of care than a hungry child in the United States?

Is it because our lawmakers feel that their fellow Americans haven't the same pride, the same heart, the same soul as their foreign brothers that the "make 'em beg for what they get" policy is imposed on needy Americans, and the "don't be insulted, we just want to help" theory is applied to foreign recipients of our aid?

Why, then, the harsh "means test" for needy Americans, and exuberant generosity in the foreign aid department?

To illustrate my point, I'd like to direct your attention briefly to testimony given by Marion B. Folsom, Secretary of the Department of Health, Education, and Welfare, who appeared before the Senate Finance Committee and opposed every single, solitary humane proposal which came before that committee to help liberalize the Federal Social Security Act and give additional help to the needy aged, the blind, physically handicapped, and dependent children of this country.

Folsom told the committee we couldn't afford to lower the age for women beneficiaries to 62, as provided in H. R. 7225.

Folsom said we couldn't afford to make payments available to workers who become disabled at age 50 and over, also provided for in H. R. 7225.

Folsom said we couldn't afford to give $10 a month surplus food stamps to the millions of American needy on public assistance, an amendment authored by Senator KERR and other Members of the Senate.

Folsom said we couldn't afford a small increase for those on public assistance as offered in an amendment authored by Senator RUSSELL LONG, of Louisiana, and many other Members of the Senate.

Secretary Folsom said that passage of Senator PAUL DOUGLAS' amendment to allow the needy aged to earn $50 a month would "* * * tend to give the old-age assistance program some of the qualities of a pension." He therefore opposed it.

For the Eisenhower administration to say we can afford such exorbitant sums for foreign economic aid, while vigorously opposing much needed economic aid for needy Americans on the grounds that we can't afford it, is hypocrisy in its worst form.

It is not our policy to be against foreign aid. To the contrary, we feel that people of the United States should be proud and happy to share part of their wealth and abundance with needy people of the world—if and when the needs of their fellow Americans have been met fully.

It's a poor father indeed who buys steaks for his hungry neighbors while throwing crumbs and scraps to his own children.

Such a father could expect contempt in the place of love and respect from his children, as well as from his neighbors. It's a universally accepted code that love, understanding, and charity begin at home.

Thank you.

Promote Milk Consumption

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. AYRES. Mr. Speaker, milk production exceeded consumption in the United States in 1955 by approximately 4,600,000,000 pounds, or almost 4 percent of the total production. These 4,600,000,000 pounds of milk were manufactured into butter, cheese, and powdered milk, and as such made up a large part of the dairy purchases by the Commodity Credit Corporation.

Every effort must be made to increase consumption of manufactured dairy products. More effort must also be made to increase the consumption of fluid milk. The fluid milk marketing areas have increased their production far in excess of fluid milk demands for class I milk. This has resulted in dumping large amounts of milk from the Federal and State order areas into competition with areas of our Nation producing manufactured dairy products. This depresses the cheese, butter, and powdered milk market. More fluid milk can and must be moved into consumption.

Today I wish to compliment a group for their help in promoting milk consumption. In 1955 the major manufacturers of the chocolate ingredients used in cholocate milk and chocolate milk drinks formed the Chocolate Milk Research Foundation. Its specific aims are to inform the public of the healthful and nutritious values of chocolate milk; to study its markets; to encourage its use; and to aid in the alleviation of the national milk surplus through increased uses of chocolate milk.

Chocolate milk can play a major role in moving fluid milk into consumption. Scientific research has demonstrated that chocolate milk is a decided stimulant to total milk sales and consumption. Whenever chocolate milk is available—in stores, restaurants, home delivery—total milk use increases. It has been definitely proved that consumers do not purchase chocolate milk as a substitute for their usual white milk ration, but rather as an addition.

An extensive series of studies was conducted at the Universities of Wisconsin and Illinois by the National Dairy Council for the Chocolate Ingredient Manufacturers on the per capita milk consumption of families, students, and factory workers in nearby medium sized cities. It was found that families which had regular deliveries of chocolate milk used an average of 21.72 percent more milk than those families which used only white milk.

A similar test was made at a university dining hall. For a 4-week control period only white milk was served; during the next control period both white and chocolate milk were offered. Results showed that during the final period, when students were offered the choice, total milk consumption jumped 12.7 percent.

A careful check of milk-vending machines in four factories indicated that 16.6 percent less milk was sold when chocolate milk was withdrawn from the dispensers. Interviews with factory workers indicated that more than half of the chocolate-milk drinkers would change to nonmilk beverages if chocolate milk were not available.

According to the surveys made, children and teen-agers comprise the largest group of milk drinkers in the United States today and the purpose of the special school milk program, with an appropriation of $75 million, is to make more milk available to a greater number of children and at the same time alleviate the national milk surplus which otherwise is converted into byproducts and stored in our Government warehouses. Chocolate milk can play an important role in this program.

Regulations of the Department of Agriculture, governing the operation of the special school milk program, provide for the reimbursement of whole milk, including flavored whole milk, meeting applicable State standards of butterfat content and sanitation. In schools serving chocolate milk, along with white, dairymen are pledged to deliver chocolate milk which meets the State's butterfat standard.

In one large city in Ohio—Toledo—vending machines for both white and chocolate milk were installed in the schools. Milk sales increased over 100 percent. Where children were offered a choice, the consumption of both white and chocolate milk went up. And children, who ordinarily were not milk drinkers, consumed large amounts of energy-giving chocolate milk, thereby increasing the total milk sales. And the more milk sold, white or chocolate, the

larger the subsidy to the schools as provided by the school milk program.

In other words, schools which serve chocolate milk along with white increase milk consumption, improve the health of their children, enlarge their school milk budget, cut down on taxes spent buying up surplus milk, make the farmers happier and keep the cows contented.

The United States Must Import Products From Other Countries if We Are To Export Our Farm Surpluses

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. MORRISON. Mr. Speaker, the Members of this Chamber will recall that on April 27, 1956, Secretary of Commerce Sinclair Weeks published a list of approximately 700 items, approved by our Government, which may now be shipped to any Soviet bloc country without license or restriction.

Carefully tucked away in this list of what Mr. Weeks described as a roster of peaceful goods were three products—watches, watch movements, and watch parts. And I am sure that many of my colleagues must have opened their eyes in astonishment when they saw this portion of the list. It represents a very curious postscript on a very important trade action which our Government took nearly 2 years ago.

In July of 1954, President Eisenhower, on the advice of the Office of Defense Mobilization and many of his Cabinet officers, adopted a decision to increase our tariffs on Swiss watches by nearly 50 percent.

Watches, as you no doubt realize, are the chief commodity in Switzerland's trade with the United States, and the sales of watches enable Switzerland to buy between 150 and 190 millions of dollars of American goods each year.

For instance, my own State of Louisiana shipped more than $2 million worth of rice, cotton, furs, and chemicals to Switzerland during 1954. The States of the South and the Southwest sold more than $40 million worth of their products to Switzerland in the same year. American cotton, fruit, tobacco, and vegetables alone amounted to more than $22 million of sales to Switzerland.

Because of the present situation of mounting agricultural surpluses and falling farmer incomes, farmers in Louisiana and everywhere else in the United States have become increasingly interested in preserving and improving every opportunity to export American cotton, wheat, rice, corn and other products. They know how important is the role of two-way foreign trade in helping to enrich and stabilize the agricultural economy of our country.

When the President's decision to restrict watch trade with the Swiss was announced, these farmers knew that, by raising barriers to Swiss watch trade with us, our Government was quite probably shrinking the market for American farm products in Switzerland.

But the farmers of America loyally restrained their immediate criticism and protest over President Eisenhower's action on Swiss watches. Why? Because they were told by nearly every important officer in the President's official entourage that the restrictive action on Swiss sales to the United States was undertaken only as a vital measure to protect an American industry whose product had been declared essential to defense by the Office of Defense Mobilization.

I have now checked back over that famous watch report made by the Office of Defense Mobilization. And I have found that among the most strident and partisan advocates of protection for the American watch industry, and restrictions on Swiss imports, were our Secretary of Commerce, Mr. Sinclair Weeks, and his Department of Commerce representatives.

In one portion of this report, even after the Department of Defense had expressed serious doubt that the American watch companies represented unique or irreplaceable portions of our defense production, the Department of Commerce countered by finding still further reasons to favor the American companies' claim that they were "essential to defense".

The Department of Commerce reported to the ODM that the defense effort during World War II was hampered by serious shortages of watches for nurses, miners and railroad workers. It urged that on this basis the American companies be protected from competition so that they could produce at least 3 million watches a year.

For anyone who can read, it was clear that the Department of Commerce was arguing in 1954 that watches and watch movements are strategic goods needed by any country to wage war.

To say the least it is utterly amusing, therefore, to find the same Department of Commerce asserting in 1956 that watches and watch movements belong on a roster of "peaceful goods", which may be exported to the Soviet bloc countries without restriction.

If watches were needed to help us conduct war in 1941–1945, why should they not be helpful for the Soviet to conduct war tomorrow?

Are there no nurses, no miners, no railroad workers in Russia? I think the answer to this ridiculous inconsistency and confusion in our policy is that Mr. Sinclair Weeks must have changed his mind since 1954. Or perhaps he did not really believe that watches were necessary to conduct war in 1954, and was acting to favor the many influential protectionists who were bringing enormous pressure to bear on our Government at that time.

In 1956, it is highly conceivable that the same people who wanted him to shut off Swiss watch trade with the United States, were now urging him to permit them to resume trade with the Soviet bloc countries. After all there has been an alarming drop of hundreds of millions of dollars in the value of American products sold to these countries, and there must have been an accompanying loss of profit for many American exporters.

I see no reason to raise any objections to American shipments of watches and watch movements to foreign countries. However, I see sufficient reason to urge that Secretary of Commerce Sinclair Weeks immediately take action to rectify the absurd inconsistency and contradictions of his Department and his policies.

It is obvious that watches cannot be, at one and the same time, both peaceful goods and essential to the conduct of war.

If they are peaceful goods then it is incumbent upon the Secretary of Commerce to announce that he has withdrawn his decisions and recommendations to the ODM in 1954. I think the facts of the situation require that the Secretary take this action, and I can assure him that a clarification which will clear away the confusion over the defense essentiality of watches will be hailed by all friends of trade, both in the United States and in the democratic world.

To persist in stubbornly maintaining the defense essentiality of watches, after his action of April 27, will only lay Secretary of Commerce Weeks open to criticism both from trade interests in the United States and from our democratic partners.

Roundup on the Potomac

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an article by Barnet Nover, chief, Denver Post Washington bureau, who has had several years experience on the Hill. He has pointed out the activities of Members in Congress in an excellent article which appeared in the Denver Post recently. The article is as follows:

WASHINGTON.—One of the things that astonishes and distresses many visitors to the Senate and House galleries in the Capitol here is the amazingly small number of Members normally in attendance at sessions of either body.

There are 96 Members of the Senate; 435 Members of the House. But except during a rollcall or in the closing stages of a debate on some issue of major importance it is rare to find even half or even a quarter of the total membership in their seats.

What many visitors fail to realize is that attendance at sessions represents only a small and, except on occasion, by no means the most important of the duties of a Member of Congress. Most of his work, like the bulk of an iceberg, is not visible to the naked eye.

Consider, for instance, the committee labors of one Member of the House—Repre-

sentative WAYNE N. ASPINALL, Democrat, who represents Colorado's western slope district.

ASPINALL is the second-ranking Democratic member of the Committee on Interior and Insular Affairs which deals with legislation of tremendous importance to the western third of the Nation.

Because of his seniority, he is chairman of the Subcommittee on Irrigation and Reclamation whose membership is precisely the same as that of the full committee. He is also a member of the Subcommittees on Mines and Mining, Territorial and Insular Affairs, Public Lands, Indians Affairs.

In addition he is a member of the House Veterans' Committee and 2 of its subcommittees, 1 of them being the Subcommittee on Veterans Insurance of which he is chairman.

This makes a total of nine committees and subcommittees.

When we take into account that the Subcommittee on Irrigation and Reclamation alone had 111 bills referred to it and up to now has actively considered and passed on 36 of these (some after very prolonged hearings) we begin to get an idea of the vast amount of committee work a chairman is called upon to perform.

In the case of one measure of particular concern to ASPINALL's own district and his home State of Colorado and of vital concern to the neighboring States of Utah, Wyoming, and New Mexico as well—the upper Colorado Storage project—20 separate meetings were held before the bill was finally reported out.

It was then ASPINALL's task (jointly with Representative CLAIR ENGLE, Democrat, of California, the committee chairman) to manage the bill on the floor of the House where, after a 3-day debate, it was approved by the smashing majority of 120.

There has been a lot of loose talk of obvious political inspiration to the effect that the 84th is a "do nothing" Congress.

So far as reclamation is concerned, nothing could be further from the truth.

Not even in what westerners now look back on as the golden era of reclamation has so much been done in this field as the present Congress has already done and the story of its full contribution is not yet complete.

Up to now, and the session is only in midterm, bills authorizing reclamation projects with an estimated overall cost of $1,053,269,000 have been enacted into law. This includes the $760 million upper Colorado project, the $225 million Trinity project (California), the $27,669,000 Ventura project (California) and the $40,600,000 Washita project (Oklahoma).

In addition reclamation legislation approved by the House Interior Committee but still awaiting final action either by the House or the Senate or both calls for authorizations totaling another $225 million, including the $157 million authorization for Fryingpan-Arkansas.

Still awaiting final action by the full House committee but approved by the subcommittee on reclamation and irrigation are two other bills, one of them authorizing the high Hells Canyon project, which would involve a total cost of $414,500,000.

It has been estimated that since the beginning of the 84th Congress, the reclamation subcommittee has met for a total of 151 hours, not including the time spent on the road or in viewing projects in the field.

But vastly important as its labors have been, the reclamation subcommittee has only occupied Aspinall part of the time. He has taken an active part in the work of the other subcommittees and of his major committees, of which he is a member, as well as serving as regional whip for the Democratic floor leader and carrying out other congressional duties.

Anybody who says that the life of a Congressman is a sinecure doesn't know what he's talking about.

Sources of Energy for Electric Generation in the Two Decades Ahead

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I am inserting a copy of an address delivered before the American Mining Congress in Cincinnati on May 7, 1956, by Mr. Philip Sporn, president of American Gas & Electric Co.

I commend it to the attention of every Member of Congress, inasmuch as this highly enlightening analysis of our fuel resources and supplies can serve as a guide for numerous decisions that we shall be called upon to make from time to time as growing population and rising standards of living bring about constant increases in our energy requirements.

As a leader in an industry indispensable in peace and war, Mr. Sporn has based his address on a careful study of projected electric power needs and on our precious reserves of nuclear and fossil fuels and on the availability of water supplies.

Read closely, if you will, Mr. Sporn's remarks regarding the need for handling with care our depleting supplies of natural gas, his frank presentation of the limitation to which the products of crude petroleum will be able to participate in the electric-power program, and his complete picture of America's increasing dependency upon the coal industry. I feel that these remarks by Mr. Sporn are important to this Congress and will be of increasing value in future sessions.

The address follows:

SOURCES OF ENERGY FOR ELECTRIC GENERATION IN THE TWO DECADES AHEAD

(Address by Philip Sporn)

In order to arrive at a reasonably reliable projection of sources of energy for the somewhat distant future, it is necessary first to make a good estimate of total energy requirements for the period in question. Such an estimate in turn depends upon the view taken of overall anticipated economic development.

I begin, therefore, with certain conclusions about the level of economic activity which I believe is to be expected in the United States during the next two decades, the period I have elected to examine. A number of factors impress me as especially relevant in arriving at these conclusions. We are experiencing a population boom which gives every indication of continuing for some time to come. We have achieved a high level of material welfare with a relatively steady but increasing trend over the past several decades. We have good reason to hope that trend will continue. The very fact that we are engaged in a worldwide struggle between the free and the Communist world that seems destined to go on for a long time to come makes it essential that we maintain and increase our economic strength.

We must be economically strong in order to support an adequate system of armament; we must also produce enough goods and services to take care of the peacetime requirements of our growing population at ever higher standards of welfare; we need to produce enough in addition to help strengthen our allies and potential allies who are less fortunately situated than we are.

Now, among other things, what all this means is that our energy requirements will have to increase very substantially year by year. Ours is a technically advanced economy, which is another way of saying that it is a high-energy economy. This view of our present situation and future needs sets the base for a quantitative projection of how much energy we will have to make available in the future.

ENERGY REQUIREMENTS OF THE UNITED STATES IN THE NEXT TWO DECADES

Today the United States fulfills its energy requirements by bituminous and anthracite coal, oil, natural gas, and waterpower. Total current use represents 1,480 million tons of bituminous coal equivalent annually. Recent predictions about the country's requirements 20 years hence place the figure at approximately 2,750 million tons of bituminous coal equivalent annually. The distribution of this future supply among coal, oil, and so on, is in itself a very complicated problem. Study of the subject, taking into account the availability of various classes of fuel and the prices at which they will be available, is among the most important resource problems that warrant attention. But the question of sources of energy for overall requirements of the long-term future is hardly a manageable subject for an occasion of this kind. I want to address myself to more limited questions: energy requirements for electric power and the sources of such energy. Even such a subject may seem overly ambitious. But, if as I have done, we consider not the remote future but only the next two decades, I think it possible to make reasonably reliable projections.

A look 20 years ahead is commended by a number of considerations:

Two decades are definitely within the range of interest of almost all people now engaged on the problem.

The trend in availability of competitive fuels for this period can be gaged with reasonable accuracy.

The effect of atomic energy in particular can be gaged for this period; for whether one is inclined to be optimistic or pessimistic in his outlook about nuclear power, the chances are that an examination of the problems involved in developing competitive atomic plants in the next 20 years will yield projections that lie within a relatively narrow range.

Finally, the next two decades may witness a focusing of worldwide forces affecting us, which may be the most critical that will confront this country for perhaps several hundred years ahead. Energy policies will play an important role in the working out of these forces. This is particularly true from the standpoint that if any action needs to be taken looking toward a change in policy or the projection of a new program to make new sources of energy available there is not very much time to lose, if effective help is to be obtained prior to the critical conjuncture of turning points in our history of the next several decades which may affect us for centuries.

We begin with total generation by utilities in the United States of nearly 550 billion kilowatt-hours in 1955. Using the techniques that we are accustomed to apply in projecting growth in my own company, which, of course, take into account our expectations concerning the national economy, I believe the corresponding figure for 1975 will be close to 2,000 billion kilowatt-hours. A reasonable breakdown of this load would show the several classes of use, as follows:

Projected total electric-power generation by electric utilities in the United States in 1975

Class of consumer:	Billions of kilowatt-hours
Residential	545
Commercial	250
Industrial	900
Miscellaneous	55
Total consumption	1,750
Losses	250
Total utility generation	2,000

Residential consumption is estimated on the basis of 54.5 million customers in 1975 with an average annual consumption per customer of 10,000 kilowatt-hours, as compared with 44.5 million customers today and slightly over 2,750 kilowatt-hours' average use. Industrial consumption results from an estimate of 245 for the FRB Index of Industrial Production in 1975 and industrial consumption of 3,675 million kilowatt-hours per point of the index, or 900 billion kilowatt-hours. (It excludes generation for self-use, which we estimate at about 250 billion kilowatt-hours.) Commercial and miscellaneous consumption represent extrapolations of present trends related to projected growth in population and income. The important figure here is the 900 billion kilowatt-hours for industry.

The estimate of 245 for the FRB Index of Industrial Production for 1975 requires explantation. It is nearly twice the 1953 figure of 134, but I do not regard it as overly optimistic. In the same period, 1953–75, the number of production workers in the country, which in 1953 was close to 14 million, is expected to increase to nearly 17 million. Taking account of the fairly well-established trend in working time, man-hours worked may be expected to rise in the same interval by a much smaller amount—my estimate is a modest 8 percent. Obviously, then, the bulk of this large increase in the FRB index has to come about as a result of the continuation of the rising long-term trend in the output of the average worker.

The measure of this is seen in the nearly trebling of large power sales per point of FRB index which I have assumed. And the nub of the increase is that the 1975 worker, with fewer hours an the job than his counterpart in 1953, will be much more productive and that the increased productivity will require tremendously more electric energy per hour of work. The 1953 figure of 9 kilowatt-hours per man-hour will in my opinion be nearly 19 kilowatt-hours per man-hour by 1975.

With industrial energy requirements of 900 billion kilowatt-hours and the residential, commercial, and other use of power that we believe are clearly in the offing, you end up with the total energy requirement of 2,000 billion kilowatt-hours.

HOW THIS ENERGY WILL BE SUPPLIED—THE HYDRO PORTION

The installed hydroelectric generating capacity in the United States in 1955 was not quite 25 million kilowatts or approximately 21 percent of a total generating capacity for the utilities of 114,550,000 kilowatts. But the percentage of hydro power in the total of electric energy is on a declining trend; hydro is bound to play a consistently diminishing role as our economy expands and the expansion in total power requirements continues to exceed the growth potential of our hydro reserves. By 1975 the Department of the Interior expects that 14 million kilowatts of hydro will have been added to the existing 25 million kilowatts of hydro installations. The Federal Power Commission estimates as much as 30 million kilowatts of additional hydro between now and 1975, or a total of 55 million kilowatts by that date.

My own projections make me think that we shall have about 48 million kilowatts installed hydro by 1975 and total capacity of all kinds of 382 million kilowatts. This would mean that two decades from now slightly over one-eighth will be hydro and that this capacity will account for 250 billion kilowatt-hours, or one-eighth of all generation. The balance, or 1,750 billion kilowatt-hours, will be thermally generated. Solar, tidal, and wind energy in the United States can be disregarded for the period in question. Despite the attempted revival of Passamaquoddy and the growing interest in solar energy, it does not look as if such sources will count for much between now and 1975.

HOW THIS ENERGY WILL BE SUPPLIED—THERMONUCLEARLY

The balance of 1,750 billion kilowatt hours to be generated by thermal power will either employ nuclear or fossil fuels. I would like to give you my estimates for nuclear fuel and then, having determined how much will have to be supplied by fossil fuels, go on to estimates of the respective parts that will be supplied by oil, gas, and coal.

The large experimental nuclear power projects which are now well beyond the early planning stage total altogether about 1 million kilowatts. These reactors are either owned outright by the Atomic Energy Commission or are being installed under the reactor demonstration program of the Commission, or in some cases are to be owned and paid for entirely by private companies without governmental aid.

This is a substantial program. A million kilowatts is a sizable amount of capacity from any point of view. Nevertheless, the effect of nuclear fuel and its impact on the energy picture of 1975 in the United States, although not insignificant, is likely to be relatively small. One of the important things to remember is that, while all the promising types of reactors are being undertaken on a large developmental scale, we should not be surprised by a period of slowdown between the completion of each of the prototypes and the inception of addittional reactors of similar species. Each experimental reactor must be built and operated to obtain the first test results and operational verifications of engineering projections. These reactors will then have to undergo a phase of further experimentation and development before the design and construction of more advanced additional projects in the same family is decided upon or before wholly new types evolve.

A substantial period of technical development and adaptation precedes the perfection of major scientific discoveries. We are now witnessing this process in the development of nuclear powerplants. In view of the formidable technical-economic obstacles to be overcome, progress in making economically competitive nuclear installations is not going to be as dramatic as has generally been assumed. I am confident that the obstacles will be overcome and nuclear power costs will be reduced to competitive levels, but only after some years of painstaking engineering development and experience with a wide variety of large experimental operating units.

Hence, I do not believe that the total installed nuclear generating capacity by 1975 will reach a level much above 20 million kilowatts in the United States. This will then represent some 5.2 percent of the total generating capacity at that time, but, owing to the higher load factor that is likely to be available to the nuclear plants, this capacity should account for approximately 150 billion kilowatt-hours, or 7.5 percent of the total 1975 utility generated energy. Of course, if the fossil fuels should for any reason fail to meet the requirements adequately, nuclear plants will be installed more rapidly. On the other hand, there is the possibility that even the estimate of 20 million kilowatts in atomic plants by 1975 may be too optimistic, because the time that it will take to solve some of the technical and economic problems may be greater than any of us now realize. Some notion of the time span which may be involved in the development of competitive nuclear power may be obtained from the recent estimates of Admiral Rickover with regard to the Shippingport plant scheduled for operation next year. Admirical Rickover has estimated that the cost of power from the operation of the first core in the Shippingport reactor will be some 52 mills per kilowatt-hour. The second core, he estimates, should produce power at 39 mills per kilowatt-hour, and the third core, which may be ready for operation in 10 years, may reduce the cost of power to 14 mills per kilowatt-hour. This is still well above a realistically competitive cost level.

While there can certainly be differences of judgment with respect to the speed with which competitive atomic power will take its place in our economy, the estimates presented herein represent I believe a reasonably well founded judgment of the probable order of magnitude of atomic energy that will be produced in the United States in 1975.

I would not want to leave the impression that Admiral Rickover's account of what is to be expected on costs from our first commercial-sized experimental power reactor illustrates anything more than the point that the first prototype of any reactor will represent the first step in a relatively long progression of steps from higher to lower costs. I say this because even now I think we know how to build reactors which will produce power at a cost reasonably close to that which the Shippingport reactor will not approach until 10 years after initial operation; the reason, of course, that we are that confident today is because of all the experimental work which has gone on in the last 10 years.

HOW THIS ENERGY WILL BE SUPPLIED—THERMAL PORTION: FOSSIL FUELS

The picture with regard to the fossil fuels it seems to me is susceptible of fairly accurate analysis. Let us start with natural gas.

Gas

In 1955 natural gas supplied some 96 billion kilowatt-hours, or 17.5 percent of the total electric energy, and 22 percent of the thermally generated energy of the United States. The figures, going back to 1950, of percentage of thermal energy generated with natural gas are:

Portion of total electric utility thermal electric energy generated by gas

Year:	Percentage
1950	19.1
1951	20.9
1952	23.3
1953	23.6
1954	25.7
1955	22.0

The conditions which have resulted in the continual rise, until reversed in 1955, in the proportion of total electric energy generation accounted for by natural gas in the past two decades, and particularly since the end of World War II, are not likely to prevail over the next 2 decades. The rapid extension of the gas pipeline networks is nearing the completion and the emphasis now is being directed to gas-storage facilities in order to avoid the need for selling large quantities offpeak at extremely low prices. The very rapid rise in gas demand for premium uses at higher prices has made such storage attractive and has stimulated construction of more storage facilities.

The rapid expansion of demand has, in turn, intensified the upward pressure on gas prices in recent years. The same process is likely to continue and exert increasing

pressure on natural gas reserves. This pressure is reversing the price advantage that natural gas has enjoyed over alternative fuels until now.

As demand expands and strains natural gas reserves and as prices rise, it will become less economical to burn offpeak gas under boilers. Available supplies are likely to be assigned to those electric utilities located close to the sources of gas supply and to an even greater extent to those special high-value uses in which natural gas is especially suitable and in which for one reason or another price is not the important factor.

Appraisals of the role of natural gas in supplying 1975 energy requirements vary considerably in large part because of uncertainty as to recoverable reserves. Some of the leading estimates of the total marketed production two decades hence, are:

Projected marketed production of natural gas in the United States in 1975

Authority:	Trillion cubic-feet
AGA	22
Department of Interior	19
Wallace E. Pratt	15
Paley Commission	15.2

Adopting from this range of figures 19 trillian cubic feet as a likely estimate for marketed production, it is possible to make a fairly reliable estimate of the amount of power that will be generated with natural gas. The maintenance of natural gas' present share of the electric utility generating market would imply the consumption of about 3 trillion cubic feet or almost 16 percent of all gas production in 1975; compared to 1955 when use for power accounted for only about 12 percent of total marketed production. An expansion of this magnitude in the utility market does not appear feasible when reviewed against the expected expansion in demand for the higher value uses and estimates of ultimate reserves. My own judgment is that gas for utility generation in 1975 will be approximately 1.7 trillion cubic feet, which will represent expansion of close to 50 percent in gas consumption by electric utilities. (Mr. Pratt has ventured a somewhat higher estimate of 2.4 trillion cubic feet.) With the B. t. u. figure at 1,050 per cubic foot and an average performance of 9,000 B. t. u. per kilowatt-hour, this represents 200 billion kilowatt-hours or 10 percent of total 1975 generation.

Oil

In 1955 oil accounted for 36 billion kilowatt-hours, or 6.68 percent of the total generation and 8.3 percent of thermal generation. The figures going back to 1950 are as follows:

Portion of total electric utility thermal electric energy generated by oil

Year:	Percentage
1950	10.2
1951	7.7
1952	7.4
1953	8.7
1954	6.67
1955	8.3

As in the case of natural gas, projections of petroleums's role in the energy economy in 1975 are highly dependent upon estimates of total recoverable reserves. While these vary over a considerable range, nevertheless leading estimates of total oil use in 1975 are quite close to one another:

Estimated total oil use in the United States in 1975

Authority:	Billions of barrels
Bureau of Mines	5.0
Wallace E. Pratt	4.9
Paley Commission	5.0

As in the case of natural gas, oil is being diverted to higher value uses, such as motive power, for which economic or convenient substitutes are not available. There has been a rapid growth in demand for the lighter petroleum fractions which is expected to continue. This shift in the composition of petroleum demand has led to changes in the petroleum refining process to diminish the portion of the barrel of oil which remains as residual oil, the oil used for power generation; even residual oil itself is finding higher value uses in the making of petroleum coke, asphalt, and other materials. In the international sphere the United States may expect to meet increasing competition for the world's petroleum resources so that imports are less likely to be available in the necessary quantities at favorable prices for utility generation. Western Europe is straining its coal reserves and looking toward oil to fill the gap in its energy supply. Accentuating this, growth in the underdeveloped countries of the world is likely to result in a very rapid rise in their petroleum demand.

These factors will increase the competitive pressures on world petroleum markets.

It appears unlikely that, in the face of the anticipated expansion in demand for the lighter fuel oils in their many specialized uses, the prospective diminution of our petroleum reserves and the rising prices likely to result from the growing demand and rising costs of petroleum exploration and development, the quantity of petroleum burned under utility boilers could expand the almost 300 percent necessary to maintain its present share of the market.

Based upon the accepted conversion figures, my own estimate of use of oil for power production is 143 million barrels, a 90-percent expansion over 1955 consumption. (Here again Mr. Pratt believes a somewhat higher figure—182.5 million barrels—is justified.) My estimate of a 90-percent expansion over 1955 would mean oil-fired power production equivalent to over 91 billion kilowatt-hours or roughly 5 percent of the total.

Coal

In this country we are extremely fortunate in our coal reserves. To arrive at the portion of the electric energy to be generated by coal we are, therefore, able to simply subtract the percentages of the total requirements that will be supplied by hydro, nuclear fuel, gas, and oil. It will be recalled that these are 12.5 percent, 7.5 percent, 10 percent, and 5 percent, respectively. Thus the total amount to be taken care of by coal is 65 percent, or 1,300 billion kilowatt-hours. Again using an average performance of 9,000 British thermal units and assuming coal at 12,000 British thermal units average heat content, this results in a 1975 coal utilization of 488 million tons.

In a previous study that I made of this subject, I had come to the conclusion that the amount of coal, based upon a similar assumption of the proportions to be supplied by nuclear energy, was 463 million tons. This lower figure resulted from using a conversion ratio to go from B. t. u. to tons of coal on the basis of 13,100 B. t. u. per pound as against the 12,000 utilized here. However, the latter figure is the more realistic for average utility coal.

I have a few remaining observations. I am confident that our industrial system will be able to provide the country with the additional 275 million kilowatts of capacity that will have to be built by 1975. I have equal confidence that we can make the fuel available to the extent required by the new capacity. As to that, the most important observation is that the role of coal will with the years become increasingly prominent.

This country is in an especially favored position in that we have the necessary coal reserves.

Parenthetically, the favorable situation of the United States in respect to coal must be contrasted with the situation of many areas abroad in which fossil fuels are even now available only at high cost or where the areas are rapidly approaching such a condition. In such areas the rate at which nuclear powerplants will be built to supplement and even replace plants using fossil fuel is likely to occur more rapidly than in this country. The present British program is a good illustration of the point. And I think it is also very probable that our interest in strengthening our friends abroad in relation to their energy program will be a stimulant to our own experimental work on nuclear reactors and that our manufacturers are likely to play an important part in supplying equipment for reactors abroad under conditions that make their work in that field more attractive economically at an earlier date than in the United States where the situation with regard to coal and coal reserves is so favorable.

But coal in the ground is not available until it is mined; in that process there will be required vast increases in capital facilities and, therefore, in capital expenditures and considerable development in all phases of coal mining: technological, management, and operational. It is true that there is on the horizon a young, vigorous, and serious competitor in the form of nuclear fuel but, considering the opportunities that are presented to coal and to the coal industry, I will not believe that the effect of the impending challenge of nuclear fuel will be anything but a stimulant to the industry—to its owners, managers, technicians, and to the people engaged in the actual mining. In responding to that challenge all of them will enhance their own welfare. That is important but, what is more important, they will make an immeasureable contribution to the welfare and safety of the people of the United States, and indeed of the whole Western World.

Corridors for Canada

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. BARTLETT. Mr. Speaker, recently Hon. J. Aubrey Simmons, member of the Canadian House of Commons from the Yukon Territory, proposed that accessways be granted by the United States through southeastern Alaska to afford passages to the sea for the Yukon Territory and northern British Columbia. Under leave to extend my remarks, I should like to include here an editorial which appeared in the May 9, 1956, issue of the Milwaukee Journal on this subject:

A CORRIDOR FOR CANADA TO SEA THROUGH ALASKA SEEMS SOUND

According to Associated Press reports, Canada is thinking about asking the United States for one or more corridors across the Alaska Panhandle to the Pacific Ocean.

The Panhandle is the 550-mile strip which cuts off the Yukon and northern British Columbia from the sea. Canadian interests maintain that this "fence" is a basic factor in limiting mineral and hydroelectric development in an area of great potential.

The world's last experience with a territorial corridor (in the Danzig area) was unsuccessful. In that instance, however, the arrangement was forcibly imposed on hostile Germans and Poles following a war. The proposal for Canadian corridors, as advanced by J. A. Simmons, Liberal member of the Canadian Parliament for the Yukon, seems reasonable and practical. As Alaska's congressional Delegate, E. L. Bartlett, has said: "Alaska and Canada have a great community

of interest and it would be very foolish if we did not take steps to see how we might use our resources to the advantage of both Territories."

Such an arrangement between this country and Canada—emphasizing good relations that have existed since the "54–40 or fight" dispute over the Northwest boundaries in 1846—would set a good example for the world. It would follow in the long pattern of peace and friendship as presently evidenced by joint development of a radar defense warning system. Under this program, incidentally, American military establishments and troops are stationed on Canadian soil.

Before the United States surrenders—or trades—any Territory, there must, of course, be a great deal of thought and discussion. But if the United States and Canada haven't had any trouble along the world's longest border, why should they have it over one or more remote corridors used for industrial transit purposes?

Actual transfer of territory might not be necessary. A long term lease, an easement, or a like arrangement might serve just as well. In any case, it should be a simple matter to work out a way for Canada to have easy access to the Pacific through the Alaska Panhandle.

Farm Prices and Politics

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. THOMPSON of Texas. Mr. Speaker, my attention has been invited to an interesting and revealing editorial in the May 19 issue of America, National Catholic Weekly Review.

Father James L. Vizzard, S. J., is assistant to the executive director of the National Catholic Rural Life Conference. It is evident from reading his editorial that he is well posted on the family-farm problem and that he is a militant fighter in the effort to maintain a strong American agriculture, particularly among those whom we classify as family farmers.

As chairman of the Subcommittee on Family Farms, it gives me pleasure to place Father Vizzard's editorial in the CONGRESSIONAL RECORD.

FARM PRICES AND POLITICS

Farm problems these days are in the center of the political stage. Not even the most confirmed Manhattan canyon dweller can deny that they belong right there. The stark facts of the farmers' plight have fought their way through the welter of statistics, claim and counterclaim, and finally have begun to get the attention they deserve.

The 1955 net profits of industrial manufacturers increased 32 percent above 1954 (New York Times survey, April 29, 1956), but net farm income dropped 10.6 percent (26 percent since 1952). A significant footnote can be added to this comparison: manufacturers using agricultural raw material boosted their net profit 15 percent on food products and 91 percent on fibers and fabrics. Farmers who in 1952 were getting 51 cents of the consumers' retail food dollar now get 38 cents. In 1 year, 1954 to 1955, the average net profit on Iowa farms declined more than 50 percent when the hog market fell to the lowest point in 15 years.

It does not take too much imagination to translate such statistics into terms of personal hardships, family crises and sheer desperation. In a few months these have driven over 150,000 Midwest farmers to repudiate their own farm organizations and join the newly founded, politically potent protest group, the National Farmers Organization.

In the face of these facts it is not surprising that politicians are ungracefully falling all over one another in a stampede to prove that they and their party are the true friend of the farmer and have always been concerned with his problems. In this struggle for farm votes the infighting between the two parties has been bitter and at times vicious.

PUTTING PARTY BEFORE PEOPLE

Congressional maneuvering on the farm legislation at the moment is shifting too fast and too unpredictably to allow any competent forecast on what kind of bill will finally pass Congress and escape another Presidential veto. One thing, however, seems clear. Farmers will not necessarily get what is good for them and the country. They'll get what political strategists calculate will hold or shift votes.

This is nothing new in an election year; but even in that context it's not very often that the vtial interests of so many are subordinated to political considerations. Farmers and the rest of us have a right to be bewildered and resentful.

Neither party has much reason to be proud of its part in the tug of war for farm votes. Senate Democrats can hardly refute the charge that with malice aforethought they loaded the recently vetoed bill up to the President's breaking point and left him little choice but to reject it. In the past few weeks the party leaders in the House have picked up the pieces and, as this is being written, have started putting them together again—this time, however, carefully calculating the absolute limit Mr. Eisenhower will accept.

But the President and Secretary Benson do not come off unscathed. For too long they refused to acknowledge the seriousness of the farmers' problems and to take the appropriate steps within the authority already theirs. What has particularly infuriated farmers has been Mr. Benson's brand of economic couéism: his insistence day after day that everything was getting better when things were patently going from bad to worse. Farmers interpreted this attitude as a blindness to facts or a lack of sympathy for their problems, or both.

Nor do the farmers feel that any longer they have reason to grant grudging admiration to the Secretary's well-publicized devotion to principle. The rather sad spectacle of his checking his principles at the door and circulating through the Senate to make deals with susceptible cotton, corn, and wheat interests badly shook that myth. There was little left of it when the highly acclaimed "moral" stand of the President on the veto was nullified by the accompanying maneuver of jacking up the support prices on key commodities in an obvious move to buy back some votes. The "to-the-rear-march" order could hardly be interpreted as a courageous stand on principle.

RETURN TO BRANNAN PLAN

It is probably too much to expect in an election year that even the critical problems of millions of citizens should get objective nonpolitical consideration and action. What such action would turn out to be is hard to figure. But this writer has a hunch that if Secretary Benson had not done such a thorough job of burying the Brannan plan under heaps of Madison Avenue scorn, some of his party might like to try now to resurrect it, dress it in a new script, and present it to the farmers and the country as a sound Republican program. That might start a new battle of words, like the current one over the origin of the soil-bank idea. But a lot of Democrats would go along with that approach. After all it was first proposed by a Democratic administration. The current administration has given it an unpublicized trial in wool, and we haven't heard any cries of distress over that. It's not likely that we will either, with Secretary Benson supporting wool at a "rigid" 106 percent of parity.

Remarks by Adlai E. Stevenson at The Dalles, Oreg., Tuesday, May 15, 1956

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend remarks, I would like to insert these remarks made by Adlai Stevenson at The Dalles, Oreg., on May 15. This seems to be a very fine statement of the stake American people have in the fullest development of our great natural resources such as Hells Canyon:

In recent weeks I have been doing a good deal of traveling up and down the Columbia River. This great valley, from Astoria back here to the business end of the river, has many memories for me.

I recall traveling through this area in 1947, when I went up to Mount St. Helens and Spirit Lake with a young Oregon journalist who has since become familiar to all of you and to all the rest of America—a fellow by the name of DICK NEUBERGER.

When I look at the Columbia River I am always reminded of the description by the late J. D. Ross, Bonneville's first Administrator. He called it "a coal mine that will never thin out and an oil well that will never run dry."

And coming back here to The Dalles today I am also reminded of an interesting and, I think, highly significant bit of local political history.

Eight years ago you had a big political rally here. And I suspect that a good many of you turned out to listen to a vigorous young fellow who was engaged in a hot contest for Oregon's nominating votes at the Republican convention. The fight was on for The Dalles Dam then, and the Republican candidate was careful to take note of it—but not until after he had completed the nationalwide radio broadcast that originated here that day. With the microphone to the outside safely dead, he returned to the rostrum to promise the local audience that he would come back as President to dedicate The Dalles Dam.

Well, Thomas Dewey didn't get back to The Dalles. But Harry Truman got back to the White House in 1948, and because he did, this great dam got started and is now in its final stages.

As I understand it, you won't complete the mammoth project until after next January. And I find great comfort in this. As Mr. Truman remarked not long ago, we Democrats are getting pretty tired of having Republicans dedicate the dams we built.

There has been enough construction money in the pipeline to keep the Republican

claim jumpers busy at the dedication ceremonies recently, but what they say on those occasions has little relationship to what they do, and their real record on river developments being written in the appropriations bills—where the administration is willing to make the taxpayers' money available for what it calls partnership deals, but isn't willing to make it available for public projects that would serve the total public interest.

Now, there is nothing wrong with the partnership idea in theory. But there has been a great deal wrong with it the way the Republicans have practiced it.

More often than not it has been an excuse for putting off the construction of needed public power facilities—or, worse still, for developing them to only a fraction of their capacity and thus wasting the great potential that belongs to all the people.

A good example is provided by the next big Oregon project in the planned series that has already done so much to transform the Pacific Northwest. The need for, and the feasibility of, the John Day Dam has long since been established. John Day will even top The Dalles when it is built—with a total capacity of 1½ millon kilowatts, and a vast potential in flood control and navigation.

The Army engineers estimated that they could use $1,450,000 for planning John Day if construction is to begin as scheduled in 1957. But the Eisenhower budget included only $500,000 for this purpose—and it is easy to see how that budget cut translates into delay in getting this great project into service.

But the same administration that couldn't spare money for planning John Day as a public facility put in a health request for funds to start it as a partnership deal with the private utilities. A total of $10 million was requested for John Day, Green Peter, and Bruces Eddy if the private utilities were cut in on the deal—but only $600,000 if they weren't.

This is the proposition WAYNE MORSE and DICK NEUBERGER call "an indefensible attempt to force a shotgun marriage with the private-power companies onto the people of Pacific Northwest."

But perhaps the best example of "partnership" in action is to be found at Hells Canyon.

There the Eisenhower administration has turned over to a private utility the last great dam site on the North American Continent—a dam site that is the keystone to the program to develop the whole of the Columbia Basin. "Partnership" in this case means three small dams to be built by the Idaho Power Co.—which takes its name from your neighboring State but sends its profits back to its owners in New England. Federal development would mean a single high dam that would triple the hydroelectric output and at the same time provide additional irrigation, flood control, downstream power production, and protection for wildlife. And it would do something else, too—it would provide power at far lower cost to the farmers, manufacturers, and homeowners of the area.

Now let me make it clear that I have no objection at all to letting a private company develop a power site if the public interest will not suffer. For example, if the only feasible use of that particular water resource is for power alone and if not comprehensive basinwide plan is involved, then there is no reason why the project should not be privately developed. But if private development means inadequate development, then it's wrong.

I cannot think of a place where private development is more wrong than at Hells Canyon.

The Idaho Power Co. plan at Hells Canyon will waste as much power as Bonneville produces. It will waste it in a region whose growth will be stunted by anything less than full realization of its waterpower potential. It will prevent forever full development of the Columbia River Basin. It will throw a roadblock in the way of the development of the economy of the entire Northwest.

On the other hand, High Hells Canyon built by the Federal Government means resuming the full development of the entire Columbia River Basin. It means the maximum development of the economy of the Northwest.

High Hells Canyon means cheap phosphate fertilizer for the farmers.

It means cheap power in the farmhouse, in the factory, and in city homes.

It means life-giving irrigation for arid lands—new farms that people can settle on and live on and prosper on.

It means more power at Bonneville, the Dalles, John Day, McNary, as well as dams on the Snake.

It means flood control. It means new industry, new homes, new towns, a new expanding economy in the Great Northwest. High Hells Canyon is, as your Senator Wayne Morse has called it, "the indispensable dam."

Awhile back the Secretary of the Interior, testifying before the Joint Committee on the Economic Report, referred to High Hells Canyon as a "white elephant."

Well, 20 years ago other Republicans from the dinosaur age referred to Grand Coulee as a "white elephant," in precisely that language. But today Grand Coulee is the greatest power-producing project anywhere on this planet. And it has spread its bounty over millions of acres—has made the desert bloom, the factories arise, the cities grow, the farms light up. When Grand Coulee was proposed, a private power company wanted to dam the Columbia with little dams, and waste forever the power of the High River. A Republican Congressman said there wasn't any sense in building Grand Coulee because "there was on one in the Grand Coulee area to sell power to except rattlesnakes, coyotes, and rabbits. Everybody knows that. There is no market for power in the Northwest." And the hucksters of the private power lobby of that day used all the arguments we hear today. They said Grand Coulee was too expensive, an unfair burden on the United States Treasury. But today Grand Coulee is $65 million ahead of schedule in paying back the United States Treasury's investment in the future of the Northwest. They said Grand Coulee was a wild dream, fit only for woolly-headed professors; but today it is one of the wonders of the world. They said Grand Coulee would come to nothing; but it powered the Hanford Atomic Energy Plant that helped to save the Western world. They said Grand Coulee was socialistic; but if that is so, today thousands of veterans who have settled on land it made fertile are socialists; and so are thousands of farmers who are getting low-cost public power kilowatts from the Bonneville system to lighten their labors and brighten their lives, to lift their water and light their homes. And so are the men and women who work in the industries created by its power, the industries that wouldn't be here if the Federal Government hadn't had the vision to see that if only we used what God had given us there could be something more out here than coyotes and rattlesnakes.

A fine power site is a magnificent asset bestowed upon the people. We must not waste it. And I hope I can be of some use to you and your Congressmen, Senators MORSE and NEUBERGER, in bringing this project to full realization.

Hells Canyon is more than a damsite. It is also, as Senator MORSE has suggested, a symbol. It is a symbol of the clear-cut difference between the Democratic and Republican Parties in this election year.

I want to stop this erosion of our resources by the Eisenhower administration.

And I want to get on with the full development of our resources for the benefit of the people all over this great country.

For, although I am in Oregon today, I am speaking to the country as well. We cannot afford any longer to waste our national inheritance. This issue means a great deal to us alive today. But it will mean much more to our children. We are shaping a Federal conservation policy—or a Federal waste policy—today that will mold our children's lives. Theodore Roosevelt said: "Of all the questions which can come before this Nation, short of the actual preservation of its existence in a great war, there is none which compares in importance with the great central task of leaving this land even a better land for our descendants than it is for us."

I believe that. I think we all believe that. I especially believe it because I have seen the arid wastelands in the old world, those dry valleys and stone creek beds where once great civilizations flourished by the Tigris and Euphrates but where today is nothing but wasteland. The rivers were there—God put them there—but men neglected them and their forests and soil. The rivers are here today—and we know what to do with them. The question is: Will we do it? Have we the vision and the courage? I think we have. The people have last say on this question. And I think, if we can get the truth about this issue across to them, they will take back for themselves what the power lobby wants. And Iva and Bonneville and Grand Coulee will become not reminders of a past long dead but guideposts along the highroad to the future. And high Hells Canyon dam will become reality, not a dream. The Pacific Northwest can have a great future. That future lies in making the best use of what God has placed here. This is to say that your future, and your children's future, lies with you.

Foreign Aid

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine statement on foreign aid, delivered by Mr. George J. Burger before the Foreign Relations Committee of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FOREIGN AID

(Statement by George J. Burger before Senate Foreign Relations Committee, May 10, 1956)

I am George J. Burger, vice president in charge of the Washington office of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are

committed by their majority vote. No officer or group of officers is permitted to speak or act officially for the federation until our entire membership has been polled.

Our members were polled through mandate No. 216 (official publication of the federation) on the question: "Are you for or against maintaining foreign aid as a permanent feature of our Nation's foreign policy?"

It is to be noted on the mandate the instruction is given to the members: "Before voting—See arguments for and against."

The argument for:

"In the political cold war, foreign aid almost certainly saved Western Europe from communism. Europe doesn't need more aid, is now expected to help the United States in aiding Asia. Stout defense of United States at Bandung last year is proof that mutual assistance helps can work there, too. Militarily, the United States, with annual expense of a few billion, has made possible creation of allied forces equal to nine times our ground forces, twice the number of air squadrons, equivalent of our naval forces. Economically, aid has helped sustain the United States economy. Over three-fourths of funds have been spent in the United States. More, in 1954, rise in exports helped float the United States economy through the recession."

The argument against:

"Since July 1, 1945, United States taxpayers have ponied up about $69 billion for foreign aid. While the program was temporary at first, it is now on a permanent basis. Meanwhile our Nation has gotten the highest deficit of any country in the world. Those who espouse aid forget that you can't finance or buy friendship. Consider, in Korea the United States bore almost 90 percent of the burden. Where were our European allies? Now the switch is to Asia. But India, an Asian country which has taken foreign aid, is flirting with Communist China. Indonesia which would get aid, has indulged in ventures sure to wreck its economy. Question here is just who is kidding whom?" (Oral insertion No. 1.)

The result of this poll, as it appears in Mandate No. 217 shows 16 percent for continuance of foreign aid, 80 percent against, and 4 no vote.

As a matter of record, I request the privilege of having made a part of the permanent record of this hearing, mandate bulletins Nos. 216 and 217 as they refer to our action on the foreign aid program.

Mr. Chairman, and Members of the Committee, as these expressions come from what can properly be termed the "grass roots" of our Nation, we believe it should be of importance for the committee and the Congress in shaping future action on this major subject.

To substantiate this statement, the Governor of Utah wrote me under date of December 13, 1955, and I quote:

"I think the people as a whole would be against foreign aid if they were given an objective picture of the entire foreign-aid program. Even as matters stand, what with all the Government's propaganda in favor of foreign-aid, I think a good segment of our people are opposed to this giveaway scheme."

It has been reliably reporaed, as late as April 26, over one-half of the present Federal public debt can be traced directly to involvement in foreign wars and the extension of aid to foreign governments and peoples.

It is also reported that the worst feature of our foreign aid programs is the fact that during periods of deficit financing, we have put the American taxpayers deeper in debt by borrowing money for the foreign aid programs. This has cost another $18 billion plus and the interest on the interest of this borrowed money added more than $8 billion to the total of the foreign aid programs since the end of World War I.

It is to be noted in a recent report appearing in the New York Times of April 21, it says: "NATO costs so far set at $312 billion," and further quoting from the Times: "Seven-year bill for United States alone is $252 billion. Thirteen other lands contributed the balance."

Again, it is to be noted as reported in the Press, April 27, and I quote: "Lag in United States orders pinches Belgium—her industrial leaders fear adverse impact of drop in contracts for NATO."

In my executive position with the federation, and in my travels throughout the Nation meeting with the average independent businessman, the question is put to me time and again: "When is Congress going to call a halt to the giveaway program before it wrecks the economic structure of our Nation and breaks the backs of its people?" Mr. Chairman, this is an actual, truthful statement presented to me time and again nationwide. I answer: "The question must be answered by the Congress of the United States."

I think it can be said that the public at large is well aware of the fact of the constant inspired, alarming statements used by the various administrations as to the peril we face unless this foreign aid of all descriptions continues. It is my belief that the public now believes that most of these statements are merely smokescreens in an attempt to justify the continuance of this giveaway program.

Mr. Chairman, I have tried to keep this statement as short as possible and, at the same time, present to the Committee what could be called: "Mr. Citizen speaks."

The argument is now being used for the continuance of foreign aid to combat reported, alleged aid from the Soviet Government. It's beyond me to understand how that Government could make good or deliver foreign aid in the same capacity as our own Government has done—where, on the other hand, it is a matter of public record that the Soviet Government has yet to make its adjustments on the lend-lease arrangement our Government so graciously extended during the critical days of World War II. It is my belief, judging on performances, that any pledge made by the Soviet Government can be looked upon as merely piecrust, and in substantiation of this belief, it was reported in the press under date of January 27, 1956: "MARTIN suspects a Russian trap—fears aid race may lure United States into bankruptcy." It would be our opinion there is real food for thought in this expression by such an outstanding Member of Congress as the Honorable JOSEPH P. MARTIN.

Just recently, to my surprise—and it happened within the past 60 days, I found that an American citizen returning from the Middle East after a year or two stay, remarked: "If you want to see some evidence of appreciation of our foreign-aid program, look at what is stamped on the currency of that country, 'Yankee go home'."

I wonder how many other recipients of aid from this Government share the same lack of appreciation—all at the expense of American taxpayers. From authoritative reports we are receiving it is a safe conclusion that this must be happening, either directly or indirectly, in the case of many other recipients of our foreign-aid program.

It is interesting to note in the international section of the New York Times of Wednesday, January 4, 1956, it said: "Booming Europe forced to slow industrial gain—struggle to keep prosperity from inducing inflation believed won in 1955." So there is justification for the Congress to "stop, look, and listen" before continuing this obviously unneeded foreign-aid program.

It would appear to small business generally that the continuance of such extensive foreign-aid program may be a smokescreen to further the best interests of international business corporations—all at the expense of the American taxpayers and small business of this Nation—and in line with this reasoning we are quoting herewith an editorial appearing in a Scripps-Howard newspaper under date of May 4, 1956, titled "Murky Billions":

"If Congress doesn't appropriate a dime this year for foreign aid—military and economic—the Government will start the fiscal year July 1 with $6.6 billion of old appropriations still not spent. If the President's request for $4.9 billion more is granted, the foreign-aid program would start the fiscal year with $11.5 billion in unexpended funds.

"Much of this is for military equipment—stuff that requires in Pentagon Jargon a long lead time between order and delivery. Granted even that, $11.5 billion is a lot of money to have kicking around in reserved and unreserved funds.

"This is another compelling reason why Congress which has let this program grow like Topsy for several years, will be failing its responsibilities if it doesn't start a thorough study of the aid program and an unbiased reappraisal of future needs."

In conclusion, solely in the interest and welfare of our own Nation, and in behalf of the people we represent, independent business and professional men, nationwide, we say: "The time for Congress to close Uncle Sam's international gift shop is now."

The Refugee Relief Act

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mrs. GREEN of Oregon. Mr. Speaker, the Refugee Relief Act represents a wise and generous act of the American people in line with our finest traditions. As the provisions of the act approach termination, however, it becomes clear that not only its extension but also a more flexible readjustment of quotas within it are urgently needed if the original intent of Congress in enacting this fine legislation is to be served. As evidence of the great public support for these proposals, under unanimous consent, I include in the RECORD at this point two letters received from the Oregon Council of Churches, a group that speaks for many church people and of which we in Oregon are very proud:

OREGON COUNCIL OF CHURCHES,
Portland, Oreg., April 24, 1956.

DEAR MRS. GREEN: It is my hope that it would be possible for you to take some definite action in persuading Congress to change quotas in the Refugee Act, in order to reopen immigration from some areas such as Greece and China, which have been closed because the assurances more than fill the quota. At the same time, Austria and Germany are lagging far behind in the number of refugees seeking to enter the United States.

It seems to me that rather than hold up refugees from such distressed areas as Greece, we should attempt to open up the flow again by reducing quotas in those areas where the people do not appear anxious to emigrate.

At the present time, I am sending through an assurance for the son of Greek parents, who is a refugee in Greece, a boy of 17, in spite of the fact that Church World Service has told us not to send any more assurances

for Greece because the Greek quota is filled. It is distressing to tell these partents of a 17-year-old boy that he cannot come into the United States, while several thousand possible assurances would be made available if the quotas were lowered for Germany and Austria.

The same holds true with those who are still seeking to bring refugees over from Hong Kong and are unable to do so because the small quota for Chinese refugees has been filled.

Whatever you can do and do speedily, I know would be most appreciated, not only by our Council of Churches, but by the many who are most anxious to do what they can to ease the distress of the refugees.

Sincerely,

MARK A. TALNEY,
Executive Director.

OREGON COUNCIL OF CHURCHES,
CHURCH WORLD SERVICE COMMITTEE,
Hood River, Oreg., April 16, 1956.

DEAR MRS GREEN: The Church World Service Committee of the Oregon Council of Churches urges you to do all possible to insure the extension of the Refugee Act of 1953, to December 31, 1957.

Such an extension would enable us to secure more assurances of employment for refugees, the time being an important factor since assurances must be on file 6 months in advance of the act's expiration.

Sincerely yours,

REV. SUMNER WALTERS,
Chairman, C. W. S. Committee Oregon Council of Churches.

The committee: Rev. Donald L. Helseth, Corvallis; Dr. S. Raynor Smith, Eugene; Rev. John Ediger, Beaverton; Dr. Walfred Erickson, Portland; Rev. C. Stanley Knott, Portland; Dr. Julian J. Keiser, Salem.

The 1956 Convention of the National Coal Association

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, May 21, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a statement advising of the 39th annual convention of the National Coal Association to be held in Washington between June 12 and 14.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE 1956 CONVENTION OF THE NATIONAL COAL ASSOCIATION

In recent years Washington has become an increasingly popular meeting place for religious, patriotic, and business organizations. Among the most important affairs on this year's schedule is the 39th annual convention of the National Coal Association, to be held at the Shoreham Hotel June 12–14. I commend it to your attention.

The National Coal Association, as spokesman for an industry vital to the Nation's health, wealth, progress, and security, has come to be relied upon in numerous ways by Members of Congress. It represents producing companies from more than half of the States of the Union. Each Senator and Representative knows that the association is ready to assist whenever information on coal—for that matter, on all sources of energy—is needed. When a committee of Congress is charged with an assignment requiring knowledge of the coal industry's views, the association can be counted upon to give effective expression on behalf of coal producers. I daresay that most of us on both sides of the Capitol in the past have never hesitated to call upon the association for facts and figures. We shall look to the association for even greater cooperation in the years ahead, inasmuch as Congress must of necessity keep abreast of developments in overall energy supplies, requirements, and reserves.

The convention will present forums of interest to all of us. The advance program, which arrived at my office today, lists addresses by men of prominence on such subjects as coal and the atom, coal and chemistry, coal and electricity, coal and business, coal and steel, coal and exports.

Except for perhaps a very few new Members of the legislative body, all of us are acquainted with the Honorable Tom Pickett, former Member of the House, who is executive vice president of the association. We also have numerous friends among the membership, and we look forward to their arrival for the convention and business meetings next month.

State Water Rights

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, May 21, 1956

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial appearing in the May 16, 1956, issue of the Denver Post entitled "State Water Rights Must Be Reaffirmed." I believe the editorial simply and effectively states the absolute necessity for legislation such as proposed in my western water rights bill, S. 863.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE WATER RIGHTS MUST BE REAFFIRMED

So far as the 17 Western States are concerned, there is no more important legislation before Congress than the Barrett bill (S. 863). This measure which was introduced by Senator BARRETT, of Wyoming, is designed to settle and, in effect, quiet title to the water rights of water users in these States against claims that the United States owns virtually all the water in all the rivers and streams of the West.

The Barrett bill would (1) prohibit any Federal interference with the exercise of existing water rights which have been granted by the Western States, and (2) require that water rights for any Federal programs or projects shall be acquired "in conformity with State laws and procedures relating to the control, appropriation, and use or distribution of such water."

"This legislation," Hatfield Chilson, of Loveland, attorney for the Colorado Water Conservation Board, told the Senate Subcommittee on Irrigation and Reclamation at the recent hearing, "merely places the Federal Government on a parity with other water users. If it wants to use water, it comes in and gets it with the same priority and by the same method that an individual or a citizen of the State would obtain his water right." That, we had assumed, has always been the rule. But the Supreme Court found otherwise.

"The position of the State of Colorado," Chilson said, "is that the State of Colorado, since it was admitted to the Union, is the owner and has full control over the waters and the water use in the State of Colorado. (That is in the State constitution which was accepted by Congress.) We do not recognize that the Federal Government has any rights in the body of water or water use in Colorado except such as they have acquired under the doctrine of appropriation, which is the official water doctrine of the State of Colorado.

"The basic issue involved is very simple. The question is, does the Federal Government own and thereby control all of the unappropriated waters in the Western States; and secondly, does the Federal Government by virtue of withdrawals and reservations of Government land thereby have a water right which was vested at the time of the withdrawal?"

The theory or philosophy of Federal control of western waters, of which J. Lee Rankin, Assistant Attorney General of the United States, seems to be the principal proponent, is:

1. When the lands which now compose the Western States were ceded to the United States, the United States became the owner of the lands and waters and the rights to use of that water.

2. While Congress has the power to give waters and the use thereof to the States, it has not done so and the title to unappropriated water remains in the United States.

3. Any water right initiated by a water user after the date of Federal withdrawal of public lands from settlement is subject to any future uses of water which the Federal Government chooses to make in connection with the withdrawn lands.

The construction placed by the Department of Justice on the United States Supreme Court in the Pelton (Oreg.) case has alarmed Western States. The time has come when Congress should say, in unmistakable words, that adjudication of water rights is exclusively a State matter, and that all claimants—Government or individual—are on the same footing. It can do that by passing the Barrett bill.

Capital Punishment

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 21, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD comments on capital punishment from a symposium conducted by the Nation magazine of New York City.

I think it is significant that such well-known public officials as Gov. Walter J. Kohler, of Wisconsin, and Gov. Joe Foss, of South Dakota, have taken a strong and positive public position against capital punishment, inasmuch as they do not regard capital punishment as an effective deterrent to major crime.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

[From a symposium in the Nation, New York]

CAPITAL PUNISHMENT: PRO AND CON

(Governors, judges, prosecutors, wardens, chaplains oppose death penalty while few defend it; say it does not deter crime, leaves no chance to correct mistakes, does not benefit criminal or kin of his victim; it is based on anger and ignores value of human life.

(Governors, State attorneys general, prison wardens, and chaplains, as well as the general public have written many letters—the great majority of them supporting the Nation's stand against capital punishment. Here is a sampling:)

I have never favored capital punishment and 6 years as governor of a State which does not impose the death penalty has merely served to reinforce that conviction.

The murderer more often than not is one of the best prospects for parole. In most instances the crime for which he was sentenced was his first serious offense—a single violent act committed under extreme provocation which it is unlikely would ever be repeated.

Here in Wisconsin all murderers who are sentenced to life terms are eventually paroled, and experience has shown that they generally establish outstanding records and ultimately are pardoned.

WALTER J. KOHLER,
Governor of Wisconsin.

I have now been in law enforcement for some 12 years. I have grave doubts as to the efficacy of capital punishment. I think that it could well promote violence rather than deter it.

EDMUND G. BROWN,
Attorney General of California.

I have been mildly opposed to capital punishment, but the brutal bombing of 44 airborne travelers has convinced me that capital punishment should be continued.

EDWIN C. JOHNSON,
Governor of Colorado.

It is punishment as a concept at which we should take a fresh look. Actually the process of taking such a fresh look is well underway, for we find in the Federal prison system and in California a rather full range of penological institutions from the fortress to the open farm.

This whole development is bringing into existence effective methods of rehabilitation. In the institutions that follow this philosophy the repeater rate has gone way down.

With the growth of this new kind of penology the death penalty is likely to wither away naturally, but this is no reason to relax the direct attack on it.

CURTIS BOK,
Judge, Court of Common Pleas, Philadelphia, Pa.

What motivates legislatures in reversing the trend toward abolition of the death penalty? In my judgment it is a response to insistent pressure. Brutal and sensational crimes like the Lindbergh kidnaping case create an atmosphere of passion and prejudice. Legislatures, in adding another to the list of capital crimes, reacted like parents punishing a child in anger.

Those who advocate the death penalty insist that it is a deterrent. The evidence available is not convincing.

DON EASTVOLD,
Attorney General of Washington.

In a century in which barbarism has returned in so great a part of the world, in gas chambers and slave labor camps, I think that we people of the English-speaking world are becoming a bit precieuse in our consideration for the lives of hardened criminals.

I do not ask myself why these fiends should die, but why should they live.

JO M. FERGUSON,
Attorney General of Kentucky.

Let me point out four ways in which life imprisonment would be superior to the death penalty.

1. It gives the State a chance to rectify any mistake it may make.

2. It gives the criminal a chance to atone. When the father of one family kills the father of any other family, we take the life of the remaining one, with the result that we have 2 dead parents and 2 orphaned families.

3. Life imprisonment gives a criminal a chance to repent and reform.

4. By showing a reverent reluctance to take even the life of a convicted murderer, the State could do more to affirm the sanctity of all life than by a thousand laws.

DAVID RHYS WILLIAMS,
Minister, First Unitarian Church, Rochester, N. Y.

I have always been opposed to capital punishment as I do not believe it is effective in crime prevention. I, too, value human life very highly, and I believe the entire matter of capital punishment should be reviewed by the legislatures of those States which have laws permitting the death penalty.

JOE FOSS,
Governor of South Dakota.

In the 1937 session of the Pennsylvania General Assembly, a bill was introduced to abolish capital punishment. I voted against a motion to recommit it and then for its passage. It was defeated; but when reconsidered later in the session I voted for it again. This time it passed but was buried in Senate committee. My views have not changed since.

HERBERT B. COHEN,
Attorney General of Pennsylvania.

Capital punishment has a very detrimental effect on the morale and general well-being of prison inmates, as well as upon the rehabilitative program of the institution.

I certainly favor the abolition of capital punishment. I question whether man can legislate away its responsibility under the sixth commandment, which reads: "Thou shalt not kill."

J. E. OVERLADE,
Warden, Indiana State Prison, Michigan City, Ind.

I am highly in favor of capital punishment for certain crimes. In North Carolina, the death penalty is the punishment for first-degree murder, first-degree burglary, rape, and arson. However, our statutes have been amended and now the jury may, in its discretion, recommend life imprisonment in every instance.

WILLIAM B. RODMAN, Jr.,
Assistant Attorney General, North Carolina.

I believe the State has lost its right to take a life. In our courts there have been too many deals, too many fixes, very little uniformity in applying the law.

Just this summer I accompanied a man to the chair, a pathetic case, and we fought to the end. His partner, the actual accomplice, was given the opportunity to plead guilty to second-degree murder and thereby get a life sentence. This to me is a farce. * * *

Basically the State has the right to take a life, but to exercise this right it must exercise perfect consistency. Since deviation is so obvious, capital punishment should be abolished.

Nothing is more inhuman than an execution. I believe that all judges, prosecutors, even jurors if possible, should be made to witness an execution, then they might think much more sincerely and seriously before giving the death penalty.

It is far greater punishment to make a man serve a life sentence (25-year minimum) than to snuff out his life.

J. W. REYNOLDS,
Catholic Chaplain, Connecticut State Prison, Wethersfield, Conn.

The death penalty is an expression of society's own sadism and cruelty.

The periodic expression of these attitudes through the dramatic and well-publicized ritual of executing a criminal reinforces, encourages and caters to psychopathic tendencies, particularly among impressionable youth.

ISIDORE ZIFERSTEIN, M. D.,
Los Angeles, Calif.

My opposition to capital punishment is based on the fact that it is not filling its purpose. It does not seem to be a deterrent.

E. R. CALLISTER,
Attorney General of Utah.

Amendments to the Slot Machine Act

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRIEST. Mr. Speaker, at the request of the Department of Justice, I introduced on May 16, 1956, H. R. 11256, a bill to amend section 3 of the Slot Machine Act. The letter from the Attorney General to the Speaker of the House of Representatives, requesting introduction of the bill, and giving the reasons for the request, is as follows:

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., January 10, 1956.

The SPEAKER,
House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: Experience acquired by the Department of Justice in the administration and enforcement of the act of January 2, 1951, commonly known as the Slot Machine Act, coupled with the decision of the Supreme Court in *United States* v. *Five Gambling Devices* (346 U. S. 441 (1953)), indicates a need for some major revisions of the act both in form and in substance. Accordingly, the attached draft legislation is submitted for your consideration and introduction in the House of Representatives.

Section 3 of the Slot Machine Act now requires every manufacturer of and dealer in gambling devices to register with the Attorney General upon entering such business and to reregister annually thereafter. It also requires such persons to file monthly reports with the Attorney General, indicating in such reports an inventory and record of all sales and deliveries of gambling devices. The section further requires that the component parts of gambling devices shall be separately marked and numbered if sold or shipped in unassembled form.

In providing for the registration and filing of required information, the section directs that information be supplied as to business places "in such district," and sales and deliveries "in the district." The quoted lan-

guage was inadvertently retained in the legislation after the Congress had decided to substitute the Attorney General for the then Collector of Internal Revenue as the official with whom the required information was to be filed. However, two of the Justices of the Supreme Court, in the case above cited, found the section void and unenforceable because of the vagueness and the uncertainty of the quoted language. The bill would eliminate this language.

In the same case, three of the five justices constituting the majority of the court held that the registration and report provisions of the act, insofar as they undertook to regulate purely intrastate transactions which do not directly affect interstate commerce, went beyond the commerce power of Congress. As proposed to be amended, the language "every person manufacturing, repairing or reconditioning any gambling device who buys or receives such device knowing that it has been transported in interstate or foreign commerce, or who sells, ships, or delivers in interstate or foreign commerce, or sells, ships, or delivers knowing it will be introduced into interstate or foreign commerce, any gambling device, and every other person who buys or receive any gambling device knowing that it has been transported in interstate or foreign commerce, or who sells, ships, or delivers in interstate or foreign commerce, or sells, ships, or delivers knowing it will be introduced into interstate or foreign commerce, any gambling device, shall register" will clarify the matter by making quite clear who must register, and will effectuate the view expressed in the case that only those whose activities directly affect interstate commerce should be required to do so.

Another major change which the bill will accomplish will be to eliminate the present filing requirements. Rather, persons subject to the registration provision of the act will be required to maintain inventories of essential information. These inventories will reflect not only sales and transfers in intrastate commerce, or in interstate or foreign commerce, but also the acquisition, possession, ownership, or custody of gambling devices. The registrants will also be required to maintain records of the numbers placed on their devices in accordance with the amended section 3. This bill also takes a more realistic view of the difficulties involved in the numbering process than does existing law and does not require small component parts to be separately numbered.

Two other major changes include (1) provision for the inspection of the required records by personnel of the FBI and (2) an immunity provision applicable to those who maintain records in compliance with the act. With respect to the FBI inspection the bill will authorize Federal district courts to compel the production of requested records. Finally, the bill continues and clarifies the provision of the present law which declares it unlawful to sell, deliver, or ship any unmarked or unnumbered gambling device or to manufacture, recondition, repair, sell, deliver or ship any gambling device without complying with the registration requirements. It differs from and enlarges the present prohibitions in that it would make it unlawful for a person to possess any gambling devices if, being required to do so, such person has failed to register or to maintain the required records. This will permit enforcement personnel to pursue forfeiture processes without waiting for a sale or delivery in an appropriate case.

The Department of Justice is of the view that this legislation will materially strengthen and clarify the Slot Machine Act and will be of genuine help in the enforcement and the administration of that law. Its prompt introduction and enactment are urged.

The Bureau of the Budget has advised that there is no objection to the submission of this recommendation.

Sincerely,

HERBERT BROWNELL, Jr.,
Attorney General.

Search for Ideas To Slow Arms Race

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 21, 1956

Mr. HUMPHREY. Mr. President, Malvina Lindsay, the well-known columnist for the Washington Post and Times Herald, devoted her column on May 17, 1956, to a discussion of the Senate Disarmament Committee hearing recently held in Boston, Mass. Her article was entitled "Search for Ideas To Slow Arms Race," and I ask unanimous consent that it be printed in the Appendix of the RECORD:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEARCH FOR IDEAS TO SLOW ARMS RACE

(By Malvina Lindsay)

To professional cynics the current efforts to get citizens to do some thinking about disarmament may seem futile, even ridiculous. The subject is supposed to be too vague and complex for anyone but experts to consider. It is also associated with failure—with all the unsuccessful disarmament conferences of history.

But some inroads on this what's-the-use attitude are being made through the regional hearings of the Senate Subcommittee on Control and Reduction of Armaments. These are at least bringing some concrete aspects of the problem to the attention of grassroots leaders of opinion, including both those who attend the hearings and those who are challenged to present ideas at them.

The subcommittee has not, despite some predictions, functioned as a forum for a procession of zealots to expound grandiose, Utopian schemes. Rather, under the chairmanship of HUBERT HUMPHREY, it has been assembling the most practical regional thinking on the subject. This was particularly true of the hearing last month in Cambridge, Mass., where professors from half a dozen colleges and also some leading citizens gave the results of their studies of armament problems.

One blunt warning to come out was that time was breathing down the necks of those working for President Eisenhower's aerial inspection plan. If this is to be effective, said Walter J. Levison, assistant director of the Boston University physics research laboratory, it "must be in operation before intercontinental ballistics missiles are included in the Soviet inventory of weapons." The site for building such a missile might be detected, but the weapon when once completed could be hidden.

A proposal that Senator JOHN O. PASTORE of the subcommittee called "the best suggestion I have heard," came from Charles D. Coryell, professor of chemistry at the Massachusetts Institute of Technology. It was that this country should be trying an open sky inspection system on an experimental basis with a friendly neighbor, as England or Belgium, in order to test the efficacy and also to develop personnel for carrying it out. The proposal would be strengthened if there was proof it would work, said Professor Coryell.

The need to relate arms control to other phases of foreign policy was stressed by witnesses. "We should aid the constructive aspirations of other peoples," said Max Millikan, director of the Center for International Studies at MIT. We should also in any disarmament policy, he pointed out, try to reverse the warlike impression of Americans that exists in some Asian and African nations.

"Our posture on disarmament has vital importance for our relations with the rest of the world," Professor Millikan reminded. He pointed out there was a "very major psychological difference between doing the same thing in one case under the appearance of pressure as a response to somebody else, and doing it as something for which you are taking the initiative."

Much of the testimony got around to the need of a strengthened United Nations to provide international machinery for arms control. Donald C. Stone, president of Springfield College, who has had wide experience in international agencies, testified he was "under no illusions as to the ease with which you could bring about the strengthening of the United Nations * * * but unless our objective is in that direction, unless we take all possible steps, I think the sincerity of what we are engaged in can be questioned."

Despite some pessimism of witnesses as to the short-range prospects of arms reduction, there was general agreement that efforts in this field must be vigorously continued. Even the least optimistic witness, Walter W. Rostow, professor of economics at MIT, an authority on Soviet and Chinese Communist societies (who saw little hope for disarmament agreements with the Soviet Union for the next 10 years but thought long-range prospects better through a probable change in Soviet society), declared "we should proceed with vigor and imagination" in arm-control efforts.

One reason for this, he said, was that he might be wrong in his estimates. Another was that a mood of pessimism on the part of this country would not be regarded as proper by either the American people or those of the free world. Still another was that as the dialog with the Soviet continued men gradually would "begin to see the dimensions of it and to have some common feeling as to how it might be solved if the policy makers in Moscow some day let it be solved."

The Holland Plan

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Pittsburgh Press on Friday, May 18, entitled "The Holland Plan." It is designed to alleviate the shortage of engineers and scientists, and refers to H. R. 11200:

THE HOLLAND PLAN

As almost everyone knows by now, one of the gravest problems facing this country is the shortage of engineers, scientists and technicians in this atomic age.

Gen. David Sarnoff, board chairman of Radio Corporation of America, bluntly and plainly describes our situation this way:

"It is extremely disturbing to learn that Soviet Russia is already turning out engineers at a greater rate than we do.

"It comes as a shock to be told that if the present trend continues, the land of communism will, within a decade or sooner, outstrip the United States across the technological board.

"In the struggle between freedom and communism now underway, this is a situation that we cannot afford to view complacently."

Representative ELMER J. HOLLAND, Allegheny County's freshman Congressman, has come up with this bold plan:

1. Grant 30 engineering scholarships each year to outstanding high-school graduates in each of the 435 congressional districts.

2. Offer engineering-school graduates economic and professional incentives to devote 3 years to teaching science and mathematics in high schools.

3. Give supplementary salary grants to engineering colleges to enable them to hold teachers.

When fully underway, the program would cost the Federal Government about $183 million a year, Mr. HOLLAND estimates. But, he said, "it is apparent that private individuals and industry have not, cannot and should not be expected to solve this problem. It is a national problem."

Mr. HOLLAND wisely included in his bill a provision specifically blocking Federal control of an institution joining the program.

Whether Mr. HOLLAND's proposal is the right answer to this worry remains to be seen. For one thing, 30 scholarships from each of the 435 congressional districts may be too many.

There are many debatable provisions of the bill. And that is just what should take place—debate. Bring it out in the open so that the Nation can start to catch up.

Industry, labor, engineering-school deans, defense leaders, almost everyone admits the problem. It would be more than foolish to "wait and see" once the Communists far outdo us in technological advances—and they are on the way.

Mr. HOLLAND deserves thanks for his contribution. Now Congress should consider and act.

Alaska Letter to the President

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I should like to include a letter recently written to the President by the Reverend N. C. Middaugh, of Moose Pass, Alaska, in which a resolution passed by the 1955 session of the Alaska mission conference of the Methodist Church was forwarded to the White House having to do with the economic and social development of Alaska:

THE CHURCH OF THE TRAIL,
MOOSE PASS METHODIST CHURCH,
Moose Pass, Alaska, May 15, 1956.

Re Alaska colonialism.

The PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: At the 1955 session of the Alaska mission conference of the Methodist Church the following resolution was passed as a portion of section II of the action projects of the report of the conference committee on social and economic relations:

"Section II, paragraph 4, colonialism:

"We believe that the best interests of all of the citizens of the United States, including those resident in the Territories, can be served only as the right of self-determination is assured and made secure for those peoples resident in the Territories.

"We therefore respectfully request the President of the United States, the Secretary of the Department of the Interior, and the Members of the Congress of the United States to take all proper measures as will guarantee and protect the exercise of the rights and privileges of self-determination to the people of the Territory of Alaska, to the end that—

"(a) Overexploitation of the Alaskan fisheries to the advantage of absentee industries, eventually resulting in the destruction and loss of this important industry, shall cease immediately.

"(b) There shall be an effective land-development program administered to the advantage of those people living in Alaska.

"(c) There shall be ample protection against the abuses by lobbies conducted on behalf of absentee enterprises.

"(d) An adequate judicial system shall be established and administered.

"Respectfully submitted,

"NORMAN MIDDAUGH.
"Chairman.
"Mr. ROSS KINNAMAN.
"Mr. GEORGE B. MCMILLAN.
"Mrs. JOHN ARGETSINGER.
"Mrs. JOSEPH ENGEL.
"WILLIAM FOSTER.
"NELSON MOYER."

Please bear in mind that the above request was a unanimous vote of the conference, which is a representative body of Alaskan Methodists.

Would you please correspond with us as to your plan for action regarding the above request. We would like a report on this matter in time for the 1956 conference meeting in Fairbanks on June 12.

Respectfully yours,
The Reverend N. C. MIDDAUGH,
Chairman.

Opposition Views on OTC

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. REED of New York. Mr. Speaker, I believe that the minority views on H. R. 5550, the bill authorizing United States membership in OTC, should be of interest to the Members of the House. These minority views will be found in the report of the Committee on Ways and Means on the bill (H. Rept. No. 2007, 84th Cong., 2d sess.). A summary of these minority views follows:

(1) OTC is designed to implement the General Agreement on Tariffs and Trade (GATT). Therefore, enactment of this bill will be interpreted inevitably as constituting congressional endorsement of GATT although the provisions of GATT itself have never been submitted to the Congress for approval.

(2) GATT is dedicated officially to the primary objective of substantial reduction of tariffs and enactment of this bill will commit the United States to the furtherance of this objective even though the Congress itself has not given its approval to any reduction in United States tariffs beyond the limited authority delegated to the President under existing law. This official dedication of GATT is of grave significance to the textile, chemical, and many other industries already hard hit by tariff reductions.

(3) OTC will create a permanent international bureaucracy susceptible to use as a powerful propaganda agency directed against the essential protection of United States industry, agriculture, and labor and to opening our domestic market to the low-cost producers of the world.

(4) Authorization of United States membership in OTC will result in an almost complete transfer by the Congress to an international organization of its constitutional authority over United States foreign-commerce policy. There is serious doubt of the constitutionality of such a delegation.

(5) Several of the substantive provisions of GATT conflict directly with established principles of United States law, particularly with regard to quotas on imports of agricultural commodities designed to implement our domestic price-support program.

(6) As a member of OTC, the United States will have but one vote. Thus, the United States, having the largest single proportion of world trade of any member nation and required to make the largest single contribution to the expenses of OTC, will be on a voting par with the other 34 member nations and will be bound by their majority decision.

(7) The agreement on OTC declares the intention of the contracting parties to seek a specialized-agency status within the United Nations. Achievement of such a status can only result in our tariff policy being further subordinated to considerations of international politics rather than to considerations of domestic economic interest.

(8) OTC contains no mechanism, by hearing or otherwise, for the direct presentation of the views of United States industry, agriculture, and labor in the formulation of recommendations vitally affecting their interest.

(9) Finally, the amendments adopted by the committee make no substantive improvement in the defects inherent in OTC–GATT.

Michigan Week

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. RABAUT. Mr. Speaker, this is Michigan Week—the time of year when the residents of the Wolverine State pause to ponder the benefits and pleasures they have derived from Michigan.

We in Michigan have so much for which to be grateful and proud. Our State is world famous for the contributions it has made to mechanical progress and nationally famous for its social advancements. Our city of Detroit is largely responsible for the 56 million motor vehicles on our Nation's highways; our laws protecting the workingman and his family have been an inspiration and challenge to other States with large working forces.

Each year, thousands of Americans travel many miles to visit our vast woodlands and glacier-formed lakes. Our fishing and outdoor sports facilities are unsurpassed.

In addition to the privileges offered to the visitor, Michigan is rightly proud of the opportunities it has afforded its own citizens. Michigan is most famous for its manufacturing; 10,000 factories give us the highest national income average derived from manufacturing. The No. 1 industry is, of course, the automobile. In addition, countless allied and subordinate businesses supply the auto industry with necessary parts and services.

We are a great agricultural area as well as an industrial giant. Our State is the foremost producer of such foodstuffs as celery, cherries, strawberries, navy beans, and cantaloups, to mention just a few. Previously, I touched on a phase of our natural resources in connection with outdoor sports. However, the quality of our other resources are well known.

We have the largest deposit of native copper in the world, the largest forest acreage in the country, and one of the largest iron-ore producing regions in the world.

We in Michigan are inclined occasionally to look back with pride at our many achievements; however, we are primarily a forward-looking people. Our State has had a glorious past, but anticipates an even greater future. The St. Lawrence seaway will radically change the complexion of Michigan as inland ports are opened to world commerce. The completion of the new bridge uniting our two peninsulas will allow our citizens to become even better acquainted with each other. Automation, if pursued in a sensible and just fashion, with an adjusted workweek, will provide our working force more leisure without a decrease in pay.

Michigan in the past has been called the hub of the arsenal of democracy. She will not be found wanting in the future.

More About Autos

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MULTER. Mr. Speaker, from time to time I have inserted in the RECORD letters from new-car purchasers. These letters substantiated my testimony before congressional committees that new cars are being dumped on the market that are not fit for use and certainly are not being delivered in the condition in which new cars should be delivered.

I have in mind what one of our colleagues said by way of answer.

Unfortunately, he made it appear that my criticism was directed against the employees of the automobile manufacturers, whereas it was directed against the manufacturers and their mass-production methods which ignore the safety factors as well as the convenience of the consumer.

All the pride in the world of an employee in his craft must be subordinated to the demonds of the assembly-line foreman who insists on speed at the expense of quality.

Further proof of the correctness of my views is found in the following comment which appears in the June 1956 issue of Motor Trend on page 74, under the heading "From the Rear Seat." It reads as follows:

The new-car manufacturers tell us that their quality control departments are supposed to see to it that each and every one of their cars is assembled with the most possible care. They say that those minor errors which periodically occur will soon be caught and corrected by the diligence of the people in this department. If that's true, what in the world has happened to the quality of our present-day cars? Is it to be expected that rattles are a normal occurrence even after a short 1,000 miles or so?

What excuse is there for screwdriver marks on metal trim? Upholstery that's not properly fitted? Trim pieces that don't aline? Rough edges on bumpers? Sloppy and orange-peel paint? Mottled chrome?

In cases where this gets by the manufacturer we're told that the dealer should take care of it before delivering the car to the customer. But is it the dealer's responsibility? Or the person's who builds the car?

We're not crying "They don't build them like they used to," but we certainly like to see them built, and not so hastily thrown together. How about it, Detroit?

Abraham Lincoln—Postmaster

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, May 21, 1956

Mr. DIRKSEN. Mr. President, on May 17, 18, and 19 the Illinois chapter of the National Association of Postmasters held their 47th annual convention at Springfield, Ill. It was probably the largest attendance in the history of the association. Included in the printed program was a brief article on Abraham Lincoln—Postmaster, compiled by William E. McElroy, the postmaster at Springfield.

It is a highly interesting article with definite historical value, and I believe it might be very appropriately included in the Appendix of the RECORD that it might have wider circulation. Accordingly I request that it be included.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABRAHAM LINCOLN—POSTMASTER

(Compiled by Postmaster William E. McElroy)

Abraham Lincoln was appointed postmaster of New Salem on May 7, 1833, succeeding Samuel Hill. His explanation of his obtaining the position under President Jackson when he was "an avowed Clay man" was that the office was too insignificant to make his politics an objection.

According to one story, Lincoln's appointment was the result of a petition circulated by the New Salem women. Irked at the treatment accorded them by Hill, who neglected the distribution of mail while he sold liquor to the men, they petitioned the Post Office Department for his removal. It is not known whether Lincoln solicited the appointment or whether it came to him without effort on his part. Upon appointment, Mr. Lincoln, like other postmasters, was required to furnish bond of $500. Nelson Alley and Alexander Trent were his bondsmen.

New Salem was on a mail route which ran from Springfield through Sangamo Town, Athens, New Salem, Havana, Lewistown, Jackson Grove, Canton, and Knox Courthouse (Knoxville) to Warren Courthouse (Monmouth), a distance of about 125 miles. The mail was scheduled to leave Springfield on Saturday at 4 a. m. and to arrive at Monmouth Courthouse on Monday at 8 p. m. On the return trip it left Monmouth Courthouse at 6 a. m. on Tuesday and arrived in Springfield at 10 p. m. on Thursday if on time. It was carried on horseback by Harvey L. Ross, whose father, Ossian Ross, of Havana, held the contract for the route. After the stage line was established it carried the mail.

By 1834 central Illinois was pretty well covered by mail routes. Besides the New Salem route, six others ran from Springfield to various places. One went to Vandalia; another to St. Louis via Jacksonville, Carrollton, and Alton; a third to St. Louis via Carlinville and Edwardsville; a fourth to Peoria (where it joined another going to Ottawa and Chicago); a fifth to Terre Haute; and the sixth to Beardstown and Quincy.

Postal rates varied with the distance traversed and the number of pages in a letter. A single sheet cost 6 cents for the first 30 miles; 10 cents for 30 to 80 miles; 12½ cents for 80 to 150 miles; 18¾ cents for 150 to 400 miles. Two sheets cost twice as much, 3 sheets 3 times as much, and so on. Neither stamps or envelopes were used. Stamps were introduced by the Post Office Department in 1847, but did not come into general use until 1855.

Letters were simply folded and sealed and the postage charge was written in the upper right-hand corner on the outside. Postage was paid by the person receiving the letter.

The high rates on letters elicited numerous complaints. To conserve space, people frequently covered a sheet, then turned it sidewise and wrote across what they had already written, sometimes following this by writing obliquely across the page. Postmasters had difficulty in determining the number of sheets in a folded and sealed letter; and if the receiver questioned the rate charged he could open the letter in the postmaster's presence and have the error, if any, corrected.

As postmaster, Lincoln was exempt from militia and jury duties, was permitted to send and receive personal letters free, and to receive one newspaper daily without charge. The law provided, however, that "If any person shall frank any letter or letters, other than those written by himself, or by his order, on the business of the office, he shall, on conviction thereof, pay a fine of $10." A letter of September 17, 1835, from Mathew S. Marsh to George M. Marsh, his brother, throws light on Lincoln's conduct of his office. "The postmaster (Mr. Lincoln," wrote Marsh, "is very careless about leaving his office open and unlocked during the day—half the time I go in and get my papers, etc., without anyone being there as was the case yesterday. The letter was only marked 25 and even if he had been there and known it was double, he would not have charged me any more—luckily he is a very clever fellow and a particular friend of mine. If he is there when I carry this to the office—I will get him to 'frank' it * * *." Lincoln was there, and did frank it, thereby making himself liable to a $10 fine; for on the outside of the letter, in Lincoln's hand is written, "Free, A. Lincoln P. M. New Salem, Ill., Sept. 22."

A note from Lincoln to George Spears also reveals his indifference to postal regulations. "At your request," wrote Lincoln, "I send you a receipt for the postage on your paper. I am somewhat surprised at your request. I will however comply with it. The

law requires newspaper postage to be paid in advance and now that I have waited a full year you choose to wound my feelings by insinuating that unless you get a receipt I will probably make you pay for it again."

According to Harvey Ross, Lincoln kept his receipts in an old blue sock, which he hid in a wooden chest beneath the counter.

Lincoln gave general satisfaction in his administration of the office. He was always anxious to please and accommodate. When he thought that someone was especially anxious to receive a letter, he would walk several miles, if necessary, to deliver it. It is recalled that "Mr. Lincoln used to tell me that when he had a call to go to the country to survey a piece of land, he placed inside his hat all the letters belonging to people in the neighborhood and distributed them along the way." The practice of carrying papers and letters in his hat became a habit with him.

As Postmaster, Lincoln could read all the newspapers that came to New Salem. At this time he formed the habit of newspapers reading, which he continued through life, and through which, in part, he learned to interpret public opinion. His position also enabled him to become acquainted with almost every settler in that part of the country and made more formidable his subsequent candidates for the legislature.

Financially, the job was not much help to him. His remuneration depended upon the receipts of his office, which were small. More than a year after the New Salem office was discontinued, and after he had moved to Springfield, he turned over the balance of his receipts to William Carpenter, the Springfield postmaster. Carpenter's account book contains the following entry under date of June 14, 1837: "For cash recd of A. Lincoln late P. M. New Salem $248.63."

It is not known how long this sum had been accumulating; but if it represented the receipts of the office for a year, Lincoln's commissions for that year would have totaled about $75 or $80. If it represented the total receipts of the office for the 3 years of Lincoln's tenure, his commissions amounted to $25 or $30 a year.

An act of Congress of March 3, 1825, provided that postmasters should receive per quarter 30 percent of the receipts up to $100. Then, on any sum over and above the first $100 and not exceeding $400, 25 percent; on sums over the first $400 but not exceeding $2,400, 8 percent. They also kept 50 percent of the receipts from newspapers, magazines, and pamphlets, while there was allowed "To postmasters whose compensation shall not exceed $500 in 1 quarter, 2 cents for every free letter delivered out of the office, excepting such as are for the postmaster himself."

The Sangamo Journal of April 9, 1834, published the receipts of some of the Illinois post offices for 1833. The Jacksonville office took in $956. T. at at Springfield received $681. The Chicago post office received $369; that at Beardstown, $187, Peoria, $136; Pekin, $178; Vandalia, $426. On the New Salem route, the Havana office took in $54; Knoxville, $36; Lewistown, $130. No figures are given for the New Salem office, but in comparison with these figures, the estimate of $25 or $30 a year as Lincoln's remuneration seems more likely to be correct.

The position of postmaster was not confining, and Lincoln supplemented his commissions by doing all sorts of odd jobs, such as splitting rails, helping at the mill, harvesting, and tending store for Hill.

In the latter part of 1833 he secured employment as a deputy to John Calhoun, the county surveyor. Calhoun was one of the most prominent Jacksonian politicians in the county and Herndon says that Lincoln probably obtained the job through the recommendation of some Democrat. Knowing Calhoun's political affiliation, Lincoln hesitated to accept the job at first, but upon being assured that it would entail no political commitment, he agreed to take it.

Lincoln served as postmaster just 3 years from May 7, 1833, until May 30, 1836, when the office was removed to Petersburg. There is no question but that Lincoln's experiences as postmaster at New Salem, in his early formative years, played a definite part in shaping the destines of this great man.

Remarks by State Controller Robert C. Kirkwood Before Spring Convention, Irrigation Districts Association of California, Fresno, Calif., May 9, 1956

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. GUBSER. Mr. Speaker, I should like to commend the attention of my colleagues to an address delivered recently by the Honorable Robert C. Kirkwood, controller of the State of California, before the spring convention of the Irrigation Districts Association of California.

I believe that this address is outstanding in pointing out the enormity of the California water problem, and the urgent necessity of joint Federal, State, and local action.

The address follows:

Today I am appearing before you for the last time as a member of the water project authority. While I am asking your indulgence to listen to what in a sense is my swan song, still the matters which I wish to discuss with you today are subjects in which my interest will continue because of my responsibilities as the chief fiscal officer of the State. What I want to discuss with you are the problems of financing water projects.

These problems are tied in closely to the overall fiscal problems of your State government. On the one hand stands the probability that part of the financing will be done through the issuance of bonds. Whether they be revenue bonds or general obligations bonds, their issuance in any considerable quantity will affect the interest costs and related problems involved in the issuance of other bonds by, your State government. On the other hand, you and I know that a district which lacks water is a sick district, and sickness soon spreads into adjoining areas. We cannot afford to see that kind of sickness come into any part of California. It would directly affect the revenues of your State government as well as other aspects of our economy.

As State controller, therefore, I expect to continue to be concerned with water problems.

Today I wish to discuss two main aspects of the financing of water projects. First, the extent of financing through the Federal Government, and second, the extent of financing by your State Government. I will not attempt to touch onthe problems of financing by local districts—a field with which you are much more familiar than I.

Federal assistance takes two primary forms, that which is nonreimbursable and that which is reimbursable.

The nonreimbursable programs are those for flood control, salinity repulsion, navigation, and so on. During the 50 years that these programs have been in existence, California has received some $400 million of Federal funds, approximately half of which has been spent in the area south of the Tehachapis. There seems to be little controversy about the desirability of seeking Federal funds under these programs.

More controversy surrounds the reimbursable programs of the Bureau of Reclamation. If we include a portion of the cost of the Hoover Dam, which has been of tremendous benefit to southern California, California has received more than $1 billion of reclamation funds. Again, more than half of this sum has benefited southern California.

Without these tremendous expenditures of Federal funds, we must all admit that California's economy would be lagging far behind today's level.

We have not always been happy with the conditions imposed on the expenditure of reclamation funds. I am one of those who feel that when an area has within its own boundaries an adequate supply of a natural resource, it is best to develop that resource locally. As far as water is concerned, this is our situation—at least in northern California. Yet because of the financing aspects of the problem, the situation is the same today as it was some 20 years ago when we invited the Federal Government into the Central Valley project picture.

In plain words, we cannot afford to move the Federal Government out of that picture and to handle the entire problem on our own.

As a member of the Water Project Authority and earlier, as a member of the Joint Legislative Committee on Water Problems, I have explored the possibility of State purchase of the Central Valley project. I have participated in many discussions with representatives of the Federal Government. It is my considered judgment that State purchase of the Central Valley project is out of the question and would in fact be unwise.

I say this for two reasons: First, if we finance the purchase through revenue bonds, we cannot provide water and power to the citizens of California as cheaply as they are provided under Federal programs. Second, we would have to divert funds which are badly needed to finance new units of the State water plan.

To those of you who resist Federal financing and fear Federal control, I would suggest as an alternative proposal that not only should the State government of California get its feet wet in meeting our water problems, but that we should plunge in with a real program of construction.

It seems to me California must choose during the coming year between dedicating a possible $200 million to a statewide plan for water development or tossing that money—and the future of the State—into a pork barrel.

The 1957 session of the legislature looms as the most important in terms of water policy that has ever confronted the State of California. We now stand at a crossroad, where our decisions for right or wrong will affect California's future for generations.

Our great need today, as I said a moment ago, is to add units to the overall plan for developing our water resources, and our most urgent water problem is financing. We are fortunate in having available some $120 million of funds which the State has received from the depletion of a natural asset, our tidelands oil.

These funds are not the equivalent of ordinary tax revenues. They should be plowed back into the development of our other natural resources.

I have urged in the past and urge again that the $75-million rainy-day fund should also be spent on projects which are long range in scope and which will benefit the entire State.

A combination of the rainy-day fund and the tidelands revenues would mean that the State could make available a sum conceivably exceeding $200 million and not heretofore specifically earmarked for other purposes.

When funds as large as these are on hand, however, there is a temptation to dip into the pork barrel. But to plunder revenues from our own natural resources or to dissipate reserves is not in the best interest of the State.

In the long run, it is not even in the best interest of those who may receive a temporary windfall for some pet project.

As far as water is concerned, 1957 is California's "year of opportunity." For the first time in her history the State will have a department of water resources prepared and able to assume responsibility for State construction of water projects.

It is imperative that all parts of the State stand together to agree upon a constructive program, before our tremendous opportunity is lost through the manipulation of selfish interests.

The time is now.

We have, on the one hand, areas presently favored with a natural resource, oil, from which large sums of money are currently being derived. These same areas now recognize the necessity for making certain of the availability in the future of another natural resource, water.

We have on the other hand the counties of origin, where memories of devastating floods are still fresh in everyone's mind, and where there is a willingness to see surplus waters transported to other parts of the State, provided flood control and water development projects with some local benefits are undertaken at once.

In between stand areas such as the central and coastal valleys. Here the immediate need for water is so great that these areas will help to secure the rights of their neighbors to the North and to the South, provided there is wholehearted cooperation in rushing water to their parching lands.

The major obstacle that stands in the way of dedication of $200 million to the State water plan is that southern California, the source of the great bulk of these funds, must have definite, enforceable commitments that water will be available to it when needed.

This certainly can be done without jeopardizing the rights or the future of the counties of origin. There is water enough to go around—for the future needs of the areas of origin and the areas south of the Tehachapi, and for the present needs of our great central and coastal valleys.

The longer we delay financing our water development, the more we will have to concentrate the sources from which financing is drawn, and the more difficult we will make our task. Long-term obligations and high, fixed interest rates—as you in the irrigation districts know—can become intolerable burdens.

Therefore, except for those funds quite properly earmarked for beach and park development, we should commit ourselves to expend on water development in the future all sums derived from tidelands oil or from power and water developed from projects constructed. Thus, we will be able to hold bond financing to a minimum and reduce the burden of long-term obligations and high interest rates.

With the program of State construction thus made feasible we can seek our full share of funds under established Federal programs without fear of Federal domination of our water picture.

If we are to do the job that must be done, we must make available not only the funds which I have suggested for use at the State level. By making these available, it is true that we will build up our voice and our bargaining position at the conference table. But we must also take advantage of all Federal programs—both nonreimbursable and reimbursable—if we are to keep our financial situation sound and stable.

This sort of thinking will benefit every part and every citizen of the State and will provide the best use and highest purpose for the rainy-day and tidelands funds.

I am confident that if all of the water users of the State realize the great opportunities which now are open to them, they will demand the proper use of this money for the water development of the State.

Let us not choose selfishly or shortsightedly. We have much to lose, for such an opportunity will not pass our way again.

Niagara River Power Development

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1956

Mr. LEHMAN. Mr. President, last week the Senate passed S. 1823, a bill introduced by me and 16 other Members of the Senate, for the public development of the great power potential at Niagara Falls. For the people of New York State it was a most significant victory. It was also a vote of considerable significance for the entire Nation. The Christian Science Monitor, in its issue of Thursday, May 17, called it "a major and perhaps historic victory" for the cause of public power.

I ask unanimous consent that this article describing the significance of the Senate vote on Niagara, written by Mr. Richard L. Strout, the veteran correspondent of the Christian Science Monitor, and one of the most astute observers in the National Capital, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATE BACKS PUBLIC POWER

(By Richard L. Strout)

Public power has won a major and, perhaps, historic victory in the Senate. It came when the so-called "preference clause" was reaffirmed as the basis for disposing of the huge hydroelectric power resources at Niagara Falls.

The "preference clause" requires that municipalities, cooperatives, and other public bodies be given preference over private utilities in the purchase of power created by the State.

The famous "preference clause" was first written into Federal law in the Reclamation Act of 1906 in the days of Theodore Roosevelt, conservation advocate. It has been a battleground for public versus private arguments for 50 years.

Clarence A. Davis, Acting Secretary of the Interior, on January 21, 1954, charged that ambiguity exists in the variations of so-called preference caluses written into power acts by Congress over the half century. While not attacking the preference clause frontally as "socialistic," as many critics have, Mr. Davis displayed lack of sympathy for the feature and indicated that it interfered with businesslike arrangements with private utilities.

FAVORITISM CHARGED

This led Girard Davidson, former Assistant Secretary of the Interior under President Truman, to charge, May 10, 1955, before a House subcommittee that the Eisenhower administration is supporting the private utility campaign to delete from this country's power policy the provision which grants a preference to public bodies and cooperatives to purchase the power generated at Government dams.

The great Canadian-United States Niagara power development will be the biggest in the East. It will cost $405 million on the American side.

The Senate division was on a clearcut partisan basis, Democrats backing public handling of the power along with the preference clause, a majority of Republicans opposing.

The vote was 48 to 39, an unexpectedly large majority. The party lineup was Democrats for—40, against 6. Republicans for—8, against 33. The matter now goes to the House.

Indicating the importance of the measure, two campaigning Democrats Senator ESTES KEFAUVER, of Tennessee, and WAYNE MORSE, of Oregon, flew back to vote for the bill and then flew away again.

There are indications that the power issue will be important in some voting areas in the election.

BATTLE OVER CLAUSE

The real Senate battle over the bill of veteran Senator HERBERT H. LEHMAN, Democrat, of New York, for the development of the Niagara power project turned primarily on the specific inclusion of the preference clause, and only secondarily on whether power development and management should be undertaken by a public authority—the proposed State power authority—rather than by private utilities. Both the preference clause and the public authority won.

New York State Republicans, led by former Gov. Thomas E. Dewey and Senator IRVING M. IVES, Republican, of New York, favored the State authority over private utilities, even though the former has been denounced as socialism by more conservative groups. Mr. Dewey so testified 3 years ago.

On the other hand, Messrs. Dewey and IVES were against the inclusion of the preference clause. Senator IVES read to the Senate a telegram from Mr. Dewey expressing unalterable opposition to the clause.

Significantly, there was no attempt on the Senate floor to introduce an amendment striking out the preference provision, which goes back to Theodore Roosevelt and which recently has been increasingly brought into doubt by the Interior Department under former Secretary Douglas McKay and Acting Secretary Clarence A. Davis.

BOND SALE PLANNED

The New York State agency plans to finance power development under the 1950 treaty with Canada by public bonds. It will be second in size only to Grand Coulee Dam in Washington, with ultimate capacity of 9 billion kilowatts.

New England stands to benefit, particularly any municipal or public power authorities that may come forward under the preference clause.

Senator ROBERT S. KERR, Democrat, of Oklahoma, bluntly charged Republicans with being against State development of power and with using the preference clause only as an excuse.

In testimony in 1954, Mr. Davis agreed that "there are profound philosophical differences as to the proper role of the Federal Government in the economy of the electric industry."

BRANDED "RADICAL"

Mr Davis appeared then as solicitor of the Interior Department. He is now acting Department head with the resignation of Secretary McKay to go to Oregon to battle Senator MORSE for the Senate seat, where hydroelectric power is the dominant issue.

The public, after half a century, is largely unfamiliar with the preference clause battle which once helped to bring the name "radical" to Teddy Roosevelt.

Assistant Secretary of the Interior Fred G. Aandahl seemed to advocate a retreat from the preference clause in a statement March

9, 1955, regarding the Department's Southwestern Power Administration policy.

"The present policy of the Department," Mr. Aandahl said, "is that the construction of multipurpose dams by the Government makes a valuable contribution to specific areas. He added that that should be "the limit of Federal participation," inferentially barring the further operation of the preference clause to local public agencies.

Soviet World Domination Goal Hasn't Swerved an Inch

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. JUDD. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of May 21, 1956:

SOVIET WORLD DOMINATION GOAL HASN'T SWERVED AN INCH

(By William Philip Simms)

Faces may change inside the Kremlin, and so may Soviet tactics, but Moscow's goal of world domination has not swerved an inch since the Red dance of death began back in 1917.

Because that is so; because the goal is more shrewdly camouflaged than in the past, and because Russia is militarily more capable than ever of carrying it out, the United States and the rest of the West are in graver peril at this moment than at any time since the Bolshevik revolution.

The notion that Khrushchev, Bulganin, Molotov & Co. have suddenly got religion and are now somehow different from what they were when they were Stalin's hatchetmen will be rank poison if swallowed by the American people. When a real change comes to Moscow, we won't have to guess at it. The whole world will know it.

As long as Russia holds on to Poland, Czechoslovakia, Latvia, Estonia, Lithuania, and her other conquests; as long as she refuses to accept any kind of mutually cheatproof arms limitation plan; as long as she continues to conspire with Communist nationals in every country in the world to overthrow their own governments, she clearly has not change one iota.

So long as the U. S. S. R. hides everything she does behind an Iron Curtain, and everything she thinks behind gobbledygook, she cannot be trusted. Deceit, lying, and double-crossing have been among her chief instruments of national policy from the outset.

BASIC COMMIE POLICY LAID DOWN BY TROTSKY

Basic Communist policy was laid down by Leon Trotsky at Brest-Litovsk in 1918. It was: Not peace, not war, but keep the free world in a constant state of eruption until strife-weary peoples everywhere fall into Russia's clutches out of sheer desperation.

But the jack-booted Germans refused to stop the war on any such arrangement as that. Instead, they mashed Russia's face into the mud and tore the country apart. Whereupon Lenin wrote his famous postscript to the Trotsky ukase. Peace, he said, would have to be accepted but only to give the Reds time in which to stage a decisive comeback. "The proletariat of the world," he added, "will come to our assistance. Then we will lay the bourgeoisie and the imperialists low."

The biggest irony of the present moment is that Trotsky's brains were bashed in because he held that Stalin was not a true follower of Lenin. For now come Khrushchev, Molotov, and other Stalinites to say, in effect, that Trotsky and the vast horde of liquidated Trotskyites were right all the time.

Which means, if it means anything at all, that Khrushchev and his comrades haven't the slightest intention of abandoning the Lenin-Trotsky concept of not war, not peace, but world domination through international conspiracy. How, in the circumstances, any informed person can believe that recent events in Moscow are a hopeful sign, is beyond this observer's ken.

Khrushchev, et al., do not say Stalin was wrong insofar as he sought to promote world revolution. On the contrary, they denounce him for butchering better Bolsheviks than he and falling down on his real job, which was plotting the downfall of free nations.

MOSCOW SPECTACULAR ANOTHER RED ZIGZAG

It would seem, therefore, that the most that can be said for the latest Moscow spectacular is that it is just another different, but typical, Communist zigzag.

More powerful than ever before and better organized everywhere for international sabotage and boring from within, there is considerable evidence that Khrushchev and his fellow conspirators now believe they can achieve their goal without actual war—that is, without a war in which Russia herself would be directly or legally involved.

All around the globe—in Western and Southern Europe, in Asia, Africa, and the Americas, and in all the strategic islands of the seas, their agents are turning every national difficulty to Moscow's advantage.

Moscow is not entirely without reason in feeling cocky. Under the terms of the Russo-German truce of 1918, Russia lost one-quarter of her population and arable land, one-third of her factories, three-fourths of her coal production and her railway system. Today, just 38 years after, approximately two-thirds of the total world population are either Reds, pinks, fellow travelers or sympathetic neutrals. Small wonder that Khrushchev now openly boasts of our certain victory over the other third.

REDS THINK THEIR A-BOMB COUNTERBALANCES OURS

European intelligence reports reveal that Khrushchev and his coconspirators believe that Soviet atomic bombs now fully counterbalance ours. From that, they conclude that they have little to fear from an atomic war because both sides realize that such a war might well prove fatal to both. That being so, conventional armies and weapons may now be said to have come back into their own.

This makes Khrushchev's present drive for conventional arms reduction especially interesting. One reason for it, of course, is its propaganda value but most likely there are others more important still. By a sort of package deal, Russia might hope to obtain some kind of ban on atomic weapons which would leave the way open for her to hold on to hers without the allies being able to catch her at it. Secondly—and perhaps the most important—any further reduction of the already skeletonized forces of Western Europe would leave that whole area at the mercy of the powerful fifth columns everywhere rampant.

SOME NATIONS FEAR RED COUP FROM WITHIN

Some of Western Europe's key countries—which, at the same time, are key countries in NATO—already live in fear of a Red coup from within. In them are enormous Communist populations, trained and disciplined in the use of conventional weapons, sabotage and violence. The Spanish civil war revealed how easily these could be secretly aided by Moscow. Thus, what happened to Poland, Czechoslovakia, Rumania and other countries taken over by the Communists, could also happen there.

Until we can eliminate all guesswork, and until some of the things enumerated above actually offer proof that there has been a genuine change of heart as well as of faces in the Kremlin, for us to enter into any bargain with it as the result of wishful thinking would be the deepest folly.

Meantime, 10 years and $50 billion worth of trying ought to have convinced us that true friendship cannot be bought.

In my humble opinion, the greatest possible service we can do for our own people, for our allies, for the cause of world peace and mankind in general is to make the United States itself as nearly invincible as humanly possible. If we do that, and are as just as we are powerful, loyal friends, of their own accord, will gladly rally round us. We won't have to go, moneybags in hand, seeking them.

Our Great Historic Sites, Buildings, and Objects Are Compelling Ways of Realizing the Worthy Quality of Our Past Attainments

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the rate of destruction of notable buildings in this country in the last two decades either by fire, demolition, or alteration is so dangerously high that thoughtful citizens are becoming deeply alarmed lest we be largely despoiled of the landmarks, sites, and notable objects which identify the historic achievements of the people of this Nation. Recently Prof. James Grote Van Derpool, president of the Society of Architectural Historians, wrote me in support of 2 bills I have sponsored, H. R. 7975 and H. R. 7976, saying that:

The inspiration to be derived from the great lessons of the past are of immense significance in guiding present and future generations toward similarly worthy standards and attainments. It seems somewhat futile to be deeply concerned about our future if we have little comprehension of our past. Certainly our great historic sites, buildings, and objects are compelling ways of realizing the worthy quality of our past attainments.

My 2 bills were designed to assure the completion of work begun under President Franklin D. Roosevelt in 1935 to prepare a national list of sites, buildings, and objects which are declared a part of the national treasure and are thus designated for careful consideration. Such lists are carefully developed and maintained by all the great nations of Europe.

Following the enactment of the Historic Sites Act of August 21, 1935—Forty-ninth United States Statutes at Large, page 666—the National Park Service of the Department of the Interior began making a nationwide survey of historic sites, buildings, and objects for the purpose of determining which of them are of outstanding national historical importance in the history of this country. The information collected has

proven to be of basic importance to the Service and has been utilized in preparing data for Presidential proclamations, national historic sites designation orders, departmental reports on proposed legislation, replies to senatorial and congressional inquiries, and answers to private and semipublic requests regarding preservation of nationally important historic buildings and sites.

The data thus provided has also been essential to the Service in assisting the Department of the Army, the Bureau of Reclamation, the Corps of Engineers, and the Division of Territories in their historic sites and buildings program. The data has also been found useful in advising the President regarding problems relating to the preservation of important historic sites and buildings.

When this important survey was approximately 50 percent complete, it was interrupted by World War II in 1941. I have been advised that under the Mission 66 program for the improvement of the natinal parks and the work of the National Park Service, it is expected that funds will be available to resume the important work of the historic sites survey and that if the necessary funds are appropriated, the Service will resume this activity during the next fiscal year. I understand that in making their survey, the National Park Service staff studies not only buildings in private or semipublic ownership, but also makes studies of those owned or controlled by the Federal Government.

Early in the 1st session of the 84th Congress I began to campaign for the preservation of the historic Civil Service Building at 7th and F Streets NW., in Washington, D. C., and later protested the plan to survey some 31 other historic buildings across the country, such as the fine old customhouse in Charleston, S. C., preparatory to razing them. I am happy, therefore, to commend the Honorable Franklyn G. Floete, Administrator, General Services Administration, and the Honorable Conrad I. Wirth, Director of the National Park Service, for establishing review procedures which will prevent the thoughtless razing of historic buildings. I am very happy to include here for the information of my colleagues some of the many fine letters I have received in support of my measures as well as a letter from Hillory A. Tolson, Acting Director of the National Park Service, confirming the review procedures which should have the support of everyone concerned with the cultural status of our Nation:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., May 18, 1956.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: A recent verbal inquiry from your staff requested detailed information relating to the procedures referred to in our letter of April 16 for the review of old Federal structures scheduled for demolition under provisions of the act of August 27, 1935.

We are glad to advise you that on April 20 by mutual agreement between this office and the General Services Administration, there were established regular procedures for the referral, review, and evaluation of such old Federal structures. The steps in these procedures are as follows:

1. General Services Administration will notify the National Park Service of the proposed demolition of an existing Federal building at the time that General Services Administration determines to include the structure as a project in the lease-purchase program for the replacement of obsolete public buildings. The notification to the Service will be a memorandum form, which will give the name of the building, its location, and its date of construction; a separate memorandum to be forwarded on each project.

2. The Service, upon receipt of the memorandum of notification, will examine the project file in the GSA Washington office; and if necessary, borrow pertinent documents, maps, and photographs for study.

3. After preliminary study, if the Service finds no apparent historical value or architectural merit in the property, GSA will be notified to this effect. If definite historical value is believed to exist and field investigation is required, GSA will also be notified and provided with a statement of the probable time required for the report and determination as to the national historical significance of the structure.

4. The Service will provide GSA with a written determination on the historical significance or architectural merit of the structure within a feasible time and certainly within the 90-day review period prescribed in the act of August 27, 1935.

We are gratified with the fine spirit of cooperation shown by the officials of the GSA and feel certain that the established procedures will provide an adequate safeguard for the evaluation and preservation of old Federal structures.

Sincerely yours,
HILLORY A. TOLSON,
Acting Director.

UNITED STATES
DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., March 2, 1956.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: Thank you for your recent referral of S. J. Res. 156, to provide for the preservation of the historic customhouse in Charleston, S. C.

We are pleased to learn of your interest and that of Senator JOHNSTON in preserving the old customhouse at Charleston through some appropriate means. The whole question of the preservation of old Federal structures, which have national historical associations, is currently be discussed with the General Services Administration. We are at present exploring procedures for the referral, review and evaluation of any of such structures under the provisions of the act of August 27, 1935, as amended (63 Stat. 380, 40 U. S. C., 1952 ed., sec. 304a–2), which provides that the Administrator of General Services shall refer to the Secretary of the Interior for determination as to the national historical significance of any old Federal buildings scheduled for demolition. Officials of the General Services Administration have been very cooperative, and we believe that the review procedures being established will prevent the thoughtless razing of any structure of national significance and will also provide an opportunity for effecting arrangements for the preservation of such structures.

We appreciate your interest in bringing S. J. Res. 156 to our attention, but, in advance of a report by the Secretary of the Interior on this legislation, we are not in a position to state our views upon it.

Sincerely yours,
CONRAD L. WIRTH,
Director.

MARCH 14, 1956.

Hon. CLAIR ENGLE,
Chairman, Committee of Interior and Insular Affairs, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN ENGLE: I strongly favor the passage of two bills that are now pending in the House of Representatives, No. 7975 and No. 7976, making an appropriation to the Park Service for a survey of historic sites, buildings, and objects owned by the Federal Government, and a second appropriation for a survey of historic and other sites, buildings and objects not owned by the Federal Government.

I am sending a copy of this letter to my nephew the Honorable HUGH D. SCOTT, Congressman from Philadelphia, and am asking his support of these bills. I am also sending a copy of this letter to the headquarters office of the National Trust in Washington.

With regard, I am
Sincerely yours,
EDWIN O. LEWIS,
Chairman, Advisory Commission, Independence National Historical Park.

STATE OF NEW JERSEY,
DEPARTMENT OF CONSERVATION
AND ECONOMIC DEVELOPMENT,
Trenton, April 25, 1956.

Hon. FRANK THOMPSON, Jr.,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: Thanks very much for your letter of April 23, 1956, regarding H. R. 7975 and H. R. 7976. I believe these are definitely good bills covering a field which has been long neglected. You may certainly count on all my support.

With warmest regards, I am
Sincerely yours,
JOSEPH E. MCLEAN,
Commissioner.

DEPARTMENT OF CONSERVATION,
DIVISION OF PARKS AND MEMORIALS,
Springfield, March 9, 1956.

Mr. FREDERICK, L. RATH,
Director, National Trust for Historic Preservation, Washington, D. C.

DEAR MR. RATH: I wish to extend the support of this office for the two bills, H. R. 7975 and H. R. 7976 which were recently introduced into the House of Representatives by Congressman FRANK THOMPSON, of New Jersey.

The first bill will provide for a much-needed survey of national park properties which should permit them to be more efficiently restored and maintained.

H. R. 7976 should be passed so that the incomplete nationwide survey of historic properties can be brought to a conclusion. It is certainly a worthy and needed project.

May I say that both bills provide for surveys of a type which we are now undertaking in the State of Illinois. We have found that such surveys permit us to develop our present properties and also to guide us while in the acquisition of properties which are not yet in public hands. The same sort of activity should certainly be going on throughout the Nation. I hope that the National Trust can be an effective instrument in relaying the wishes of this office to Congress.

Sincerely yours,
RICHARD S. HAGEN,
Historical Consultant.

SOCIETY OF ARCHITECTURAL HISTORIANS,
April 4, 1956.

The Honorable FRANK THOMPSON, Jr.,
Member of Congress, House of Representatives, Washington, D. C.

DEAR MR. THOMPSON: In reply to your good letter of March 26 requesting a statement in support of bill H. R. 7975 and H. R. 7976, I am more than happy to do so as follows:

On behalf of the Society of Architectural Historians I would like to offer warm commendation for the objectives expressed in the two bills designated as H. R. 7975 and H. R. 7976, as introduced into the House of Representatives on January 3 by Congressman FRANK THOMPSON.

These two bills represent logical first steps toward the preservation of significant historic sites, buildings, and objects in this country, whether already owned by the Federal Government or in other hands.

Calling for an appropriation to finance a systematic survey and evaluation of these two classes of historic holdings, for the first time, will allow our Nation to have a clear picture of what constitutes an important part of the heritage of the American people. Such a survey undertaken by the admirably trained and historically aware staff of the National Park Service, should prove an immensely useful guide as to exactly what is of genuine significance to us and hence worthy of zealous preservation. From an administrative point of view such inventories should prove of immediate usefulness to the concerned members of the Government and private bodies responsible for the custodianship of such works.

At long last, this country will be joining the ranks of the great nations of Europe who have long maintained so-called national lists of sites, buildings, and objects which are declared a part of the national treasure and are thus designated for careful preservation.

The rate of destruction of notable buildings in this country, in the last two decades either by fire, demolition, or alteration is so dangerously high that thoughtful citizens are alarmed lest we be largely despoiled of the landmarks, sites, and notable objects which identify the historic achievements of the people of this Nation. The inspiration to be derived from the great lessons of the past are of immense significance in guiding present and future generations toward similarly worthy standards and attainments. It seems somewhat futile to be deeply concerned about our future if we have little comprehension of our past. Certainly our great historic sites, buildings, and objects are compelling ways of realizing the worthy quality of our past attainments.

Very sincerely,
Prof. JAMES GROTE VAN DERPOOL,
President.

THE COMMISSION OF FINE ARTS,
Washington, D. C., May 11, 1956.

The Honorable FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: I was very glad to receive your letter of May 9, 1956, which I read to the members of the Commission of Fine Arts at the meeting held on May 9 and 10, 1956. We share your feeling of satisfaction that the General Services Administration has changed its mind about the need to raze the old Patent Office Building here and the old customhouse in Charleston, S. C. The preservation of our historic and architectural monuments remains, however, a matter of continuous vigilance, and we are grateful that you consider this a matter to which you can lend your support.

The allocation of funds for mural paintings and sculpture in new public buildings is an important item of our current studies in the Commission. The preparation of such legislation involves the agreement and cooperation of the General Services Administration and the Bureau of the Budget, where the matter now stands. Until it can be cleared through these two agencies, there is nothing that can be done at the present time about such legislation, but we are hopeful of securing a report and draft of such legislation from the General Services Administration in the near future.

Sincerely yours,
DAVID E. FINLEY,
Director.

COMMITTEE ON PRESERVATION
OF HISTORIC BUILDINGS,
Chicago, Ill., April 17, 1596.

The Honorable FRANK THOMPSON, Jr.,
Representative from New Jersey, the House of Representatives, Washington, D. C.

MY DEAR REPRESENTATIVE THOMPSON: Mr. Albert Simons, of Charleston, a member of our committee, has been good enough to send me a clipping from the Charleston Evening Post, April 6, 1956, with the welcome news that any thought of razing the old customhouse there has been abandoned and that the General Services Administration will seek to preserve it.

Our Committee also notes mention of your having added your voice to protests against the proposed demolition and also that you have drafted bills aimed at preserving national landmarks having "exceptional value of commemorating or illustrating the History of the United States." Such structures so often possess architectural significance also, that the American Institute of Architects finds double cause for applauding and supporting your cause. We would be very interested indeed to know what progress has been made toward your objective and especially how we could bring the institute's national prestige to bear in support.

We have over 100 preservation officers through the country who are conducting a national inventory of significant buildings and who, as much as is possible, help in the preservation of them. Perhaps you know Mr. Seymour Williams, 385 Central Avenue, Rahway, N. J., and would be interested in talking things over with him. He is a veteran in preservation and one of our most zealous cooperators.

Also, you might wish to communicate with Albert Simons, 17 Broad Street, Charleston 3, S. C., who has led our fight to save the threatened Patent Office in Washington, so far successfully.

Please accept our thanks for your interest and effective support.

Sincerely yours,
EARL H. REED,
FAIA Chairman.

THE HENRY FRANCIS DU PONT
WINTERTHUR MUSEUM,
Winterthur, Del., March 21, 1956.

Mr. FREDERICK L. RATH, Jr.,
Director, National Trust for Historic Preservation,
Washington, D. C.

DEAR FRED: I note with great interest the two bills now before Congress: H. R. 7975 and H. R. 797. Without question, the two projects outlined in these bills are of tremendous interest to the Nation as a whole. It seems a great shame that any nation, and especially one as rich as ours, has been unwilling or unable to afford the comparatively small amount of money necessary to complete a survey of its historic buildings and monuments.

Each year these monuments mean more and more to the American people. I foresee their becoming a most important part in the overall American educational system in the comparatively near future; that is to say, if any of them remain. The first step toward saving them is to learn the important ones through such surveys as outlined in H. R. 7975 and H. R. 7976.

I wholeheartedly hope—as does every member of this institution—that these two bills may be passed.

Yours very truly,
CHARLES F. MONTGOMERY.

MISSOURI HISTORICAL SOCIETY,
St. Louis, Mo., March 23, 1956.

Mr. FREDERICK L. RATH, Jr.,
Director, National Trust for Historic Preservation,
Washington, D. C.

DEAR MR. RATH: I have just had the opportunity to examine your fall-winter 1955 issue of Historic Preservation with your enclosure regarding House bills H. R. 7975 and 7976. Both provide an opportunity for completing the increasingly needed list of historic properties administered by the National Park Service, and the remaining sites of national interest which still survive.

Here at the historical society we constantly use, for reference purposes, the material assembled under the Historic America Building Survey Act. It is greatly to be desired that this project be completed.

Sincerely,
CHARLES VAN RAVENSWAAY,
Director.

CITY ART MUSEUM OF ST. LOUIS,
St. Louis, Mo., March 2, 1956.

Mr. FRED L. RATH, Jr.,
Director, National Trust for Historic Preservation,
Washington, D. C.

DEAR FRED: Recently I received a copy of the two bills H. R. 7975 and H. R. 7976 relating to the facilitation of historic preservation in the United States. Needless to say I hope these will be passed since the survey for which they would provide would be most helpful in the appraisal and eventual realization of many preservation projects commemorating or illustrating the history of the United States.

The National Park Service, under whose aegis such projects come would be greatly aided in their efforts by such a survey since at the present time the development of historic sites and the preservation of buildings and objects owned by the United States lack the benefit of any organized plan for the implementation of these many and disparate undertakings.

In our own region for instance I am sure that the great Jefferson National Expansion Memorial would benefit through such a survey, whereas at present it is having to undergo a painfully slow reactivation after almost 20 years of stagnation because of the late war.

Sincerely yours,
CHARLES NAGEL,
Director.

Brooklyn's Oldest Synagogue Celebrates 100th Anniversary

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. ANFUSO. Mr. Speaker, Brooklyn's oldest synagogue, known as Baith Israel Anshei Emes, is now celebrating the 100th anniversary of its existence. Founded in 1856 by 12 Jews of Dutch and Bavarian origin, this congregation was the first attempt to organize Jewish religious and communal life in Brooklyn. Today, the Borough of Brooklyn contains the largest Jewish community in the world, numbering about 1 million people of the Jewish faith.

Of particular interest is the fact during the early years of its existence it

was aided by Christian neighbors when a group of bigoted know nothings tried to stop the congregation from conducting religious worship. Today, we find that Christian people are again aiding this congregation through financial contributions for the purpose of establishing this old synagogue as a shrine in Brooklyn for posterity. What better example of brotherhood and interfaith understanding can we have?

A century ago when this congregation was established, Brooklyn was primarily farmland. The members of the congregation, their children and their grandchildren grew up with Brooklyn and helped to make it what it is today. They have played a vital role in the growth of community life, which today encompasses some 3 million souls of all faiths.

On the occasion of a century of uninterrupted existence, I extend my sincerest good wishes to the congregation and its entire membership. May it continue to bring forth the finest in Jewish life in the future as it has done so well in the past.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert two articles which describe the history of Brooklyn's oldest synagogue and its impact on the community. The articles, written by Oscar Hertz, president of the congregation, and by its spiritual leader Rabbi Israel Goldfarb, were published in the April 1956 issue of the Jewish Forum. They are as follows:

CENTENNIAL OF BAITH ISRAEL ANSHEI EMES

(By Oscar Hertz, president)

(EDITOR'S NOTE.—Oscar Hertz, a prominent attorney, is active in Brooklyn's religious and communal affairs.)

BROOKLYN'S OLDEST SYNAGOGUE: A SHRINE

In 1943, Brooklyn's first and oldest synagogue was fraught with peril. Congregation Baith Israel Anshei Emes, founded in 1856, was haunted by one pervasive reality—the threat of closing its doors as a house of worship.

The two imposing synagogue buildings located at Kane and Court Streets were on the verge of crumbling because of lack of repair. A shift in the Jewish population had considerably reduced its membership. Our country was at war with Germany and approximately 200 of the congregation's young men were in the armed services.

Everything looked bleak. The board of trustees was utterly discouraged. To gather courage to carry on, our conversation centered around the common struggles of our congregation's pioneers. But as the weeks rolled on, the financial crisis became worse.

"The Jews are a people of history and time," wrote the historian, Rufus Learsi. Our members, guided by this philosophy, decided to hold on as long as possible, hoping and praying that time would bring the miracle of keeping our synagogue open for posterity.

The miracle did happen. In our midst appeared a stranger who made inquiry for a place of worship. A mild-mannered individual, with a kindly looking face, introduced himself to the members as Herman Belth.

Rabbi Israel Goldfarb, spiritual leader of our congregation, warmly welcomed Mr. Belth. Members of the congregation made him feel at home. As time elapsed, he was attracted more and more by the awe-inspiring synagogue. He loved its lofty simplicity of design. He was struck by the majestic beauty of the buildings. Its high columns, stained-glass windows, and choir loft gave one a feeling of peace and religious contentment, despite the crumbling plaster and cracked walls.

Mr. Belth, a partner in the brokerage firm of Merrill Lynch, Pierce, Fenner, & Beane, learned of the financial distress of the congregation. He felt the importance of maintaining the Jewish religion and preserving the synagogue for prayer. He recommended the establishment of a building fund, of course, pledging his own assistance. "Our support at this crucial period must be expanded to the utmost," pleaded Mr. Belth.

The members were permeated with Mr. Belth's spirit and enthusiasm. We all worked hard to raise funds. Mr. Belth brought in many thousands of dollars. This enabled the synagogue immediately to make some necessary repairs.

In 1948, I noticed that the moneys contributed were not sufficient to meet many of the obligations. Somewhat discouraged, I wrote a letter to Rabbi Goldfarb informing him that, despite Mr. Belth's and members' herculean efforts, the synagogue was still financially in distress.

This letter was shown Mr. Belth. While the Rabbi and Mr. Belth were in conversation at the latter's home, Mrs. Belth handed an envelope to her husband. It was from a Christian friend. It contained $2,000 for the synagogue. This brought new temporary life and hope to the rabbi and the congregation.

Thirteen years have passed since Mr. Belth has come into the life of the congregation. During this period he, with the aid of his friends (some of them the most outstanding Christian folks in the political and financial fields in the world) contributed approximately $100,000. With this money the synagogue was remodeled and redecorated. Singlehanded, Mr. Belth lifted the congregation from its plight in 1943 to one of the foremost synagogues in Brooklyn today.

Congregation Baith Israel Anshei Emes is now celebrating its 100th anniversary. On May 13, 1956, the centennial celebration will culminate at a dinner to be held at the Waldorf-Astoria Hotel. The proceeds will go into a building endowment fund. Mr. Belth has undertaken the chairmanship of this fund for the sole purpose of raising an initial sum of $250,000 to insure the perpetuation of the synagogue as a shrine for posterity.

No longer does this synagogue belong to the members of the congregation as such. It rather belongs to all Jewry. As the first and oldest synagogue in the largest Jewish community in the world; it rightfully has its place as a shrine dedicated to Jewish life.

At first, minyan services were held in homes. When, on January 22, 1856, they met in the home of Mr. B. Rose on Myrtle Avenue, the minyan became Baith Israel (House of Israel) and Morris Ehrlich was elected president; Marcus Bass, vice president; J. A. Jonas, treasurer; Nehemiah Hoffheimer, secretary, and Tagol Samter, Michael Prince, and Joshua Mendes, trustees.

A temporary synagogue was fitted out at 155 Atlantic Street (now Atlantic Avenue). The ritual was usually chanted by laymen, except on Passover and autumnal festivals, when a regular cantor, chazzan, was brought from New York.

But all did not go smoothly. In that area where the congregation met, and where George Washington planned the amphibious withdrawal that saved his army, where freedom won in the Battle of Long Island, the pious Jews found themselves pursued by the old wolf pack of bigotry.

The know-nothings, a bigoted and anti-intellectual group of the time, blasted away at the establishment of the synagogue. But they hadn't counted on the force of faith. The little congregation was supported in its struggles by local Christians—Roman Catholics and Protestant. Following the implications of their faith, which holds that God is not the special property of any tribe or race, and that all men should worship Him as brothers, sincere Christians stood by the pious Jews in verbal debates and fistfights. Some were arrested for assault and battery. Against the active religious conviction of Jew and Christian, the opposition of the know-nothings splintered apart. The congregation then and there began its tradition of Jewish-Christian cooperation.

A building erected on the corner of State Street and Boerum Place was the second home of the congregation, when Solomon Furst became president; Marcus Bass, vice president; T. Samar, treasurer; Julius Corn, secretary; and H. Mautner, M. Lowenthal and M. Cohen, trustees.

The cornerstone was laid on January 12, 1862, by Moses Lowenthal, who subsequently became president of the congregation. The large gathering at the ceremonies included city officials and Christian clergymen. Officiating were Rabbi Raphall Isaacs and S. M. Aaron, both of New York.

Members of the congregation marched with their scrolls from the temporary quarters on Atlantic Street to their new spiritual home—the "Boerum Shul." Here Baith Israel spent more than 40 decisive years, years filled with pathos, humor, and progress.

While the new synagogue was located near a stable of race horses, members of the congregation did not complain. But the thoroughbreds, apparently, did. Race-horse handlers complained about that "loud praying from the synagogue disturbing the horses." Any requests, however, to stop praying must have been met with a polite nay (neigh?), for the members continued praying and the congregation continued exerting a wider influence in the growing community. Waves of immigrants were sweeping into the country.

The early minutes of the congregation were in English, next in German, then in Yiddish, the last indicating an influx from Poland, Russia, and other areas of Eastern Europe. Before the turn of the century, they were again written in English, and have been ever since.

As the Jewish population in Brooklyn grew from 100 to 1 million, groups split off from the mother synagogue and from one another and formed new synagogues, so that today a number of Jewish institutions in the borough can trace their lineage back to the first congregation.

After the turn of the century the congregation declined; by 1904 it had dwindled down to about 30. One reason was population movement with people spreading farther out into Brooklyn, leaving old neighborhoods to decay. For some years the congregation had been without a rabbi. The trustees and officers took the dilemma by the horns and the congregation was moved to its present location on Kane Street (then Harrison Street) near Court Street.

In June 1905 Rabbi Israel Goldfarb became the spiritual leader of the congregation. In autumn of that year he made a powerful plea for the establishment of a Talmud Torah (daily Hebrew school). With the initiative of Mr. Sonnenstrahl and Mr. Salit, the school was organized. It opened its doors on November 26, 1905, with 90 pupils, who came to 4 sessions weekly to learn Hebrew, the prayer book, translation of the Bible, Rashi, Jewish music, Jewish history, and religion. The instruction in Sunday school was thorough and the Talmud Torah provided added learning which broadened and deepened the students' knowledge of their religious and cultural past.

The congregation's new home was originally built in 1846 as a Dutch Reformed Church. It was temporarily remodeled, and the pulpit of the old Boerum shul was removed to the new synagogue, which was dedicated on Washington's birthday, 1905. In March 1908 it merged with Talmud Torah Anshei Emes (of Degraw Street). The Scrolls of the Law were brought in carriages, and

President Isaac Tuck presided over the joyous celebration. Thus the congregation became Baith Israel Anshei Emes.

Down through the years the women of the congregation played an important role. It was the congregation's first women's society, formed in 1868 as the Daughters of Israel Benefit Society, that gave some of its money for the Kane Street building. A permanent sisterhood was formed in 1908 with Mrs. L. Summer as president.

The synagogue was completely remodeled in 1911 and again in 1929. The 1920's were golden years for the congregation. Eight hundred active members contributed to the life of the synagogue, and the Sunday school thronged with 500 children.

But trouble was ahead. A ticker tape told of ever-sickening prices. The congregation, decimated, weathered the depression, serving its members and standing for the principles of traditional Judaism. Faithfully it taught the young and buried the dead in its cemetery. Then came the war, the sacrifices, the lives of sons laid down on the battlefields.

But there was nothing it could do about population shifts in the Borough of Brooklyn. The immediate area became increasingly Roman Catholic, surrounded by business establishments. The Jewish population scattered and shifted, leaving the mother synagogue more and more alone. Yet the congregation still has its faithful members, holding services every day for some of the Jewish businessmen of the area.

Sometimes when there aren't enough present for a legal service, the local police station (Butler Street precinct) is called up. The Irish desk lieutenant politely obliges by sending the needed number of patrolmen who had just finished their tour of duty, to fill out the congregation's morning or evening minyan.

Incidents like these are typical of the Jewish-Christian cooperation that has been distinctive of the congregation's history. On December 16, 1955, it honored the members of the bench and bar in recognition of their outstanding contribution to the growth and development of the largest Jewish community in America. On February 5, 1956, the congregation held a public celebration to commemorate its centennial. Both successful events were held in the synagogue.

The dinner celebration, to be held at the Waldorf-Astoria Hotel on May 13, 1956, will begin a new milestone in the history of the congregation. Now it has been decided that the synagogue be made into a shrine. Nothing could be more fitting. Brooklyn has been called the "Borough of Churches." But with a thriving Jewish community of more than a million persons, it is also a borough of Synagogues.

The "mother synagogue" today stands as a symbol of the finest in Jewish life and of the finest of cooperation with other faiths. We are linked in unity, supported by an unswerving faith in the power of religious belief. In the past we have contributed generously to the spiritual life of our community. As a shrine, an additional growing contribution will be made toward building Brooklyn as the Borough of Brotherhood.

BAITH ISRAEL ANSHEI EMES

(By Israel Goldfarb, rabbi)

(EDITOR'S NOTE.—Dr. Goldfarb has just completed his 50th year as spiritual leader of congregation Baith Israel Anshei Emes, which is celebrating its centennial. He is recognized as one of the outstanding members of the Rabbinate.)

SPIRITUAL IMPACT ON COMMUNITY LIFE

Looking at the sprawling Jewish community of Brooklyn with its estimated population of more than 1 million souls, one would hardly believe that this, the largest single Jewish community in the world, has grown up and developed within the short span of only 100 years. To trace the beginnings of this remarkable community and its unprecedented growth, one must turn to the annals of Congregation Baith Israel Anshei Emes, the mother synagogue of Brooklyn, now celebrating its 100th anniversary.

It is not known exactly when or how Jews first came to live in Brooklyn. It is most probable that individual Jews settled on Long Island as early as the Dutch period. Their number was apparently too small to form a community. It is a matter of tradition that, during the holy days, they attended the congregations in New York, the more pious among them rowing over on Fridays to spend the Sabbath with their brethren on Manhattan Island.

It was not until January 22, 1856, when 12 serious minded Jews of Dutch and Bavarian descent, symbolically reminiscent of the original 12 tribes of Israel, met at the home of Mr. B. Ross on Myrtle Avenue in the city of Brooklyn for the purpose of incorporation of a congregation and synagogue for divine service. This meeting marked the birth of the first Jewish house of worship and the first attempt at organized Jewish life in Brooklyn.

Little did this small group dream that the tiny acorn which they then planted in the virgin soil of Brooklyn would someday grow up into a mighty oak. If these pioneer Jews were to return today, how surprised would they be to find that the quiet and peaceful Brooklyn countryside of a century ago has grown and developed (in great measure through the efforts of its Jewish population) into a great center of industry and commerce, religion, education, art, and culture. With what just pride would they gaze upon Brooklyn's large network of synagogues and religious schools of every description, of philanthropic, educational, and social institutions that are teeming with Jewish life and activity.

II

During the first years of its existence, Congregation Baith Israel, as the new organization was named, held its religious services in a temporary, improvised synagogue at 155 Atlantic Street (now Atlantic Avenue). It was not until January 12, 1862, when the cornerstone for Brooklyn's first synagogue was laid on the corner of Boerum Place and State Street, a few blocks from Boro Hall. It was a happy day when on August 31 of the same year the new synagogue was dedicated in the presence of a large gathering, including distinguished rabbis from New York, city officials and Christian clergymen.

In the decades that followed, Congregation Baith Israel was the center of Jewish activities in Brooklyn's growing community. Within its sacred walls, hundreds of men and women have found spiritual comfort and religious exultation. Within its classrooms, many hundreds of Jewish children have received their spiritual nourishment and their first knowledge of our people's history and faith.

The first years of the congregation's existence were not, however, without their hardships and struggles, disappointments and serious setbacks. Early in its history, the congregation was torn by internal ideological strife when a number of its members sought to introduce the reform ritual into its religious services. It happened during the period when the reform movement was very strong under the aggressive leadership of men like Rabbis Isaac M. Wise, Max Lilienthal, David Einhorn, Samuel Adler, and Samuel Hirsch. This movement, a product of Germany, had made rapid strides over the length and breadth of the country. Under such strain, Baith Israel, which had been pursuing a strict course of consistent and uncompromising orthodoxy since its inception, had quite a task before it in trying to keep itself from being swept by the powerful currents of the reform movement into the labyrinth of the new cult.

To all demands for changes in the ritual, the Congregation remained stubbornly unyielding. Accordingly, in 1861, the discontented advocates of reform seceded from the congregation and organized a new society under the name of Beth Elohim, the first reform temple of Brooklyn, now situated at Eighth Avenue and Garfield Place.

In 1869 a splinter of this new congregation broke away from Beth Elohim and organized Temple Israel at the corner of Bedford and Lafayette Avenues, but which later merged with Temple Beth Elohim of Williamsburg under the name of Union Temple, now at Prospect Park Plaza and Eastern Parkway.

III

For the next 40 years the congregation continued without interruption, serving the spiritual needs of the growing Jewish population in the downtown area of Brooklyn with rare zeal and devotion.

During these years wave after wave of new Jewish immigrants began to arrive from lands of persecution and poverty. With the influx of these newcomers the completion of Brooklyn Bridge, the improvement of transit facilities, the consolidation of the city of Brooklyn with New York, and the opening up of many new and attractive residential sections in this great borough, the Jewish community grew and prospered beyond all expectations. New synagogues, temples, and chevras appeared, new Sunday schools, Talmud Torahs, and Yeshivas came into being. New philanthropic, social, and cultural institutions sprang up everywhere. Brooklyn today may truly be said to be the largest single Jewish community in all the world.

In 1905 the congregation acquired its present building at Kane and Court Streets. The high archceilinged interior, with its finely wrought columns, its artistic, dignified interior decorations, its choir loft, balconies, and its decorative stained-glass windows combine to give this old building an atmosphere of dignity and holiness.

In 1908 an amalgamation was effected between Baith Israel and the neighboring Congregation Talmud Torah Anshei Emes. The congregation then adopted the name Baith Israel Anshei Emes. This merger helped to increase the membership and to secure for the synagogue its position as an active and growing congregation.

In the 1920's the synagogue was at its peak. It enjoyed a membership of more than 800 persons and a religious school of 500 children taught by a staff of 25 teachers. Unfortunately, the two world wars changed this rosy picture. The character of the neighborhood changed. The Jewish population in the vicinity of the synagogue began rapidly to decrease, resulting in a sharp decline in the congregation's membership, and a serious falling off in synagogue and school attendance.

Yet, despite this serious setback, the congregation carried on its sacred work with rare devotion and sacrifice, never for a moment lowering its high standards of communal responsibility. Its Ner Tamid was never dimmed during the entire century. The solemn voices in prayer never failed to be heard in its synagogue thrice daily. The cheerful voices of children at study ever re-echoed within its classrooms without interruption.

In the two world wars the congregation was alert to its duties and responsibilities. Over 600 of our young men responded patriotically to the call of our country's Armed Forces. Many thousands of dollars were raised for the relief of our brethren in the war-stricken countries and for the upbuilding of Palestine as the Jewish homeland.

Here at home, the congregation was alert and active in every movement that worked

for the good and welfare of the Jewish as well as the non-Jewish community.

IV

We are now entering a new milestone in the congregation's history, as its first century ends. We are now reconsecrating ourselves to greater efforts on behalf of our synagogue and the high ideals for which it stands.

In the past decade, in particular, the congregation has been blessed with an alert and far-sighted leadership. High in this leadership stands Mr. Herman Belth, through whose generosity and influence the synagogue was refurbished and redecorated at a cost close to $50,000. Largely also to Mr. Belth's initiative, the congregation has now embarked on an ambitious plan to raise an endowment fund of $250,000, toward which he has already contributed $25,000. Among the other leaders of whom we are very proud are Oscar Hertz, our youthful president, and his senior brother Jacob of the law firm of Hertz and Hertz, who are imbued with a fine Jewish ideology and with a self-sacrificing spirit.

There are many others, both men and women, in our congregation's leadership who are worthy of honorable mention for their dedicated zeal in the work of this century-old synagogue, but whose names I must regretfully omit due to lack of space. Suffice it to say that with such men and women at the helm of Baith Israel Anshei Emes, the congregation cannot fail.

It was my privilege and joy to have served the spiritual needs of this historic synagogue for over half a century. I am happy to have been able to serve it with all the talent and strength that the good Lord has granted me.

My only prayer now is that the synagogue to which I have dedicated a lifetime of service may continue in the years ahead as a spiritual blessing to those coming after us, and that Congregation Baith Israel Anshei Emes may stand out as a beacon light, as a sacred shrine dedicated to the lofty ideals of emeth, din, and shalom—truth, justice, and peace.

Need for Strengthening United States Airpower

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1956

Mr. WILEY. Mr. President, it was my privilege to speak to the Arnold Air Society at the University of Wisconsin in Madison on Saturday night last, on the subject of the necessity for strengthening United States air power. I ask unanimous consent that a copy of my address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

SENATOR WILEY URGES STRENGTHENING UNITED STATES AIR MUSCLE—SAYS ANY MORE UNDERESTIMATING OF RED STRENGTH COULD BE "SUICIDAL"—URGES MORE UNITED STATES REENLISTMENT INDUCEMENTS.

It is a privilege to be your guest tonight. You will have an even greater privilege—of serving in the United States Air Force.

Today, we pay tribute to you and all other patriots who defend America.

KREMLIN RESPECTS UNITED STATES MUSCLE

We pay tribute by the great Armed Forces Day parade which we have been privileged to witness. We pay tribute by our words of sincere praise for America's sentinels.

But most important of all, we pay tribute in action—by vowing to take constructive steps—to put still more "muscle" into the United States Air Force, into the crucial guided missile program, and into all other essential military arms. Why? So as to assure America's invincibility and to deter global war.

The Soviet Union, despite showy signs to the contrary, is still unfortunately bent on world conquest. The Kremlin still respects "muscle" on its opponents arms; not flabby fat, not apathy, not empty bragging on any American's part, but strong, well-trained, defensive, "muscle."

We don't get muscle without exercise, without training, without self dedication.

That is what you of the Air Force Reserve Officers Training Corps have been learning, and it is what all Americans must relearn. In this dangerous Jet-Atomic Age, softness of mind or body can be suicide. We must be strong, vigilant.

A GREAT AMERICAN—"HAP" ARNOLD

As you so well know, the Arnold Air Society perpetuates in honor of the immortal name of "Hap" Arnold, one of the greatest, strongest airmen of all times.

He was an air officer who learned to fly from the Wright brothers, who picked up from Billy Mitchell's dying hands the torch of a dynamic Air Force. He carried the torch aloft into the "wild blue yonder" with the winged squadrons which played so magnificent a role in winning World War II.

In but a few years, we had built the insignificant airpower that we had before 1941—into the most powerful air force in the world—an armada of 2½ million men and 75,000 planes. That was an "impossible job," but it was done.

And it was done under the command of your namesake, Gen. Hap Arnold.

As he said, "The difficult, we do easily. The impossible takes a little longer."

This time, thank goodness, we recognized our potential enemy much sooner. And after a postwar relapse, we wisely began steps to rebuild our shrunken airpower.

THE NEED FOR SPLIT-SECOND REACTION

We are all aware that with the growth of flight radius and the rise in air speed—better than 1,400 miles per hour—we shall not again have much warning of actual outbreak of hostilities.

That is why our air strength is built into an instantaneous machine which must start without delay.

Our superb SAC, or Strategic Air Command, is poised, as you know, to go off at the flash of a signal.

Ready are the long range and medium bombers. Ready are the atomic-H-bombs. Ready are the skilled air crews. Waiting for a signal—we hope will never have to be flashed from headquarters; a signal that a potential enemy has actually started hostilities.

Then SAC stings back with fatal destructive power.

Our U. S. A. has never begun a war. And it does not intend to.

But it is ready with an all-powerful threat of awesome retaliation which our potential enemies fear.

Besides this retaliation, we have the defense of our far-flung Navy, with its own airpower afloat on the big flat tops.

And our Army and Marine Corps are dispersed startegically to block attack upon the free world.

Similarly and most important, our missiles and interceptors are set up to defend our continental United States.

THE COMPONENTS OF AIR MIGHT

As you are so well aware, airpower includes, of course, the aircraft, and their weapons, and the men who fly and service them.

Airpower also means the indispensable bases—at home and abroad—from which the aircraft are launched on their missions.

And back of the bases and aircraft is the vast complicated industrial organization of human skills and of raw materials.

Through a kind of magic formula, there emerges the intricate airplanes, with automatic fire control systems, atomic-H-bombs and rockets.

And back of this production is the long research and development process. It conceives, designs, builds and tests all the things which go into their super-modern airplanes.

Air power also includes civil aviation which furnishes ready additional sources of planes, skills and fields.

"Air power," to quote Arnold again, "will always be the business of every American citizen."

MADISON JUST HOURS, SOON MINUTES AWAY FROM MOSCOW

In this shrunken world, it is now possible to fly from Moscow to Madison, or Madison to Moscow in a jet bomber in less than 9 hours; and from or to Siberia in less than 5 hours.

Soon, the long-range rocket will again shrink bomb transportation time between these spots and only to a matter of minutes.

These facts have utterly changed our concept of international relations. Gone—as dead as the dodo or the dinosaur—is the obsolete concept of isolation.

AIR POWER BACKS UP UNITED STATES DIPLOMACY

Technically speaking, General Arnold defined air power this way. He said:

"Air power includes a nation's ability to deliver cargo, people, destructive missiles and war-making potential through the air to a desired destination to accomplish a desired purpose."

American air power is not an offensive threat to anyone. But it is ready to back up our American Foreign Service and our economic and technical aid group in their front-line responsibility of strengthening our relations with other governments and with other people.

Here, at home in our domestic affairs we have put away our "six shooters." We face no major threat to domestic tranquility. But, out in the cold international scene in this world where Korea was attacked and split asunder, where Vietnam was assaulted and divided, where fires rage in North Africa and potentially again in the Middle East, we face a grim challenge from international communism.

We are still so threatened with brutal Red disregard of right, honor and security; we are faced with so serious a threat of potential death and destruction of ourselves and of all that is dear to us, that we must keep up our guard. That means an attitude of vigilance. And it means appropriations for vigilance. False economy would not make sense. A second best air force is no good. Underestimating our enemy could be a catastrophe, perhaps sheer suicide.

We must maintain our air power supreme and ready to retaliate with efficiency at all times.

AIRPOWER IS PEACE POWER

We must and shall only use it to defend the peace of the world.

And so our airpower is, in reality, peace power.

Our statesmen—inside and outside NATO—must continue to be able to negotiate from positions of strength; from positions, not only of moral strength, but also of physical military strength, so as to assure respect for our statements, and to back them up, if need be.

SOVIET DISARMAMENT THUS FAR A SHAM

Unilateral disarmament would be the height of stupidity on our part, and that is why our alert President will never risk it. The Reds, for all their propaganda fanfare of reduction of conventional ground and sea forces, have not reduced by one iota, their all-out preparations in the crucial air arm—by piloted and pilotless aircraft.

They are putting away their obsolete "bean shooters," so they can step up their production of superdeadly missiles and H-bombs.

I do not mean that the recent ferment inside the top echelons of the Kremlin is without any meaning save as propaganda.

Obviously, there is a reappraisal going on, and a new phase of the struggle for power inside the Kremlin.

But while the Soviets so obviously continue to seek to conquer the world, their sham and showy efforts of so-called disarmament—their sirupy words of friendship—must not lull us to sleep.

IS KHRUSHCHEVISM ANY BETTER THAN STALINISM?

Joe Stalin is dead. Stalinism, as such, may be dead or dying.

But the Reds can "tell it to the Marines," or to the Army or the Air Force, if they think we naively believe that Khrushchevism is innocent or harmless.

Therefore, 365 days a year, we will continue to combat Red subversion at home and abroad.

And we will do so with the marvelous aid of the men with the honored, winged emblem, and with their hard-working ground crews.

They are called not simply to carry weapons of death, but, as well, the sinews of life.

INSPIRING EXAMPLES OF PEACEFUL AIRPOWER

Illustrations of peaceful use of airpower abound. There was the unforgettable Berlin airlift which fed and saved the liberty-loving Germans of West Berlin, who had been blockaded by the ruthless Communists.

There was the Moslem airlift to Mecca, which was appreciated as a friendly act to overcome a transportation problem encountered by devout pilgrims.

There has been the "Kinderlift" when Berlin children have been brought out by air for a few weeks' vacation and recreation in Western Germany.

And the Air Force has cooperated with her sister services on land and sea in a long series of disaster relief and rescue operations. These have covered flood relief in England, the Netherlands, Germany, Italy, and Pakistan, and earthquake relief in Greece and Turkey.

WE ARE PROUD OF OUR OVERSEAS FORCES

And that brings us to this point.

We can indeed be proud of the behavior and the accomplishments of our men stationed throughout the world.

Our American airmen, our sailors and ground forces have recognized the delicate nature of our overseas position—being stationed in other sovereign peoples' territory.

Of course, every once in a while, you hear some criticism of the conduct of some GI in a foreign land. But I say to you that there has never been a people whose overseas boys have behaved more admirably, more thoughtfully, more generously than have the Armed Forces of the United States stationed abroad. Despite the occasional, isolated incidents and mishaps, we have a right to hold our head high over the general conduct of our boys overseas. And we can thank the top command of our services, as well as the officers down the line, and the GI's themselves, for that inspiring record.

Even before the United States of America dispatches a fighter or bomber wing to a foreign base, the ground must have been prepared—in spirit and in letter—money must have been spent there first. Runways, shops, and hangars must have been built. Barracks and hospitals, chapels and commissaries—in fact the living needs the size of an American town must have been provided—for our own men.

And our airmen abroad are genuine ambassadors of good will, who are representative of all that is fine in American life. Although the United States Air Force is a new service, it has a record of devotion to duty and of accomplishment which makes it worthy of representing America abroad, along with our Army, Navy, and Foreign Service.

SOVIETS MAKING SPECTACULAR AIR PROGRESS

Now, what about our airmen's equipment? Are we losing the competitive race with the Reds?

As we are all aware, the newspapers, radio and television have recently been full of conflicting testimony of both sides of this crucial question: "Are we now still ahead of the Soviet Union in air power, or are the Reds already ahead of us?"

Gen. Curtiss LeMay has given the very disturbing but factual testimony that only 78 B–52 bombers have been produced, of which only 31 were accepted. On the other hand, it is estimated that the Reds have approximately 100 intercontinental jet bombers, which are equivalent to our B–52's.

While it is agreed that we are thus behind the Soviet Union in the long-range bomber, it is universally agreed that we are far ahead in medium range jet bombers—our B–47's. These medium bombers require, however, overseas bases, or refueling in air.

And there have been other comparisons—many of them disturbing comparisons—as regards our own versus Soviet production, in interceptor planes and in other categories of aircraft and missiles.

It is not my intention at the present time to try to evaluate the conflicting testimony—the defense of our supremacy by Secretary of Defense Wilson, and Admiral Radford, on one hand, or assertions by some Senators and others to the contrary.

The Soviets have, by everyone's opinion, made spectacular progress. And the very fact that there is now such strong dispute—the very fact that there is controversy as to who is ahead, the very fact that many people believe that by 1960, the Soviet Union may surpass us in many crucial respects—these facts make it absolutely necessary that we constantly re-evaluate the adequacy of our own forces, and that we appropriate every dime necessary for our survival.

DECISIVE BATTLES WOULD BE FOUGHT IN AIR

President Eisenhower has, of course, rightfully stressed that we cannot look exclusively at any one weapon and ignore other weapons and forces.

At the same time, it is quite clear that if World War III ever comes, (and we pray God that it will not come) the decisive battles will be fought in the air. And in the air, the decisive weapon may be pilotless aircraft, the guided missile and the intercontinental ballistic missile.

THREE CONDITIONS WE MUST NOT TOLERATE

Under these circumstances, it would be absolutely folly to allow certain conditions to continue:

1. It would be absolute folly to fail to take steps to widen our inadequate reservoir of scientists, engineers and technicians.

2. It would be absolutely folly to continue to allow conditions to exist which discourage our most skilled technicians in the Air Force and in other services from reenlisting.

Our country is each year losing literally billions of dollars in trained manpower, as our experienced airmen and as our mechanics quit in droves when their enlistment period is up. These men would be glad to continue to serve, if we gave them the minimal encouragement in adequate salary and benefits—for themselves and for their families.

3. It would be absolute folly to permit needless duplication of effort and confusion among the services in the guided missile or any similar advanced weapon field.

It is one thing to have a spirit of healthy competition; it is another thing to have each service "stepping over the other services' feet," retracing perhaps, the same steps which the other service may long since have gone through, and failing to benefit from the other services' latest research and findings.

I hope that recent Pentagon changes will at long last bring smooth coordination and teamwork. The air will be the crucial battlefield.

And I hope there will be universal recognition among our people of this and other "facts of life" in today's danger-strewn world.

NIKES AT MILWAUKEE, JETS IN NORTHERN MICHIGAN

A year ago, last November, steps were begun to surround Milwaukee with Nike sites. Milwaukee is, of course, our State's greatest manufacturing center and therefore, the most likely target in the State.

In northern Michigan, one of the greatest interceptor fields in all the world is now being built, with the idea that if the Russian bombers come, they can first be intercepted by Air Force fighters.

If the Russian bombers should get past the fighters and the guided Nikes, then it is goodbye Milwaukee and vast adjacent areas. Most of Wisconsin would be on the firing line in the next war, if hostilities should break out.

SAC, TAC, CADC

Fortunately, in the Strategic Air Command, we have the ability to destroy an enemy's war-making capacity and his will to fight.

In the Tactical Air Command, we have a a highly mobile light bomber and fighter bomber force that can destroy enemy troop concentrations and lines of communication and can employ atomic weapons.

In the Continental Air Defense Command, we have a constantly increasing capability to detect, intercept, and destroy invading bomber aircraft before they reach our vital target centers.

Behind the radar network, our manned interceptors, such as those here at Truax Field, are ready for instance action against an aggressor.

THE GREAT VALUE OF TRUAX FIELD

Truax, as we all know, is an immensely important base and is rapidly expanding. There exists, however, a requirement for 523 family housing units, and construction of these has already been approved. The feasibilty of extending the runways is under study. The Air Force expects Truax Field to be a permanent-type base for a long time to come.

General Mitchell Field, at Milwaukee, has an Air Reserve fighter bomber wing. Also an Air National Guard fighter interceptor wing. More space and equipment are needed. The Air Force has an approved construction program to provide during the next 2 years adequate facilities for the Air Reserve unit.

The field's location near the concentration of reservists in Milwaukee helps assure the permanence of this field.

As I'm sure you are aware, a new base is being constructed in an area generally to the south of Kansasville. Acquisition of land has begun and construction should start this summer. It should be completed in about a year and a half. At that time, about 150 officers, 1,225 airmen, and 250 civilians will be assigned to the base. The estimated annual base payroll will be about

$5 million. Additional expenditures for base services, supplies, utilities, etc., are estimated to run up toward $1½ million per year. The location of this base in Racine and Kenosha Counties will result in tremendous financial benefits for that area and for the whole State. And the jets to be stationed at the base will provide protection of immeasurable value to the State of Wisconsin and the Nation as a whole.

Of course, we might have hoped that it would not be necessary to disturb the tranquil scene of our countrysides with roaring military jets. But we would far rather suffer such little inconvenience and disturbance as arises than risk national extinction.

CONCLUSION

The overall United States Air Force numbers more than 930,000 uniformed personnel, employs about 300,000 civilian employees with over 800,000 dependents. This represents a potent influence in our domestic life—and an influence for good.

Whether or not you make the Air Force your life-long career, as General Arnold made it his, you will find positions of importance and responsibility in the years that lie ahead. Chosen men like yourself are educated to be leaders and, whether in the Air Force or in civilian life, you have the opportunity to be leaders who understand and appreciate air power.

Wisconsin is proud of you and wishes you well.

As the Air Force says—

"In space so vast
It ends where no one knows,
Our giant birds seem gnats
As distance grows.
We measure flight
In miles and speed and men
And quality of craft—
But mostly men."

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Address by Judge Irving R. Kaufman at an Americanism Seminar Sponsored by the Minnesota American Legion

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. HUMPHREY. Mr. President, recently one of America's distinguished jurists, the Honorable Irving R. Kaufman, judge of the United States district court in the State of New York, addressed an Americanism seminar sponsored by the Minnesota American Legion in the city of St. Paul, Minn. Judge Kaufman used as his theme the Bill of Rights and commented extensively upon the historical background relating to the fifth amendment and the recent abuse and misuse of that amendment by the Communists.

Judge Kaufman said:

Democracy can be preserved only by democratic methods. When we stifle honest criticism and when we ostracize the dissenter, we are not practicing democracy, but are adding fuel to the Communist fire.

The editorial in the St. Paul Dispatch on April 17, 1956, summarized Judge Kaufman's address in these words:

True Americanism includes living up to our principles of liberty under law and making democracy work for minorities and dissenters as well as for majority groups. The Legion's seminar has been a constructive force in this direction.

It was Judge Kaufman who presided at the espionage trial of Julius and Ethel Rosenberg. Judge Kaufman is known as one of the great legal minds of our time. He is a strong defender of freedom and is an effective anti-Communist. His dedication to liberty and his abhorrence of any form of tyranny is well known.

I ask unanimous consent that the editorial of the April 17 St. Paul Dispatch be printed in the Appendix of the RECORD. I also ask unanimous consent that the news story from the Minneapolis Sunday Tribune of April 15 entitled "United States Must Guard Liberties, Judge Says," be printed at this point in my remarks; also the editorial from the Chicago Daily News of April 26, and the lead article in the Minnesota Legionnaire of Wednesday, April 18, along with the news item of the St. Paul Pioneer Press of April 15.

These editorials and news stories bring to our attention the importance of Judge Kaufman's address and the courage and brilliance of his remarks.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch of April 17, 1956]

JUDGE KAUFMAN ON POSITIVE AMERICANISM

Positive Americanism requires a good deal more than mere denunciation of communism, as Judge Irving R. Kaufman of New York emphasized in his American Legion address here Saturday.

Appearing before the Legion's annual Americanism seminar, the judge who presided at the espionage trials of Julius and Ethel Rosenberg pointed out that it is not always easy or popular to stand up for basic American principles of freedom.

It is an irony of human nature that periods of emotional superpatriotism tend to develop support for restrictions on personal liberty not countenanced by the United States Constitution. In such times the defenders of traditional constitutional safeguards may find themselves assailed as unpatriotic, or as Communist sympathizers.

"Democracy can be preserved only by democratic methods," Judge Kaufman said. "When we stifle honest criticism and when we ostracize the dissenter, we are not practicing democracy, but are adding fuel to the Communist fire."

Judge Kaufman's defense of the fifth amendment illustrated his warning against impatience with democratic processes. The fifth amendment has been used by Communists for their own protection, but this does not alter the fact that this safeguard against forced self-incrimination "is fundamental to our idea of justice," he stated. When borers attack an apple tree, the judge commented, "you eliminate the borer—you don't chop down the tree."

Another point made by the jurist was that at times the Communists pay lip service to certain good causes and ideals. Then honest citizens who stand up and defend these same principles are sometimes "branded as Communists or fellow travelers." This, said Judge Kaufman, "is playing right into the hands of the Communists both here and abroad."

True Americanism includes living up to our principles of liberty under law and making democracy work for minorities and dissenters as well as for majority groups. The Legion's seminar has been a constructive force in this direction.

[From the Minneapolis Sunday Tribune of April 15, 1956]

UNITED STATES MUST GUARD LIBERTIES, JUDGE SAYS

Soviet Russia's efforts to "co-exist capitalism to death" must be met by renewed vigilance over American liberties, Judge Irving R. Kaufman said in St. Paul Saturday night.

The New York Federal jurist, presiding judge at the espionage trial of Julius and Ethel Rosenberg, said in a speech prepared for a Minnesota American Legion seminar this country can beat the Communists at their own game if it honestly portrays its way of life to the world.

The new Red line, he said, clearly means Russia "will aim a barrage of Communist propaganda and espionage at freedom-loving countries the like of which we have never seen," and try to "coexist capitalism to death."

Thus it is essential that the entire world be made aware of our success story, Kaufman said.

But, he added, Americans must guard against striking "blindly at all who espouse an honest and decent cause merely because the Communists are also paying it lip service."

"Democracy," he said, "is based on a calculated risk, a belief that free men exercising a free choice out of various competing ideas will exercise the widest choice possible."

By smothering honest criticism "when we ostracize the well meaning dissenter, we are not practicing democracy but are adding fuel to the Communist fire," he said.

He cautioned against weakening the fifth amendment, preserving the right against self-incrimination, although he acknowledged there is "justifiable frustration among Americans because the Communists have been invoking this privilege consistently."

Americans who want to abolish the amendment because Communists have abused it, he said fall into the Red trap by endangering the same liberties the Communists want to destroy.

He said the Nation must maintain a continuing vigil on two fronts, against Red subversion and against the danger of labeling as Communists all who disagree with the majority.

This is complicated by the fact that Communists "often parade in false dress as advocates of liberal causes," he said, adding.

"We cannot let certain worthwhile causes become Communist property. We cannot permit a worthy movement to be defeated merely because a few Communists are attempting to infiltrate it."

[From the Chicago Daily News of April 26, 1956]

GUARDING LIBERTIES

United States Judge Irving R. Kaufman, of New York, will be remembered as the judge who sentenced Julius and Ethel Rosenberg, the convicted spies. He thereby became the target of a worldwide campaign of abuse, sparked and fed by the Communists.

As one thus singled out for persecution, it is interesting to hear Judge Kaufman's views on the subject of Communist causes. It has not clouded his thinking, as evidenced by his remarks to an American Legion audience in St. Paul the other day.

He noted that Communists "often will be heard hypocritically in defense of certain of our precious liberties—but these liberties do not become any less precious because Communists have temporarily decided to pay them lip service.

"Yet, all too often, others who then speak out in favor of these same vital rights are branded as Communists, or fellow travelers, for some believe in the old saying that: 'Where there is smoke, there is fire.' I urge you, the next time you hear that familiar theme, don't rush blindly with an ax at the smoke thus created—you may chop a fire fighter instead of a fire."

[From the Minnesota Legionnaire of April 18, 1956]

JUDGE KAUFMAN WARNS THAT DEMOCRACY CAN ONLY BE PRESERVED BY DEMOCRATIC METHODS—SEMINAR STRESSES POSITIVE ASPECTS OF AMERICANISM

(Condensed text of Judge Kaufman's address.)

Continued vigilance against Communist subversion while "equal vigil is maintained to insure that not all who disagree with the majority, politically or economically, are labeled Communist" was urged by United States District Court Judge Irving R. Kaufman, of New York City, in a banquet address at the department's second annual Americanism Seminar in St. Paul Saturday.

Judge Kaufman, presiding judge at the trial of Ethel and Julius Rosenberg who were convicted of espionage for revealing atomic secrets to a foreign government, declared that democracy can be preserved only by democratic methods—"slow and plodding though they be."

Warning that "when we stifle honest criticism and when we ostracize the well-meaning dissenter, we are not practicing democracy, but are adding fuel to the Communist fire," he emphasized that an "important basic concept of our democracy is that only when people are given free access to all different competing viewpoints can they recognize the truth and thus choose wisely."

Judge Kaufman was the principal speaker at the banquent, concluding event of the 1-day seminar. Speakers at the afternoon session included Department Commander Dan Foley, Wayne Murphy, national research director of the American Legion, Hennepin County Sheriff Ed Ryan, and National Committeeman Carl Lundgren. The afternoon program included a dramatic and revealing skit on Communist tactics presented by the University of Minnesota theater. Miss Gasperlin, of St. Cloud Cathedral High School, gave the prepared talk she gave as a finalist in the department oratorical contest.

Emphasis was placed on the positive aspects of Americanism and how the various programs of the American Legion can be utilized as a potent force in the battle against communism and all forms of subversion. Although stressing the positive approach, the various speakers warned against relaxing our vigilance against the ever-increasing Communist menace.

Wayne Murphy, one of the Legion's leading authorities on subversion and counter-subversion, pointed out that the basic aims of the American Legion have not changed since 1919 and emphasized that "teamwork is our greatest asset."

Although warning that "we can't win this kind of warfare by remaining silent," Murphy declared "we don't need any vigilantes."

Sheriff Ryan, stressing the importance of combating bigotry at home, also warned against the vigilante method, and urged that anyone having information about suspected Communists turn that information over to the Federal Bureau of Investigation.

Murphy called the Legion's Americanism program a two-fold program consisting of the positive or educational phase and the actual fight against subversion. In discussing counter-subversive activity, he said it "requires mental and moral courage that many people are unwilling to demonstrate." He sees the chief problem of counter-subversive activity as getting people on the local level aware of a definite responsibility to advance both phases of the Americanism program.

Judge Kaufman, meanwhile, pointed out that "democracy is based on a calculated risk—a belief that free men exercising a free choice out of various competing ideas will exercise the widest choice possible—America's history over the past 175 years has justified continued faith in that belief."

Emphasizing that the fifth amendment of the Constitution is "fundamental to our idea of justice, to our belief in man's inherent dignity, and to our tradition that a man is innocent until proven guilty," he warned against weakening the strength of the fifth amendment even though there is a "justifiable frustration among Americans because the Communists have been invoking this privilege consistently."

He declared that when Americans react by summarily condemning the whole doctrine of the fifth amendment and urge its abolition "we fall into the Communist trap by endangering the very liberties they seek to destroy."

Stating that, "the best way to sell democracy is to show that it works," Judge Kaufman declared that failure to speak up for the rights of the honest dissenter is not only a failure "to live up to that heritage of freedom which our ancestors fought to preserve, but we also lose another battle of words and ideals we are waging with Moscow."

The Federal jurist concluded by warning that, "we must never become so completely consumed with this ever-present Communist threat that our thinking is motivated by what we hate rather than by our love of the American way. Unfortunately, some of us have begun to hate each other—particularly when we are in disagreement over some fundamental issue. It was a condition that led a contemporary philosopher to warn that, "If we permit our hatred of Russia to replace our love of the American dream as the motivation of our lives, we will have accorded Communism the greatest tribute to which any dogma may aspire, the power to dictate the thinking of its enemies."

Highlights of the afternoon session was the skit presented by University of Minnesota dramatic club members under the direcction of Dr. Arthur Ballet. It graphically demonstrated how Communists infiltrate an organization and take over a meeting without well-meaning members even knowing what has happened. It stressed the importance of being ever alert to these undermining tactics and demonstrated how doing things in the democratic way is the best safeguard against the Communist threat.

Featured players were William Phelps, Neil Hofland, James Stapleton, Thomas Quigley John Blue, Jerry Rumley, Jerry Ness, Janis Benson, Philip Benson, and Kallista Mavroulis. The script was written by Phillip Gelb, of KUOM, the University radio station.

C. B. Howard, special agent for the Federal Bureau of Investigation, was also scheduled to speak at the afternoon session, but was unable to appear.

[From the St. Paul Sunday Pioneer Press of April 15, 1956]

NEW YORK JUDGE SPEAKS HERE—FIFTH AMENDMENT DEFENDED

A prominent New York jurist Saturday cautioned against any weakening of the fifth amendment despite its use as a refuge by Reds.

Judge Irving R. Kaufman, the United States district court judge who presided over the trial of atom spies Ethel and Julius Rosenberg, said Americans who want to abolish the amendment fall into a Communist trap "by endangering the very liberties the Communists seek to destroy."

Speaking at an Americanism seminar sponsored in St. Paul by the Minnesota American Legion, Judge Kaufman said the idea that a man should not be compelled to bear witness against himself "has been fundamental to our idea of justice in the courts, to our belief in man's inherent dignity and to our tradition that a man is innocent until proven guilty."

Casting out that doctrine and labeling as Communists all who want to retain the privileges of the fifth amendment "is playing into the Communists' hands," he said.

"All the Communists need to do is take refuge behind the very civil rights which we know they are pledged to destroy and then others, fearful of being labeled subversive, will shun the term 'civil rights' as a Communist label," he added.

Democracy can be preserved only by democratic methods—"slow and plodding though they be," he said.

INFILTRATION DANGER

Warning against Communist infiltration, he said:

"If a few Communists try to infiltrate your organization, don't abandon ship and hand them the organization as a gift. Fight back and clear them from your group."

The United States can beat the Communists at their own game if it honestly portrays its way of life to the world, he said. The new Communist line means that Russia "will aim a barrage of propaganda and espionage at freedom-loving countries the likes of which we have never seen. They will try to coexist capitalism to death."

Thus it is essential the entire world be told the American success story, he added, and that freedomwise "we practice what we preach."

The seminar was held at the Hotel St. Paul.

Low-Cost Electric Power Systems

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "People's Electric Systems Must Work Together for Abundant, Low-Cost Power," written by Clyde T. Ellis, and published in Public Power magazine for May 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEOPLE'S ELECTRIC SYSTEMS MUST WORK TOGETHER FOR ABUNDANT, LOW-COST POWER

(By Clyde T. Ellis)

Today, 20 years after the passage of the Rural Electrification Act of 1936, not only the farmers' rural electric systems, but many of the municipally-owned systems as well, are in trouble.

They are in trouble first, because in most of the country no good method has been found for tying together for maximum efficiency those consumer-owned electric systems better known as municipals, power districts and cooperatives. They are in trouble secondly, because the so-called private-power companies, having themselves achieved the efficiencies of integration by fair means and foul, are now pouring fabulous sums into propaganda, lobbying, and public relations campaigns to convince the American people that their monopolies typify the American way and that the consumer-owned systems do not.

All of them realize more and more that the cooperative position is vulnerable and insecure, but perhaps few know that there are certain interests who would like to eliminate entirely the REA cooperatives. To most cooperative members, the Hoover Commission report is something vague and remote. They do not see that those who support the Hoover

Commission reports are by and large the same interests who didn't want REA brought into existence in the first place, and who now see in the cooperatives a challenge to the monopolistic utilities.

Too few cooperative members see any relationship between public power and REA cooperatives. They don't know that the two types of projects have a lot in common, including a common opposition, and that this opposition is relentless and resourceful.

Only through the development of plentiful supplies of low cost public power could REA cooperatives be given loans to take electricity to hundreds of thousands of rural homes in the post-war period.

The only hope of electric cooperatives to survive lies in eternal vigilance and unity. Those who would restroy public power would destroy the REA cooperatives and vice versa. It will take a unified defense to win the struggle against the common enemy.

Outstanding Youth

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. OSTERTAG. Mr. Speaker, the horizons are limitless for the young people of today, and many of them recognize it. It is a pleasure to call to the attention of this House the record of a young man of my district who has won not only 1 scholarship but 3, and who, in addition to superior achievements in scholarship, is a good musician, a good speaker, and a good athlete. Keith A. Wallace, a senior at Elba Central School, has just been awarded a $4,000 Bell Foundation scholarship to Antioch College, as a result of his eminence in his studies, which averaged over 90 percent. The foundation is affiliated with the Bell Aircraft Corp. in Buffalo.

Keith expects to become a research chemist, a field in which his talents will assuredly be needed. At a time such as this, when we are faced with a shortage of trained scientists, the opportunities for advanced study which industry is making available to young people are to be commended, as are the young people who rise to those opportunities. Keith has already brought honor to himself, his parents, and his school, and will undoubtedly bring further honor to science and his country, as a result of this developing program of partnership between industry and education.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD the following account of this young man's attainments, from the Batavia Daily News of May 19, 1956:

SENIOR AT ELBA CENTRAL SCHOOL WINNER OF $4,000 SCHOLARSHIP

Keith A. Wallace, 17, a senior at Elba Central School, is the 1956 winner of the $4,000 Bell Foundation Scholarship to Antioch College, Yellow Springs, Ohio. The foundation is affiliated with the Bell Aircraft Corp. in Buffalo.

Keith, who ranks third in the senior class with an average over 90 percent, is also the recipient of two other scholarships. He was awarded a $1,400 State scholarship and a $400-a-year scholarship to Hobart College in Geneva. He will accept the Bell Foundation grant. He plans to major in chemistry with hopes of becoming a research chemist.

Besides attaining high scholastic honors, Keith is also in the Elba Central School band, the National Honor Society, and he took part in the school play. He was winner of the school speaking contest this year and placed second in the county competition. He was a member of the football team and enjoys playing chess.

His parents are Mr. and Mrs. Chester A. Wallace of the Transit Road, Elba. Mr. Wallace is employed as a toll collector at the Batavia Interchange of the State Thruway.

Post Office Department Tries Union Busting

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. WIER. Mr. Speaker, recent directives of the Postmaster General that have been issued and sent to the major post offices of the Nation for posting appear to be followups on his declarations of the past 2 years that any form of collective bargaining or unionism in the postal service under his administration must be his kind of unionism or suffer the consequences.

Worse than that is the denial to any postal worker the right to express or convey to his Representative or Senator any grievance or complaint without first submitting it to the Department. This order savors very much of real "slave labor."

In addition to the recent directives issued, the Department has served notice that rules and regulations of bygone days will now be dusted off, or better yet, may we say, resurrected and rigidly enforced.

I submit that the new directives enumerated below and the strict enforcement of age-old directives surely do not in any manner display friendly relationship but to the contrary only express and lay the groundwork for a declaration of dictatorship upon each of the postal unions and their officers.

As to myself, I want no part of this type of Government administration and take this means to express my deep resentment and opposition.

Following are a couple of the latest directives that have been broadcast by the Department and clearly make known to the employees its hostile attitude:

Issue 57 of the Postal Manual, dated March 28, 1956. Section 744.442, captioned "Engaging in Campaigns for Changes in the Service," reads as follows:

"(a) Information relating to the policies and decisions of the Post Office Department will be released only through official channels. Employees shall not actively engage in campaigns for or against changes in the service, or furnish information to be used in such campaigns unless prior approval has been obtained from higher authority.

"(b) If an employee has justifiable reasons for favoring or opposing changes in the postal service, he shall contact the proper officials and await specific instructions before engaging in local hearings or activities."

The Postal Bulletin for Thursday, April 19, 1956, reads:

"ALL POSTAL INSTALLATIONS—EMPLOYEE PARTICIPATION IN CONTESTS

"While on duty employees of the postal service may not participate in any contest sponsored by private concerns, associations, or other private organizations, nor accept any prizes from such concerns, associations, or organizations, unless participation is approved specifically by the Department.

"Office of the Deputy Postmaster General."

A Time for Stocktaking

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. CHIPERFIELD. Mr. Speaker, I introduced an amendment to the mutual-security program which is designed to do exactly what this editorial of May 9, 1956, from the Galesburg Register-Mail, of Galesburg, Ill., suggests; namely, appoint a commission of not more than five members whose duty it would be to study the program and submit to the President their recommendations.

A TIME FOR STOCKTAKING

The idea is growing in important quarters that a thoroughgoing review of this country's foreign-aid program is much in order. It makes much sense, since we have not had one since 1947.

President Eisenhower favors review by a high-level commission free of partisan leanings. Chairman WALTER GEORGE, of the Senate Foreign Relations Committee, earlier had advocated a similar study and his suggestion gained the evident approval of the members of his committee.

A full study of foreign aid, preferably by an independent group not directly affiliated with Government, would seem to serve significant purpose.

First of all, even assuming that those in the administration who now prepare foreign-aid proposals are exercising utmost care, they are too close to the matter to see it with any detachment.

The program requires the dispassionate look of the outsider.

Back in 1947, when the Marshall plan was just shaping up, the Nation got such a study.

One group, nonofficial, considered aid from the viewpoint of our capabilities. Another, under then Representative Christian Herter, of Massachusetts, examined it from the standpoint of the actual needs of our foreign friends.

From that time on we have been advancing foreign assistance, either economic or military, virtually without interruption. The emphasis has shifted from Europe to Asia and from economic to military, but the program has gone on.

It is no reflection on those who annually frame new aid plans to suggest that a certain haphazard, unsystematic element may have crept into a program that is now nearly 10 years old.

We need to be sure that in 1956, as in 1947, we are spending our billions wisely in terms of both foreign needs and our own ability to bear the load.

We need to be sure, too, that if the program is going to go on and on it will do so

because of clearly understood purpose associated with high Government policy.

Fears have increased over the years that the program is running to some extent on sheer momentum.

Some will say that a review of foreign aid would be designed simply to afford excuse for cutting it down.

It is known, for instance, that Senator GEORGE is in political difficulty in his native Georgia from former Gov. Herman Talmadge, a rival who is shooting at foreign-aid giveaways.

We can acknowledge that reexaminations of foreign aid often are urged by its opponents (which GEORGE never has been). But we cannot for that reason say that an impartial, highminded study of the question is either unnecessary or unwise.

Foreign aid is no sacred cow.

If it is necessary to the safety of this Nation and its friends, there is no doubt it will go on. Still, it is completely reasonable to seek an independent check upon it.

So long as that review is managed by able and honorable men, we need not fear that it could be used successfully by the program's enemies to destroy indirectly what they could not kill by open measures.

Armed Forces Day

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. IKARD. Mr. Speaker, this past week this Nation along with the Armed Forces observed its seventh annual Armed Forces Day.

Citizens throughout the entire United States watched parades and witnessed demonstrations of the Air Force, Army, and the Navy.

Unlike the military demonstrations put on in the Soviet Union and witnessed by the chosen few of Moscow, the seat and source of power for world communism, Armed Forces Day in the United States was witnessed and observed by all people throughout the length and breadth of this country. The fact that all of our citizens participated in honoring the military services and the contribution that they are performing in the maintenance of peace and security throughout the world is a vivid illustration of the difference between a dictatorship and a democracy. For, it is the American people who control the destinies of our Nation. It is our citizenry who are our source of power.

They, unlike the average citizen of the Soviet Union, are not barred from our airbases and our military installations. Here our citizens are invited to come on to our military bases to see at firsthand the products of defense that they are paying for.

One of the many speakers during the celebration activities for Armed Forces Day was Gen. Thomas D. White, Vice Chief of Staff, United States Air Force.

Speaking at Sheppard Air Force Base, Wichita Falls, Tex., before a gathering of residents of the community and military personnel of the base, General White stressed the benefits to be derived from cooperative civic-military relationships. He stressed the fine community relations that exist between military personnel of Sheppard Air Force Base and the community of Wichita Falls.

As you may know, Sheppard Air Force Base makes a valuable contribution in providing the necessary technically trained personnel to operate complex Air Force equipment. The support provided by Wichita Falls to the airmen and officers at Sheppard in the long run helps to create the hard core of skilled manpower within the Air Force.

Now this is a very important matter. For as we all know, this Nation cannot hope ever to match the Communist Soviet military forces man for man. Airpower, however, does give us the opportunity to match Soviet Russia in striking power.

It therefore behooves us to make certain that our airpower has the properly qualified manpower necessary to sustain an effective and efficient Air Force.

The Air Force needs picked men carefully trained. It must be backed up by an organization of mechanics, supply, and administrative personnel carefully selected and extensively trained. They, along with our air crew members, represent a valuable investment to this country.

But, it is no secret that the Air Force, like its sister services, is having difficulties in retaining its qualified and trained personnel. In the case of the Air Force, a shortage of technical skills places it in a vicious circle and as General White pointed out "when an experienced mechanic leaves the service he must be replaced."

Much can be done to remedy this trouble and to increase the attractiveness of a career in the military service. General White cites the need not only for a pay raise—which will more nearly equal the compensation of equivalent civilian positions—but of adequate housing, proper medical care for dependents, and other benefits.

Armed Forces Day is a day set aside to honor the men and women of the military service. It is up to the American people and this Congress to do everything that can be done to keep these fine people.

Under unanimous consent, I include in the RECORD General White's address:

On my way to Wichita Falls, I enjoyed sightseeing from my plane. As I watched the unfolding of this vast and wealthy land of rolling plains and rugged mountains, I could easily understand why Texans are so proud.

This is the land of superlatives—biggest in size, greatest producer of oil, cotton, and livestock.

Everything is done in a big way down here. Maybe this is the reason that while military leaders speaking elsewhere are getting away with just one Armed Forces Day speech, here in Texas, I have got to give two.

Normally, I feel that speechmaking is one of the least attractive of my duties. Here in Texas, though, I will make an exception. First, this gives me a chance to spend 2 days in Texas, a favorite Air Force State. Furthermore, it would take many more than two speeches for me to express by appreciation for the outstanding community support that the Air Force receives here and all over Texas.

I am especially happy to see you here at the Sheppard Air Force Base Officers' Club. This luncheon gathering of civilians and military demonstrates the close relationship that exists between this Air Force installation and the city of Wichita Falls.

At any base, this sort of mutual support and friendly relationship is important. At bases where, for instance, our vital fighting units are located, the better civic-military relationship, the better the fighting quality of our combat units. We have found that those bases that enjoy wholehearted reception and support by their surrounding civilian communities are those bases best and most efficiently accomplishing their missions.

For example, at bomber bases where the nearby rents and the cost of living have been held down to rates airmen can afford, our crews have not been forced to live far away from their airplanes. In an emergency they could get into the air much faster than they could if forced by high prices to live far from their bases.

Another example—the reenlistment rate of our airmen is higher at bases located in friendly and hospitable communities. Naturally, the more trained airmen that reenlist, the higher our combat effectiveness. More on this later.

Here at Sheppard Air Force Base the fine community relations are valuable in a very special way. This base is the largest in the Nation for the training of aviation mechanics. In addition, other schools are located at Sheppard. The young men in training here are, for the most part, relatively new in the service.

Up until the time they arrive here, life in the service for most of them has been a hectic round of basic training, classification and so on.

Here at Sheppard, they settle down to study and learn to do a very important job. Here is probably their first chance to stand back, look at life in the Air Force, and decide whether or not this life is for them.

The welcome and hospitality you offer them help to convince these young airmen that a military career is a respected profession. Your actions can influence these men toward an honorable career for public service.

I mention all this to affirm the significance of the relationship between the military services and the communities they serve and protect. In no other nation is this relationship so important.

In yet another way, community relations are important here. Students from many allied countries are sometimes fortunate enough to attend schools at Sheppard Air Force Base. I am pleased to learn of your warm hospitality to these foreign students. Just as the strength of our land is built upon the union of the States, the strength of the free world is built on free world alliances. You will be happy to know that in many allied nations, your sons and daughters are receiving the same kind of wonderful treatment. In its own way, this reciprocal hospitality speaks the words of true friendship more sincerely than treaties.

Today marks Armed Forces Day in America. All across the United States, ceremonies similar to the fine parade here this morning, and to this luncheon, have been taking place during the last 2 or 3 days.

From Fort Benning, Ga., to Fort Lewis, Wash., Americans are being welcomed into Army Posts to see the Army's marvelous new equipment of land warfare.

From Norfolk, Va., to San Diego, Calif., American men, women, and children are eagerly climbing all over our naval warships and seeing the latest weapons of seapower.

And at Air Force bases from Maine to California, and especially in Texas, where there are so many airbases, our citizens are examining the latest and most modern aircraft and weapons which combine to form American air strength.

It is interesting to contrast Armed Forces Day here and its equivalent in Russia—whether it be the annual May Day show of Communist armed strength or the Red Air Force Day.

In both countries the armed forces show takes place within and over the source of power.

In Russia, the show takes place only at Moscow, for the Kremlin is the source of power.

In the United States citizens all across the Nation see parades and witness demonstrations by the various services. Here it is our people who control the destinies of our Nation, and our people who are our source of power. This is a vivid illustration of the difference between a dictatorship and a democracy.

There are other contrasts.

In the Soviet Union the average citizen is barred from the airbases and other military installations.

Red fighting equipment belongs to and is jealously guarded by the Government. The people have no business examining military equipment.

Here our citizens are invited to come onto our military bases to see at firsthand the products of defense that they are paying for. It is their business.

In Moscow, the countless troops that march through Red Square and the airplanes that thunder overhead are products of authority and oppression, as well as a symbol—a kind of fist that is shaken at the world as a reminder of the Communist aim to dominate the globe.

In our land, the military strength on display is a source of pride. Our strength is power for peace and freedom.

We in America are well aware of these differences, and they make us prize our liberty even more. This is the reason we are willing to devote some 10 percent of our gross national product to defense of our freedom.

These dollars, almost 40 billion of them a year, are buying for us the biggest bargain in history. Consider, for example, what just one day of a modern, global war would cost this Nation. Just a few dozen thermonuclear bombs on the United States could go a long way toward wiping out our material wealth. Cities that have been abuilding for generations could be flattened, as if stepped on by a giant foot. Damage and loss would be immeasurable—we do not even have the figures to describe it in dollars.

Even more tragic would be the loss of American lives. If we were hit by nuclear weapons, our deaths would be counted by the millions. The tragic personal loss would touch us all.

If this ever happened, we would take little comfort in knowing that, at the same time, the attacker was suffering even greater loss. Regardless of how decisively we defeated the attacker, we could never claim to win—if by winning we mean coming out ahead.

Horrible as such a war would be, however, I hope that all Americans still value liberty and freedom highly enough to accept that kind of a fight for freedom, if the choice is forced upon us.

In fact, our determination to stay free can be instrumental in preventing our being forced to fight for freedom. If we keep strong, and, much more important, if our strength is backed by evidence that we prize freedom more than life and wealth, the chances are good that we can save both our lives and our liberty.

Look at the record of the past 10 years. Nineteen fifty-six marks what has been called A Decade of Security Through Global Air Power. During these years our country has remained safe, even though a potential aggressor has developed and built a powerful air force and is stockpiling nuclear bombs, the most powerful instruments of warfare.

Throughout this period, the Red rulers have been well aware of the United States capability to retaliate to any attack with decisive and devastating blows.

Obviously, this ability of the United States frustrated Communist aims of world domination. For this reason, the Reds have begun to abandon traditional forms of military strength and have chosen two new courses of action, both designed for ultimate attainment of Communist goals.

First, they have taken on the task of building up their airpower. Their all-out drive for military production sacrifices even the human needs of their people. The haste with which they are proceeding is significant. I would imagine that their goal is Red air strength great enough to be able to attack us so effectively that we would find it impossible to retaliate with significant force.

Second, and concurrently, during the period in which they lack the capability of attacking us decisively, they have been forced into other, more devious avenues leading to Communist goals.

Thus we see the smiles and jokes, the proffered aid to underdeveloped nations, and the time-consuming stalling on disarmament and other questions of international importance.

Militarily speaking, we cannot let the changing expression on the Communist face affect our defense planning. Although I am quite hopeful that eventually the Communists will change, I do not think it will be soon.

For this reason we must continue to work hard on what has been termed "the long pull" in defense. For 10, 50 years, or longer, our best chances for security lie in the system we have found to be effective during this last decade. This means we must remain so strong that no aggressor will risk attacking us, regardless of how burning his ambitions or how dishonorable his methods.

To keep strong enough so that in 1966 we can celebrate a second decade of security will require great efforts on our part. It also means that we must solve some major problems.

Each of the services faces difficulties in maintaining effective strength. You who are interested in airpower have undoubtedly been following the current Air Force questions dealing with bombers, bases, and missiles. There are also other problems which are the primary concern of other services.

There is one concern, however, that is common to all three arms. It is a problem that assumes special meaning here, since this base is primarily a large training establishment. In these days of supersonic airplanes and miraculous electronics, it brings us up short to realize that our main difficulty is an old-fashioned one, a shortage of men.

Consider how this affects the Air Force.

Although, as I said, the problem is old-fashioned, the kinds of men we need are products of a new age, the jet age. We can get thousands of untrained, basic airmen. This is no solution. The difficulty is in getting the skilled technicians, or in keeping our skilled airmen once we have trained them from basics.

A shortage of technical skills places us in a vicious circle. When an experienced mechanic leaves the service, he must be replaced. To replace him, we must train an unskilled airman. To train unskilled airmen requires a skilled technical teacher. We must, in effect, pull a good man out of a combat organization and use him as a teacher in a training organization, like the one here. This, in turn, creates the need or another technician in the combat unit, and so on. Thus the most serious result of the shortage of skilled men is reduced combat capability.

Another serious result is the increased cost of operating your Air Force. Our training bills are tremendous, and again, if our training job were not so big, much of the money now used for training could be used to increase our combat power.

The immediate remedy for this trouble is to increase the attractiveness of a career of military service. Last year our Government granted a pay raise to servicemen. Immediately reenlistments started to rise. Unfortunately, the greatest rise was among those men whose military specialties were not critical. Although the pay raise helped, it was not large enough to induce enough jet engine mechanics, hydraulic experts, and electronic specialists to stay in.

What we need is a pay raise that, added to other service benefits, will more nearly equal the compensation of equivalent civilian positions. As part of this compensation, we must be able to offer adequate housing, proper medical care for dependents, and other benefits.

It has been pointed out many times that the cost of these remedies would be far smaller than the amount we are now paying in turnover and training costs.

But even if the remedies cost more, we still would get a bargain. If all the services could man their full forces with properly trained and experienced men, the Nation's effective defense potential would be multiplied.

I think it is appropriate on this Armed Forces Day here in Wichita Falls, Tex.—home of one of our largest training bases—that I leave these thoughts with you. This is the day set aside to honor the men and women of the Armed Forces. We must do everything we can to hang on to these wonderful people. Here in Wichita Falls, you are already contributing to this cause by helping to make our people feel they are doing a worthwhile job. I hope you will be just as enthusiastically behind any measures designed to keep these people on their jobs.

The strength we need to deter war lies first, last, and always in our people. It is up to all of us to insure that a shortage of trained people does not turn out to be the Achilles' heel of our defense.

North Atlantic Treaty Organization

EXTENSION OF REMARKS
OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I submit herewith the following resolution adopted by the program board of the Council of Churches of Buffalo and Erie County, Wednesday, May 9, 1956:

Whereas both President Eisenhower and Secretary of State Dulles have said that it is now time to develop the economic and political potentiality of NATO; and

Whereas most of our NATO allies have for some months been pressing such action; and

Whereas it is of cardinal importance that the moral power of the democratic West unite effectively behind some responsible effort to explore how best to preserve and advance the right and practice of self-government throughout the world; and

Whereas the statement of our Secretary of State in New York City, April 23, indicates a forward-looking attitude toward world affairs, away from war and nuclear menace toward a more orderly way of international life: Therefore be it

Resolved, That we, the program board of the Council of Churches of Buffalo and Erie County, having previously urged the immediate passage of Senate Concurrent Resolu-

tion 12 which is a resolution for calling an Atlantic Exploratory Convention of citizen delegates from the principal Western democracies, we do hereby convey to the Secretary of State of the United States our approval of his statement that this Nation is willing to join with other NATO countries in an exploration of ways and means to develop the North Atlantic Treaty Organization in ways more than military; and we commend the purpose to strengthen the economic and cultural forces of these nations; and we pray that unified action, if achieved, may extend to the benefit of all peoples everywhere.

Maritime Day Address by Hon. Leverett Saltonstall, of Massachusetts

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. BUTLER. Mr. President, today is that outstanding occasion which, unfortunately, occurs but once a year. It is Maritime Day.

I have just returned from a luncheon given by the Propeller Club, port of Baltimore. While there, I had the great privilege of introducing the guest of honor, our friend and distinguished colleague, the senior Senator from Massachusetts [Mr. SALTONSTALL].

Of course, in looking about for an outstanding authority on maritime matters, it was only natural that the Propeller Club would give serious consideration to requesting the Senator from Massachusetts to deliver the Maritime Day address. During that time he did me, the Port of Baltimore Propeller Club, and the State of Maryland the great honor of delivering one of the finest Maritime Day addresses I have ever been privileged to hear. Accordingly, and for the purpose of sharing his remarks with the Members of the Senate and the people generally, I send to the desk a copy of his speech, with a request for unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LEVERETT SALTONSTALL, MARITIME DAY LUNCHEON, PROPELLER CLUB OF BALTIMORE, MAY 22

Since I certainly don't want to sail into any port, especially Baltimore, under false colors, I think I should say right here and now that you fellows are competitors, strong competitors, of ours in Boston. This rivalry is one of the painful yet stimulating facts of Atlantic port life, and I want you to know that we recognize it as such.

Despite our rivalry, however—and it's a healthy one fundamentally—you in Baltimore and we in Boston have an equal and vital interest in maritime affairs as a whole. It is therefore essential that, as Baltimoreans and Bostonians, but even more importantly as Americans, we do everything within our power to see to it that a dynamic and progressive national maritime policy is maintained and implemented with commonsense, vigor, and foresight. Although we all recognize it, I think we can never overemphasize the dual importance of our merchant marine and our maritime industries to a healthy American economy and to our national defense.

Nearly 100 years of trial and error, marked in great part by the failure to recognize this dual importance of our merchant marine, failed to provide America with a stable maritime policy until Congress drafted the Merchant Marine Act of 1936. This act is agreed to be a fundamental piece of maritime legislation, for it establishes a workable basis for maintaining a strong American merchant marine as a private enterprise venture, and at the same time strengthening the merchant marine and the shipbuilding industry as an essential arm of our national security and as an indispensable auxiliary of our armed services in event of national emergency.

In time of peace, reliable shipping service at reasonable rates requires that the United States carry a substantial part of its waterborne foreign commerce in American-flag vessels. During periods of economic depression, such as all nations have known in their history, the seafaring people have tended to give priority to their own commerce and their fleets have been instruments of national policy and trade promotion. But even in times of peace and prosperity such as we enjoy today, it is clear that if the strength of our American merchant marine is reduced or, indeed, if we were ever to be without it, foreign maritime powers would be in a position—which they are ever ready and eager to occupy—of carrying our goods at times and from ports of their own choosing and at whatever prices the American traffic could be forced to bear. Needless to say, those prices would be boosted sky high. We could not argue, since we could not compete.

Of even greater consequence, however, is the vital role of the merchant marine and the shipbuilding industry as instruments of national defense and security. Regardless of ordinary economic considerations, the maintenance of a vigorous merchant marine, available for service as a military auxiliary, simply must be regarded as a necessary cost of national defense to the extent that an adequate merchant fleet and shipbuilding industry cannot, in the light of crippling foreign competition, be self-supporting.

The Congress is repeatedly reminded of these facts by those of us who, by reason of the maritime States from which we come, have a great awareness and knowledge of United States maritime history, policy, and requirements. Fortunately, through the vigorous and unflagging efforts, on a wholly bipartisan basis, of such Senators, among others, as your JOHN BUTLER, Washington's WARREN MAGNUSON, Maine's FREDERICK PAYNE, and this occasionally seagoing Yankee now speaking, the Senate has been regularly persuaded that certain legislation just had to be placed at the top of the Senate's must list of legislation to be enacted. We have not achieved all that we hope to, all that we should—but we refuse to give up the ship!

Most recently, through the spirited bipartisan effort to which I have referred, we were able to record in the Senate a defense of the Cargo Preference Act, the 50–50 law, which we believe in so wholeheartedly and which we feel must be maintained. The very existence of a United States-flag fleet is our only protection against the kind of situation as that in which foreign maritime powers would be enabled, without such cargo preference restrictions, to take arbitrary and costly action where our American cargoes are concerned. Public Law 664, the Cargo Preference Act, is one of those pieces of legislation which prevents such foreign monopoly and yet at the same time fairly provides our friends from abroad with an opportunity to participate in the interest of healthier world trade. Previously, on nine such occasions since 1948, Congress has written this 50–50 provision into various aid programs. Now the Cargo Preference Act has made it unnecessary to repeat that procedure. It has become a part of our general law.

In another area of merchant marine interest and activity, it is pleasing to report that with the approval of Public Law 415 of this Congress, the Secretary of Commerce has been authorized to maintain the Merchant Marine Academy at Kings Point, N. Y., on a permanent basis.

In a word, we are strengthening the sinews of our merchant marine for the purpose of attracting the best of our young men to the merchant marine and encouraging them to remain in it as career officers.

These actions are typical of the maritime legislation for which we are determined to fight hard in every session of every Congress, and yet these are but a part of a larger effort, a wider program, that must be given effect continuingly if the American merchant marine is, economically and in the national interest, to achieve the goals it seeks.

I have had occasion from time to time to list six specific suggestions as to how our maritime problem may be seen clearly and implemented successfully. The suggestions are these:

1. A full cooperation among the Maritime Board, the shipping industry, and Government based upon confidence and mutual understanding.

2. The prompt determination of reliable indices for construction and operating participation by the Government.

3. The institution and maintenance of an orderly replacement program by appropriate planning and legislation.

4. The common-sense gearing of our maritime policy equally to defense and to peacetime needs.

5. The initiation of a vigorous and comprehensive program of public information and enlightenment.

6. The effective administration of the Merchant Marine Act of 1936, together with a periodic review of that act to see how it may be better implemented from time to time in order that its purposes may be more effectively achieved.

It has always seemed to me very necessary that our citizens realize that the beneficiaries of a strong national maritime policy are not solely the shipowners and operators or those who man the vessels. The beneficiaries of such a policy are all the people of all the States, for every single region in this country contributes to and shares in the benefits which flow from the construction, the maintenance, and the operation of our merchant fleet in time of peace and in time of war.

As a member of the Senate Armed Services and Appropriations Committee, I have worked hard for years to try to help overcome the feast or famine practices that have characterized us in maritime affairs over the years. In time of peace we have, characteristically, been foolishly content to wallow in the trough of the maritime wave. Then hurriedly and apprehensively in time of emergency we have built, at tremendous expense and with no little risk, to achieve a crest of production adequate to those emergency needs.

We hear much these days, particularly as regards airpower and the new era of guided missiles, of research and development, the work of our scientists in private laboratories and in Government installations designed for one purpose: the more rapid and effective improvement of weapons, ships and aircraft. We have had it dramatized spectacularly for men who go down to the sea in ships by the atomic-powered submarine *Nautilus*. This same emphasis upon research and development must be applied to America's merchant marine, to the conception, designing, and building of newer, better, more efficient and more economical commercial vessels and gear.

During World War II, Mrs. Saltonstall was invited to christen the first LST built in the shipyard at Hingham, Mass. That yard was barely a year old and had been created almost from scratch on the Massa-

chusetts shoreline. Just as Mrs. Saltonstall was about to break the bottle on the vessel's bow, the superintendent of the yard said to her, "This ship will go down the ways at a speed of 16 knots and it will never move as fast as that again." That statement often makes me think of the advances that have been made in marine design and engineering in the last decade and of the grim significance of that progress in today's world.

Finally, may I say that, if we intend to keep an effective merchant marine afloat, it is inescapable that our merchant marine will have to be helped financially to compete with foreign-flag vessels. Therefore, a program of Government participation seems to be the only answer to our dilemma. Only through such Government participation can American shipowners maintain up-to-date, high-speed vessels which they can operate on a competitive basis with foreign-flag fleets.

For the same reasons we must continue with the construction subsidy program, which enables American shipyards to retain that vital core of shipyard labor without which we could not build vessels in time of war. A New Englander certainly doesn't spend money he doesn't have to spend. Nevertheless he paints his barn regularly. This is an expenditure, but it is a long-term economy. It is exactly in that sense that we must look upon expenditures where our national security and the merchant marine are concerned.

Let me conclude with these words of President Eisenhower's: "We were caught flat footed in both World Wars because we relied too much upon foriegn owned and operated shipping to carry our cargoes abroad and to bring critically needed supplies to this country.

"America's industrial prosperity and military security both demand that we maintain a privately operated merchant marine adequate in size and of modern design to insure that our lines of supplies for either peace or war will be safe.

"I consider the merchant marine to be our fourth arm of defense and vital to the stability and expansion of our foreign trade."

These are sentiments of a far sighted and clear-thinking leader with which we all agree and toward the realization of which we are determined to work everlastingly hard together.

Quality of Bank Assets in Prosperity

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. MARTIN of Pennsylvania. Mr. President, the matter of public debt, private debt, and inflation are all subjects of deep interest to every thinking American.

James N. Land, vice president of the Mellon National Bank & Trust Co., of Pittsburgh, delivered a very able address on May 3, 1956, in Atlantic City, at the 62d annual convention of the PBA.

This address should be widely read, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Bank assets consist largely of borrowers' obligations to pay. The quality of such assets, therefore, turns on the ability of borrowers to keep their promises.

Many times in the past, in periods of prosperity, borrowers and lenders alike have become overoptimistic regarding the amount of debt that could be serviced and paid, and there have been many painful days of reckoning.

Will Rogers, once when he was asked what caused depressions, is reported to have replied, "Well, every now and then we have to stop and pay up."

Is history getting ready to repeat itself again, or has the creation of debt this time been sufficiently restrained that no new day of reckoning is to be expected?

The largest single borrower whose obligations are held by banks is, of course, the United States Government. The Federal debt, as we all know, is a huge one. It has not, however, increased markedly in total amount in the last 10 years, and relative to the size of the economy it has declined considerably. At the end of 1946 it was about 1¼ times gross national product for that year; now it is only about 70 percent of the current annual rate of gross national product.

There can be no doubt of the continuing ability of the United States Government to meet its obligations in dollars. The money it requires for payments of principal must, of course, come largely from the sale of new obligations, as must also the funds for financing deficits when they unfortunately occur. The Federal Reserve, while possessing a large degree of independence, recognizes the necessity of maintaining conditions in the money market which will enable the Treasury to carry out its necessary financing. This was demonstrated anew last November in the assistance which the Federal Reserve then rendered to a Treasury refunding. It is unthinkable that the Federal Reserve should set itself up over and beyond the general Government to such an extent as to cause the Treasury to default.

The sole question regarding the quality of United States Government obligations is not whether they will be paid but whether the dollars in which they are paid will have the same or a diminished purchasing power. Prosperity is a threat to the quality of such obligations only if its sets in motion a chain of circumstances which leads to inflation. Regardless of its effect on quality, however, it does tend to reduce the quantity of Government obligations in the hands of banks. For instance, during 1955, the pressure to obtain funds for loans caused commercial banks to dispose of about $7 billion of United States Government securities. This substitution of risk assets for riskless caused some lessening in the average quality of bank portfolios.

Private debtors and State and local governments cannot have the same degree of assurance as the Federal Government in obtaining money with which to meet their obligations under any and all circumstances.

An unfortunate result of a long period of prosperity is that it creates a deceptive appearance of strength for many marginal enterprises. Also many lenders become lulled into a false sense of security as prosperous conditions continue on and on without serious reversal. There is a strong temptation to be content with reduced margins of safety, as for instance in the relationship of current assets to current liabilities on the part of borrowers, whereas past experience would indicate that the reverse would be the part of wisdom. For instance, after an extended period of prosperity perhaps we should regard a current ratio to 2¼ to 1 as being no better than 1¾ to 1 following a period of liquidation when things had been put to the test. And perhaps we should have a similar viewpoint in regard to the relationship of earnings to charges.

Hindsight has proved that in the past the quality of lending tends to deteriorate in long periods of prosperity. By way of example, I shall cite some figures from a study of the National Bureau of Economic Research of a sample of urban mortgage loans made in the 1920's by life insurance companies, commercial banks, savings and loan associations and mutual savings banks. In the case of residential loans, 21 percent in volume of the loans made in 1925–29 eventually went into default as compared with only 8 percent of the loans of this character made in 1920–24. The corresponding percentages for loans on business properties were 37 percent for 1925–29 and 14 percent for 1920–24. These striking divergencies can only partly explained by the fact that the earlier loans had more time to be paid down or paid off before trouble hit.

In suggesting that there may be a margin of borrowers whose ability to pay debts is less strong than it should be, I am not implying a serious deterioration of position on the part of most business enterprises.

In the corporate field at least, the view that there has not been a general deterioration seems supported by the overall facts regarding corporate debt. These facts have been obscured somewhat by increased use of the lease-back device, which creates obligations that do not appear on the balance sheet. Nevertheless, it seems fairly clear that, if we leave out accrued taxes offset by short-term United States Government obligations owned, the rise in the debt of nonfinancial corporations during the last 15 years has not been as great proportionately as the growth in either corporate profits or the general economy during the same period. It is true that this is partly because the debt rose relatively little during the war years, but even if we deal only with the present decade we find little evidence of any markedly disproportionate growth in corporate debt.

When we turn to unincorporated enterprises, we find that their debt has been increasing at a somewhat faster rate than corporate debt, not only over the span of the last 15 years but also during the present decade. This suggests that there may be a greater segment of borrowers of marginal strength among unincorporated businesses than among corporations.

While State and local governmental debt has increased substantially since the war and particularly during the last 3 years, it is nevertheless considerably smaller now in relation to gross national product than it was in 1940 and 1941. Such debt does not seem likely to be a primary or initiating cause of trouble in the economy. The problems of State and local governments relate more to raising new money for such things as schools and roads than to paying the obligations they have already incurred.

I now come to a class of debt which is of great importance, from the standpoint both of bank portfolios and the general economy, and that is the debt of individuals, consisting primarily of consumer debt and residential mortgages. And here we find a class of debt that has been rising not only more rapidly than the general economy but also more rapidly than the specific economic factors which generate most of the debt, namely, (1) consumer purchases of automobiles, household appliances and equipment, and other durable goods, and (2) residential construction.

We are frequently assured by apologists for the debt that while it cannot go on rising at recent rates its present level is not too "high" in relation to some standard or other and therefore is no cause for worry. Frequently such contentions are based on the assumed continued high level of income or on the greater margin of income which is available now for so-called discretionary spending.

Such thinking misses a very important point. Income should not be thought of as something that comes into being without regard to what is happening in the area of debt creation and payment. If one grants that the debt cannot continue rising at recent rates, he should ask himself what ef-

fect the slackening will have on the amount of income that is being generated.

Things which are sold to consumers on an installment-payment basis, whether they be automobiles or houses or household equipment or other goods, pump money into the income stream a long while in advance of taking an equal amount of money out of it. The money injected into the income stream consists largely of wages and salaries paid to the persons who make, transport, and sell the things destined for consumer installment purchase, and, to a lesser extent, it consists of dividends and interest paid from the business earnings generated by these processes. The money taken out of the income stream consists of downpayments and installment payments by the ultimate purchasers.

To illustrate, take what happens in connection with an automobile. The workmen who make the automobile and the materials entering into its manufacture will have received their wages probably before the automobile even reaches the ultimate buyer and in any event long before he has finished paying for it. The same will largely be true of salaries of supervisory and executive personnel. Also investors in the concerns involved will usually have received their reward in the form of dividends and interest well before the ultimate buyer has finished his payments.

In the economy as a whole at any given time the making, transporting, and marketing of a multitude of new things destined for consumer installment purchase will be tending to enlarge the income stream and the installment paying for a multitude of things previously sold will be tending to reduce it. The net effect will depend on which element is dominant, and this is likely to be reflected in increases or decreases in the total amount of debt outstanding.

Any increase in either the dollar volume of installment-debt financing or the period of time over which installments are to be paid provides a stimulus to the economy by widening the gap between money income created and money income used up, but it can be demonstrated mathematically that, in the absence of new changes, the effect of such a "shot in the arm" lasts no longer than the term of the new debt brought into existence at the time of the change and is of diminishing importance before the end of that period.

To illustrate, assume that for some years a particular type of personal debt has been coming into existence at the rate of $100 million a month at the beginning of each month and has uniformly been payable over 20 months. This would mean that a total of $100 million would be paid each month and the total debt outstanding at the end of any month would be $950 million. This would represent the unpaid residue of debt created over 20 months, consisting of $95 million for the most recent month, $90 million for the month before that, and so on. Now assume that at the beginning of a particular month new debt starts coming into existence at the rate of $120 million a month and the period over which the new debt is required to be paid is lengthened to 30 months. The changed rates of debt creation and debt payment would cause the outstanding debt to rise gradually from $950 million to $1,740 million at the end of 30 months, at which point it would become stationary. Debt payment and debt creation would then be in balance, and, in the absence of new changes, the transitional stimulus to the economy would be at an end. If new changes should occur but should be in the direction of a reduced volume of borrowing or more rapid rates of repayment then not only would the stimulus be gone but instead there would be a drag operating against the economy.

I am aware that the money injected into the income stream by the processes I have been describing is not new or additional money unless it is borrowed from banks and that it does not go out of existence when repaid unless it is repaid to banks. This, however, is frequently the case. And even when the money used consists of nonbank funds previously in existence, its employment in financing installment-buying transforms it from the status of capital in certain hands into income flowing into other hands. It becomes capital again when repaid to the lenders and does not automatically reenter the income stream.

The dollar volume of consumer purchases of durable goods was only about one-fourth larger in 1955 than in 1950, but the amount of consumer goods installment-debt outstanding at the end of 1955 was nearly double the amount outstanding at the end of 1950. Similarly, mortgage debt on nonfarm 1-to-4 family residence was almost twice as large at the end of 1955 as at the end of 1950, although the dollar volume of residential construction was only about 60 percent greater during the 5 years ended with 1955 than during the 5 years ended with 1950.

In the year 1955 alone consumer installment debt went up nearly 25 percent and mortgage debt on nonfarm 1-to-4 family residences rose 17 percent.

The Federal Reserve Bank of Cleveland has computed that, if installment debt and disposable income were each to continue increasing at approximately the average percentage rate of the past 4 years, installment debt by 1965 would be over three times as large in relation to disposable income as at the end of 1955, and in 1965 would require more than one-third of disposable income for its servicing.

The recent rates of increase in consumer and residential debt are obviously unsustainable; they simply cannot continue indefinitely. The arithmetic of debt-payment schedules, if nothing else, will inevitably reduce the gap between debt creation and debt payment.

I will venture the opinion that at least half of the rise in personal income in 1955 originated in or was supported by unsustainable increases in personal debt.

Income which originates in a growth of debt that cannot be kept up is unreliable income. One wishes that as it circulates through the economy it could be made to bear a label reading somewhat as follows: "This income originated in an unsustainable source. Don't count on its being repeated." Such a label would afford a better appreciation of economic realities. For example, the automobile worker who is receiving large wages in a period in which automobile installment debt is climbing rapidly can perhaps understand that his income may be reduced if such debt levels off, but people who at second-, third-, or fourth-hand receive income created by his spending are usually not aware of the element of undependability in it. If they were warned of this undependability, they might order their affairs differently.

We talk much about the automatic stabilizers that have been built into our economy in the last quarter-century and I do not think they should be minimized. But I also think that before we accept the philosophy that we are in a completely new era we should take a good, hard look at the possibility that personal debt will prove to be an automatic unstabilizer.

If trouble does develop in the area of personal debt, I think the repercussions will be felt not so much in the form of defaults on personal debt as in a reduced volume of consumer purchases, particularly of durable goods. Most people, I believe, will keep up their debt payments even in a period of declining income. Both by inclination and to keep their records clear, they will reduce their purchases of new goods before they default on their outstanding obligations. They can do this all the more readily because a high but reducible standard of living and a large stock of durable goods already on hand make more wants postponable than ever before.

If trouble originating in the area of personal debt causes a reduced volume of consumer purchases, the effects will be felt most severely by business concerns of marginal strength, particularly in the durable goods field. All of which reemphasizes the importance of not relaxing standards in making loans to business enterprises.

I do not intend to imply that I expect a period of liquidation comparable to the early 1930's, because the contrary is the case. But I do suggest that in our lending it would be well to take in account the posibility of a setback within the next few years of more severity than any readjustment that has occurred since the war. One does not have to be a bear on the future of this country to believe that such a setback is possible. If it were just a matter of material resources and human capabilities and desires, we could dismiss the possibility of a downturn; we have everything of that sort that we need to keep our economy expanding continuously. But we must remember that these fundamental factors have almost always been favorable to economic expansion, and yet we have never been able in the past to proceed without interruption. To my way of thinking, these interruptions have occurred primarily because what I call the financial statement of things has been allowed to get out of kilter with the physical and human potentialities of the economy, requiring us every now and then, as Will Rogers said, "to stop and pay up."

If we adhere to conservative standards of lending and investing we may not only serve own own direct interests in avoiding trouble in our own portfolios but also contribute to the public welfare by mitigating those distortions in the financial system which produce economic dislocations. By throwing our weight against inflation now, we may be helping to avoid deflation later on and perhaps still later a renewed push toward inflation which might originate in governmental deficits incurred during the deflation. In other words, we may be doing our part in facilitating orderly and constructive economic progress.

Remarks of W. P. Kennedy, President of the Brotherhood of Railroad Trainmen

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. HUMPHREY. Mr. President, the distinguished president of the Brotherhood of Railroad Trainmen, Mr. W. P. Kennedy, addressed the State meeting of the Minnesota Association of the Brotherhood of Railroad Trainmen and Ladies Auxiliary Lodges in Minneapolis, Minn., on May 5, 1956. I ask unanimous consent that Mr. Kennedy's remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

ADDRESS OF W. P. KENNEDY, PRESIDENT OF THE BROTHERHOOD OF RAILROAD TRAINMEN, BEFORE THE STATE MEETING OF THE MINNESOTA ASSOCIATION OF BROTHERHOOD OF RAILROAD TRAINMEN AND LADIES AUXILIARY LODGES, MINNEAPOLIS, MINN., MAY 5, 1956

Someone rightfully said, "Government is our Business." The business of Government is, or should be, the concern of all. The problem that faces us, and particularly so in this important political year, is, how and what can we do, to exercise our rights in taking care of our business—the Government?

The best and really the only effective and successful way to do the job is through our individual political efforts by qualifying and voting in all elections.

Of course, we can do the job more efficiently, after we have qualified through registering, wherever required, by pooling our political efforts with those of others, in groups and through such groups in political parties.

The members of the Brotherhood of Railroad Trainmen have, through 73 years learned the great values of successfully doing things collectively.

Our collective endeavors have really been our salvation, as workers, striving to improve our wages, working conditions and ways of living. We would have failed miserably as individuals. It was that working together, pulling together and all standing as one that did more to do the job than all else.

Through those years we have also learned that pooling our political efforts can be tremendously effective in nominating and electing public officials who served the people—all of the people, not a certain group or small clique of specially favored persons.

We have also learned that when we failed to pool our political efforts, we lost. We lost more than the election contest. We lost gains difficult to recover. A good example of such losses was in the vote complacency in 1946, which brought forth that terribly bad 80th Congress in 1947, with its infamous Taft-Hartley Act and uneven and unfair tax laws. In other instances we have watched national administrations almost forget the workers and the farmers in their eagerness to serve that small clique, who appeared to be their heaviest campaign contributors.

The Brotherhood of Railroad Trainmen and its ladies auxiliary, a labor organization of serious minded American workers in the United States and Canada, will continue its age-old custom of being nonpartisan in all elections. That is the only reasonable course we can take in fairness to all concerned. Those most concerned in such actions are the members of the brotherhood, who are usually quite active in all political parties, except the Communist Party. We do not have any known Communists. We do not want any. They would find our membership hard and difficult to get along with.

The democratic procedures within the Brotherhood of Railroad Trainmen do not provide fertile ground for Communists or other totalitarian minded individuals. That is good for us. That's the way we want it. It's the way we are going to keep it.

We have developed a good habit of looking over the political issues that are of vital interest to the workers, to the farmers and to the people generally. We scan the records of those in office, along with information and attitudes of those seeking office. From such information we make our decisions on who to support and who to oppose. We support or oppose the candidates regardless of their political party. It's the only way we can do—in our search for justice and political freedom.

The elections this year—are of grave political importance—in Minnesota—in the Nation—and in the world-at-large. The election of a President, a Vice President and the Members of Congress presents a great challenge and a great opportunity to every member of the Brotherhood of Railroad Trainmen and ladies auxiliary in the United States, in lending their assistance in building this Nation's future program and policies for a freer and more democratic society at home and throughout the world.

In a world endangered by Communistic influence abroad and with economic uncertainty and political confusion at home, the stakes in the primaries and in the general elections this year are enormous. We, the citizens of this great country have a most important task before us. We should insist that the major political parties nominate their most qualified candidates and include planks in their platforms on the important domestic and foreign issues before the American people.

We, in the labor unions, in the farm organizations, and in the civic groups, must do our part in presenting the issues clearly and understandingly to the people.

We can wholeheartedly support the American Heritage Foundation in its nationwide campaign to have citizens to qualify and to vote in the primaries and in the general elections.

We must overcome the complacencies of the past. We must all qualify and vote. It's the wise thing to do. It's the only way we can assure ourselves of holding our economic and social gains of the past two decades. It's our only chance to go forward to the better ways of living—we cannot stand still—we either move forward or backward—and who among us wants to go back to those demoralizing days of the 1930's. People throughout the world, who love liberty and want its freedoms preserved are anxiously watching and waiting the results of our primaries and elections. We must not fail them. We must not fail ourselves. There is so much depending on what we do in America this year.

The office of the Chief Executive of the United States is a most important one. On the shoulders of our next President will rest the responsibility for the general welfare and the preparedness of our 166 millions of people and there will be millions and millions of people in the critical areas of the world who will look hopefully to America for guidance.

The next 4 critical and difficult years will require a lot of hard and vigorous work. As much as we may desire to do so, there just isn't any plausible way of successfully delegating the important and essential duties of our Chief Executive. We cannot accept the idea that our national administration can be liberal in its foreign policies and at the same time serve the most decadent reactionaries at home.

We want and we need a President who will serve all of the people, not just a privileged few—one who believes that our great natural resources belong to—and should be used for—all of the people, instead of being given away for exploitation by selected groups or individuals for personal gain. Our next President should be a person who believes that what is good for the workers, the farmers, the housekeepers, and the small-business people, is also good for America.

We regard the office of the Vice President as one of importance—not to be offered as a consolation prize. Events of the past months make us more than ever conscious of the importance of an office, whose occupant is only a heartbeat away from that of the Chief Executive.

We deplore a political expediency whereby a liberal is counterbalanced with a conservative as a candidate for Vice President, or vice versa. The succession in office makes both the President and the Vice President equally important. The people should so regard it—even if the politicians have no regard for the desires of the people.

While we discuss the importance of national officials, we must not overlook the national officials to be elected from the several States. Along with the President and Vice President, there will be 33 United States Senators and the entire House of Representatives, 435—a delegation from each State.

Our great State of Minnesota has its important and impressive quota to be nominated and elected this year. The nine Representatives in Congress are up for the consideration of the voters this year. Of those 9 there are 5 who have been outstanding in their services to the people of our State and of our Nation. It might be well to call the roll—for they do deserve special mention.

Here in Minneapolis we have a fine liberal in ROY W. WIER in the Third District, now serving his fourth term. Across the river from St. Paul, there is another fine liberal, EUGENE J. MCCARTHY in the Fourth District, also serving his fourth term. Over from Grove City in the Sixth District we have an outstanding farmer, who is equaling his city colleagues' record—FRED MARSHALL, serving his fourth term. Representing the northern part of the State from Chisholm is another fighter for the rights of the people, JOHN A. BLATNIK in the Eighth District, serving his fifth term—and in the northwestern Ninth District, we have a newcomer in national politics, Mrs. COYA KNUTSON, serving her first term. And really doing a good job. It's wonderful—those 5 good Congressmen—the only thing we need to do is to return them to the Congress along with 4 others who will serve the people's interests as these 5 are now doing.

The election of liberals as President, Vice President, and as Senators would be ineffectual without a majority in the House of Representatives. That is why it is so important to increase the number of liberals in the House of Representatives from Minnesota.

That outstanding liberal in the Senate of the United States, our good friend and fellow citizen HUBERT H. HUMPHREY needs more help in Washington next year. One of the best ways to give that help is to elect more Congressmen like WIER, MCCARTHY, MARSHALL, BLATNIK, and COYA KNUTSON.

There is a definite trend toward the nomination and election of candidates who will serve all of the people.

The Congress will be called upon to consider fair and equitable tax law revision, labor relations, social security, national health, railroad retirement, aid to schools, federal housing and workable farm supports—all of those subjects are extremely vital to members of the Brotherhood and the Auxiliary and the workers in all other avocations.

We do have a big task ahead of us—we must do our part to make sure that our most important business—the business of our Government is carried on in a forthright manner to promote the general welfare—to provide adequately for the national defense and to adjust the inequalities which developed when we failed to do our part of the job.

The task ahead of us will not be so very difficult—if each individual will do his or her share by voting in all elections—and pool their voting collectively with that of others seeking the same goals. It is really a simple matter and doesn't take very much time.

The most important phase of it—is voting for the candidates who serve your interests, regardless of their party affiliations. There's no reason why we cannot use the same good judgment used by the big industrialists and the financiers of Wall Street—they vote for

candidates who serve their interests. When we become aware of the great value of that vote of ours—we will vote for labor's endorsed candidates. Public officials elected with the support of labor unions have always served the public interest—that is always to our interest.

Our labor unions were put at an unfair disadvantage by our enemies who controlled the 80th Congress and passed the Taft-Hartley Act over the veto of the President. That act among other antilabor provisions amended section 313 of the Corrupt Practices Act, by putting labor unions in with national banks and corporations organized under the authority of Congress.

To overcome the restrictions of the Taft-Hartley law we organized the Trainmen's Political Education League. The league provides facility whereby the members, employees and friends of the brotherhood can legally carry on needed nonpartisan political activities in support of favorable candidates for public office.

TPEL affords you and your friends the opportunity to effectively take an active part in the selecting of capable public officials who will be friendly to your interests.

tI is the best way you can help keep your Government working for all of the people. We must ever be alert to the fact that a TPEL contribution is needed from each of you and from each member of your lodge. Our friendly candidates need financial support. We can give that needed support through TPEL. A membership card is issued to all making a contribution of $1 or more.

Brother Lester J. Covey, State Legislative Representative, is State chairman for TPEL. He has membership cards. He will accept your contributions.

We do have a vital interest in the issues that should be discussed and considered in the campaign this year.

Will the power companies be given the franchise to sell the publicly created power from the Niagara Falls development—or will we follow that splendid example set by the Canadians in the Ontario Public Power Authority. The Canadians give the people full advantage of public power. We, in the United States should do likewise.

The national administration takes an entirely different view—in the Hells Canyon project, where every effort is made to give away that great natural resource to a power company with its limitations to develop the full potentiality.

Another good example of the administration's attempt to destroy the progress made in public power, flood control, and conservation is in the support given the ill-fated venture of the Dixon-Yates in the power field in the Tennessee Valley Authority territory. Another one is the efforts to dispose of the public grazing and timber lands—much of which are in national parks and national preserves. We must take care or we will be seeing national scandals that will make the Teapot Dome-Fall-Doheny scandals of the early twenties look like pink tea parties in comparison.

It is time to check vote complacency and join in the campaign to have all qualify and vote—and to become familiar with the issues—the real issues before the people of our great Nation. We, in the labor unions do have a vital interest in the issues that should be sizzling hot topics of the campaign this year.

America is full of traditionally liberal, militant people—people who love the good life of freedom and abundance for all. We are yet too close to the early pioneering frontiersmen to have developed the conservative ways and attitudes of the continentals. The majority of us still believe the rights of the individual are and should be superior. We believe in democratic government, free enterprise, with the dignity and importance of human rights, freedoms, and needs over all else.

We want to conserve, at any cost, our invaluable heritage of time-tested customs and institutions in the forward march to economic, social and political security.

We can never hope to obtain the goal where we will reach economic, social and political perfection. The struggle for survival goes on and it must be continued by us and by our children and their children. The present and the future, like that of the past, must depend upon the people, who are more conscious than the others, that our democratic way of life is not a label, nor a name, but that it consists of social, economic and political ideals, which must be protected—fought for—in order to be kept alive and growing for us and for our posterity. Such people have always been more alert and sensitive to the forces which create injustices. Such people are the liberals, who have held high the torches of our cherished ideals.

Thomas Jefferson recognized the forces of liberalism and reaction when he wrote, "Men by their very constitutions are naturally divided into two parties, those who fear and distrust the people and wish to draw all powers from them into the hands of the higher classes; and those who identify themselves with the people, have confidence in them, cherish, and consider them as the most wise depository of the public interest."

Our political party alinements are not so well defined as in the quotation from Jefferson. We have liberals and reactionaries in both the Republican and Democratic Parties. That is why we, as a labor union, must remain nonpartisan—supporting liberals where we find them in both parties. In that way we attempt to meet the challenges of our time by courageously joining with those who believe the people to be the best depositary of the public interest.

As a voter in Minnesota, I don't see how I can turn in any direction but to the Democrat-Farmer-Labor Party.

In Gov. Orville Freeman, we have a liberal as described by Thomas Jefferson, who serves well the interests of all people in the State. He is doing a good job and his administration is following the pattern set by his illustrious predecessor, Floyd B. Olson.

The State of Minnesota needs Orville Freeman and with him a workable majority in the legislature.

It will be wise to follow the endorsement of the Minnesota State Legislative Board. Lester Covey will keep you fully and correctly informed on the candidates for State offices endorsed by the legislative board.

The uneasy restlessness of the people since January 1953 seems to show less and less confidence in President Eisenhower and the Republican Party. Despite all of the favorable publicity in the newspapers and magazines, on the television and over the radio, there's definite trend in the opposite direction.

The 30 Republican Governors in 1953 have dwindled to 21, with the Democrats increasing their number from 18 to 27. Five hundred and five State legislators have been added to the Democratic column in the same period. Hundreds of Republican strongholds in counties and cities in Pennsylvania, Illinois, Indiana, the New England States and in other sections of the country have turned Democratic—all of this indicates the people's resentment against the administration's failure to provide for the general welfare. It is evident that what is good for General Motors is not good for and is not wanted by the people.

The Minnesota Legislative Boards of the Brotherhood of Railroad Trainmen and Ladies Auxiliary have the obligations of directing the course of our members should take in the primary and general elections. The officers and members of the boards must not fail in pushing forward our collective political efforts to where all will be registered and all will vote in the primary election, September 11 and in the general election November 6. 1956 is an important political year. You can make it one for yourselves and for the people. May God grant you the wisdom to do so.

Legislation From the Bench

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Chicago Daily Tribune of Tuesday, May 15, 1956, entitled "Legislation From the Bench," which is worthy of the consideration of all Members of Congress, as well as citizens generally in this country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEGISLATION FROM THE BENCH

Senators BRIDGES and MCCARTHY are offering a bill providing that no act of Congress dealing with sedition, subversion, or communism shall be construed as taking away the concurrent jurisdiction of the States in these fields. This legislation is in answer to recent decisions of the Supreme Court, holding that the Federal Government preempted jurisdiction over such matters and that the States may not take action as long as the Government has laws under which it may act.

The growing tendency of the Supreme Court to kill off State laws in wholesale lots and to center all authority in the Government was pointed out in a speech the other day by Senator BYRD, of Virginia, who called upon Congress to stop the Court's process of reducing the States to "the status of provinces, completely under Federal law."

In order to accomplish this purpose, Mr. BYRD and 11 other Senators have introduced bills whose general effect is to inform the Supreme Court that when Congress intends a Federal law to invalidate all State laws in the same field it will plainly say so, and that otherwise the Court is to presume no such intention.

Among other recent decisions, the Supreme Court upheld the Pennsylvania Supreme Court in invalidating the conviction of Steve Nelson, a leading Communist, under the State sedition law. It also ruled that resort to the fifth amendment was not sufficient cause for firing a New York City schoolteacher, although State law existed as authority for doing so.

Senator BYRD noted a similar intrusion of the Court in denying States the right to exercise ordinary police power in maintaining peace and order in labor disputes. The Court granted a writ of certiorari to the United Automobile Workers in a case involving union goon tactics amounting to civil insurrection, which the Wisconsin Employment Relations Board had sought to bring under control.

This string of decisions and court decrees started in March, when the Supreme Court, upholding the immunity law of 1954 in the case of a Communist named William Ludwig Ullmann, asserted the doctrine that Congress could bind the State courts. Ullmann contended that, although the Fed-

eral immunity law compelled him to testify on Government order or go to jail, he was in nowise protected from subsequent prosecution in the State courts, based on the testimony he gave under a pledge of Federal immunity. Therefore, he argued, the immunity law abridged the fifth amendment, which guarantees that no witness may be compelled to testify against himself.

The Supreme Court met the issue by saying that, inasmuch as the immunity law was related to the national security, it placed a restriction on the exercise of State power in the interest of a more effective exercise of conceded Federal power. As we asked at the time: Who conceded it? Certainly not the States. And the legislative history of the immunity law showed that Congress itself admitted doubt that it had the constitutional power to bind the States.

Senator BYRD says that, given the course upon which it has embarked, there is no telling where, if anywhere, the Supreme Court will be willing to stop. On the same premises that it has already adopted, it could proceed to rule that no State can enact labor legislation or exercise the taxing power in areas in which the Federal Government also happens to operate. In fact, according to the prevailing philosophy of preemption, the Supreme Court would deny the States any powers in any fields for which the Federal Government has spoken a claim, however faintly, through congressional action.

The 9th and 10th amendments, reserving rights to the States and the people, would inevitably become nullities under the application of this doctrine. We think that Congress is right in deciding that it is past time to call a halt to the Court's disposition to legislate from the bench in the interest of a vast extension of Federal power. To do so is not to negate the power of Congress, for it is clearly established that Federal law prevails when State law is in conflict. But that is not the issue. The issue is to preserve the concurrent jurisdiction of the States, as well as their integrity as voluntary partners who gave their consent to Federal union.

Twentieth Anniversary of REA

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. HILL. Mr. President, the May 1956 issue of Public Power, the official publication of the American Public Power Association, contains four articles recognizing the 20th anniversary of our REA program. These articles report on the past, present, and future of the REA program, as we pass the 20th anniversary of the Rural Electrification Act, which was signed on May 20, 1936, by President Franklin D. Roosevelt.

I ask unanimous consent to have printed in the Appendix of the RECORD one of these articles, which was written by Mr. Claude R. Wickard, who was for many years the able and devoted REA Administrator. He speaks a wise word of warning in his article entitled "Enemies of Public Power Also Would Destroy Electric Cooperatives."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENEMIES OF PUBLIC POWER ALSO WOULD DESTROY ELECTRIC COOPERATIVES

(By Claude R. Wickard)

(EDITOR'S NOTE.—Longest term as REA Administrator during the agency's first two decades was served by Claude R. Wickard. Mr. Wickard rose through various positions in the Agricultural Adjustment Administration to Secretary of Agriculture in 1940. After resigning as Secretary of Agriculture in 1945, he became REA Administrator, serving until 1953. He now lives on his Indiana farm.)

This is being written on a cold and snowy February night in an Indiana farm home, made comfortable, modern, and convenient through REA electric service.

I was awakened this morning by an electric clock radio, and I heard the latest news before I arose. I washed and shaved with a plentiful supply of hot and cold water available through an automatic electric water pressure system and an automatic electric water heater. The whole house was a comfortable 72° because of an electrically controlled heating system.

My breakfast: grapefruit was taken from an electric refrigerator. The milk which had been pasteurized in an electric home pasteurizer also came from the refrigerator. Bacon and eggs were cooked on an electric range. The coffee was made in an automatic electric percolator and the toast in an electric toaster. The garbage was placed in an electric disposal and the dishes were washed by an automatic electric dishwasher.

My wife placed the soiled cloths and linens in the automatic washer and later transferred them to the electric dryer before smoothing them with the electric iron. She cleaned the rugs with an electric vacuum sweeper.

The noon meal came from foods which had been preserved in the electric refrigerator. The evening meal was prepared entirely from foods taken from the deep freeze and the refrigerator. Even before I sat down to the evening meal, I had received up to the minute news, weather and market reports over the radio.

I took time out from writing this article after dinner to watch Purdue, my alma mater, beat Michigan 72 to 63 in a Big Ten basketball game. Because of the blizzard, many were prevented from attending the game, but I saw it clearly and comfortably in my own home through that electrical annihilator of space—television.

With the exception of the radio, none of these electrical devices were in this house 20 years ago. There was no power to operate such electrical devices. Yet there was a high line along the State highway just 1 mile away. Some of my neighbors and I had tried in vain to get the power company officials to serve us on terms we could afford. These officials said that the company was not interested in serving farmers because farmers would not use enough electricity to make service profitable.

REA CHANGED FARM LIFE

It was only after the creation of REA that the power company became interested in serving us. We refused to negotiate with these people who suddenly had become interested in giving us service after years of disinterest. We would wait a little longer perhaps to get electric service, but we thought we would get better and cheaper service through our own cooperative. In 2 years we were getting REA electric service.

We are now using it for over 20 different purposes in farm production. At the risk of omitting some, I shall try to name them: automatic water pumps, making water available in automatic fountains in all buildings and fields; heaters for automatic water fountains; lighting of barns and barn lots; elevators for grains and feeds; feed mixer; air compressor for tire inflation; power drills; saw and planer; automatic hog house heater; hog house air circulator; poultry house lights; chicken brooder; pig brooders; milking machine; milk cooler; milkhouse water heater; milking house ventilator; emery wheel; sickle sharpener; welder; chicken fountain heater; refrigerator for serum and vaccines; and crop dryer.

Electric service has modernized farm living and it has helped to revolutionize farm production. Millions of rural families are deeply indebted to Franklin Roosevelt, George Norris, Sam Rayburn and others who had the vision of REA and the courage to fight off the opposition.

Those of us who now derive so much benefit from REA must have vision and courage if we are not to lose the full benefit of REA or even all of REA.

To obtain the full advantage of electric service on the farm, the service must be reliable and it must be low in cost. Reliable and low cost service means new uses and greater usage. The additional use means that the lines, transformers and other facilities must have greater capacity. The increased use of electricity around the farmsteads means more dependence on the service. This means that the proper maintenance of REA facilities is essential. The cost of REA service can be influenced by proper maintenance which will insure increased use.

Reliability, capacity and cost are interdependent. The board of directors and the managers will have to have vision and courage if this interdependence is properly used to gain full advantage of REA service.

My own REA cooperative is a good example of how it is possible to give good service through proper maintenance and increased capacity. It is most reassuring to know that other cooperative crews would rush to our aid if a bad storm hit our lines.

We members could and would make our voices heard if our management was not alert and efficient. Yes, we can effectively control the affairs of our cooperatives in the interests of good service and low cost.

My cooperative, like the majority of REA cooperatives, does not generate its own electricity. It, therefore, has only limited control over the reliability and cost of the service it extends its members. For instance, most of the lengthy interruptions of my service are due to the failure of the supplier's system rather than the cooperative. The cooperative management can only beg that improvements be made to avoid these outages, which are far too frequent and too lengthy. The power company failures have an unfortunate habit of coming at milking time.

The cooperatives in the State are in constant negotiation with the power suppliers over location of substations and wholesale rate contracts. One of the principal suppliers of REA power in the State has asked the State utility commission for approval of a rate increase, much of which was based on erroneous claims. The power company did not include an increase to REA cooperatives in its petition, apparently because it did not want to disturb the most influential of its customers. When the utility commission granted a part of the increase requested, it then included the REA cooperatives on the ground that rates could not be discriminatory.

The cooperatives learned the truth of what they had often been told—that the long-term contracts always sought by the power companies are no guaranty against rate increases.

There is considerable variation in the attitude of the cooperatives toward their suppliers. Some seem to feel that the only strategy they can adopt is to stay on the friendliest terms with the power companies. Others are openly resentful of the arbitrary

and even arrogant tactics of the power company officials.

All of them realize more and more that the cooperative position is vulnerable and insecure, but perhaps few know that there are certain interests who would like to eliminate entirely the REA cooperatives. To most cooperative members the Hoover Commission report is something vague and remote. They do not see that those who support the Hoover Commission reports are by and large the same interests who didn't want REA brought into existence in the first place, and who now see in the cooperatives a challenge to the monopolistic utilities.

Too few cooperative members see any relationship between public power and REA cooperatives. They don't know that the two types of projects have a lot in common, including a common opposition, and that this opposition is relentless and resourceful.

Only through the development of plentiful supplies of low-cost public power could REA cooperatives be given loans to take electricity to hundreds of thousands of rural homes in the postwar period.

The only hope of electric cooperatives to survive lies in eternal vigilance and unity. Those who would destroy public power would destroy the REA cooperatives and vice versa. It will take a unified defense to win the struggle against the common enemy.

A Government-Subsidized Scholarship Program

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. HUMPHREY. Mr. President, the shortage of teachers, scientists, nurses, and social workers is a national problem to which I have frequently invited the Senate's attention. I have just received a letter from Mr. Harold Pluimer, principal of the public schools in Renville, Minn. He proposes a Government scholarship program for members of the top 10 percent of every senior class. It is a sound and constructive proposal.

I commend him for his concern with this serious problem and for his imaginative proposal. I have long supported a Federal scholarship program and endorse in general the suggestions of Mr. Pluimer. This type of Federal aid to education is urgently needed and could be expanded by cooperative efforts of States and local political subdivisions. I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RENVILLE PUBLIC SCHOOLS,
Renville, Minn., May 14, 1556.

Hon. HUBERT HUMPHREY,
United States Senate,
Washington, D. C.

DEAR SENATOR HUMPHREY: Please permit me to take some of your valuable time to very briefly propose a partial answer to the very acute problem of the shortage of professional personnel. Particularly I am referring to teachers, scientists, nurses, and social workers.

This may possibly be classified as a variation of Federal aid to education but I am sure the many public and congressional objections to the Federal-aid program would not apply to the suggested plan.

Approximately 1¼ million seniors will be graduating from our high schools this spring. I would like to recommend a Government subsidized scholarship program for the members of the top 10 percent of every senior class. Certainly this segment of the school population, in the interest of our national welfare, should attend college. Offhand the cost would appear staggering—but an analysis of the proposal would reveal it to be possibly one of the best investments our Government ever made. Let us assume a $100 scholarship for 100,000 students needing financial assistance. The cost per year would be approximately $10 million—the cost of one B–52 bomber.

The implications of such a program are staggering, and it is difficult to conceive valid objections to such a venture.

I sincerely believe that a program of education assistance would be as valuable to the defense of our country as the strategic material that is so often emphasized.

Your careful study of this proposal is requested.

Sincerely yours.

HAROLD PLUIMER,
Principal.

The Bully Among Us

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "The Bully Among Us," which appeared in the Concord Daily Monitor, Friday, May 18, 1956, which I feel warrants the attention of the Members of Congress and the public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BULLY AMONG US

The Russians have announced they are going to reduce their armed forces numerically by 1,200,000. They will still have in excess of 10 million or 11 million men under arms, even if their announcement is genuine, a fact the world has no way of determining.

Because the Russian word is worthless the free world can do little more than ignore the Russian announcement as other than political propaganda and continue perfection of its own armed defenses. In doing so the free world must say to the Communists that only if it agrees to joint inspection of defenses in all their aspects will it recognize any honest desire on the part of the Communists to reduce armaments for the purpose of helping to preserve world peace.

In short, Russia has not in this new statement provided genuine proof of honorable intentions as respects the peoples of this earth. It is, instead, seeking a cheap advantage. It wants the rest of the world to drop its guard against Communist aggression. It wants to soften up the free world, partly by dividing it. And the chances that it will succeed in part are very, very good.

The burden of armaments upon the free peoples is great. The will of many of the free peoples to fight to preserve their freedom is not all it might be. The full implications which lie in the development of atomic power are not generally realizable short of an atomic war. The political stability of many of the free governments is nil. Unity in the free world is a fiction.

It is the nature of freedom that each person and each nation shall be itself. The common danger from communism is not enough to overcome this trait which is both an asset and liability of free men. So free men will interpret the Russian announcement in any variety of ways, and pursue any variety of consequential actions and attitudes.

Within the free world there is a seeking of the attainment of ideals. In the Communist world there is only a seeking of the attainment of power. Man's nature is always temporarily on the side of the power seekers. Their objective is less abstract than that of the idealists, and more realizable because of man's innate weaknesses. Force can produce power. Freedom does not always produce freedom, but more often a license which sometimes degenerates into force.

The goal of the free world is the harder one to achieve. Its achievement rests upon faith, and the works which faith alone can produce, yet no man is completely a man of faith. Contrariwise, no man is completely devoid of faith, not even the most avid disciple of force. Without effort, however, it is easier for man to be selfish and cynical and hypocritical than to let his faith dominate his actions and reactions.

So it is that the advantage often seems to be with the unscrupulous, as it does at this moment in international affairs. This very fact illustrates the great part faith plays in our destiny. Only if we have faith do we refuse to yield our idealistic goals despite the enticements of those who have accepted the wicked way because the weakness of the appeal of power has submerged the faith they, too, might have had.

Often in the struggle toward the goal of justice and peace upon this earth obstacles which appear devoid of solution test our faith. Often we are compelled to proceed without knowledge as to whether the course we persist in or adopt will or can produce desirable results. We feel our way, and now and then, we are rewarded, our faith is renewed, and we have the courage to keep trying.

The world has been in a long interval of such trying, without respite. It is tired. It is tempted to relax its efforts. It is quarrelsome. Yet a calmer second thought reveals that progress there has been, not universal, but nevertheless impressive. The world has become amazingly small and intimate, and this very fact is one reason we sense what seem to be so many irritants. Its nations and people are like a complete family of relatives all living in the same house at last. No wonder there is confusion as we try to work out compatible arrangements for such close association.

International Trade Union Activity: A Vehicle for Greater World Security

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "International Trade Union Activity: A Vehicle for Greater World Security," by Solomon Barkin, director of

research, Textile Workers Union of America, AFL–CIO, in the Labor Law Journal, December 1955:

INTERNATIONAL TRADE UNION ACTIVITY: A VEHICLE FOR GREATER WORLD SECURITY

(By Solomon Barkin)

In a world in which opposing sides are oriented around totalitarian Communist regimes, on the one hand, and a group of democratic countries, sensitive to the popular demands for rising living standards and world peace on the other, international free trade-union activity plays a vital role in strengthening the position of the non-Communist world. It is creating a popular loyalty to and a belief in the progressive programs of the non-Communist states. In itself, it constitutes a weapon with which to hold off and combat the Communist threat. It is an organization which seeks to assure the realization of the basic objectives of the free world.

The active part which the trade-union movement has played, and can continue to play, in the establishment of world security as understood by the non-Communist world has been moderately appreciated by professionals in our foreign service. But the great mass of Americans does not yet begin to comprehend the direct, vital position it has already occupied, and the part it can in the future play, in containing the flood of communism, even destroying its grasp within its own areas, and building stronger democratic institutions.

The free trade-union movement is particularly well suited by its history, activities, and knowledge, its intense hatred of and opposition to Communist principles, and its devotion to progressive democracy to serve in the present battle. In fact, no other group is as well adapted for this undertaking. In this offensive, it enjoys the advantage of not only creating support for a non-Communist, progressive economic-social program, but also of assuring stricter adherence to it by the nations themselves and threatening the very hold of the Communist totalitarian powers over their own repressed peoples. Above all else, it knows that ultimate victory will be effected not by military means but by the demonstration of rising standards of living, full employment, political democracy and respect for human rights in the free world. These gains will ultimately force relaxation of totalitarian controls and reductions in military expenditures in the Communist states—the preludes to more sweeping accommodations to democratic human concepts. With flourishing trade-union movements the world over, the era of coexistence can become one of conversion of totalitarianism to democracy.

THREE WEAPONS OF SECURITY

1. Adequate self-defense: World security, in the eyes of the non-Communist world, embraces three basic guiding principles. First, freedom from outside attack or a military power adequate to assure this objective. This end has to be promoted not by one nation, but by all, for all associated nations and independent countries. This strength is necessary as a deterrent to military attack.

2. Economic and political improvement: The second principle for world security for a democratic non-Communist world is dedication to the improvement of the economic and political positions of its people. The western, and many Asiatic, non-Communist powers are pursuing this goal. The Communist countries have been too devoted to the construction of capital-goods industries and military might to give consideration to this objective. The rewards for the non-Communist countries which have embarked on this program are an affirmative devotion by their peoples to their cause and a diminishing following for the Communist parties in their midst. The price Russia is paying for its program is its constricted economic development which does not keep abreast of its growth in population.

3. Political freedom and self-determination: The third principle of the free world's program for security is the right of people of each nation to determine their own form of government and economy. We have respected those maintained by other nations. The United States has objected to and refused to recognize conversion through military might. We have never accepted the submergence of the Balkan states. The Congress of the United States recently declared that "peoples who have been subjected to the rapacity of alien despotisms shall again enjoy the right of self-determination within a framework which will sustain peace; that they shall again have the right to choose the form of government under which they live; and that the sovereign rights of self-government shall be restored to them all in accordance with the pledge of the Atlantic Charter." President Eisenhower declared at the summit conference that "the American people feel strongly that certain peoples of Eastern Europe have not yet been given this pledge of our United Nations war-time agreement." Free elections for the Germans were assigned number-one priority in the allied programs.

The battle among systems and programs must be waged through the hearts and minds of men, by means of deeds and economic accomplishments and not by political and military might.

No principle comes closer to the dedication of the free trade unionist who proclaims the right of all peoples to full national freedom and self-government, and dedicates himself to champian the cause of human freedom, oppose and combat totalitarianism and oppression in any form and supports all working people deprived of their rights as workers and human beings by oppressive regimes.

This determination to fight for freedom and ecoonmic and political progress, to support defense and to advance the cause of economic well-being through unified action of workers constitutes a formidable assistance to the non-Communist world. The Interntional Conferedation of Free Trade Unions, at its May conference in Vienna, numbered delegates from 56 countries representing more than 50 million workers from all continents and all regions, races, religions, and colors. Associated with the confederation are the International Trade Secretariats which add an additional 3 million organized workers in nations without affiliated national centers. They included men high in the echelons of their country's leadership. Some were allied and others in opposition to incumbent governments. But all were united in support of the above priciples.

ICFTU: A EIGHTER FOR HUMAN FREEDOM

The international free trade union movement not only has a common cause with the democratic nations, but it is composed of organizations led by persons tried in the battle for human freedom. Their lives have been dedicated to this purpose. And in this fight with Communist totalitarianism and subversion, they are among the best qualified and most learned in the arts of combat with them. Their faith and qualifications for the challenge have been repeatedly tested. They know the difference between the men who exploit the fight for freedom to impose their own totalitarian organizations and those who are truly advancing human rights, well-being and freedom.

Steeped in the hope that Allied-Soviet war cooperation would usher in a new day, the British and French trade unions and the CIO, together with the Russians, formed the World Federation of Trade Unions in 1945. The effort to build a single world movement based on the assumption of a contained Communist labor front was set back in 1946 with the death of Sidney Hillman and the withdrawal of Sir Walter Citrine, the British unionist. The increasing domination of the federation by Communist officialdom caused increasing dissention. Concurrently, the American Federation of Labor maintained its own international operations designed to counteract Communist activity and to help strengthen the newly rising free unions in the defeated countries. The WFTU finally collapsed with the split between the East and West on the Marshall plan. The International Trade Secretariats had never joined and remained independent, jealousy protecting themselves from domination by Communists. With the help of the American Federation of Labor, the free unions withdrew in December 1949, and formed the present International Confederation of Trade Unions, selecting J. H. Oldenbroek of the Netherlands, a fighting anti-Communist and secretary of the International Federation of Transport Workers, as its general secretary. It now enjoys the support of the free trade unions throughout the world. No longer predominantly a European organization, it draws its support, leadership and following from all corners of the world.

Lonely Man and Lonely Philosophy

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 22, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lonely Man and Lonely Philosophy," written by Jim Lewis, and published in University of Miami's fine newspaper, the Miami Hurricane, of April 27, 1956.

The editorial describes the difference in the thinking between those who live under a free government and those who live under a dictatorship or a Communist form of government. I think the editorial is splendidly written; it tells an impressive story, and I commend it highly to the attention of Members of Congress and the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LONELY MAN AND LONELY PHILOSOPHY

(By Jim Lewis)

It was sunset. Outside, the western sky was slashed and bleeding, but the cafeteria was cheery with a suppertime peace. Dishes clanked, people laughed quickly and the public-address system covered it all with soft music. And I had supper with a Communist.

"You are weak," the Communist said, "and Lenin despises you. You call yourself a liberal, but in reality you are only a weakling. You are afraid to make up your mind, you vacillate, you think one thing today and another tomorrow."

He glared at me through his glasses and bolted some mashed potatoes. He drank some milk. He was kind of a young Communist, and he didn't like coffee.

"Certainty has never been strength," I suggested. "Because you have a belief doesn't mean that you have the truth."

"How do you know?" he shouted. "You've never tried our way, you don't know anything about it and can't make a judgment."

I'd never, never tried suicide, either. But it didn't seem worth mentioning.

His eyes got a religious glow, and he continued: "We have decision. We have a truth to carry. You have nothing; no guts, no insides, no strength. Lenin despised you, your kind, the phony intellectual. We despise you."

He was editorializing. He wasn't a party member, probably not even a fellow traveler. And I don't think he despised me. Lenin, maybe; but Lenin was a lonely, bitter man with iron instead of a soul. My friend was only lonely.

The Communists, the believers in any true cause, feel they have strength because they have a discipline to follow. They feel, it seems to me, that because they are part of a movement, they are secure; that they do not have to rely on personal weakness, that they need not exercise the dreadful freedom of decision.

And they are strong, as the brick is strong in the wall. Or as an ant in the sand hill is strong.

But I have never really thought of that as a strength. After freshman semantics, none of us are brave enough to say "Strength is—" or attempt to delineate a meaning.

But if I were on the spot, I think I would admit that strength to me has always meant the ability to stand alone, to make decisions, to exist through choice. A man who is strong will go his own way.

"You are weak," my friend had said, "because you change your mind." Decisions once made should be happily forgotten; changing your mind brings you once again to the abyss of choice, the insecurity of being an individual.

"You're afraid of being," I said.

"You're intellectually soft," he told me.

We went out together. The sky was green and shadows were soaking softly into everything. A blonde Chi-O went past, her hair the color of ashwood in the fading light. I watched her pass; my friend studied the lake.

Communism and the West will never meet or agree. Their social philosophies are more remote than their economy. Our ancestors followed the sunset, and went alone, and made their choices; communism, although originaly a Western economic theory, answered a dire need in the Slavic breast, a need to be safe. The West is a civilization of nomads; the East, of farmers.

My friend went away, walking quickly across the darkening campus, his arms full of books and fear. Around him the university buildings thrust their stone geometries against the sky with a breathless ease, as casual and free as the philosophy that made them.

My friend looked as if he were lonely. He always will be.

Soviet Spy Network in America

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which appeared in the Evening Star, Monday, May 21, 1956, entitled "Soviet Spy Network in America," written by Constantine Brown, which I feel is worthy of the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET SPY NETWORK IN AMERICA—TESTIMONY OF FORMER RED AGENTS SEEN AS VINDICATION OF MCCARTHY

(By Constantine Brown)

A sensational story of 2 years ago, widely publicized in the press and on television, was the Army-McCarthy hearing which eventually ended in condemnation of the Wisconsin Senator by the Senate.

The basis for that spectacular row between an investigating committee and the Army Department, headed by Secretary Stevens, was the accusation by Senator MCCARTHY and his staff that the Army was coddling Communists who had imbedded themselves at Fort Monmouth.

The Army said it started the investigation because MCCARTHY had used "undue influence" to get a commission for one of his staffers, David Schine. At the same time, it insisted that there had been no espionage at Fort Monmouth and that only a routine error had been made in the promotion of Major Peress.

Last Thursday the testimony under oath of a former Soviet employee of the Soviet Signal Corps Research Institute in Moscow was read into the record of the Internal Security Subcommittee of the Senate, and then made public. For security reasons the witness did not appear in public hearing and his evidence was given under the assumed name of "Andriyeve." When he fled from the U. S. S. R. and how he reached this country are also kept secret.

The testimony bore out entirely the accusation of Senator McCarthy that there had been large-scale espionage at Fort Monmouth since 1944 when Mr. Andriyeve first joined his outfit. One of his functions was to examine a series of documents in foreign language, 90 percent of which were of American origin and 10 percent of British and French origin.

When asked by Committee Counsel Robert Morris whether they had originated at Fort Monmouth or the Signal Corps, the reply was: "One batch emanated from Fort Monmouth and the other from RCA. I could not tell you exactly which RCA laboratories because I don't remember."

When Mr. Morris asked for an approximation of the quantities of documents examined and translated by the witness over a period of a year the reply was "thousands."

The Army Department was queried by reporters soon after the end of Thursday's hearings. Its spokesman pointed out that during the war we exchanged military information with the U. S. S. R.; hence it would have been natural that the Soviet Signal Corps Research Institute should have in its possession data about our then novel radar and other such things.

But in his sworn testimony Andriyeve stated: "The documents came from the Sepetsotdel (secret police section) and had to do with high power, supersonic frequency and ultra-high frequency tubes that are used for radar. Some of them would be photocopies or photostats that evidently came in originally from the United States; others were enlargements, blowups from microfilms which got into the Soviet Union from America and were developed and enlarged at some local Soviet level. The vast majority of them had classification marks such as 'secret', 'top secret' or only 'confidential.'"

When asked how he thought they came into possession of his agency the answer was: "The only thing I can tell you is that when we would tell the secret-police officer in what you may call a facetious way 'Where did you steal them' he would say 'Shut up; it is none of your business. Your business is to try to find out how to use them. It is our business how to get them.'"

Insofar as Andriyeve could tell the Senate Internal Security Subcommittee, the flow of documents continued through 1945 after he had been transferred from the Signal Corps Research Institute to the manufacture of radar parts.

It is, of course, accurate that we did give the U. S. S. R. some technical information of minor importance. The Pentagon's official policy was to keep away from the Russians our major technical inventions and know-how. This was, however, a policy which the Soviet agents in this country knew how to counteract. What they could not obtain officially they got through ideological stooges who had sensitive positions in the Government.

The revelations of the former Soviet official will change nothing, of course, in MCCARTHY's status as a censured Senator. The Republicans in the Senate feel that they cannot afford to raise the question that he was censured too hastily and that there was some real foundation for the accusation of Communist infiltration at Fort Monmouth because they would go counter to the wishes of the executive branch of the party. The Democrats have no reason to pull the chestnuts out of the fire for an opponent whose activities cost them some seats in the 1952 election.

Bureau of Reclamation—Hydroelectric Power Projects

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter from Commissioner W. A. Dexheimer, Bureau of Reclamation, together with a list of hydroelectric powerplants constructed, under construction, and authorized to be constructed by the Bureau.

The letter and list follows:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D. C., May 2, 1956.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D. C.

MY DEAR MR. EVINS: As requested in your letter dated April 26, 1956, the following information is being furnished:

1. In reply to your first question a tabulation of hydroelectric plants under the administration of the Bureau of Reclamation is attached.

2. The total existing hydroelectric nameplate capacity is 4,962,550 kilowatts. The total nameplate capacity under construction by the Bureau is 470,750 kilowatts and the Bureau is authorized to construct an additional 1,884,400 kilowatts giving a combined total of hydroelectric power capacity authorized and under construction of 2,355,150 kilowatts.

3. There is also attached a pamphlet entitled "Repayment Histories and Payout Schedules, 1952," which gives the latest comprehensive data on Bureau of Reclamation contracts that are available in this office. It would take several months' work to bring this up to date and since you require this information at the earliest possible date, this Office feels that the attached pamphlet will in all probability meet your requirements.

Exclusive of the Missouri River Basin project which is authorized jointly to the Bureau of Reclamation and the Army Corps of Engineers, the beneficiaries of Reclamation projects in general repay over 90 percent

of all projects construction costs. The balance of construction costs is either allocated to other services such as flood control and navigation or to special programs such as the water conservation and utilization program or to writeoffs and adjustments. All these are authorized by specific acts of Congress. You, of course, are aware that power and municipal and industrial water allocations bear interest. Incidentally, these interest-bearing features pay out their own allocations and assist in the repayment of irrigation costs as well. In terms of overall ratios, irrigation repays about 60 percent of its total cost with power and municipal and industrial water paying out the remaining 40 percent of the costs allocated to irrigation.

Sincerely yours,

W. A. DEXHEIMER,
Commissioner.

Sukarno and the Revolution

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from the Washington Post of May 22, 1956, by Mr. Walter Lippmann. Mr. Lippmann's usual penetrating analysis and evaluation of President Sukarno's impressive and sobering speech before the Congress last week raises very basic points which requires the serious thought and consideration of us all.

TODAY AND TOMORROW

(By Walter Lippmann)

SUKARNO AND THE REVOLUTION

Dr. Sukarno, the President of the Indonesian Republic, who was in Washington last week, came at a time when the administration, and even some Members of Congress, are reappraising American policy in Asia. We know that we have been working up a blind alley. In fact, the invitation to Dr. Sukarno was meant to mark a new approach to the neutralism of the newly independent nations.

Yet it must be said that to listen carefully to what Dr. Sukarno said to Congress, and to what was implied in what he said, was a sobering experience. For though he had come as the head of the Indonesian Republic, he spoke with great zeal and fervor as an apostle of the revolution which is rising against Western power and influence all the way across Asia and Africa. We are, it was quite evident as he spoke, only in the first phase of the reappraisal which the tides of history are compelling us to make.

More specifically, what is going on in Washington today is an effort to correct errors in our policy which are quite recent which were the consequences of the Korean war. Before 1950 we did not take the view that all nations ought to join a military coalition of which we are the leaders, that neutralism or not joining our alliances was morally wrong and unfriendly to American vital interests, that with grudging exceptions joining our military alliances was the passport to economic aid.

In the Marshall plan, which was launched before the Korean war, economic aid was given ahead of military aid. The NATO military alliance had not yet been conceived when the Marshall plan went into effect. It was the Korean war that compelled us to rearm ourselves in Western Europe and led to the militarization of our foreign policy in Asia.

We are now engaged in trying to persuade Congress to agree to some demilitarization of our policy.

Dr. Sukarno made it quite plain how necessary is the demilitarization of our relations with newly independent countries like Indonesia. But there was a lot more to his address than that, and all of it dispelled any notion that with a few changes of emphasis in our foreign aid policy, all will be well. In the welcoming addresses and in his responses much was said about George Washington and Thomas Jefferson. But the analogy cannot be carried very far. For the revolution of which Dr. Sukarno is so brilliant a leader and spokesman has a depth and scope and energy which are without precedent.

The revolution is not only anticolonial in the sense that it is a rebellion against foreign rulers. Dr. Sukarno went beyond that to raise the question—not explicitly but by intimation—whether the revolutionary movement means to stop short of the expulsion of all Western power and influence from Africa, South Asia, and the South Pacific. What gives this revolution its fierce and enormous energy is the determination at long last to undo the human consequences of three centuries of the white man's domination, and at the same time to overcome the economic and technological backwardness of the former colonial lands. Dr. Sukarno made it plain that if this four-dimensional revolution can be carried out by democratic means he would prefer it, but that the revolution will have to be carried out, if necessary, by totalitarian means.

The revolution which Dr. Sukarno was proclaiming is running from Morocco to Tunis through the Middle East, to Aden, to Ceylon, to Singapore, to Indonesia, probably to Formosa and Japan. The Western nations, among whom we belong, are on the defensive throughout this vast area, and all the key positions remaining to them are under attack. One has the feeling that the Western nations are fighting rearguard actions, the French in North Africa, the British in the Middle East, we in Formosa and beyond.

We must begin to ask ourselves questions to which we cannot expect to find quick and certain answers. A new relationship between the emancipated East and the democratic West will have to be found. Where shall we look for the end of the thread by which we can find our way through the labyrinth?

In 1950 the answer to that question was plainer than it is today. We should have looked to India to be the mediator. Is it now too late for this? Is the damage done by our crudely militaristic policies irreparable in the sense that opportunities which once existed are now foreclosed?

Let us hope that nothing is irreparable.

Soybeans

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. VURSELL. Mr. Speaker, with a bumper crop of 372 million bushels of soybeans produced in 1955, now selling around $3 a bushel, so far above parity that it hardly can be computed, is the best proof that supply and demand gives the farmer greater profit than can be brought to him by support prices and we are not plagued by any surpluses.

I would like to point out Illinois leads all States, producing 77 million bushels and the total crop of 372 million which brought the farmers about $1 billion.

Research scientists in the United States Department of Agriculture through the years by plant breeding have developed 16 new varieties—all producing 20 percent more oil and 10 percent more beans that the varieties they have replaced.

At this time when we have billions of bushels of surplus wheat, corn, and other products which are depressing farm prices, may I point out that this huge soybean crop is selling far above price supports and we not plagued with any surplus. One of the reasons is that the research scientists have found many new industrial outlets for this farm crop in addition to feed and food uses.

Today, soybeans provide 70 percent of all vegetable oils used in margarine and 54 percent of all vegetable shortenings.

Marketing research has opened outlets for 221 million pounds of soybeans annually for use as drying oil products, for acids, special resins, in printing inks and paper, textile sizing and automobile tire cord sizing. In plastics alone including linoleums, tile and like products it is estimated 200 million pounds of soybean oil are used annually. Markets in industry are steadily being expanded which help to keep the demands for the farmers' soybeans strong in our domestic market.

From July last year to February this year, 55 million bushels of soybeans were exported—40 percent more than a year before.

By finding new markets for this farm product, research has again proven that the small amount of money our committee appropriates for finding new uses for farm products is paying tremendous dividends to agriculture and the economy of the Nation.

Tax Scandals Under the Truman Administration

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD 3 editorials, 1 from the Chicago Tribune, 1 from a recent issue of a Pittsburgh newspaper, and 1 from the Tampa Morning Tribune.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune of May 15, 1956]

RANKING RACKETEER OF THE BUREAUCRACY

Senator JOHN J. WILLIAMS, of Delaware, who demonstrated during the Truman administration that he has a remarkable ability for getting onto the trail of shady business, has lost none of his talent. He has just notified the Senate that the fourth highest paid employee on the Federal payroll is a gambler and racetrack operator whose deportation is sought as an alien illegally in the United States, and against whose racetrack the Government has filed claims for $2½ million in unpaid taxes.

This adornment of the Washington welfare state, William G. Lias, has been retained by the Government at a salary of $35,000 a year to manage the Wheeling Downs racetrack at Wheeling, W. Va. The horse park went into receivership. The Government then turned around and hired its operator, who had run up the big tax arrearage, in order to protect its equity. When WILLIAMS inquired who was responsible, the Treasury Department pointed to the Justice Department, and the Justice Department, in turn, pointed to the Federal court that appointed receivers for the track.

WILLIAMS asserted that Lias started bootlegging in 1941 and branched out as an operator of slot machines and the numbers game before he turned to racetrack management. In his present elevated status as a public servant, his pay exceeds that of any Member of Congress, any Cabinet member, and the top officials of any Government agency. He is drawing $100 a day even while appearing in court to answer charges of being an undesirable alien, subject to deportation to Greece.

Senator WILLIAMS said that Lias' wife had been installed at the track as another Federal employee on racetrack duty, and that the assistant track manager under the Federal receivership had been George Lewis, of San Anselmo, Calif., who was under a 1-year sentence to prison for evading $1 million in income tax when he was hired. Lewis lost his appeal and is now serving his term at Terminal Island Prison in California.

The Delaware Senator is a Republican, and these strange goings on occur under a Republican administration, pledged to clean up the Truman mess in Washington. Evidently that promise did not extend to the outlying provinces. Mr. WILLIAMS continues to call his shots as he did so ably during the Truman regime, when, as a one-man investigation, he exposed more corruption and fraud than most of the delegated investigatory agencies were able to discover.

The Senator is now in his second term, with 2 years to run. We should think it a calamity if the Nation were to lose the services of so useful a man. But, if political misfortune ever overtakes Senator WILLIAMS we would be glad to have him on our staff. He has all of the attributes of a great reporter who could be trusted to uncover more than his quota of scoops.

[From a recent Pittsburgh (Pa.) newspaper]

WHY FAVORS FOR LIAS?

Senator WILLIAMS, of Delaware, who keeps a sharp watch over tax matters, is justly indignant over the Federal Government's two-faced dealings with William G. (Big Bill) Lias, former owner of the Wheeling Downs racetrack.

The Justice Department has classed Lias as one of the Nation's prominent racketeers. Although the Government has a $2½ million tax lien against this one-time king of the Wheeling rackets and the Justice Department is trying to deport him as an undesirable alien, he is now employed by the Government to manage the Wheeling Downs track at a salary of $35,000 a year. And that, Senator WILLIAMS has pointed out, makes Lias the fourth highest paid employee on the Federal payroll.

The track which Lias formerly owned is now under a Federal receivership. Federal Judge Harry E. Watkins appointed a Wheeling attorney as track receiver and, subsequently, approved the attorney's selection of Lias as track manager. Thus Lias became, in effect, a Federal employee. So did his wife, who is on the same payroll, and George Lewis, a convicted income-tax evader who was named assistant track manager.

This means that Lias is put in a position of trust to protect a $2½ million tax lien against himself. It is a little like assigning a wolf to shepherd a flock he is known to have raided.

Are Lias and an income-tax evader the only people who could be found to manage a racetrack in Federal receivership? Senator WILLIAMS should push his charges until the people responsible for this obvious impropriety are held accountable.

[From the Tampa (Fla.) Morning Tribune of May 12, 1956]

HOW ABOUT IT, MR. BROWNELL?

Senator JOHN WILLIAMS, Delaware Republican, made a name for himself digging up tax scandals under the Truman administration. After Eisenhower took office the digging became harder but the Senator kept at it. Now he seems to have uncovered something suspicious in the vicinity of the Wheeling Downs (West Virginia) race track.

This track is owned by William G. Lias. The Federal Government has reason to know Mr. Lias quite well. It has (1) classified him as a "top racketeer," (2) filed $2,500,000 in claims for unpaid taxes against him, and (3) is attempting to deport him as an undesirable alien.

As a result of the Government's tax claims, the Lias race track was placed in receivership by order of Federal court. It is, therefore, in effect being operated by and for the Government.

But who is being paid $35,000 a year to manage it? None other than William G. Lias, the same man the Government is trying to deport.

Lias, said Senator WILLIAMS, regards himself as a Government employee. As such he would be "about the fourth highest paid employee on the Federal payroll" (only the President, Vice President and Speaker of the House receive more).

If the Williams charges are true, Attorney General Brownell owes Congress and the peo-

ple an explanation. There must be honest, law-abiding citizens willing and able to manage the race track at $35,000 a year. Why, then, give the job to a man the Department of Justice contends is neither?

Western Self-Interest and Israeli Self-Defense

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. KLEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article which appeared in the magazine Commentary. This article should be of interest to Congress and to the American public because of the revealing light that it casts on the problem of peace in the Near East which is a vital American national interest:

WESTERN SELF-INTEREST AND ISRAELI SELF-DEFENSE—THEY COINCIDE

(By Hal Lehrman)

"If Israel is dissuaded from using the life force of their race to ward off the Egyptians until the Egyptians have learned to use the Russian weapons with which they have been supplied and the Egyptians then attack, it will become not only a matter of prudence but a measure of honor to make sure that they are not the losers by waiting."—Sir Winston Churchill

In the 2 months just past, the threat of Middle Eastern war has taken up fixed residence on the world's front pages. All the wisdom of the world's statesmen has made no measurable progress in allaying the crisis. In Washington, and to some extent still in London and Paris, policy remains muddled by the obsessive belief that Arab reasonableness can be obtained by gift, entreaty, and gentle admonition. In the United Nations, nobody is even looking for solutions any more; the best to be hoped for—if East and West can compromise their differences—is some wordy and complicated stratagem which will have the dubious advantage of "gaining time." And in the Middle East itself the record shows a perilous decline of the Western position.

Britain's ignominious ejection from Jordan has begun. Egypt, Syria, and Saudi Arabia have held semipublic deliberations on ways and means of speeding British departure and winning over Jordan to their side. Jordan has concerted with Syria on mutual military aid along their Israeli borders. Remote Yemen has been drawn into Egypt's system of military alliances with Syria and Saudi Arabia. The Cairo radio, not content with the trouble it has helped to make in North Africa, has begun to foment revolt as far away as Zanzibar. There is a brisk traffic of Soviet satellite instructors bound for Egypt to teach, and of Egyptian military teams bound for Eastern Europe to learn, the operation and maintenance of the complicated weapons obtained by Cairo at bargain prices from Prague.

The West, quite clearly, is simply marching along, without a studied policy for the Arab-Israel dispute—or for the latter threat of Arab-Soviet friendship and loss of the Middle East. In both areas, however, the interest of the free world, and the national interest of the United States, are dangerously involved. The search for an effective policy is therefore obligatory, however futile the previous efforts have been.

At this writing it is possible, by straining, to derive comfort from indications that western capitals are beginning dimly to recognize the desirability of enabling Israel, for her hard cash, to purchase some weapons similar in quality to the new Egyptian arms. An elementary justification for this step would be Israel's obvious need to be able to defend herself. More important, it would dampen the Arabs' intoxication with their own increasing strength. The Egyptians are acutely aware of Israeli prowess in the field. If Cairo knows that the Israelis have obtained the means for counterattack, it will not dare provoke an all-out war. Left-handedly, the State Department has intimated that it has "no objection" to sale of arms to Israel by the "traditional" suppliers of Middle Eastern arms, Britain and France.

The latter powers are described with some reason, as considering this a hypocritical—and futile—ruse to divert Arab resentment from the United States. Nevertheless, there are some signs that narrow cracks may be developing in that western wall which, except for clearance of some French jet planes and a miscellany of auxiliary items, has so far prevented Israel from acquiring the arms capable of confronting Egypt's Soviet equipment.

But it will take more than a thin trickle of modern weapons to keep Gamal Abdel Nasser's junta prudent, or give Israel the security to which she feels entitled in view of declared Arab hostility. Moreover, even full achivement of an arms balance can only have a negative value. It can dissuade the Arabs from making war—but it cannot compel them to make peace. Israel will still be confronted by the enervating drain of maximum preparedness. The West will still be harassed by Arab intransigence on all fronts, and Arab willingness to accommodate the Soviets will almost certainly grow, to the greater jeopardy of the entire Middle East.

In a previous article in these pages (March) this writer examined—and noted the flaws in—the possible lines of action usually envisaged in any tough policy of political and economic sanctions which the West might adopt toward the Arabs. However, in some quarters familiar with the Arab mind it is felt that another means of bringing the Arabs to their senses lies close at hand.

Every non-Arab military observer in the Middle East—and every candid Arab observer as well—knows that the Arabs are actually more afraid of the Israeli soldiers, man for man, than they are of the whole might and power of West and East combined. They do not expect to have to fight the remote Americans, British, or Russians. But they know that a test of battle with the Israelis next door is a very real possibility. They have undergone such tests before, and they remember the results ruefully. Even now, with all their newly acquired massive armor, they are very respectful of their Zionist neighbor's military ability.

Not until the Arabs have grown considerably more proficient in the use of this equipment, and confident that they can propel it across the border in one massive knockout blow without the smallest chance of reprisal, will they cease regarding Israel as a holy terror. Meanwhile certain military experts—and even a section of sober Israeli opinion—are beginning to reflect on the possibilities of exploiting this military inferiority complex to deflate an Arab political arrogance which, unless checked, will end by knocking the last props out from under the western position in the Middle East—and by ruining the Arabs as well, to the sole profit of the Kremlin.

The idea of playing on Arab respect for Israeli fighting skill to call the Arab diplomatic bluff against the West has not yet recommended itself to the West's own diplomats. There are many precedents for such diplomatic failure to see the obvious when the conclusions from the obvious require daring action. When the Nazis marched into the Rhineland, they could have been marched right out again if the British and French had called their bluff—without a shot fired. When the Russians began gobbling up eastern Europe in violation of World War II commitments, they could have been induced to disgorge if the British and Americans had called their bluff. (President Truman, later, called it in Iran with complete success and not an ounce of powder burned.)

Such bluffs are not challenged because the risks are too large; it takes imagination to perceive that the risks of allowing the bluff to stand, as evident in the examples above, are even larger. So runs the argument of certain qualified observers, in Israel and elsewhere. In the present case, western policymakers still cling to the notion that the Arabs can be wheedled, bribed, and maneuvered into loyalty. Perhaps the French, fed up with Egyptian backbiting, might support a stern western policy. But the French, with most of their effectives already involved elsewhere, are the weakest of the Big Three. Though the British are now disenchanted with Nasser and reportedly itching to deal sternly with him, they are so wedded to dependence on Arab friendship that they might, in exchange for the smallest bone, begin believing all over again in a policy of concessions. It is the State Department, above all, that remains hopeful that such a policy will succeed—and the State Department sets the direction of western diplomacy in today's Middle East.

The State Department view recoils from any suggestion of a showdown with the Arabs. It persists in seeking to placate them so as not to "provoke" them into further collaboration with the Soviets. It rests on the assumption—negated by all previous experience with the Arabs—that they appreciate the generosity implicit in concessions and will not despise those who offer them. American diplomacy has not yet discovered that appeasing the Arabs in order to keep them out of Moscow's clutches will only make the Arabs more demanding—and more dependent on Moscow as the lever for the next turn of the screw on the West. Western willingness to finance Egypt's high dam at Aswan, for instance, has merely increased Arab enthusiasm for the Soviets, whose vague offer to help with the dam is credited with having forced the West's hand. In recent declarations, Premier Nasser has excelled himself in cockiness, and made no effort to hide his intention of working the Soviet bogey to the limit. Such cockiness is the direct result of the bowing and scraping by Western spokesmen in his anteroom.

Critics of western policy hold that the way to stop losing the Middle East is to choke off the game of diplomatic blackmail which the Arabs are playing. And there are observers with no stake in the fate of Israel, except insofar as it involves that of the West, too, who see in Israeli military superiority an effective diplomatic instrument by which to bring the Arabs to terms.

If the Arabs are not brought to terms—these same observers feel—the Arabs' own folly will eventually make them, as well as the Israelis, victims of the Soviets. Israel's existence—at least as a free society—would be snuffed out by the sovietization of the Arab world. At a certain point on the road to Middle-Eastern ruin, therefore, Israel will be compelled for the sake of sheer survival to throw off western inhibitions and devise an independent policy of her own. That policy may include an attempt by Israel alone to call the Arab bluff.

How could the West wisely exploit the real and persisting Arab fear of Israeli battle superiority? Will a tactic that exploits that fear necessarily lead to war?

It suits Nasser's propaganda to assert that Israel has no reason for alarm over Egypt's armament because Israel is protected by the Anglo-Franco-American guaranty of 1950. The implication is that the West, and in particular the United States, shields the Zionist state. The fact is that the tripartite declaration, though woolly as to implementation, guarantees all existing Arab-Israeli frontiers, including the Arab sides of them. Egypt's saber rattling, her small adventures along the Gaza strip, the incursions of the fedayeen suicide squads, the Syrian attacks on Israeli fishermen, the brandishing of fists by Jordan's Arab Legion—all this is done on the assumption that, should the enraged Israelis venture on full-scale retaliation, the West would rush forward, under the tripartite guaranty, and stop them. Israel would emerge with nothing gained except the stigma of aggressor. It is under the umbrella of the tripartite declaration, which Nasser and his friends profess to despise, that the Arabs have been able to embark with impunity on a massive arms program, to reject negotiation, and to proclaim that there can be no peace with Israel until she has accepted impossible terms.

Under this umbrella, too, Egypt has been able to bait the West and woo the Russians, secure in the assurance that Egypt's front with Israel cannot erupt because the West itself—absurd though it now may seem—is guarantor of a peace that the Arabs themselves refuse to recognize. As long as Egypt has only the confused and anxious West to worry about, she can flirt with Moscow as boldly as she likes.

But what if Nasser should suddenly find himself faced by a single-minded—and unhampered—Israel? How much leisure would he retain to plan new diplomatic maneuvers? Suppose that, on any morning during the next weeks, and wearing appropriate pokerfaces, the Ambassadors of France, Britain, and the United States in Cairo were to convene before the Egyptian Premier's desk and hold discourse with him somewhat as follows:

"In 1950 our governments announced they would apply sanctions against any aggression on frontiers and armistice lines around Israel. The purpose of this guaranty was to protect all parties and facilitate negotiations between Israel and the Arab States with a view to transforming the armistices into peace treaties. We are now compelled to note that this purpose has failed.

"We do not blame you—or Israel. We simply observe that there is no peace, and that our guaranty has not achieved the purpose for which we undertook it 6 years ago. Therefore, Mr. Prime Minister, as of 5 a. m. next Sunday, we are annulling the guaranty. We leave you and the Israelis to settle your differences between you—without hindrance from outside. How you settle them, or do not settle them, is not our affair. We merely invite your attention, with the friendliest of motives, to the fact that your policy of nonnegotiation with Israel may have unhappy consequences. When one party to a dispute persists in maintaining a state of belligerency, it runs the risk that the other party may eventually turn belligerent, too. Mr. Prime Minister, we bid you good day. * * *"

The advocates of such a move concede that it is daring. How could the mid-20th century countenance such ruthless 19th century diplomacy? And wouldn't a vacuum be created into which the Russians could enter? Foreseeing these disconcerting questions, the advocates of a western policy based on Israel's fighting strength propose 2 further steps, 1 prior to the proposed colloquy with Nasser, 1 afterward.

The first step would be to expose the U. N.'s inability to obtain peace. (U. N. Secretary General Dag Hammerskjold's "success" in obtaining an Israeli-Egyptian ceasefire last month merely eased a current irritation temporarily; it brought no relief for the basic malady—absence of peace—which can flare up in fresh outbreaks any time.) Let a tripartite resolution at once be presented to the Security Council calling for direct Arab-Israeli general negotiations within a brief time limit. Unless the Soviets are prepared to lose all the advantages so far gained in Arab affections, they will veto this move. (A similar move in the General Assembly would be similarly defeated by the combined efforts of the Soviet and Arab blocs.) The U. N. thus having tried once again and failed, the three guarantor powers could then visit Nasser.

Immediately after withdrawal of the envoys from the Premier's presence, a joint note from Washington, London, and Paris could be sped to Moscow containing notification of the Tripartite Declaration's annulment, with the following addendum:

"We consider the Arab-Israeli dissension to be purely a local dispute. The locality is situated in an area where our three governments and their nationals possess clear and established interests. Nevertheless, we will not intervene in settlement of the local dispute—and we are confident that no other government will intervene. Any such intervention will be regarded by us as a hostile act. * * *"

Would Moscow pick up this challenge? It can be argued that the Soviets would not need to. They could seize the opportunity to meddle (and improve their standing with the Arabs) simply by pouring more arms into Alexandria—a "commercial transtion" against which the West could legitimately take no exception. True. But there is a saturation point for a backward country like Egypt beyond which extra planes and tanks simply cannot be absorbed. A deluge of arms would not affect the Arab-Israeli issues right now—so long as the Israelis already had an adequate supply of the same types of weapons. It takes skilled personnel to handle such arms, and time to learn how. The Egyptians lack the know-how, and the Israelis, by speedily moving to call their bluff, would not give them the time.

But what if Soviet and satellite "volunteers" were ready to man Egypt's new weapons? Wouldn't that mean Egyptian willingness to fight—and, eventually, war with the West? In the light of the grim Western notice against a "hostile act," it certainly would—which makes it extremely unlikely that Moscow would permit such "volunteering." For the Soviets to defy the West under these circumstances, one would have to assume that they were ready and eager for war. If so, would they let the West pick the time? Or the place? Every adventure the Soviets have undertaken to date indicates that they pick the time and place. If they were seeking world war III, would they start it in the Middle East, where, of all conceivable theaters of action, they are most at disadvantage for bases and communication lines? Wouln't they, instead, seize West Berlin, or strike at Vietnam, South Korea, or any other point to which the Communist empire had easier access than to the Levant? And wouldn't they select a moment designed to give them the benefit of maximum surprise?

It makes no sense to suppose that the Soviets will sacrifice all this for the relatively minor advantage of stirring the Arab-Israeli pot. Nor can the West be charged with provocation if it serves notice that Soviet meddling would be a casus belli. The three Western powers have at least as much right to protect their interests in the Middle East as the Soviets have, say, in Eastern Europe. Any attempt from Moscow to replace the tripartite guaranty by one of its own would be as impertinent, and provocative, as a Western attempt to inaugurate and supervise free elections in Bulgaria or Rumania. As a matter of fact, Moscow in mid-April actually denounced all projects to intervene in the Israeli-Arab issue. Thus the Soviets' stated position, whatever it may be worth, suggests that, if anything, they would have to endorse the West's annulment of the tripartite guaranty as consistent with the ban on all intervention from outside. Assuming, then, that the West stands firm in its resolve to isolate the Arab-Israeli argument, the Russians can be confidently relied on to keep clear.

What would Israel do? For the first time, she would argue her case with and against the Arabs on its merits and with full use of her bargaining power, unhampered by the prospect of Western restraint, discriminations, or sanctions.

She would, according to the advocates of such a showdown policy, remind Egypt, Jordan, Syria, and Lebanon that each had pledged, in the armistices of 1949, to proceed with her from temporary armistice to permanent peace treaty, not to permanent belligerency. She would certainly invite them, one more time in a long series of such invitations, to sit, negotiate, and make peace with her. If her invitation were again spurned, she would demand at least that hostile acts by the armistice signatories, in particular Egypt, should cease. She would insist that the blockades at Suez and Eylat be lifted as intolerable restrictions. Otherwise, Israel would serve notice, she would be compelled to draw the logical consequences from Cairo's assertions that Egypt was still at war with her. Israel would move to defend the armistice to which Egypt had agreed. Any continued or new violation of that armistice by Egypt would itself be aggression, and would justify full Israeli countermeasures.

What would Egypt do? She would not attack, the spokesman for this line of action argue. On the contrary, there would be an even chance, according to them, that Nasser would attempt to grope his way to the conference table; faced suddenly by an actual showdown with an adversary whose proven superiority he knows, and against whom he has lost all protections from abroad, he would have eloquent reasons to seek the surer protections of a peace treaty. Could he do so without committing political suicide? It would risk. But if he is as strong and popular inside Egypt as he claims to be, he should be able—by energetic propaganda and resolute police precautions—to accomplish the somersault convincingly. His biggest obstacle would be the hotheaded younger elements in the army—but even they are not unaware of Israeli prowess. Should the domestic perils of agreement to treat with Israel seem too formidable to Nasser, he would still have the choice of gradual retreat on the blockade and on other specific acts of belligerency. Such retreat could be covered by a noisy brandishing of arms to save face at home. Israel would certainly not mind the words as long as the deeds were satisfactory.

But, obviously, if no such satisfaction were given, then Israel would be compelled to move. Otherwise it would be her bluff that would be called. And obviously, her move would have to be larger than the usual punitive raid with limited attack and quick withdrawal. The move would have to be of sufficient size to force Egypt's compliance with her own pledges. This could very easily become the spark to a full-scale Arab-Israeli war—and this is where the spokesmen of independent Israeli action have to face up to the full consequences of the line they propose. No competent military observer doubts that Israel would win such a war, but there is more than that to it.

Nobody is more aware than the advocates, Israeli and non-Israeli, of this course of action that to contemplate war as a last resort to bring about an Arab-Israeli settlement sounds shocking and brutal. It is not

the kind of proposal customarily made by enlightened people—certainly not in this era. But it must be understood that the advocates of a showdown with Egypt believe the alternative to it may be considerably more dreadful. If the Arabs continue their unrestricted arming against Israel and their diplomatic blackmail of the West, sooner or later the question will cease to be one of war or peace but simply of the date and dimension of the inevitable war. The later the decision, the weaker the Israelis (which also means the West) vis-a-vis the Arabs and the bloodier the ultimate struggle. The longer the present trend is permitted, the stronger the Soviets will grow in the Middle East, and the wider the boundaries of the eventual conflict.

But should Israel let herself be put in the position of fighting the West's battles singlehanded? No responsible Israeli statesman has suggested that Israel be used in such a manner. Yet few sectors of Israeli opinion would find the idea unacceptable. To most Israelis, pulling the West's chestnuts from the fire would seem only incidental. Israel and the West have an identical degree of interest in ending the present Arab-Soviet threats. The proposed line of action, it is felt, would afford Israel release from an actual pressure and a prospective disaster that have already become nearly intolerable for her citizens to contemplate.

Two months ago—it is further argued—it might have been objected that Britain would never consent to drastic anti-Arab action. But Britain has gone a long way since Jordan gave Sir John Bagot Glubb his walking papers. The British are fighting mad at Egypt for having largely instigated that move, and for other anti-imperialist acts on her part. They have been reported even ready to employ their troops in Jordan in the event of a further major effort to destroy British influence there. This is a spectacular toughening of attitude for a government which only a year ago talked itself into giving away the Suez Canal. The British, it is said in Israel and elsewhere, have not yet taken the full cure for that tropical disease of which the most sinister symptom is confidence in the pledge of Arab leaders, they still, for example, have illusions about Iraqi fidelity. But at this precise moment in their reeducation, it is quite possible that they would cooperate in a plan to cut Nasser down to size by cancellation of the Tripartite Declaration.

The French, too, have suffered some rude revelations. Only last November a highly placed Frenchman in Cairo advised me ponderously that France "is in effect an Islamic power because of our great holdings in Moslem North Africa; we must therefore have an independent, and most careful, policy toward other Islamic powers such as Egypt." Today the French are so aroused about Algeria and so furious over Egyptian meddling in Moslem North Africa that they are inclined to be much less careful in treating with Nasser. And it is argued that, even if they and the British recoiled from annulling the guaranty outright, the United States could bring about the same result by withdrawing of her own accord; with the major partner gone, the Tripartite Declaration would lapse. If in a subsequent confrontation between Israel and the Arabs the United States remained aloof, it is most improbable that either Britain or France would choose to intervene unilaterally.

The only really valid objection anticipated by proponents of the idea of a direct Arab-Israeli settlement is a simple but effective one. It is not, they feel, going to happen, because the United States—or at least the Eisenhower administration and the present State Department—will not permit it to happen.

Who would have dreamed the day would come, as it now has, when the British would be cocking a fist at the Arabs—and raging at the Americans, of all people, for seeming to play a devious game on the Arab side. Shades of Ernest Bevin and Harry Truman. Washington has become the bizarre champion of Arab sensibilities, while London, classic and indefatigable wooer of Arabs, has at last had its eyes opened to the hopelessness of it all.

The cumulative evidence that appeasement of the Arabs has only fanned their ardor for Moscow has not induced the State Department to change its course. There are risks in any policy of showdown with Nasser. These are the only risks the Department apparently can visualize. A blind departmental eye is turned toward the greater risks that other observers foresee in a policy that avoids any crisis with the Arabs, which would then lead inevitably to greater disaster. It is easier to sit in a bus careening downhill out of control than to crawl through the window and jump.

The State Department at this moment does not even dare "offend" the Arabs to the extent of selling Israel a single airplane. Cancellation of the Tripartite Declaration is thus most unlikely under present circumstances. Nevertheless, discussion of such a move here serves to illuminate, as if by a lightning flash, the fact that Western policy today pinions Israel's arms behind her back while the Cairo junta, fed with Soviet weapons, looks forward to the time when it will be able to obliterate Israel at a blow.

The leaders of Israel—let there be no doubt about this—would have great moral and practical scruples against launching on an independent course that risks war, and they are, moreover, anxious not to forfeit the world's good opinion. Yet the largest evil which can befall any community is its annihilation—and survival is a moral value, too. If a stage is reached where the distance between Israel and destruction becomes even narrower than at present, diplomatic and other considerations will become secondary to the well nigh supreme one of survival. The Arabs make no secret of their intentions. As recently as last month the official Cairo newspaper Al Goumhouriya advised Secretary Hammarskjold that peace was impossible until Israel ceased to exist.

Should the safeguarding of her life and freedom force Israel to call the Arab bluff on her own, what would be the gravest obstacle to victory? The might and majesty of the Arab armies? Hardly—if the war came before Egypt could bring the full force of her new armaments to bear. The major impediment would be the sanctions which the powers might impose on Israel as an "aggressor." Total censure, economic penalties, paralyzing blockade are all conceivable. These could drive Israel back to her point of take-off and despoil her of any advantage gained from battle. Armed intervention might even be employed, with sufficient speed to halt and repulse the Israeli forces before the issue could be decided in the field. In the clash, Israel would emerge sapped spiritually and physically, with her ultimate security more jeopardized than ever, and her moral credit gone.

The prospect is more than sobering to the Israelis, and also to their friends. If some Israelis can contemplate it as possible, if not imminent, it is only because the inaction of the West, with the State Department giving the cues, is allowing their country to drift into a most desperate situation. The simple truth is that Israel cannot accept a position of inferior strength in the face of neighbors sworn to her destruction. Until the threat of being reduced to such a position is eliminated, counsels of desperation (which seem less desperate than their alternative) will receive more and more of a hearing from Israelis.

Meanwhile it is all-important—and here I speak for myself and my own assessment of the situation—that Israel's cause be better presented to the American public than it has been so far. The Israelis—all the Arab propaganda to the contrary notwithstanding—have not shown themselves adept at public relations. More important, neither have the several American organizations and the numerous American friends of Israel working energetically to present her case. Otherwise, the dangerous impression might not have arisen that it is the Israelis, and not the Arabs, who are the chronic aggressors—and that aid to Israel would hurt American interests in the Middle East.

Two things need to be brought home to American public opinion by friends of democracy in the Middle East. First, Washington's negative behavior toward Israel (as distinguished from Washington's pious declarations) is strengthening the Arabs militarily and encouraging them to believe that they may launch an all-out blitz—and get away with it—just as soon as they feel confident enough of a crushing superiority in arms and alliances. Second, the one way to salvage the Western position in the Middle East—and avoid loss of the area to the Soviet—is to reverse the present State Department policy of Arab appeasement.

Western diplomatic timidity toward Nasser and his allies will only encourage them further into the Soviet embrace. Advocates of Israel's security must lift themselves out of their rut of special pleading and shopworn slogans: These can no longer convince or persuade. Nor are they pertinent. Aid to Israel is not the paramount point. It is aid to the United States that matters now. The State Department, in effect, is telling Americans that the Arabs must be placated or else the United States is threatened. Let Americans be told instead that the State Department's present policy of appeasement will only destroy American security in the Middle East.

This is the truth: That only a resolute confrontation of the Arabs will help America. One vital element of such a confrontation is American support of Israel's right to security and peace. Not for Israel's sake, but for America's.

TVA Repayments Into Treasury Exceed Statutory Requirements

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. EVINS. Mr. Speaker, the Tennessee Valley Authority has been regarded for many years—by those who are fair-minded—as one of the most efficiently operated Government agencies in our entire Federal system.

This great agency which has contributed so much to our national-defense effort has diligently been repaying into the Federal Treasury the investment in its power operations.

Today, TVA is far ahead of its regular payment schedule and we can only conclude that this has been brought about by efficient management and operation.

Through 1957, a total of $261,500,000 will have been repaid into the Federal Treasury by TVA. The following table of repayments show accurately the annual revenues and other payments paid by TVA into the Federal Treasury.

The schedule of payments follows:

Payments made by TVA into the United States Treasury as repayment of investment in its power program

Fiscal year	Payment	Total payment
1948	$10,500,000	$10,500,000
1949	5,500,000	16,000,000
1950	5,500,000	21,500,000
1951	9,000,000	30,500,000
1952	12,000,000	42,500,000
1953	15,000,000	57,500,000
1954	20,000,000	77,500,000
1955	50,000,000	127,500,000
1956 (estimated)	59,000,000	186,500,000
1957 (proposed)	75,000,000	261,500,000
Repaid into Treasury prior to enactment of statutory requirements prior to 1948		24,000,000
Total payments through 1957		285,000,000

Foreign Giveaway Program: An Alice in Wonderland Situation

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. GROSS. Mr. Speaker, soon to come before the House will be legislation to authorize continuation of our foreign WPA extravaganza, a giveaway scheme we were once led to believe was to be a temporary and emergency program.

In this regard, I call attention to the current Small Business column, sponsored by the National Federation of Independent Business, which appears in weekly newspapers throughout the country. The column, written by the federation's president, C. Wilson Harder, is as follows:

Many veteran Washington observers feel greatest improvement needed in Government is return to old-fashioned intellectual morality.

People look to Government for an example of morality. Along the Potomac today there are those Government experts who decry expansion of consumer installment credit on grounds it is immoral for people to spend beyond their means.

Yet Government itself furnishes the example. For instance, increased use of tubeless auto tires is making inroads into inner-tube use. Government collects tax on inner tubes. To offset this loss, serious consideration is being given to a tax to replace inner-tube tax. Little thought is being given to cutting expenses accordingly.

It is interesting to note Coleman Andrews, recently retired income-tax head, is now stumping for repeal of that tax, largely on ground it leads to governmental excesses.

The administration beats drums for multi-billion dollar highway program. Ways and means of raising taxes for program are discussed. But as yet, there is no guaranty such extra taxes would go into roads.

For example, in 8 years, 1947 through 1954, Federal Government collected almost $13 billion in special automotive excises from highway users, but has spent bare $4 billion on roads. Where has other $9 billion gone? An interesting speculation.

Part has probably gone to defense against communism. Yet, paradoxically, part has undoubtedly gone to help communism.

For some officials in the International Cooperation Administration, huge giveaway operation descended from Marshall plan, cannot seem to recognize a Communist when they see one.

In recent 60-day period ICA shelled out over $9 million in American tax money to Communist Yugoslavia in hides, cotton, coal, ocean transportation, and even road-building equipment.

This fellow Boz, alias Tito, is even more wondrous than the wonderful Wizard of Oz. In fact, like Stalin, born something else, he, too, works under an alias.

The late Stalin probably only rates as a bigger Communist than Tito because with so many more millions of Russians than there are Yugoslavs, Stalin could liquidate more than Tito can. There is no difference here between the quality of murder; the only difference is in quantity.

Yet this Nation's giveaway agency, now under complete State Department control, hands out money hand over fist to build up Yugoslavia. It almost appears there is a design to prove that a Communist state can be successful. Thus world has spectacle of a government making angry noises at those who call themselves Russian Communists, smothering with kindness those who call themselves Yugoslavian Communists.

To complete Alice in Wonderland situation, Government is going to give a huge amount of rubber tires to Formosa, just in case Chiang Chinese might be useful some day to help kill off Communist Chinese.

But no American company can bid on this business. It has been reserved for Italian makers. A weird situation.

Many Notable Dignitaries From Foreign Countries Have Visited the TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. EVINS. Mr. Speaker, throughout the years many heads of state, important personages and foreign dignitaries from many lands have visited the TVA. Foreign visitors to our country, as well as our own citizens, have come to look upon TVA as a superior example of government at work in the field of resource development and conservation of national resources. Certainly the TVA is a symbol of success of what a great government can do to protect lives and property, advance commerce, industry, and agriculture through cooperative endeavor between the people of a great region and the Federal Government. Because of this achievement and success TVA has become a great national and international asset. It is an international symbol of American engineering achievement—and TVA is visited annually by many notable visitors.

Among the distinguished dignitaries visiting TVA the following are included:

Prince Albert of Liege, Belgium, November 1955.

Prime Minister U. Nu, of Burma, July 1955.

Ambassador Gaganvihari Mehta, of India, May 1954.

Queen Juliana and Prince Bernhard, of the Netherlands, in April 1952.

Ambassador and Mrs. Eban, of Israel, in May 1953.

Muhammed Khuda, Minister of Defense, of Pakistan, in December 1952.

Ambassador and Mrs. Feridun C. Erkin, of Turkey, in October 1952.

Adm. Renato Guillobel, Secretary of the Brazilian Navy, in September 1952.

Former Prime Minister Hans Hetoft, of Denmark, and Ambassador Henrik de Kauffmann, of Denmark, in July 1952.

Prime Minister David Ben-Gurion, of Israel, in May 1951.

Prime Minister Joseph Pholien, of Belgium, in April 1951.

President Gabriel Gonzales Videla, of Chile, in April 1950.

Dr. Franz Bluecher, Vice Chancellor of West Germany, in February 1950.

Prime Minister Pundit Jawaharlal Nehru, of India, in October 1949.

President Enroco Gaspar Dutra, of Brazil, in May 1949.

Right Honorable Hector McNeil, British Minister of State, in April 1949.

The Khan of Kalat, Ruler of Kalat, Pakistan, in April 1949.

Prince Charles, Regent of Belgium, in April 1948.

The Egyptian Minister of Public Works, in July 1947.

President Miguel Aleman, of Mexico, in May 1947.

Petition for Separate Pension Program for World War I Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. BYRD. Mr. Speaker, I wish to present a petition received from my congressional district on May 14, 1956, and bearing the signatures of 33 of my constituents. The petition urges the immediate enactment of a special pension program for World War I veterans. I am glad to bring this petition to the attention of the Congress. The petition follows:

PETITION FOR SEPARATE PENSION PROGRAM FOR WORLD WAR I VETERANS

This petition is addressed by the undersigned to the President and Congress of the United States, urging immediate enactment of a separate and liberal pension program for World War I veterans and their widows and orphans. We submit that aging World War I veterans are deserving of consideration and treatment on an equal basis with the aging veterans of previous wars in our Nation's history and in line with established American traditions.

Film Furor

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. HOLTZMAN. Mr. Speaker, back in December 1954 a consent decree was signed by Eastman Kodak Co. and the Department of Justice which permits other color-processing companies to develop the color film manufactured by Eastman Kodak.

For many years Eastman dominated the color film processing industry, and thousands upon thousands of amateur photographers were used to the old system of purchasing the film and paying for the processing at the same time. The exposed film was automatically sent to Eastman and then returned to the customer directly.

Upon the new competitive system the customer pays the purchase price of the film at his dealer's and then when the film has been exposed he brings it back and pays the processing charges. At the moment Eastman still handles such processing because the other developers have not yet been able to get into operation. However, it is expected that Pavelle Color, Inc., of New York City, one of the leading independent color photofinishers, which has launched a tremendous expansion program, will be set up and operating by this summer. By next month this corporation will be starting Kodacolor operations, and they will be able to handle Kodachrome shortly afterward.

Naturally, in changing from a monopolistic system to a competitive one there is a period of adjustment which results in certain inconveniences and confusion. Customers now find themselves faced with this state of affairs, and have been outspoken in their dissatisfaction. However, it is the consensus of opinion that once these competitors get underway the consumer will reap many advantages. A recent article in Business Week, May 12 issue, gives the true picture of this situation, and the benefits the customers may expect to realize. That article follows:

FILM FUROR: EFFORTS TO MAKE COLOR-FILM PROCESSING COMPETITIVE HAVE STIRRED UP CONSUMER UNREST; NO COMPETITION SO FAR

Justice Department sowed the seeds of competition in the color-film processing industry a little less than a year and a half ago when it got Eastman Kodak Co. to agree to let other companies develop the film it manufactures (Business Week, Dec. 25, 1954, p. 24). But they have been slow in taking root. Right now the thing that seems to be growing fastest is consumer dissatisfaction and confusion.

The transition: There are a couple of reasons for this state of affairs. One of the big ones is the efficient marketing system that Eastman developed for the sale and processing of its color film. This system is on the way out as a result of the consent decree reached between Eastman and the Government in December 1954. But consumers haven't adjusted yet to the new order of things—and many see no reason for the change anyway.

The system was abandoned to give other companies a crack at the $100 million annual business of developing color films for amateur photographers. But, although a number of new processors are jumping into the field nationally—such as Pavelle Color, Inc., Pathecolor, Inc., and Technicolor, Inc.—none of them has had time to get set up to do any processing. New processors see this fact as the underlying cause of current difficulties.

One-price system: Eastman was able to maintain its dominance in the color-film processing field by selling its Kodachrome and Kodacolor film—which constitute 90 percent of the color-film market—for a price that included processing costs. Under the consent decree, the company agreed to give up its exclusive processing rights on these two types of film. This meant setting 2 prices—1 for the film itself, and another for processing charges. And it agreed to turn over its technical know-how on processing the film to any comers who might want to get into the business.

The two-price policy on Eastman color film gives the customer and the dealer from whom he buys it a chance to decide whether Eastman or some other processor shall develop it. The policy went into effect for Kodachrome 35-millimeter still transparencies last October, for Kodacolor prints last December. And this month Eastman will begin shipping to its dealers new packages of Kodachrome 8-millimeter and 16-millimeter amateur movie film for sale at a price that doesn't include processing charges.

Consumer dissatisfaction: But a lot of the millions of amateur photographers who use Eastman's color film don't like the new setup. They found the old one more convenient. That's because when they bought film and paid for the processing at the same time, they got a little mailing pouch for sending the exposed film back to Eastman for development. Then the processed film came back to them directly.

Now the customer only pays the purchase price of the film when he picks it up at his dealer. After he has shot a roll, he has to bring it back and pay the processing charges. For now, the dealer will send the film to Eastman—since no other processor is ready to handle it yet. And then the customer has to make another trip back to his dealer for his processed film.

Price boost: Users of Kodachrome transparencies have been squawking plenty about the new system. They found the mailing setup a lot easier. Not only that, under the two-price system they've been paying an extra 10 cents over the single price. Eastman says the increase is due to the additional handling involved.

Confusion: The company anticipates new compliants will start rolling in soon when home movies fans find they can't use the mail pouch any more. Many of them don't realize there's been a change and will mail the film directly to Eastman anyway. A lot of Kodachrome users have been doing this. In such cases, Eastman processes the film and sends it on to a dealer in the owner's vicinity. Then the company writes to the customer, telling him where his film has been sent and asking him to use a dealer in the future. The letter also explains that under the consent decree the company can no longer service the customer directly.

Eastman says it knew a lot of these problems would crop up. It says it proposed to the Justice Department that instead of getting two prices for its film, it be allowed to sell film both ways—with or without processing costs included in the price. This way, it contends, the consumer would still have the choice of having the film processed by some other company. Yet, for those who wanted it, the old system would remain intact. It isn't saying "I told you so" publicly, but Eastman clearly sees the present complaints and confusion as a vindication of its position.

How Justice feels: Justice Department, smarting under the implication that its consent decree is responsible for consumer dissatisfaction and higher prices, points out that injecting competition into a monopolistic situation necessarily involves a period of readjustment. And it feels Eastman is adding to the trouble by going further than it has to under the decree.

Most of the consumer unrest stems from doing away with the mail pouch. But Antitrust Chief Stanley Barnes says Eastman didn't have to do this. "They want to have their cake and eat it too, which is perfectly all right as an attitude for a business to take," says Barnes, "but we didn't force them to adopt that policy." According to Barnes, Eastman could continue to use a mail pouch by selling it separately from the cost of the film.

Eastman counters that while the decree does not specifically outlaw the mail pouch system, it does enjoin any sort of tie-in between buying the film and paying for the processing. And the company thinks this makes the use of a mail pouch impractical.

Independents' position: Independent processors feel that the fact that they are not ready for business lies at the heart of the current trouble. They say that when they are ready—and when competition does in fact exist in color film processing—consumers will begin to reap a few advantages.

At the time the consent decree was signed, firms could develop Kodachrome or Kodacolor film. But immediately after it was signed, several companies announced their intention of entering the field on a national scale, began to make plans for setting up shop. Pathecolor was organized, for example, and started construction of a $1-million processing lab in Bayonne, N. J. It began to lay plans for a national marketing system (BW, July 30, 1955, p. 50).

Time element: Dates for changing over from the one-price system to two prices by Eastman were set, according to the type of film, in the consent decree. These extended from 10 months to a year and a half from December 1954. But, actually, this did not give the independents enough time to get their plans ready to process film. For one thing, the diagrams for the processing equipment, as well as some of the equipment itself, had to come from Eastman. And not until late last year did Eastman have to come across with the diagrams or offers to sell equipment.

Some of the new processors feel that more time should have been allowed for them to get set up. But Justice Department wanted to alter the one-price system as soon as possible. It realized a period would follow when no competition was ready, but it also felt that until Eastman changed its methods there would be no business for the new companies anyway.

The independents admit that the consumer has been inconvenienced to some extent, though some think there's been some exaggeration. But they are sure once they get into business, the inconveniences will disappear.

Advantages seen: James L. Wolcott, president of Pathecolor, says: "When the new companies get underway this summer, present inconveniences will be replaced by definite advantages to the consumer." And Si Pavelle, vice president of Pavelle, feels the same way.

Pathecolor will be ready to handle transparencies and Kodacolor next month and the movie film by midsummer. Pavelle will take transparencies and Kodacolor about the same time. Both companies will provide mailing pouches for customers who want them, in addition to working through the regular camera store and drugstore outlets.

Some of the independent processors think Eastman could have avoided some of the confusion that has marked the transition period.

As they see it, for example, pushing up the date for the changeover in handling movie film from July to May will cause a new rash of customer complaints. It means an added month or so when customers have to take their film to a dealer for the privilege of choosing their own processor when the only company ready to do the processing is Eastman.

Eastman retorts that it is sending out new movie film packages under the two-price system this month because the old film is being sold out. And, after all, the company says, it's just doing what the Justice Department asked it to do, only faster.

Modification feared: What the independents really are afraid of is that all the consumer unrest and confusion may make it appear that the consent decree is unworkable. Some of them speculate privately that a case is being built up to justify modification of the decree. Drastic modifications might wash their investments down the drain. But Justice Department says it hasn't heard anything about such a move.

One change the independents definitely would not like to see would be permission for Eastman to sell film under both the single-price and two-price systems. Since film sold under each system would come in different packages (one would contain a mailing pouch), they point out there would be no way to control the availability of the two packages. And they frankly feel they couldn't buck both Eastman's long-established reputation and customer's tendency to go on buying film in the old way.

Supreme Court Decisions Put States On the Spot

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of May 19, 1956:

SUPREME COURT DECISIONS PUT STATES ON THE SPOT

State officials and others who are concerned about the encroachments of the Federal Government in matters which have hitherto been the affair of the States and local communities are alarmed by the implications of recent decisions by the Supreme Court. Following up its decision outlawing segregation in public schools, the Court, in the Steve Nelson case, seems to take the view that the 48 States may not pass laws dealing with internal subversion or punish those convicted under such statutes. In the Slochower case the Court, in a 5-to-4 decision, denied the right of the State of New York arbitrarily to bar from public office persons who take refuge behind the fifth amendment.

The irony of the Slochower decision is that the New York City Charter containing the provision which the Court has upset was passed in 1938, following the Seabury investigation of corruption in New York City a few years earlier. Since the adoption of section 903 as part of the New York Charter, public officials who refuse to waive immunity in the course of such investigations do so on pain of losing their jobs. We are not aware that this requirement has been regarded over the past quarter century as an outrageous denial of personal liberty as long as it applied to politicians or bureaucrats. But when a fifth amendment professor runs afoul of this provision the heavens fall and the country is astounded by another Supreme Court decision restricting the right of a State to decide for itself what kind of people to retain in its school system.

As is often true of Supreme Court decisions, the dissenters in the Slochower case seem to make better sense than the majority. Justice John Harlan, for example, pointed out that the teacher in question was not necessarily suspected of guilt because he had availed himself of the fifth amendment when asked concerning past Communist Party membership. The question in Justice Harlan's view was not whether there was an inference of guilt but "whether a State violates due process when it makes a claim of privilege grounds for discharge." The justice added that "a State may justifiably consider that teachers who refuse to answer questions concerning their official conduct are no longer qualified for public-school teaching on the ground that their refusal to answer jeopardizes the confidence that the public should have in its school system."

Plainly, the implications of these recent decisions go beyond the qualifications of schoolteachers. The issue is rapidly becoming whether or not any field remains which the States may safely regard as their legitimate concern. If New York may not establish its own qualifications for the employment of public officials, including schoolteachers, what becomes of the right of some seventeen States to curtail the excesses of labor leaders by right-to-work laws? And if the effort to deal with subversion and treason is to be the monopoly of the Federal Government, what chance will there be to combat the Communist conspiracy without an enormous and possibly dangerous enlargement of Federal police activity?

A bill has already been presented in the House of Representatives providing that State laws shall not be nullified by the existence of a Federal statute unless the Federal law specifically so provides or unless the two laws are completely inconsistent. Up to now, this proposed statute has received little attention, but the trend of recent High Court decisions will certainly stimulate new interest in it among the now alerted States.

Loring M. Black

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. MULTER. Mr. Speaker, it was with extreme regret that I learned of the sudden and untimely demise of our very good friend, the Honorable Loring M. Black. He served in this House with distinction and honor to himself, the Borough of Brooklyn, and the city and State of New York, as well as the Nation, for 12 years.

Although it was not my privilege to serve with him in the House, it was my good fortune to have known him for many years and to have been able to call him my friend.

He was able, to the point of brilliance. His advice was sound and much sought after. He will be grievously missed, not only by his good and dear wife, but by all his many friends.

The Life of J. Melville Broughton Continues

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. COOLEY. Mr. Speaker, the late Senator J. Melville Broughton lived a very manly and magnificent life, and during his long and useful public career he made many grand contributions to the welfare of his State and Nation.

A few days ago a beautiful building on the campus of State College in Raleigh, N. C., was dedicated to the memory of this great and good man. On that occasion Mr. Clyde A. Dillon delivered an appropriate and beautiful speech in which he paid a tribute to our late beloved friend, Senator J. Melville Broughton, and I take pleasure in presenting Mr. Dillon's speech to the end that the Members of Congress and others who read the CONGRESSIONAL RECORD may have an opportunity to read this elegant address by one of the leading businessmen and beloved churchmen of the city of Raleigh in which Senator Broughton made his home:

THE LIFE OF J. MELVILLE BROUGHTON CONTINUES

We are here this morning on the campus of a great university, and we are in a building well designed for the teaching of technical subjects—so badly needed in this country; and this building that we occupy bears the name of a great statesman. At this moment we should look up to heaven and thank God for the life of J. Melville Broughton.

Before speaking in particular about the Broughton Mechanical Engineering Building, it seems most appropriate to pay tribute to the man that will be perpetuated through future years because this building is named and dedicated in his memory. From the life of this man whose passing is marked by durable light, let us reverently gather at least a few of the incidents likely to make known the incentives of his great soul, especially for the education and inspiration of posterity, as well as for our good here today.

Mr. Broughton had the good fortune of beginning his illustrious life with a family name of distinction; but, howsoever great a man's heritage may be, he is responsible for living his own life and making his particular name of greatness, and of eternal value to human society and the glory of his Creator. It is said that Emerson peeped into every cradle—looking for a new prophet. Every happy parent of a new son also looks into the cradle with fond dreams of how great a man could be produced from that "little bundle of possibilities." That child's particular heredity may mean an eye for beauty unseen by others, an ear for unheard melodies, a stronger tendency toward God and right, and a new spark of creative genius. A child's heredity may even reach back across generations, and pick up some lost trait or gift, and therefore remake an age. And, chiefly, there is our heredity from God, which dignifies our dust and makes us a "little lower than the angels."

J. Melville Broughton, my friends, while inheriting the rich treasure of a good family name, knew from the beginning that he had his own life to live and was responsible for meeting life's challenges and hardships with high resolve, definite purpose to live for

others as well as for self, and should dedicate himself to such a task, with courage to be at his best in all efforts, regardless of conflict and opposition.

Someone has said that the way to success in life is as plain as the way to market—if one selects a business or profession that he likes, and works at it all the time with devoted enthusiasm and unceasing patience. Along that highway of living, the traveler who knows the rules of the road and who is true to life, continues all the time to display kindness and courtesy to all people, and he seasons all his efforts with an abiding sense of humor—seeing something funny in his successes and even in his failures. And, too, he is ever mindful of life's greatest requirement, which is faith—faith in self, in his fellow men, and in his God.

We could scarcely think of a man who has exercised all of these high requirements and qualities more completely than did Mr. Broughton. He made use of these things with such grace and poise that he appeared to be perfectly natural and undisturbed at all times. These things were basic characteristics of his life, without which he would not have dared to live. Such practice in his life gave him a winsoneness of personality that caused people to fall in love with him; and the better he was known the more he was loved.

Thus we can understand how undisturbed he was in meeting all the difficult as well as the ordinary tasks of life. He conducted even the most strenuous political campaigns with the greatest of confidence and composure. If he had political enemies who used unfair tactics against him, he seemed not to be annoyed; without malice nor anger he maintained his steady course toward victory—with wonderful poise and peace of mind. I know Melville Broughton was a real and true winner in life, and was never a conceited boaster of victories won. He deserves to be remembered as a great statesman, for he measured up to the high standard of true statesmanship in every respect.

Again Melville Broughton truly recognized the big place that his charming and gifted wife had in helping him to be the winner and the man of distinction that he was. She shared high honors with him as he served at his best in the highest places of State and Nation. And together they made home life sweet and wholesome for themselves and for their four children. The influence of that entire family is, indeed, a rich heritage for our State and country. State Supreme Court Justice Emery B. Denny, in a well-written article on J. Melville Broughton, which appears in a book written concerning papers and addresses of Mr. Broughton, has this fine thing to say about his good wife: "Mrs. Broughton," he said, "is one of the most attractive and charming women ever to grace the executive mansion as first lady. Through the years she has been a tremendous asset, as well as an inspiration, to her husband."

Without going into every detail on Mr. Broughton's accomplishments, we simply name a few of his steps upward on the ladder of success, the most of which are pretty well known already by all of you. He was graduated early from high school in Raleigh, and then from Wake Forest College; he rendered good service as high-school principal and as a reporter of the Winston-Salem Journal; he studied law both at Wake Forest and Harvard University; he served with distinction as State senator in two sessions of our State legislature; and he won in the race for Governor of North Carolina by the largest majority of votes ever given a gubernatorial candidate in our State, in which office he served for 4 years, during which administration many great achievements were won for the people of our State because of his wise leadership, in spite of the fact that much of this period our country was engaged in war. Finally, as you well know, Mr. Broughton ended his life's career while serving so well as United States Senator in Washington, where he mingled with many of the greatest men of America and of the world—and yet "he never lost the common touch."

It is very significant that throughout Mr. Broughton's busy life, in Raleigh and in our Nation's Capital, he was continuously engaged in teaching a Sunday School class, after having served many years as Superintendent of the Tabernacle Baptist Church in Raleigh. Thus we see that he not only did not lose the common touch with men, but more significantly he never lost touch with God. Really and truly, Mr. Broughton was what we often refer to as an all-round man. So much so, that he could well be regarded as one answer to J. G. Holland's prayer:

"God, give us men—
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

And now, with all these facts before us about the man, how appropriately State College is naming this magnificent building the Broughton Mechanical Engineering Building. I want to congratulate the College, and especially the Engineering Department, for so honoring this good man, and friend of us all.

Mr. Broughton was deeply concerned while Governor of North Carolina in the development of the engineering program of State College, as well as being interested deeply in improving the industrial training in all of its branches here in our State.

We find this paragraph in the Sunday's News and Observer of April 8: "The $800,000 building which houses the offices, laboratories, and classrooms of the State College Department of Mechanical Engineering, was named in memory of the former Governor and former United States Senator, the late J. Melville Broughton. Governor Broughton was the first president of the Engineering Foundation at State College and was active in the support of the College's School of Engineering."

Right here we should like to emphasize the great need for industrial development in North Carolina, so as to raise the standard of living for all our people, and at the same time make possible the manufacture of products in our State, and make it unnecessary to send our raw materials out of the State for manufacture. Such a course would increase the income for the State, not only to individuals but the needed revenue for the State. In this progress we know that our own present Governor Luther H. Hodges is most vitally interested, for on many occasions he has expressed this concern. He would also agree with us as we declare that accomplishment would greatly aid in keeping our good men within the bounds of our commonwealth. Is it not an alarming situation that North Carolina, according to Governor Hodges, is losing too many of its well qualified men to other States for more lucrative jobs, simply because we are not developing industry to the extent that we could keep them here?

Such achievement, I venture to say, is not only possible, but with our ever-increasing consciousness of such need, and with emphasis added to emphasis concerning the need and the possibility, we shall in the near future realize a big advance along all these lines. And even those who have had dreams of such reality and have passed on shall not have dreamed in vain.

This magnificent Broughton Mechanical Engineering Building gives us new hope for such accomplishment. Will you please visualize in these figures something of the immensity of this building? It has 52,419 square feet of floor area and a volume of 749,505 cubic feet. It is inspiring to think of what may be produced within these walls. The building contains such fundamental basic laboratories as aerodynamics for the determination of air forces on airplane model parts, an aircraft structures laboratory for fundamental studies of heat transfer, heating and air-conditioning, refrigeration, steam generation, power generation, instrument analysis and development for measurement of all kinds, the study and examination of fuels, lubricants, and the examination of stresses in machine parts which cannot ordinarily be determined by calculation.

We are, indeed, proud of the rapid progress that State College is making, and especially of its progress in the engineering department. And we are proud of the fact that great men, with great minds, are continuously concerned in making State College just the place where the best young men of our State and country will seek to be trained for the best possible service in the best possible industries—which industries, we earnestly trust, will be provided very soon right here in our State. And, very probably, these students as they learn here in this and other buildings, will be the men who will plan and develop greater industries than our great forefathers ever dreamed would be developed in our midst.

And again, my friends, we look back to Governor Broughton with thanks, for his keen vision and his endeavors to make North Carolina great in industry; and we look to his radiant face today—if perchance he is looking this way—and gain new inspiration for the tasks ahead, as we behold that face which expresses sincere appreciation for what State College has done, and is doing, in his memory and his immortal name.

John Ruskin's lines on the subject, Builders, seem so very appropriate for the conclusion of my remarks here today that I want to use them now:

"When we build, let us think that we build forever. Let it not be for present delight nor for present use alone.
Let it be such work as our descendants will thank us for, and let us think, as we lay stone on stone, that a time is to come when those stones will be held sacred because our hands have touched them, and that men wrought substance of them,
See! This our fathers did for us."

Porter on Primary

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. MINSHALL. Mr. Speaker, one of the top political analysts in the country is Phil Porter, the Sunday and feature editor of the Cleveland Plain Dealer.

His rise to national prominence in political reporting is based upon a lifetime of achievement. He was valedictorian of his high-school class after winning six letters in football, baseball, and swimming. Spare time, he worked as a high-school correspondent for the Plain Dealer.

At Ohio State University, he was a leader in his class, won honors in campus politics, and was awarded a cup as the most campus-active student in the Big Ten. Summertimes were spent as a police reporter for the Plain Dealer.

Following his college days, Phil Porter embarked upon a 35-year career with the Plain Dealer where he has worked at every desk, covered every kind of story on the Ohio scene, and reported eight national political conventions.

During World War II, Phil Porter served as an Air Force colonel in north Africa, Europe, and England, and on the staff of General Spaatz.

Phil Porter's brilliant interpretation of politicians and political activities is unexcelled. Phil Porter was one of the first to predict the nomination and election of General Eisenhower which he did in October 1951. Today, Phil Porter has a new prognostication which appeared in the Cleveland Plain Dealer on May 12, 1956. I commend it to your attention.

PORTER ON PRIMARY

(By Philip W. Porter)

Tuesday's pjrimary election proved little, except that mighty few people in this land of the free are interested in voting. No amount of money, effort, or preaching will get them out, unless there's a red hot fight between sharp personalities, and usually not even then.

The greatest misinformation still exists in the minds of many who are interested; they still don't understand, after 40 years of primaries, that you can't vote for Republicans and Democrats in the same primary, that there are really two separate elections held on the same day in the same voting booths. And failure to vote won't stop people from griping about their officials, even though they had no part in May in choosing those who finally run against each other in November.

The only mildly significant event of Tuesday was the semifinal death rattle of the Lausche presidential boom. I say semifinal because it will not officially expire until the Governor's name is presented to the Democratic convention in August along with a lot of other also-rans. But with Lausche unable to get the votes of the entire delegation from his home State, and four delegates in there actively pitching against him, he'll look like a mighty poor "favorite son."

ODDS TOO GREAT

Unlike some other newspapermen, I've never taken the Lausche boom seriously because of its essential contradictions. Frankie would first have to be nominated by the Democrats before he could get the votes of any of those Republicans who have viewed him so favorably in the past. And how he could even be considered as a serious contender with the labor unions, the remnants of the New Deal (ADA) and his hometown political organization against him, I could never quite figure. Now, with four Ohio delegates against him, that just about does it.

I may be unduly suspicious of human nature, but it has seemed to me all along that the Lausche presidential pitch was just so much advertising for his Senate campaign, and to get him better known nationally, so that if he should lose the Senate seat, he'd be in a position to command a good "front" job in business. I concede that he has made considerable hay outside Ohio among people who hadn't even heard of him (particularly the so-called independents), by his unorthodox tactics and personality, but they'll never get a chance to ballot on him.

The old pros around the State, both Democratic and Republican, have for some time taken with a grain of salt the standard Lausche denunciation of bosses, which consisted mainly of a slug at a so-called boss who has nothing much left to boss (Ray T. Miller), while the majority of other county bosses throughout Ohio were on Lausche's ticket as delegates.

STAFF WORK SPOTTY

If Lausche had had better staff work by his supporters in Cleveland, he might not have lost any delegates here. But they failed to get petitions properly signed in a couple of cases, which is inexcusable in political organization work. If you knew the inside, however, you were not surprised, for the Lausche-ites here have never been really organized. They were loosely hung together—anti-Miller, to be sure, but never a real organization themselves. And I've always suspected that the Governor avoided a precinct-control fight with Miller because (1) his crowd probably could not have got the candidates properly accredited and (2) Miller was more valuable to him as a live whipping boy than a defeated chairman.

Anyway, the Lausche boom as of today is as dead as Methusaleh, despite his sudden national publicity and the most favorable press around Ohio that any governor has had in the last generation, if not before. If the State House corresopndents had worked him over from the beginning as they worked over Harry L. Davis, Martin L. Davey, and John W. Bricker, the history of the last 12 years might have been somewhat different. But they have been charmed by him, just as ordinary voters have, and little truly biting and analytical stuff has been dug up about the inadequacies of the Ohio road and mental-health situations.

O'NEILL'S THE MAN

In nominating Billy O'Neill for Governor, the Republicans chose a man who is odds-on to win, to make a splendid administrator (something we've not had in Columbus in ages) and who can go much farther in public life as he ages.

Bob Krupansky is an able, though young and green, candidate for county prosecutor. He has a chance to win, if he plots his own course and doesn't let some of his new-found friends get the idea they own him. But in a Democratic county against an opponent named Corrigan, it will be tough.

And now, citizens of our great State and county who didn't vote, you can go back to griping about taxes and incompetent public officials.

View of Truck Body & Equipment Association, Inc., Concerning the Federal Highway and Highway Revenue Act of 1956

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a statement containing the views of Truck Body & Equipment Association, Inc., relative to the Federal Highway and Highway Revenue Act of 1956.

The statement, addressed to Hon. HARRY F. BYRD, chairman, Senate Finance Committee, under date of May 18, 1956, follows:

DEAR SENATOR BYRD: We would like to submit herewith for the record this written statement in lieu of a personal appearance before your committee applicable to title II containing the revenue raising features of H. R. 10660, the Federal Highway and Highway Revenue Act of 1956.

The Truck Body & Equipment Association, Inc. is a national trade association representative of truck body manufacturers, special truck equipment manufacturers, distributors of these products, and others related to this industry such as suppliers of component parts that go into truck body construction and truck operation.

Our membership includes firms located in all sections of the United States. The industry is recognized as one vital to our national economy, and based on established standards these firms are considered small business, the backbone of our American economic system.

The Truck Body & Equipment Association appreciates and supports the general objectives and necessity of a Federal highway program as proposed in H. R. 10660, especially the features of the highway construction portion of the measure incorporated as title I. Likewise, the provisions of title II, incorporating the revenue-raising features of H. R. 10660 with the following exceptions:

1. Exemption from the revenue-raising features of the bill should be provided for trucks and bodies purchased for use in relatively confined areas, on urban streets and roads within city limits and adjacent suburbs, within limited populated sections in which regions practically all of the truck bodies and truck equipment manufactured by members of the industry represented by the Truck Body & Equipment Association are sold and used. The proposed highway program must be defined as pertaining to roads and highways in rural areas for traffic and hauling on a long-distance-over-the-road-intercity basis. We urge and recommend that such trucks and bodies as described above be treated as nonhighway users and be relieved of the payment of further taxes.

2. Trucks and truck bodies not used for product delivery, for the hauling of revenue cargo, or operated for profit should be excluded from the revenue-raising features of the bill. Example: Trucks and bodies used by utility companies and the vocational trades.

3. We urge and recommend an amendment to the bill exempting from any form of taxation, including highway-use taxes, manufacturers' excise tax, etc., motor vehicles operated over private roads and purchased and used for nonhighway operations.

4. An increase in Federal excise tax rates as proposed in the bill may well have an adverse effect on truck body production because there would be a pronounced tendency on the part of prospective purchasers to reuse an old truck body when buying a new chassis in view of the additional cost involved for a new body, the manufacturer passing on to the purchaser the full amount of the Federal excise tax involved to recover the same which he was obliged to pay.

We respectfully request serious and favorable consideration of the foregoing recommendations with respect to H. R. 10660.

Sincerely yours,

ARTHUR H. NUESSE,
Executive Manager.

A Sound Fiscal Program

EXTENSION OF REMARKS

OF

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. YOUNG. Mr. Speaker, it has been particularly encouraging to notice recently the strong interest on the part of

the American people in a sound fiscal program. A poll taken by me this year in Nevada indicated that my constituents by a vote of 68.8 percent to 19.1 percent preferred having any surplus in the budget this year applied to reducing the national debt before being utilized to make possible a badly needed tax reduction.

One of the fiscal problems in devising a sound taxing system is to be sure that taxes do not impose an excessive and discriminatory burden on small businesses and farms. I recently received from Emery Graunke, an experienced accountant and tax consultant in my State, a very challenging and informative letter in which he points up some of the difficulties being encountered today by those who have small farms and are starting out in business. In continuing our quest for an ever better tax system, I think it might be well worth while for the Members of the House to consider the very sound suggestions that come from this well-qualified man.

Pertinent excerpts from this letter are as follows:

Doing a considerable amount of tax work as a tax consultant, I have been very interested in the articles written by the former Internal Revenue Commissioner, T. Coleman Andrews. There are certain fundamental points that he has discussed in which I agree with him wholeheartedly. I think his suggestion for a Hoover-type commission to study the entire tax field is excellent.

I fully realize that the Government, of course, must have a source of revenue and that people today expect more and more services from their Government; however, I believe that the American public has reached the point of somewhat rebelling against the present excessive high rate imposed by the income-tax law. Fundamentally, the income tax is a self-imposed assessment of taxes, and, due to the continued existing high rate, people are searching for every loophole possible and stretching claims for deductions to the point where they often are not honest and the self-assessing principle is deteriorating.

In my tax practice I deal with the average so-called small-business men as well as wage earners, and I have come to the conclusion that the present income-tax laws make it almost impossible for a young man to enter into business or farming on borrowed capital for the reason that he has to make enough money in order to repay the borrowed capital. In the process of making money he then becomes liable for exorbitant income-tax assessment, with the result that after he has made his payments on the loan, paid his income tax, there is seldom enough left for his livelihood. This in turn keeps stifling the small-business man, with the result that the trend in business and farming today is toward the elimination of the small-business man entirely and being replaced by large concerns or ranching operators. I sincerely feel that it is not a healthy condition. I also feel that the excessive rates of taxation in the higher brackets kill all incentive to expand, and it is this incentive to expand and grow that has made America the greatest industrial nation of the world.

In small towns it is surprising the number of businesses, such as service stations, retail stores, etc., that net approximately $5,000 a year. Recently a client of mine had borrowed $10,000 to buy a service station. Due to the existing tight-money market, the longest term loan he could obtain was a 5-year loan, which meant he had to repay the loan at a rate of $2,000 a year plus the interest. His net income was $5,000. Naturally, the repayment of the loan had to be paid out of his net income, as only the interest is deductible as an expense. Therefore, after making the payment of $2,000, he had approximately $3,000 left of his $5,000 profit. His income tax on the $5,000 profit was approximately $540. Taking that from the $3,000 that he had left after making his loan payment, there remained $2,460, which he found to be inadequate to support his family. I think this is a clear example of the devastating effect of the income-tax laws.

I feel that there should be some allowance for a tax deduction of loan-principal repayments. It is important to remember that the small neighborhood grocer, the corner druggist, the service-station operator, etc., make up the bulk of the real small-business men in this country and are very important to its economy. They are the people who really need tax relief in the form of deduction for repayment of borrowed capital.

The above are just some ideas I have had in my mind regarding taxation, and I feel that I can speak from experience because of having some 400 tax clients, most of whom are in the small-business category or in the small ranching field.

Drawing for Homestead Units on the Minidoka Reclamation Project's North Side Pumping Division

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assistant Secretary of the Interior Wesley A. D'Ewart at drawing for homestead units on the Minidoka reclamation project's north side pumping division, May 12, 1956:

It is a real pleasure for me to be here today and to take part in the drawing for homestead farm units on the Minidoka Project's North Side Pumping Division.

Irrigation and homesteading fit together like hand and glove. The western United States owes much of its tremendous, dynamic growth to irrigated agriculture and to the intrepid homesteaders who developed the raw land into productive farms.

The veterans whose names are drawn here today are indeed fortunate for they will have an opportunity to become integral parts of this region's basic economy.

This opportunity is the great prize that will be won by some of you here at the drawing today. But in order to capitalize this opportunity, each of the lucky winners will have to work, and work hard. As veterans, I am sure all the winners will know that success is not handed to them on a silver platter. It will have to be earned.

I have more than a passing interest in the North Side Pumping Division. Back in the summer of 1949, joint hearings were held before the Subcommittee on Irrigation and Reclamation of the House Committee on Public Lands and a special subcommittee of the Senate Committee on Interior and Insular Affairs on H. R. 5506. This was a bill to authorize the Palisades Dam and the North Side Pumping Division. It was my privilege, as a Member of Congress from Montana, to sit as a member of the House group and to participate in those hearings.

There was much discussion during the week-long sessions about how much the development of the North Side Pumping Division and the Palisades project meant to this area and to our country. Authorization of these projects was supported by a number of eminent representatives in the immediate area and by Idaho's able congressional delegation.

I am sure I don't have to remind you of the important efforts of Congressman HAMER BUDGE and Senator HENRY C. DWORSHAK in this respect. Both of these highly esteemed gentlemen have worked hard and successfully in behalf of this project. When the first $150,000 to start this work was appropriated for fiscal year 1953 I know it was a dream of many years come true for you and for your elected representatives in Washington.

Now that I'm out here and have seen for myself how the North Side work is progressing and how it has added to the overall economic health of the area—I realize even more that the many witnesses from this area who appeared at the hearings and urged the projects were indeed foresighted men.

I understand that excellent progress is being made on the Palisades project, too, and that the first storage and power generation will take place this coming October.

The basic purpose behind the establishment of Federal reclamation was to develop the arid lands on the 17 Western States while simultaneously settling as many farm families on the lands as was economically feasible. The North Side pumping division certainly meets these criteria. In 1953, 72 farm units were entered, 85 units in 1954, and 94 in 1955. There are 194 scheduled to be entered in 1956, and 225 in 1957. This means more than 77,000 acres of productive land from what once was barren, arid desert. Incidentally, the 194 units being drawn for today is the largest such land drawing to be held this year in the whole United States.

There are more farm units being made available for homestead entry than many persons realize, for homesteading generally is thought of only in connection with the old wild West and the Oklahoma race for newly opened lands. Yet, a total of 2,159 units including 183,125 acres has been made available for homesteading since the close of World War II. In 1956, 232 farm units will be opened for entry in Western States. These units, here on the North Side, the Kennewick division of the Yakima project in Washington, and the Gila project in Arizona, will include some 26,297 acres.

In addition, 166 farm units, encompassing over 15,000 acres, will be sold from federally owned lands on the Columbia Basin project in Washington and the Eden project in Wyoming. Throughout the 17 Western States there are over 7 million acres of land receiving full or supplemental water supplies from facilities constructed by the Bureau of Reclamation. This is the equivalent of more than 125,000 family-size farm units and 125,000 suburban units. In addition, about 100,000 family-sized farm units will be created by projects now under construction or authorized for construction.

The gross value of crop production from all Federal reclamation projects in the 17 Western States in 1954 was over $865 million and the cumulative value of crops produced since 1906 is now over $10 billion. Federal tax revenues since 1916 from reclamation areas which can be considered attributable to the Federal reclamation developments total over $3 billion, far more than the total cost of all Bureau of Reclamation constructed projects. The total income to reclamation project farmers and farm labor over the years since 1906 is almost $7 billion and the aggregate income to urban areas tied into reclamation projects is in the neighborhood of $10 billion.

The beneficial effects of reclamation development may be likened to rippling water in a pond. Starting from a small localized area, the ripple spreads in ever-widening circles to cover the entire pond. A person has only to visit such thriving cities as Twin Falls, Jerome, and Rupert to see what the development of the North Side pumping division means to this area. It is not particularly difficult to recognize the ever-widening circles of economic values.

The chance to be a part of and share in all of these basic, essential facets of the local community, the State of Idaho, and the Nation—that is the lot of the lucky veterans whose names are drawn today. A chance to work hard and put down roots in an orderly, expanding community, founded on firm, dependable, irrigated agriculture.

But when putting down roots, both in the literal and in the figurative sense, one must consider at all times the availability of an adequate and continuing supply of water. Water is basic to all life. Without it neither plants nor animals nor human beings can survive. Properly supplied with it, all living things can complete their normal, productive life cycles.

I noted in a Geological Survey report published in 1954 that your State, Idaho, was 1 of 3 States in the Nation, the others being Rhode Island and Mississippi, that reported no shortage of public water. You were, indeed, fortunate that year, but I know it was not always thus. From my ranching experience in your neighbor State of Montana I have learned, as I am sure you have learned, that water supplies and the weather that regulates them are anything but constant.

Water problems have been with the West for more than a century. It was in 1847 that pioneer Mormon settlers in the Salt Lake Valley, not too far from where we are meeting today, started diverting water from nearby canyon streams. Though it isn't commonly known, the first diversion wasn't for irrigation at all. It was to soften up the ground so these ambitious farmers could plow it for planting. But before long, they had water running down the ditches between growing plants. They even managed to harvest a crop which was planted in the late weeks of that first hot summer.

From that meager beginning has grown an irrigated farmland empire that now counts more than 26 million acres in the 17 Western States.

However, great as this progress has been, the time has cowe for us to own up to the fact that across the Nation we have been rapidly approaching a water crisis. From the housewife in Washington, D. C., to the sugar-beet farmers right here in Magic Valley this crisis is assuming more and more definite proportions. There are many reasons for this. Most important among them, perhaps, is the unprecedented and to a certain extent unanticipated, increase in our population. There are now nearly 165 million people in this country and the experts predict we shall have passed the 221 million population mark by 1975. With more and more people depending on a single resource it isn't difficult to see that something must be done to alleviate the pressure by conservation, development, and wise use.

Irrigation is a major consumer of water. The present average daily consumption of 120 billion gallons is double the amount used in any other category. By 1975 it is expected that irrigation will still retain first position with an average daily demand of 170 billion gallons. Thanks to evaporation and transpiration there is a considerable amount of water returned to the atmosphere. An undetermined amount percolates through the soil and replenishes ground-water supplies. Usable return flows range from 20 to 60 percent.

When you add the requirements of irrigation to the other use categories, the total daily demand at present is slightly more than 250 billion gallons. By 1975 the total daily requirements for public, industrial, steam electric power, and irrigation water supply will amount to approximately 450 billion gallons. Our requirements will be neary double what they are today. And these are conservative estimates.

The administration has taken positive steps toward the solution of the water problem. One of the first steps in this direction was taken more than 2 years ago when President Eisenhower appointed an Advisory Committee on Water Resources Policy.

When he created the committee, President Eisenhower had this to say:

"If we are to continue to advance agriculturally and industrially we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans. It is my desire that this administration furnish effective and resourceful leadership in establishing national policies and improving the administrative organization needed to conserve and best utilize the full potential of our water resources.

"Policies have been modified repeatedly to reflect changing needs and priorities. Unfortunately, we have often relied on piecemeal or stopgap measures * * * policies * * * have been inconsistent. Accordingly, it is both fitting and necessary for us to undertake a comprehensive review looking toward modernization of Federal policies and programs."

The committee completed its report late last year and in January of this year the President transmitted it to Congress with a request for prompt consideration.

The first problem the advisory committee recognized was that our store of basic physical facts was inadequate, or that they were ignored. The committee recommended that the basic data program be strengthened. It proposed that within the next 5 years the amount of funds allocated at present be doubled to carry out an expansion of all phases of the basic data program in cooperation with States and local units. It was proposed that a minimum of 5 percent of the allocated funds be spent on evaluation of data. In addition, the committee urged that funds be appropriated on a uniform scale from year to year.

The committee emphasized that there is no national water problem. It said there are instead a variety of water problems and they are unique in each region, State, and locality. As a result, there can be no overall plan for water resource development. Planning must be based on existing and projected conditions in each area. The organizational changes proposed by the committee would lessen bureaucratic control, and provide the local people a greater voice in determining how their resources would be developed.

The committee strongly believed that a sound water resources development plan required all interested groups to participate in the planning process from the start. Consequently it recommended that regional or river basin committees be established as the need arose. Each committee would have a nonvoting chairman appointed by the President. The Federal agencies having responsibility in the area would be represented on the committee and the governor of each affected State would appoint representatives.

These committees should be the principal medium through which planning activities of all participants would be coordinated. These committees would prepare and publish joint comprehensive water resources development plans, which would be revised from time to time as conditions in the region and in the Nation changed.

The committee has proposed that an Office of Coordinator of Water Resources be established in the Executive Office of the President.

The Coordinator would reconcile the inevitable interagency differences, and he would develop and establish uniform procedures for all agencies; he would cooperate with the Bureau of the Budget and the Council of Economic Advisers in evaluation of departmental requests for appropriations; he would work on the reconciliation of water resources policies with other Federal policies, and would prepare long-range programs of water resource developments consistent with other public works programs.

The advisory committee proposed that an impartial board of review be established to evaluate the economic and engineering feasibility of projects before submittal to the President. The board would be composed of three persons with competence in engineering, economics, or others with recognized abilities and judgment in the resources field. They should have had no connection with the planning of projects submitted for review, nor should they be involved in the subsequent construction of projects. Such a board would serve full-time and would be able to give due consideration to congressional policy and to criteria established by the Coordinator of Water Resources in evaluation of projects.

The committee has several proposals designed to clarify the complex situation regarding State water laws.

It recognizes that in many areas land is worthless without the water rights that go with it. The report states, "The principles which recognize water rights as property rights should be accepted. Determinations as to disposition of water should recognize such rights."

The committee recommends that the Federal Government collaborate with States in a study to determine the relationships between the establishment of property rights to water and the economic and social development of the Nation. Such a study would clarify the rights of the respective parties and is a prerequisite to solving the current dilemma in this field.

The committee urges that the States solve these problems to their mutual satisfaction by means of interstate compacts. Agreements arrived at in this manner are considered preferable to the imposition of Federal legislation.

Most of the Western States have adopted a set of rather rigid priorities for the use of water, usually listed in the following order: Domestic uses, stock watering, irrigation, manufacturing or power generation. This pattern has evolved over time in response to local conditions. There are many parts of the country where these priorities come in different patterns.

The committee believes that each State can determine how water can be used to best advantage within its borders. It rejects the idea that the Federal Government can dictate priorities; however, it recommends that there be come flexibility with regard to priority of use in order to adjust to changing conditions.

Another of the committee recommendations deals with participation in costs. If there is to be a genuine partnership in the water resources development and partnership is the creed of the Eisenhower administration natural resources program—the State and local interests should be expected to assume a fair share of the costs along with their increased responsibilities. A major share of the project benefits accrue to particular individuals and to particular areas. The committee has recommended that the share of the costs to be borne by the beneficiaries should be proportionate to the benefits received.

By following the guidelines laid down by President Eisenhower's committee, I am confident the country as a whole will solve its water problems. Certainly many of the committee's recommendations are in evidence here on your own Minidoka project.

I admire the way you Idahoans manage your soil, water and other resources. I am interested, too, in the Federal Government's cooperating in the further development of the Snake River and its tributaries.

However, in planning any development, we must take into consideration multiple-use; that is, to return the maximum benefits to the greatest number of people. We must consider not only the storage of water for irrigation which is clearly one of the primary purposes in this area but also flood control and fish and wildlife values. Because it helps pay the bill, we must also consider maximum development of hydroelectric power resources.

Right now, there is a clear need for further upstream storage on the Snake River. I understand there is a record snow cover piled so deep in the mountains that there is danger of floods when the snowmelt starts, which should be very shortly. Yet, in several recent years, it has been necessary to pull the reclamation reservoirs down to a very low level to keep irrigation canals flowing.

Additional storage will permit cyclical operation of the entire network of reservoirs rather than on a year-to-year storage basis. With the exception of the few years of extreme drought, the level of reservoirs could be maintained at a fairly constant level if there is sufficient capacity to hold over storage from flood years to years of drought. This would enhance their value for all purposes, particularly for the fishermen and for the millions of recreation seekers who crowd into the upper Snake River watershed in Grand Teton and Yellowstone National Parks every summer.

At the same time, there are existing fishery and wildlife resources which must be preserved and enhanced where possible. That is why the Bureau of Reclamation is spending many thousands of dollars in a complete investigation of all storage possibilities before making a recommendation to the Department on how to proceed. Field offices of other agencies within the Department of the Interior are working closely with the Bureau of Reclamation in these investigations. When the report is received in Washington, it will again be closely scrutinized by all agencies and the Secretary of the Interior will undoubtedly have to make some decisions between conflicting interests.

You may rest assured that in making these decisions, the Department will be guided by a desire to effect the greatest multiple-use of the river's resources including both further stabilization of your irrigated land production and enhancement of upstream fish and wildlife benefits.

Speaking of irrigation and farmland, much has been written and more has been said regarding crop surpluses. A principal question these days is "Why should we develop additional irrigated farmlands in the face of current overproduction?" Generalizations are often misleading. They are not only misleading—they result in gross misinformation which indicts reclamation as a principal contributor to these surpluses.

First, I would like to call to your attention some of the overall considerations that have a bearing on the development of our agricultural resources. I have mentioned the population increase, but there are others.

It has been pointed out that more than 115 million acres are now occupied by cities, highways, airports, defense establishments, and for industrial use. Eighty million acres of this area was originally good farmland. It has also been pointed out that we are losing farmland to nonagricultural uses at a rate of more than 1 million acres per year despite any new acreage brought in by irrigation projects.

The trend in eating habits is a factor, too. If we consume an average of 156 pounds of red meat annually, which was the consumption in 1954, we will require some 35 million acres more land in 1962 than was used in 1953 to grow feed. It has been variously estimated by responsible officials in the Department of Agriculture that a balance will be reached between production and consumption within about 3 to 5 years.

Other significant trends are in evidence also. The increasing population of the West is consuming more and more of the farm production of the Western States. Only a few years ago cattle raised in the Great Basin were shipped eastward. Now the line of demarcation between the East and West bound movement of cattle is generally, I believe, at about the Continental Divide, but with some Texas cattle moving to the west coast.

The increase in per capita consumption of fruits and vegetables reflects a further change in our diet and eating habits. The irrigated West supplies a substantial part of the total requirement for these protective and health-giving foods, much of which is marketed during the late fall, winter, and early spring.

In this perspective, consider that many years elapse between the time a Federal reclamation project is first proposed and the time the lands are in full agricultural production. We must go through the extensive process of investigation, review of proposed reports by all interested State and Federal agencies, authorization by the Congress, the appropriation of funds for construction, the development of final plans and specifications, the construction of the physical facilities of the project, and finally the settlement of the land.

Even after the farmer is on the land, several years are required to extend the farm ditches to all parts of the farm and to level and to get into full production the total acreage served. On a large project this can involve a period of time varying from possibly 5 to 25 years. Projects or additions to projects which are proposed today will not come into full production for several years after we have attained a balance in overall production and consumption. Many of our projects supply supplemental water to an existing economy—that is, they assure water year after year to stabilize production.

The principal price support crops on which there is some production on reclamation projects are barley, corn, oats, wheat, rye, grain sorghum, cotton, dry and edible beans, flaxseed, rice and soybeans. The cereal grains are grown primarily for feed and to provide a balanced farming operation, including the rotation of crops for maintenance of soil structure and soil fertility.

Data obtained from the Department of Agriculture shows by States the 1954 production of each of these crops under the support program. The amount of production which is actually price supported varies from 5 to 50 percent. Using the percentage of production supported in each State, we have estimated the amount produced on reclamation projects which might be considered supported. The total production of each cereal crop on reclamation projects in 1954, as a percentage of United States production, varies from about one-sixth of 1 percent to about 7.5 percent. Thus, when you take into consideration the relatively small portion of each total crop which is price supported, it becomes clearly evident that support for reclamation project production is negligible and of little significance.

Many western irrigation projects are in close proximity to large public grazing areas. These cereal crops supplement the grazing lands and permit better utilization of the 700 million acres of western rangelands by providing a late fall, winter and spring feed supply. Grazing of many acres would not be economically feasible by reason of high transportation costs of livestock to and from grazing lands were it not for these irrigated feed base lands.

We hear a great deal about how wheat production on reclamation projects is in competition with midwestern wheat. Wheat produced on reclamation projects in 1954 was less than 2 percent, and the amount supported was less than 1 percent of the United States production of about 970 million bushels. This is hardly a major contribution to the problem of overproduction of wheat. Actually, instead of contributing to that problem, farming as practiced under irrigation tends to alleviate this problem.

Rice production on reclamation projects is less than 1 percent, and the production of soybeans amount to less than one-tenth of 1 percent of our national production. Flaxseed under support which was produced on reclamation projects amounts to less than one-fourth of 1 percent of the United States production.

Of the 13.7 million bales of cotton produced in 1954, almost 17 percent was under the support program. Production on reclamation projects amounts to approximately 6.5 percent of the total production. The amount under support from reclamation projects is only 1.27 percent of the United States production.

Here we have a situation in which cotton can be produced under irrigation in competition with any other area in the country. In a free market, the irrigated areas probably could continue to produce profitably and many of the producers in nonirrigated areas would be forced to other alternatives. To criticize this production is to put a premium on inefficiency.

Dry and edible bean production in 1954 totaled 17 million bushels. Approximately one-third of the total is produced on reclamation projects. This is a western crop and a good crop, and we offer no apologies for producing it any more than anyone else should apologize for production of corn or wheat in the Midwest. However, only about 23.5 percent of the total 1954 bean production was price supported. This compared with 44 percent of wheat and almost 52 percent of rice production under the support program.

Thus, it appears rather evident that production of agricultural commodities on Federal reclamation projects does not contribute significantly to the overall farm surplus problem. In the light of forecasts of future needs, it is also clearly evident that we should proceed with all speed to develop and bring into production all of the potentially irrigable lands of the West.

As we go forward—in reclamation, in farming, and in the control, management, and use of our great natural resources—we must never lose sight of the fact that our greatest asset of all is a strong, upright, free citizenry. I mean the kind of citizenry envisioned by our forefathers when they wrote the Constitution with its limited powers of government. Such a citizenry can be developed not by bureaucratic control, but by encouraging the individual to use wisely his and his country's resources. The land is a great heritage. Its best development, use and control will come in the traditional American way—as a result of intelligent forces at work within rather than by arbitrary force imposed from without.

May I offer my advance congratulations to the veterans whose names will be drawn here today. I know they will carry on this tradition on the farm as they did so nobly on the battlefield.

Corps of Engineers—Hydroelectric Power Projects

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. EVINS. Mr. Speaker, under leave to extend by remarks in the Appendix of the RECORD, I desire to have included a letter from Maj. Gen. E. C. Itschner, United States Army, Assistant Chief of Engineers for Civil Works, together with a statement from the Corps of Engineers listing hydroelectric power projects operated under construction and in an active status, by the corps.

The list is substantial with an ultimate installed power capacity of 5,253,400 kilowatts, by the Corps of Engineers.

The letter and list follows:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C., May 3, 1956.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D. C.

DEAR MR. EVINS: The attached data inclosure specifically covers the data requested in your letter of April 26 with reference to Corps of Engineers multiple-purpose projects with power. You will find the data arranged in the same order as listed in your letter.

It is a pleasure to be of assistance to you and it is hoped the data will supply the information you want. Should any further data be required, I wish you would let me hear from you.

Sincerely yours,

E. C. ITSCHNER,
Major General, United States Army, Assistant Chief of Engineers, for Civil Works.

DATA INCLOSURE

1. Twenty-five multiple purpose projects with power have been built and are now being operated by the Corps of Engineers. As of May 2, 1956, the installed generating capacity of these projects was 4,025,400 kilowatts, with 1,228,000 kilowatts of additional generating capacity yet to be installed in four of these projects not yet completed.

2. List by basins and name and location of the above 25 projects:

Columbia River Basin: Albeni Falls, Idaho, Pend Oreille River; Bonneville, Oreg. and Wash., Columbia River; Chief Joseph, Wash., Columbia River; McNary, Oreg. and Wash., Columbia River.

Willamette River Basin: Detroit, Oreg., North Santiam River; Lookout Point, Oreg., Middle Fork River.

Missouri River Basin: Fort Peck, Mont., Missouri River; Fort Randall, S. Dak., Missouri River; Garrison, N. Dak., Missouri River.

Cumberland River Basin: Center Hill, Tenn., Caney Fork River; Dale Hollow, Tenn., Obey River; Wolf Creek, Ky., Cumberland River.

Roanoke River Basin: John H. Kerr, Va. and N. C., Roanoke River; Philpott, Va., Smith River.

Savannah River Basin: Clark Hill, Ga. and S. C., Savannah River.

Alabama-Coosa River Basin: Allatoona, Ga., Etowah River.

Ouachita River Basin: Blakely Mountain, Ark., Ouachita River; Narrows, Ark., Little Missouri River.

White River Basin: Bull Shoals, Ark. and Mo., White River; Norfolk, Ark., and Mo., North Fork River.

Red River Basin: Denison, Okla. and Tex., Red River.

Arkansas River Basin: Ft. Gibson, Okla., Grand (Neosho) River; Tenkiller Ferry, Okla., Illinois River.

Brazos River Basin: Whitney, Tex., Brazos River.

Great Lakes Basin: St. Marys River, Mich., St. Marys Falls.

3. List of Corps of Engineers multiple purpose projects with power authorized and planned for construction:

(a) Projects now under construction—Total, 14: Buford, Ga.; Cheatham, Tenn.; Cougar, Oreg.; Fort Gaines, Ala. and Ga.; Gavins Point, Nebr. and S. Dak.; Hartwell, Ga. and S. C.; Hills Creek, Oreg.; Ice Harbor, Wash; Jim Woodruff, Fla.; McGee Bend, Tex.; Oahe, N. Dak. and S. Dak.; Old Hickory, Tenn.; Table Rock, Ark. and Mo.; The Dalles, Oreg. and Wash.

(b) Other active projects in current budget—total, 3: Green Peter, Oreg.; John Day, Oreg. and Wash.; Lower Cumberland, Ky.

(c) Other active projects—total, 18: Beaver, Ark.; Belton, Tex.; Big Bend, S. Dak.; Booneville, Ky.; Carthage, Tenn.; Celina, Ky.; Dardanelle, Ark.; Eufaula, Okla.; Gathright and Falling Springs, Va.; Greers Ferry, Ark.; Jones Bluff, Ala.; Libby, Mont.; Little Goose, Wash.; Lower Granite, Wash.; Lower Monumental, Wash.; Millers Ferry, Ala.; Short Mountain, Okla.; Stockton, Mo.

Total, (a), (b), and (c), 35.

4. Total installed capacity of existing projects and of projects under construction:

(a) Existing projects: This installed capacity of existing projects as of May 2 was 4,025,400 kilowatts. Four of these projects have a total of 1,228,000 kilowatts of generating capacity scheduled to be installed between May 3 and June 1961, making the total installed capacity for these existing projects upon completion 5,253,400 kilowatts.

(b) Projects under construction: The total scheduled installed capacity of the 14 projects listed under 3 (a) above is 2,412,000 kilowatts.

A Salute to the Army Field Band

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. VAN ZANDT. Mr. Speaker, great bands and illustrious military musical organizations have been the good fortune of our country since the first humble fife-and-drum led our forefathers to battle and independence almost 200 years ago at Concord and Lexington. In the two centuries since 1776, our gallant sons and daughters have marched to the defense of our country behind stirring martial music that told the enemy with crashing drums and awesome chords to beware. America was in the fight to the end. Then, when the smoke of battle had cleared and the last hurrah was voiced, our great bands honored in stately music the returning heroes and those who did not return.

As we pause on May 30 to honor our hero dead in parades and appropriate ceremonies, who can deny the thrill of hearing The Stars and Stripes Forever in the distance and then our troops and veterans going by in ordered ranks? What heart can fail to respond to When Johnny Comes Marching Home? Who is so hardened that he can withhold tears when the trumpeter steps from the band and plays the clear, sweet notes of taps?

Mr. Speaker, today I would like to pay a special tribute to the United States Army Field Band. This organization, in both war and peace, at home and abroad, has always maintained the highest traditions of great music. The people of Clearfield, Pa., in the 20th Congressional District, had the recent good luck on April 9 to hear the Army Field Band in concert. Since Clearfield, Pa., is in my congressional district I wish to call attention to an editorial published in the Clearfield Progress April 12, 1956, which indicates the outstanding quality of the Army Field Band and certifies the values of this band not only to the Army but to the entire country:

A WORTHWHILE FRILL

Every time we hear the United States Army field band or music by some of its members and every time we meet and talk with Maj. Chester E. Whiting, director of the band, Clearfield's own Capt. Lewis Bierly, assistant director, and the enlisted members of the band, we are proud that we are an American. We're proud that our country and its Army can produce such a fine musical organization and proud of its personnel that represents us as our soldier-musicians.

Clearfielders have been extremely fortunate in having the opportunity to hear the band or, as was the case Monday night, a selected segment of the fine musical organization. The band was a featured attraction of the County Sesquicentennial Celebration in 1954 and last year came back to present, from a raft on the river, the "Clearfield Legend," an original musical composition written especially to glorify the Susquehanna and its influence on the area over the years. Monday night, a dozen or more members of the band returned to demonstrate, at a Rotary Club-sponsored dinner, that they were as versatile and talented as a small group as is the entire organization.

The major share of the credit for the pleasure Clearfielders have had in listening to the Army field band is due Russell A. Shaw, an old bandsman himself, a lover of good music and a personal friend of Major Whiting and Captain Bierly. Mr. Shaw deserves the community's thanks for the opportunity of hearing the band. Clearfielders themselves—those who have sponsored the band's appearances in the community—also can take a bow for being good hosts, the kind that make the band members and their leaders willing and anxious to come back.

As Mr. Shaw pointed out in his remarks at Monday night's Rotary dinner, the public relations or good will value of the Army Field Band in its occasional foreign tours is unsurpassed and far more productive than the millions of dollars this Nation pours down the drain in equipping foreign nations with armaments, economic aid, and the like. On the domestic scene, the band is providing all 48 States of the Nation, through its many tours, an opportunity to hear music the like of which towns such as Clearfield and its counterparts across the country would never otherwise have the opportunity to enjoy. It's somewhat comforting, also, to realize that out of a defense organization basically devoted to destruction can come a cultural organization such as the United States Army Field Band.

It may be that the Army Field Band might be classified as a Government "frill." However, it is one Government "frill" that we think is worth while and should be continued with adequate financial support. It is a "frill" that gives the taxpayer enjoyment for his money—and it's money well spent. It could be ill-spent if it weren't for the inspired leadership and the enthusiastic and talented personnel of the band that has been so apparent in its Clearfield appearances. As long as such leadership and enlisted personnel are available, the United States Army Field Band is one of the best investments of taxpayers' dollars this Nation can make, for they are truly ambassadors of good will at home and abroad.

Mr. Speaker, everytime we hear the United States Army Field Band or music by some of its members and everytime we meet and talk with Maj. Chester E. Whiting, director of the band, Clearfield's own Capt. Lewis Bierly, assistant director, and the enlisted members of the band, we are proud that we are Americans. We are proud that our country and its Army can produce such a fine musical organization and proud of its personnel that represents us as our soldier-musicians.

Clearfielders have been extremely fortunate in having the opportunity to hear the band or, as was the case Monday night, a selected segment of the fine musical organization. The band was a featured attraction of the county sesquicentennial celebration in 1954 and last year came back to present, from a raft on the river, the Clearfield Legend, an original musical composition written especially to glorify the Susquehanna and its influence on the area over the years. Monday night, a dozen or more members of the band returned to demonstrate, at a Rotary Club-sponsored dinner, that they were as versatile and talented as a small group as is the entire organization.

The major share of the credit for the pleasure Clearfielders have had in listening to the Army Field Band is due Russell A. Shaw, an old bandsman himself, a lover of good music and a personal friend of Major Whiting and Captain Bierly. Mr. Shaw deserves the community's thanks for the opportunity of hearing the band. Clearfielders themselves—those who have sponsored the band's appearance in the community—also can take a bow for being good hosts, the kind that make the band members and their leaders willing and anxious to come back.

As Mr. Shaw pointed out in his remarks at Monday night's Rotary dinner, the public-relations or good will value of the Army Field Band in its occasional foreign tours is unsurpassed and far more productive than the millions of dollars this Nation pours down the drain in equipping foreign nations with armaments, economic aid and the like. On the domestic scene, the band is providing all 48 States of the Nation, through its many tours, an opportunity to hear music the like of which towns such as Clearfield and its counterparts across the country would never otherwise have the opportunity to enjoy. It is somewhat comforting, also to realize that out of a defense organization basically devoted to destruction can come a cultural organization such as the United States Army Field Band.

It may be that the Army Field Band might be classified as a Government frill. However, it is one government frill with adequate financial support. It is a frill that gives the taxpayer enjoyment for his money—and it is money well spent. It could be ill-spent if it were not for the inspired leadership and the enthusiastic and talented personnel of the band that has been so apparent in its Clearfield appearances. As long as such leadership and enlisted personnel are available, the United States Field Band is one of the best investments of taxpayers' dollars this Nation can make for they are truly ambassadors of good will at home and abroad.

I submit that this editorial is a well deserved tribute to a fine musical organization and that any attempts to eliminate this band or others like it are tantamount to taking the breath out of spring. Through the fine cooperation extended to me by Captain Whiting I have been instrumental in securing the Army Field Band for delightful concerts in several communities in my congressional district. On each occasion it has never failed to live up to its reputation as one of the finest bands in the Nation. Therefore, I speak from experience when I join the Clearfield (Pa.) Progress in its well deserved tribute to the United States Army Field Band.

Supplying Education With the "Spirit of Religion"

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a speech given by Dr. Bernard Braskamp, Chaplain of the House of Representatives, as guest speaker at the opening meeting at the annual Veishea celebration of Iowa State College, Ames, Iowa. The meeting was held in the Clyde Williams Stadium and was attended by approximately 10,000 people.

The speech follows:

President Hilton, I feel greatly honored in being invited to participate in this annual Veishea celebration, sponsored and presented by the students of Iowa State College. Your introduction is very complimentary and your welcome most generous.

It is indeed a great pleasure and privilege for me to return to my native State and be the guest speaker at one of America's outstanding institutions of higher learning. I am finding myself tempted to engage in a reminiscent mood for as I go up and down the courts of memory there are coming to my mind many of those boyhood experiences which I had in that little town of Alton where I was born.

Perhaps there are folks in this audience who were my fellow students at Grinnell College some 52 years ago when I was the shortstop on the varsity baseball team during my freshman and sophmore years before going to the University of Michigan and Princeton. I recall very distinctly being here in Ames when we played Iowa State College.

I am not going to continue in this sort of a reminiscent mood for there is no time for that. Furthermore, brevity has always been one of my specialties. Not long ago I was the guest speaker at a dinner meeting. The toastmaster, who has known me intimately throughout my entire ministry of 45 years in Washington, said, "I am quite sure the Chaplain's message will not be very long; it will only seem long." I like the observation made by Dr. Alexander Ruthven, who was for many years the distinguished president of my alma mater, the University of Michigan. He reminds us that an address or message need not be eternal in order to be immortal. I sincerely hope that my message will not seem long and I am quite sure that it will not be immortal.

Your chairman has informed me that this year's Veishea theme pertains to education and that the program committee has invited me to present a message that relates or ties together religion and education. This is an exceedingly broad subject and I shall not attempt to treat it in any academic or abstract fashion, a mission for which I have no qualifications. Recently a friend characterized a very scholarly and learned gentleman as being all abstract up there, referring to his head and all concrete down here, referring to his heart. I trust that what I shall say will be practical and helpful, stimulating not only your minds but stirring your hearts.

During this year, 1956, we are commemorating the 100th anniversary of the birth of Woodrow Wilson, the 28th President of the United States, who will always be remembered as one of America's foremost educators, and statesmen. I shall never forget the last time I was privileged to hear that great man. That was 45 years ago when I was a senior student in Princeton Theological Seminary and also taking post-graduate work in the University for a masters degree in philosophy.

Late one afternoon he came to the seminary vesper service to address the young men who were preparing for the ministry. He began by saying: "Gentlemen, I have always regarded the illustrations that I use in my messages as the windows through which my listeners can see most clearly what I am trying to say." Then he related the experience of a student who many years ago went to a little town in Iowa to occupy the pulpit of the Presbyterian Church during his summer vacation. Woodrow Wilson didn't mention the name of the town but it may have been Ames. After a 2 days journey by train the student arrived on a Saturday and went straightway to the barber's shop for a haircut and shave. The barber, like most barbers, was very talkative and began to ask him all sorts of questions. "Stranger here?" "Yes from Princeton, N. J." "What are you going to do here?" "I am going to supply the Presbyterian Church." Quick as a flash the barber asked, "And with what?" He evidently thought the young man might be a Fuller Brush man who was going to supply the church and the janitor with mops, brooms, brushes, soap, wax, etc. In answer to the barber's very fundamental question, "And with what?", the student replied that he had come to supply the church with the gospel.

Now in speaking on this subject, "Religion and Education," let me be a little more specific and take as my theme, "Supplying education with the spirit of religion."

The cynic, who has been defined as the man who knows the price of everything and the value of nothing, would have us believe that religion is merely a racket; something which people feel will bring certain economic,

social, and political advantages and material gains.

Then there are those who speak of religion as an opiate. This is the invective which Karl Marx and the Communists have hurled against religion, that it teaches people to be resigned to their sufferings and struggles, putting them to sleep and making them content with social conditions, as they are, instead of fighting against them.

Furthermore, there are some who think of religion as an emotional gust; a passing sentiment; an impulse which comes and goes; a fad or fashion of mere temporary interest.

There are still others who refer to religion as a kind of stimulant which it is well for a man to take when he feels pretty low and needs something to strengthen his morale as he faces a crisis and is in doubt concerning the outcome.

Over against these negative attitudes of the cynic and the Communists let us remind ourselves of one of the great affirmations made by Thomas Carlyle that religion is the chief fact in a man's life. Here is a statement that is becoming increasingly evident for as Sabatier, the French theologian and historian, said many years ago, "Man is incurably religious."

The editor of a popular magazine asked a friend to write an article on the subject of what he considered would be the next forward step in religion. In that article he set forth the thesis that the next forward step in religion would be a step backward. A statement of that kind may strike us at first as being hopelessly reactionary. Furthermore, it may seem very paradoxical for how can one go forward by going backward?

When we look at the root meaning of the word, "religion" we have no difficulty in seeing that this is the basic idea. There are two definitions of the word, "religion" each giving a different aspect of the same thing. Cicero preferred the meaning, "to think back; to think over again; to reflect on the meaning of life and to recollect divine things." St. Augustine defined religion as meaning "to rebind; to tie together that which unites man to God and his fellow men." One thought runs through both definitions, namely that religion is the tie that rebinds us to God.

Now, in speaking on this special subject of "supplying education with the spirit of religion," I want to go back and remind you of three factors or aspects which constitute the very alphabet of true religion. The first statement I wish to make is that the spirit of religion supplies not only education but the whole of life with a sense of reverence.

This aspect of religion may be rather difficult to define but it is easily recognized for it indicates a mental attitude and a heart attitude with which we are all familiar. Reverence is a word we find in both sacred and secular literature. It is that indwelling grace or sentiment which makes us conscious of the fact that certain things invoke not only our admiration but our adoration.

When we begin to think of whom we should revere we soon discover that reverence for God must transcend them all for here we have the basis and inspiration of all other reverences. When we eliminate reverence for God we are cutting the very root of reverence for our fellow man, for ourselves, for law and everything else.

Dr. Henry Churchill King, who was for many years the president of Oberlin College, wrote an inspiring book entitled, "The Moral and Religious Challenge of Our Times." In the very first sentence he states that he has come to believe that reverence for human personality is the ruling principle in ethics and religion. This is also the outstanding principle in the life of Albert Schweitzer.

Nowhere have I found a more beautiful reminder and expression of this sense of reverence for ourselves, which religion supplies us with, than in these words written to a friend, as a birthday wish, by the daughter of a brilliant professor in the University of Edinburgh. "That life for you may never lose its halo."

Religion supplies us not only with a sense of reverence but with the strongest and noblest kind of restraint when we are tempted to break faith with our higher and better self.

Voltaire must have understood this when he said, "If there were no God it would be necessary to invent one." This was his unique way of saying that the best proof of the fact of God is that we cannot do without him. It is related that one day Voltaire was entertaining in his home a company of friends. Presently their conversation turned to the subject of religion. As soon as they were about to give their reasons for not believing in God he ordered his servants to leave the room. On being asked his reason for so doing he replied he did not wish that he and his guests should have their throats cut. Voltaire knew very well that religion with its belief in God supplies man's character and conduct with the greatest sense of restraint.

Centuries ago the Prophet Isaiah exclaimed, "Where there is no vision, the people perish"—this is the more accurate translation: "Where there is no vision of God, the people cast off restraint." The old registrar at Oxford said to a young man who was a candidate for admission into the university, "Tell me about your belief in God." "But sir," was the reply, "I do not believe in any God." "What!" exclaimed the registrar, "You say you do not believe in God. Go out and find God by tomorrow morning at 9 o'clock or leave this university." That registrar likewise understood very clearly that belief in God affords man the greatest sense of restraint.

We hear a great deal of talk about freedom but freedom must always be coordinated with restraint and discipline for these are the supreme factors in social integration. I am thinking of a 10-year-old boy who was finding parental discipline very irksome. He said to his father, "When will I be old enough and big enough to do as I please?" The father was a very wise man for he gave the right answer when he said, "My boy, no one ever grows to be that old and that big." Surely one of the primary objectives of an education is to teach us this sense of restraint for it is absolutely essential to social unity. Our college students, who have the advantages of an education, are charged with the responsibility of maintaining and promoting it.

This brings us to the third thing that religion supplies education and all life with namely, a sense of responsibility. Here we have one of the great principles of religion for it tells us that we are human beings with a responsibility toward God and man. Nowhere is this more clearly taught than in the Bible. There are those who would have us believe that the early chapters of the Book of Genesis have been discredited long ago. I am confident, however, that they are of rich and rare value for our moral and spiritual culture for in those chapters we are reminded of this sense of responsibility. They teach us that the question of Cain, "Am I my brother's keeper?" must be answered conclusively in the affirmative. The indictment brought against Cain was that he defiantly declared he had no feeling of responsibility for life and welfare of his brother Abel.

In one of Hall Caine's novels there is a story of a schoolboy who was asked by his teacher, "Johnny, who is your neighbor?" His answer, "Please sir, the man who lives next door." Again the teacher asked, "And what is your duty toward your neighbor?" The boy replied, "Please sir, to keep my eye on him."

Several years ago two books appeared simultaneously. The one is entitled "Beyond Good and Evil," giving us the philosophy of Friedrich Nietzsche which is that of excessive individualism. It is a bold confession of the ruthless law of the survival of the fittest and tells us that it is all nonsense to talk of being responsible and giving ourselves for the sake of others. The other book entitled, "The Christian Ministry and the Social Order," places the emphasis upon the sense of responsibility, reminding us to seek an education in order that we may be better enabled to meet the needs of humanity and thus bring to fulfillment and fruition the ideals of democracy. George Eliot asks, "What are we here for if not to make life less difficult for one another?"

Now, before speaking of that which is of supreme importance, I wish to say by way of parenthesis, that one of the most encouraging and hopeful signs of our time is that of a new feeling of religious consciousness among our leaders in public life. It seems to me that there is sweeping across the vast areas of our national life a new wave of appreciation of the vitality and validity of the spirit of religion.

Since making the chaplaincy of the House of Representatives a full-time ministry, I have had a greater opportunity than ever before, through my daily association with the Members of Congress, to learn that the spirit of religion is being given as large a place among them as among any group of men and women. Our chosen Representatives are quite aware that national greatness cannot survive if we allow it to become eclipsed by a decline in spiritual idealism and that our national problems cannot be solved on a purely economic basis.

I believe that his new feeling of religious consciousness among our legislators is also becoming increasingly evident in the field of education. In the March issue of the Alumnus of the University of Michigan there is an interesting article entitled, "The Role of Religion on the Michigan Campus." Dr. Baldwin, the coordinator of religious affairs at the university, observes a rising spirit of religious acceptance among students. He indicates that there have been times when they were antagonistic or indifferent to religion but today they recognize its value. It is becoming more and more evident to them that science does not have all the answers and that in religion they may find secure principles for growth and self-realization.

What is true at Michigan is equally true in nearly all our universities and colleges for both the faculties and students understand, as never before, that the "Temple of Modern Civilization" cannot be built without religion. A college or university may be very expert and efficient in many kinds of learning and knowledge but these are not enough.

Let me conclude my message by being more specific and say that education and our whole life, in all its relationships must, above everything else, be supplied with the Spirit of Jesus Christ in whose character and conduct we have the incarnation of life's highest aims and loftiest aspirations.

Shortly after the First World War, Lloyd George said, "Now it is Christ or chaos." Among the most profound affirmations which Woodrow Wilson ever made we find these, "Civilization cannot be redeemed materially unless it is redeemed spiritually. The world must be saturated with the spirit of Jesus Christ."

When I was a student at Grinnell College and the University of Michigan, I had great

difficulty in knowing what studies to take for I didn't seem to have the slightest idea as to what kind of a career I ought to prepare for. Perhaps I was too much interested in athletics, especially baseball, hoping someday to make the big league.

I entered my senior year at Michigan fully intending to study law after receiving the degree of bachelor of arts. Three months before graduation I had a unique experience. One Sunday evening I was invited to attend a meeting in the YMCA building. About two hundred students were assembled there to hear Dr. Angell, the president of the university. His introductory words were these, "Young men, I have spoken to you on many occasions and on many subjects but there is one subject of supreme importance; namely, "Jesus Christ and our relationship to Him." He closed his message by saying, "O, what a great Christ we have." I went home that evening with those words ringing in my ears and shortly before midnight I dedicated my life to the Christian ministry.

In speaking about Jesus Christ and supplying our life and education with His spirit, I want to make three brief observations.

The first is that I wish to acknowledge very humbly and frankly that there is no one whose spirit so baffles and perplexes me. The New Testament narrative tells us that 1900 years ago God historically humanized Himself. "The Word became flesh and dwelt among us."

Theologians have tried to draw the mystic line which separates the human Jesus from the Divine Christ. The old credal statement refers to Him as, "very God of very God, of one substance with God; very man of very man, of one substance with man." But, what is substance?

Dr. Joseph Fort Newton will always be remembered as one of America's outstanding preachers. He ministered for several years to a church in Cedar Rapids, Iowa, and then was called to the City Temple in London where he had a most significant ministry. I heard him tell of a friend who asked Bertrand Russell two questions: "Do you fully understand Einstein's theory of relativity, and do you go with him all the way?" The great mathematician straightway replied, "I answer the first question in the negative and the second in the affirmative.

A student in the Divinity School of Harvard University of the class of 1913, wrote the following lines which have been set to music by Lowell Mason:

"I know not how that Bethlehem's Babe
could in the Godhead be. I only know the
Manger-Child has brought God's life to me."

Yes, this Christ baffles and perplexes me but even though my finite mind cannot understand His nature I am willing to accept Him and try and follow His spirit.

My second observation about Jesus Christ is that there is no one whose life and character and spirit so attract and allure me. We find it impossible to place Him in any human category for only once has the plant of humanity bloomed and blossomed into a perfect flower and that was the Rose of Sharon, the Lily of the Valley. In Him we have the realized ideal of humanity. He was always speaking the language of the heart which is the language of kindness and considerateness, of mercy and love. Is there any wonder that the multitudes were astonished at the gracious words which came from His lips?

Greek mythology tells us that when Iole was asked how she knew that Hercules was a god she replied, "Because I was satisfied with him the moment my eyes fell upon him. When I beheld Theseus and the other heroes, I desired that they might engage in a chariot race, or at least a foot race that I might see which of them was the doughtiest but when I beheld Hercules, he conquered when he walked or sat or whatever he did and so I knew that he was a god." Surely in a sense far more wonderful we become satisfied with Jesus Christ, the moment we behold the beauty of His character and spirit.

What a beautiful tribute of reverence and homage Charles Lamb paid to Him on that memorable day when he and a few friends were meeting in a coffee house in London. Presently their conversation turned toward the great men of the past. One said he would liked to have met and known Chaucer. Many other names were mentioned. Presently someone spoke of that name which is above every name. There was a moments pause and then Charles Lamb broke the silence by saying, "If William Shakespeare came into this room we would all stand up and do him reverence, but if Jesus Christ came here we would all kneel in worship."

The third and last observation I wish to make about Jesus Christ is that He is challenging us to belong to His Spiritual Kingdom and help Him build it upon this earth. Frederick of Prussia was greatly intent upon teaching his subjects, especially the youth and children, the lessons of patriotism. He would frequently visit the schools. One day he stood before a class of boys and girls, and holding up a stone, he asked them this question, "To what kingdom does this belong?" "To the mineral kingdom," was the prompt reply. Then he held up a leaf and asked the question, "To what kingdom does this belong?" "To the vegetable kingdom," was the ready response. Then with great pride he straightened himself up before those children and asked, "To what kingdom do I belong?" Immediately there came from the lips of a little girl in the rear of the room this answer, "Sir, you belong to the heavenly kingdom." It is said that Frederick of Prussia was moved to tears and replied that he wished all his subjects might belong to that kingdom.

That little girl has spoken a great truth. There is a kingdom greater than the mineral, the vegetable, the animal kingdom, and greater than all our civil kingdoms. When Francis G. Peabody addressed the students of Harvard University many years ago he urged them to cultivate "spiritual frontage" and to seek first the Kingdom of God and His righteousness. I believe that it is our great business to help build that kingdom and to give it that larger numerical and geographical expansion which is inherent in the very principles which it proclaims.

Several years ago Mrs. Paul Douglas, the wife of Senator DOUGLAS, was the Congresswoman at large from the State of Illinois. Her father, Lorado Taft, will always be remembered as one of America's foremost sculptors. One morning I said to Mrs. Douglas that I greatly admired her father and that I had recently come across a very significant exhortation which he gave in an address to a group of fellow sculptors. This is what he said, "What we sculptors need to do is to get back into our work the hint of eternity." Surely this is what we need to do in the greatest of all arts, the art of living. Let us go back and get into our education and life, with all its various vocations and avocations, the spirit of religion and the spirit of that eternal Christ whose name is above every name.

Richard Watson Gilder has written these lines which have always challenged and inspired me:

"If Jesus Christ is a man,
And only a man, I say
And to Him will I cleave alway.
And to Him will I cleave always.

"If Jesus Christ is a God
And the only God, I swear
I will follow Him through Heaven and hell
Through earth, the sea, and the air."

Warren G. Harding Council, No. 372, Junior Order United American Mechanics, Altoona, Pa., Celebrates 103d Anniversary of the Junior Order, May 19, 1956

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. VAN ZANDT. Mr. Speaker, on May 19, 1956, it was my privilege to address the 103d anniversary banquet of the Junior Order United American Mechanics, sponsored by the Warren G. Harding Council, No. 372, Altoona, Pa.

The address follows:

ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, AT THE 103D ANNIVERSARY BANQUET SPONSORED BY THE WARREN G. HARDING COUNCIL, NO. 372, JUNIOR ORDER UNITED AMERICAN MECHANICS, ALTOONA, PA., MAY 19, 1956

It is a privilege to be invited to deliver the principal address at this banquet commemorating the 103d anniversary of the Junior Order United American Mechanics.

One hundred and three years is a long time, but when you look back over the many accomplishments of the junior order in the field of Americanism it is only proper to say that the 103 years represent over a century of progress in the building of a better America.

It is an honor for me as a member of Pride of Mountain City Council, No. 472, to be asked to deliver the address on this occasion.

In choosing a subject, I have decided to talk to you of loyalty to one's country and an adequate national defense as twin weapons in the struggle against world comunism.

Before discussing the subject of my discourse, I wish to assure you that I have not changed my position as a strong supporter of the McCarran-Walter Immigration Act.

There are many in Congress who share my views. Thus, I am confident that the effort being made to nullify the present law will not succeed.

Loyalty to our country is one of the virtues of every red-blooded citizen prompting him to utter the prayerful exclamation, "Thank God I am an American."

It is typical of men and women who belong to such a patriotic organization as the Junior Order United American Mechanics to Promote Love of Country, and in so doing warn of the existing dangers at home and abroad.

At the same time we must stress the importance of constant vigilance against those forces seeking to destroy the American way of life.

As a Nation, this year we are celebrating the 250th birthday anniversary of the immortal Benjamin Franklin.

An inventor, statesman, and diplomat, Franklin was well aware of the problems which a young Nation was about to face.

He was a firm believer in national preparedness, which is so strongly advocated by the Junior Order.

It is well to recall what Benjamin Franklin had to say on this subject.

Speaking of preparedness, Poor Richard, as he was known in printing circles, had this sage advice—and I quote:

"Let us beware," said Franklin, "of being lulled into a dangerous security; and of being weakened by internal contentions and

divisions; of neglect in military exercises and discipline, and in providing stores of arms and munitions of war; for the expenses required to prevent a war are much lighter than those that will, if not prevented, be necessary to maintain it."

How right, Ben Franklin was—and is to this day.

Do we not all remember Pearl Harbor—and how difficult it was for us to get our war effort underway?

Today, we are in the atomic age—and time will work against us.

Preparedness, therefore, is a matter of top priority.

For years the Junior Order United American Mechanics has urged that greater attention should be given in our public schools to the teaching of American history—to let our children know exactly how hard-won were the liberties which we enjoy.

These youngsters should be made aware that they have an inheritance—that is priceless—and they should be training in their early days to be ready to take over that precious gift when they reach manhood and womanhood.

It was Franklin again who had these wise words to say in connection with our youth, and I quote:

"I think with you, that nothing is of more importance for the public welfare, than to form and train up youth in wisdom and virtue.

"Wise and good men are, in my opinion, the strength of the State far more than riches and arms."

Franklin was old and wise enough to know that if children are well trained in their heritage, they will be able to advance it through the arts and sciences and bring even greater glory to the Nation.

The Junior Order United American Mechanics is aware, too, of the evils of communism, and constantly has raised a loud voice about this menace to the welfare of our land.

With some other patriotic organizations, it was a voice in the wilderness because little heed was given until recent years, when communism reared its ugly head publicly by showing itself openly in parades and demonstrations.

The Junior Order had an answer for these public demonstrations and that answer was to emphasize the objectives of this patriotic group by urging greater love of country and loyalty to the Constitution of the United States.

The plea for an alert and educated citizenry must be heeded because it is the only solution to the problem of attacking and defeating subversive elements in our midst.

This positive expression of confidence in our way of life actually has caused public consternation in the ranks of the Communists—and, as a result, their public demonstrations have faded into obscurity.

But we are not fooled.

The Commies in this country have not disbanded—the threat of communism is still with us and at times becomes arrogant beyond belief.

Wasn't it Mr. Khrushchev who recently said, although he smiled while he said it, that "Communism would one day capture the imagination of the entire world"?

So we must be on guard.

We must continue to teach the American way of life as opposed to a life of slavery and degradation which communism brings.

We must make every American citizen awaken to his civic responsibility to combat this menace.

And we must urge our citizens to take full part in their own Government processes.

That is the message we have for our membership in commemoration of the 103d anniversary of the junior order.

Once more let us turn to wise and aged Ben Franklin, a man who was years ahead of his time in his thinking.

The words I quote now could have been uttered yesterday, since they fit so well into our international situation at this time.

Franklin had this to say on the question of world leadership—listen clearly as I quote:

"Europe is on our side of the question, as far as applause and good wishes can carry them—those who live under arbitrary power do nevertheless approve of liberty, and wish for it; they almost despair of recovering it in Europe; 'tis a common observation here, that our cause is the cause of all mankind, and that we are fighting for their liberty in defending our own."

Truer words were never spoken in Franklin's day and can be uttered again today.

We are without a doubt the hope of the world if a way of life in which we believe is to be preserved for ourselves and extended to other people.

So we must be vigilant.

We must question those who would foist upon us ideas such as are found in UNESCO education pamphlets, which urge that we rescind our citizenship and join a world organization.

We must guard against those who feel we should sacrifice much of our sovereignty in order to allay the fear of other nations.

None of this need be done.

What we must continue to try to do is to give assistance to those who need it most.

In giving that assistance, we must tell them where it came from, and why we, as American citizens, are able to share our good fortune with others.

If this story can be gotten across in foreign lands, we have no doubt that in time, the people in Communist countries and their satellites will rise in their own wrath and destroy that system before it wholly destroys their precious countries.

Each nation cherishes its own way of life just as much as we do.

No one wants to be dominated by a power whose language and customs it cannot understand.

But there can be a common denominator, where respect for each other will be paramount, and where by an exchange of the necessities of life, we can actually turn swords into plowshares.

Instead of fearing an atomic explosion, we can benefit by the use of nuclear power for the good of all people.

We know that we are in a year in which much will be heard in the way of political propaganda as our two great parties in the United States strive for power.

And though we hear charges and countercharges, we are not alarmed.

When the chips are down, Americans will unite as no other people in the world.

Franklin knew that in his day.

For late in life he said:

"Do not believe the reports you hear of our internal divisions. We are, I believe, as much united as any people ever were, and as firmly."

Ladies and gentlemen, as we observe this 103d anniversary of the junior order, let us take to heart the words of Benjamin Franklin.

No matter what one hears, we are a united people working for a better place for each of us in which to live and rear our families in peace.

But we must keep our guard up.

For it is only by constant vigilance on the part of such organizations as the Junior Order that we as a nation can protect the American form of government and thus preserve our cherished legacy of liberty and freedom purchased with the blood of American patriots.

Therefore, let us resolve to continue our efforts to keep the United States strong and free and thus help to guarantee for our children—life, liberty, and the pursuit of happiness which are their rightful heritage.

Congressman Brown Issues Eloquent Warning Against Court Dictatorship

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. DORN of South Carolina. Mr. Speaker, the Honorable PAUL BROWN is held in the highest esteem throughout South Carolina as well as Georgia. The following editorial from the Anderson Independent, Anderson, S. C., recognizes the able address made by Mr. BROWN recently on the floor of this House:

CONGRESSMAN BROWN ISSUES ELOQUENT WARNING AGAINST COURT DICTATORSHIP

Americans who have long regarded Supreme Court decisions as final were shocked last week to read that the present tribunal has ordered reopened a case in which it awarded $90,000 to an accident victim.

This is the latest in a series of unusual—to risk the understatement of the decade—decisions by the Court headed by President Eisenhower's Chief Justice Warren.

How the Court has succeeded in piling conflict upon confusion was eloquently expounded in the United States House of Representatives by Representative PAUL BROWN of Georgia's 10th District.

"Is it any wonder," Representative BROWN demanded, "that editorials are being written which refer to the Supreme Court as a third House, when the rights guaranteed the States under the Constitution are being ignored; the authority of Congress is being disregarded; judicial precedent is being cast aside; and language is being written into the Constitution by means of judicial interpretation?

"Is it any wonder that the decisions of the Supreme Court bring uncertainty and confusion as a substitute for the peace and good order which earlier courts felt obligated to preserve?

"The Constitution of the United States has served us well for more than 160 years, the wisdom and foresight of its framers remain unequaled in history, and it is my belief that it is no less imperative that we adhere strictly to the principles of the constitutional government today."

Congressman BROWN referred not only to the school integration decision which 2 years ago last week made the date May 17 infamous, but to a more recent decision in which it was held that State antisubversive statutes are no good and others in which arbitrary sociological conclusions supplant or change the letter of basic law as set forth in the Constitution.

The Georgia leader sees this new concept of the Supreme Court striking at the very heart of judicial interpretation and constitutional government in America."

He warns that "if the Supreme Court is to be consistent, this new theory of ignoring the meaning of words when written will have equal application to all other provisions of the Constitution, as well as legislation passed by the Congress."

Unless there is a reversal of this trend, there is danger that this Nation will find itself subjected to the dictatorship of nine men with our liberties buried under a mass of decisions cut to fit expediencies of the day rather than the sturdy pattern of constitutional law.

Congressman BROWN has rendered his State and Nation a real service by spotlighting with unerring reason and unanswerable logic the growing menace to the liberties of a free people.

Nationalization of Property in Bolivia

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. ANFUSO. Mr. Speaker, the Republic of Bolivia will be, as it has been for some years past, one of the chief beneficiaries of our Government's Mutual Aid program in South America.

Since Congress is currently considering this program for the coming fiscal year, I believe we should be extremely careful to see that the funds of the American taxpayers are used to help only those governments which respect and uphold international law.

Recently, several articles have appeared in the American press concerning Bolivia's nationalization policy. It seems that Bolivia is resorting to nationalization of property as an official government policy, thereby flagrantly disregarding its obligations to compensate United States and foreign stockholders when their properties in Bolivia are nationalized.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article on the subject by Mr. Edward Tomlinson, a veteran observer and corresponodent who has spent many years in Latin America. His article, which was published in the New York World-Telegram and Sun on April 28, 1956, reads as follows:

BOLIVIA LEARNS A LESSON IN TIN

(By Edward Tomlinson)

WASHINGTON, April 28.—President Victor Paz Estenssoro, of Bolivia, has just read off an important lesson in economics to nationalist politicians and leftist labor leaders in his own as well as in other countries of this hemisphere.

The Bolivian strongman, who took over the country by bloody revolution in 1952, expected to bring more gold, if not the golden age to the old Andean nation by confiscation of the giant tin industry. Four years and an empty treasury later, he admits that Government operation of the vast enterprise has been a failure.

President Paz not only declares, in effect, that nationalization of the mines has been financially disastrous, but that the mine laborers, chief supporters of his Government, are responsible for the fiasco. "They worked harder for the private owners," he says, "than they did for the Government."

LOAFED ON THE JOB

Few people ever work very hard for the Government in Latin America. Bolivian Government workers are some of the most efficient clock watchers in the world. It got them by political leaders insisting that the Government invade the field of private business enterprise.

Bolivian workers, of course, loafed on the job after the mines were nationalized. On the other hand, they didn't strike continually. They didn't carry on a consistent campaign of sabotage against the operators. They didn't organize riots and wreak vengeance upon foreign engineers and their helpless families, as they had been doing for years before the Government took over.

Even so, it is a little unfair to blame poor, illiterate Indians and cholos (half breeds) for the mistakes in policy and lack of technical and engineering ability of higher ups which brought misfortune to the country's number one enterprise. The workers listened to, and were pressured by these leaders into supporting the nationalization scheme.

The blame for what has happened rests squarely upon President Paz and his henchmen. He and they had preached confiscation for years. They embarked upon this latest Latin American economic misadventure in spite of the previous failure of nationalization and government operation of the oil industry.

Be it said to his credit, Dr. Paz tried to do something about the oil situation, although in a somewhat underhanded way. He has turned that industry back to private enterprise to operate, but not to those from whom it had been taken. Acknowledgment that nationalization of oil was a mistake did not include any thought of remuneration, or even open apology to those who originally spent millions to explore and discover that oil was there.

LEARNED LESSON

At any rate, in the closing weeks of his term of office, the Bolivian leader confesses he has learned that confiscation and nationalization of big private industry is a most unprofitable policy. His old companion in arms, Juan Lechin, big boss of the mine unions, has said nothing. It remains to be seen whether those who take office after Dr. Paz profit from his mistakes and his confession.

It also remains to be seen whether the nationalistic political and labor leaders in other Latin American republics learn anything from the Bolivian story. So far, little has been said about it in the Latin American press.

The Great Unfinished Business

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. UDALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from an address made by Adlai E. Stevenson in New York on April 25, 1956:

[From the Christian Science Monitor]

THE GREAT UNFINISHED BUSINESS

There can be no lasting freedom in America unless there is peace in the world. And there will be peace in the world only when we here in America prove that freedom means what we say it means.

We must show that freedom is the servant of the poor as well as the rich—for most of the world is poor; that it protects change—for most of the world is in revolution; that is it colorblind—for humanity knows no color lines.

We must prove that freedom contains that full measure of justice without which it could be freedom for the strong to oppress the weak.

I see freedom in the world today as the great life-giving river of which America is the source. It will be whatever we are, not more not less. So if we hope to make the principles of freedom meaningful in the world, we must first make sure they have mighty meaning for ourselves. We must—in our land, our own communities, and in our own hearts—live up to the values of individual freedom and individual right which are the basis of our American society.

Yet we must do this not just because it may exalt our leadership in the world, but, above all, for the sake of these values themselves—the values which give life and power to the great experiment in self-government to which we as a people have been so long committeed, and to which so many others in Asia and Africa now urgently aspire.

Our task is all the harder and the purity of our example all the more important because these people know little about these values of individual freedom and rights which lie at the root of free society and national independence. The achievement of equal rights for all American citizens is the great unfinished business before the United States.

This would be just as much the case had there been no Supreme Court decision on desegregation in the public schools. That decision was simply an expression of our steady movement toward genuine equality for all before the law; it expressed in a new field the old principle that the American heritage of liberty and opportunity is not to be confined to men, women, and children of a single race, a single religion, or a single color.

Yet the Supreme Court decision requires social change in some areas of our country, and all social change creates massive problems of adjustment. The Supreme Court wisely left it to the district courts to determine the measures of good-faith progress.

There remains, however, the abiding responsibility of the executive branch of the Government to do its part in meeting this most fateful internal problem and the rising tensions that have followed in its train.

The Presidency is, above all, a place of moral leadership. Yet in these months of crucial importance no leadership has been provided. The immense prestige and influence of the Office has been withheld from those who honestly seek to carry out the law in gathering storm and against rising resistance.

Refusing to rise to this great moral and constitutional crisis, the administration has hardly even acknowledged its gravity. It is the sworn responsibility of the President of this Nation to carry out the law of the land.

And I would point out that this Office is the one office in the democracy, apart from the courts, where the man who fills it represents all the people. Those in the Congress bear particular responsibilities to the citizens of the States they represent, and on what is in some ways a regional problem their views are natually divided.

Not so of the Presidency. Where the Nation is divided, there is special demand on him to unite and lead the people toward the common goal.

As President, if that were my privilege, I would work ceaselessly and with a sense of crucial urgency—with public officials, private groups, and educators—to meet this challenge in our life as a Nation and this threat to our national reputation.

I would act in the knowledge that law and order is the Executive's responsibility; and I would and will act, too, I pray, in the conviction that to play politics with the Court's decision and the basis rights of citizens and human beings is wicked.

Hon. Loring M. Black

SPEECH
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. KEOGH. Mr. Speaker, I was greatly saddened yesterday by the sudden passing of my good and old friend, Loring Black, and our former colleague

who served in the House from 1923 to 1935, as a Representative from Brooklyn.

Loring served with distinction in the House and was an active opponent of the prohibition law and its enforcement. He also sponsored much beneficial legislation on behalf of our veterans and was an early worker in the field of narcotics control. Loring was a gentle, kindly man, and I shall often recall the many pleasant hours I spent in his company. His was a friendship that I greatly treasured over the years, and I shall miss his keen sense of humor, his friendly visits and the many talks we had together. A gentle spirit has left us and we, his friends, are poorer for the loss, but we shall cherish his memory and hope that he now rests in peace.

Notice to Members

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. CELLER. Mr. Speaker, the House Judiciary Committee today voted out H. R. 1840, a bill to strengthen the Robinson-Patman Act and amend the antitrust law prohibiting price discrimination, which was introduced by the gentleman from Colorado, a member of the Judiciary Committee, Mr. BYRON G. ROGERS.

This bill is identical to H. R. 11, introduced by the gentleman from Texas, Mr. WRIGHT PATMAN, except that the ROGERS' bill eliminates the preamble termed "Declaration of purpose and policy."

Application is now being made for a rule to bring to the floor of the House the aforesaid bill, H. R. 1840.

The texts of both bills follow:

H. R. 1840

A bill to strengthen the Robinson-Patman Act and amend the antitrust law prohibiting price discrimination.

Be it enacted, etc., That subsection (b) of section 2 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914, as amended (15 U. S. C. 13 (b)), is hereby amended to read as follows:

"SEC. 2. (b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of rebutting the prima facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided, however*, That unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce it shall be a complete defense for a seller to show that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor."

H. R. 11

Declaration of purpose and policy

A bill to reaffirm the national public policy and the purpose of Congress in the laws against unlawful restraints and monopolies, commonly designated "antitrust" laws, which among other things prohibit price discrimination; to aid in intelligent, fair, and effective administration and enforcement thereof; and to strengthen the Robinson-Patman Anti-Price Discrimination Act and the protection which it affords to independent business, the Congress hereby reaffirms that the purpose of the antitrust laws in prohibiting price discriminations is to secure equality of opportunity of all persons to compete in trade or business and to preserve competition where it exists, to restore it where it is destroyed, and to permit it to spring up in new fields

Be it enacted, etc., That subsection (b) of section 2 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended (15 U. S. C. 13 (b)), is hereby amended to read as follows:

"Sec. 2. (b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of rebutting the prima facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided, however*, That unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce it shall be a complete defense for a seller to show that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor."

The Showdown on Foreign Aid

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 22, 1956

Mr. CASE of New Jersey. Mr. President, an informative article on foreign aid, written by Gould Lincoln, appeared in the Evening Star of Washington, D. C., on May 19. It dealt, in large degree, with a recent address by my colleague, the senior Senator from New Jersey [Mr. SMITH]. I hope that every Senator will find time to read this interesting article. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL
(By Gould Lincoln)
THE SHOWDOWN ON FOREIGN AID

As Congress approaches a showdown on foreign aid, Senator H. ALEXANDER SMITH, of New Jersey, veteran Republican member of the Senate Foreign Relations Committee, is emphasizing a basic and important reason for the continuance of nonmilitary aid to underdeveloped countries. It goes beyond the prevention of the spread of communism, although that still remains a primary objective.

Speaking recently to the New Jersey State Bar Association, Senator SMITH said:

"The nonmilitary foreign-assistance program must have a more human and more universal objective than merely the prevention of the spread of communism. Our primary nonmilitary objective should be as friendly partners to help fulfill the aspirations of the millions of people in the underdeveloped countries for freedom, independence, self-determination, and, of course, a higher standard of living."

The New Jersey Senator is firmly of the opinion that peoples of these underdeveloped countries, most of them in Asia and Africa, are eager to learn the know-how from America of real government of the people, by the people, and for the people.

He is convinced, too, that the peoples of these countries are eager to break away from the old imperialisms and colonialisms, and to be recognized as free and independent and without any form of external control. American aid, he insists, can be so given and administered as to convey the know-how of democratic self-government.

"If we can meet this objective," the Senator said, "the appeal of communism should disappear and should no longer be such a threat to our own future freedom and security.

"Stated in another way, our primary nonmilitary objective should be a human man-to-man contact with peoples who really wish to be free and who wish to know what brought freedom and liberty to the people of the United States."

Nonmilitary aid to these underdeveloped countries should also be designed particularly to improve the economic condition of their peoples, Senator SMITH believes. He warned that the gap between Western economic prosperity and that of two-thirds of the non-Communist world, which is underdeveloped, is steadily increasing. And, he added:

"Our own standards of living will advance only if we do our part in helping to advance standards of living in Asia, Africa, and Latin America." He said, too, that if this country accepts the opportunity now offered to help make men free it will pursue the one course that can lead to an eventual and lasting peace.

The House and Senate Foreign Relations Committees are both engaged in whipping into shape the necessary legislation authorizing foreign aid for fiscal 1957. President Eisenhower has asked for a total of approximately $4.9 billion, of which $3 billion is for military aid, and $1.9 billion for economic relief and technical assistance.

Economic aid for most of the West European countries is out, as stated by the President in his foreign aid message to Congress last March. Rehabilitation in these countries has progressed enormously under the foreign-aid program since the close of the last war.

The importance of the nonmilitary foreign aid program has been greatly increased by reason of the Soviet Union's new drive to gain prestige and friends through economic assistance, especially in these underdeveloped countries.

Notwithstanding this fact, strenuous efforts are being made in Congress in this election year to chop the authorization of funds for economic aid, as well as funds for military aid. It's a shortsighted operation.

Furthermore, an important recommendation by the President that Congress declare a policy under which long-term commitments for economic projects in underdeveloped areas of the world may be made has been seriously under fire.

The President recognizes that one Congress cannot bind a future Congress, and that appropriations must be made each year for any project. But he feels that some assurance should be given that economic projects, undertaken in these underdeveloped countries, will be pursued to completion, though it be only a moral assurance.

The House Foreign Affairs Committee, while refusing to accept the President's plan for a 10-year loan authority, went so far as to write into the bill a declaration that foreign aid should be continued as long as international communism remains a danger to the peace of the world and to security of the United States.

The foreign aid bill not only has to receive committee action, but also the action of the two Houses of Congress. Senator SMITH insists its passage is the most important immediate step Congress can take to assure a safe and more peaceful world.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, ———, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The American Institute for Foreign Trade

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. GOLDWATER. Mr. President, a few short miles north of the thriving city of Glendale, Ariz., is located America's most unique and at the same time one of her most valuable schools. Founded by the late Gen. Barton Yount, the American Institute for Foreign Trade has in the few short years of its existence made itself felt on the economics of this country and Latin America. This institution trains young men and women to fit into the economic life of foreign countries at the executive level; and while the graduates are to be found around the globe, they have concentrated in the Latin American countries. In order that my colleagues may have a better understanding of this school, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article from the Arizonian, a weekly newspaper of Scottsdale, Ariz.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Scottsdale (Ariz.) Arizonian of May 11, 1956]

AND THEN THE WORLD—STORY OF A UNIQUE CENTER OF LEARNING

In round numbers—and much more literally than figuratively speaking—Phoenix, Ariz., is the world's training center for foreign trade. In all probability, more of the American-born men who become the business leaders of trade centers around the world in the next few years, wil have trained specifically for their foreign careers at the American Institute for Foreign Trade than in any one other school anywhere.

And, partly because the Institute is only 8 years old, and partly because its function is highly specialized as compared with the traditional ivy-clad alma mater, we have constantly to be reminded that this world-recognized and tremendously important fountainhead in foreign trade education is virtually a local institution: the American Institute For Foreign Trade is located at Thunderbird Field No. 1, a dozen miles west and north of Phoenix near Glendale. Actually, several members of the school's distinguished board of directors are residents of Paradise Valley.

In a few words, the school is primarily for college graduates who have decided to make a career of business in a foreign country and want specific, concentrated training in the language, customs, culture, attitudes and intricacies of foreign commerce in the country or part of the world of their choice. A 1-year course leads to the degree of Bachelor of Foreign Trade; the less usual 2-year course to the degree of Master of Foreign Trade. There are also short, intensive "Key Man" courses for groups of young executives, whose companies have selected them for foreign posts.

The rest of the short-version story is in terms of placement of AIFT graduates. "We train for executive positions, not clerkships or secondary jobs," says President Carl A. Sauer with pardonable pride, considering the results obtained. "Our students enter the Institute knowing where they are going and with completely businesslike attitudes; they graduate ready for key positions with the largest corporations."

FIVE HUNDRED IN KEY POSITIONS

Director of Placement Donald A. Johnson will be happy to show you the card-indexed result—2000 graduates, 500 of them currently in top foreign posts with American and international business concerns around the world. A few of the rest, of course, have returned home or never did "go out"—but most of the balance are currently on the payrolls of companies who want them to have preliminary service in the home office or the American sales force before being established in Latin America, South America, Europe, Asia or Africa. Soon there will be a thousand AIFT alumni in the Who's Who of world business.

CANDIDATES INTERVIEWED

Throughout the school year, and especially during the spring term, executives and personnel directors of some of the country's largest corporations visit the AIFT campus at Thunderbird and interview students preparatory to employing them for berths in foreign trade. Students are also furnished with the needs and requirements of firms everywhere, and carry on extensive correspondence with them in search of the one best opportunity. More than half the students in each class are hired before they have graduated. The rest go in search of their jobs, armed with a unique credential—a BFT from AIFT.

FOUNDED ON DREAM

Behind the record of quick and dramatic growth of a significant institution with implications of worldwide influence is a dream, of course—the dream of its late founder, Gen. Barton K. Yount, who believed international understanding could best be served by training at home to know and respect customs and attitudes abroad before attemping to live and work abroad. There was also a stroke of good fortune when the fledgling school acquired Thunderbird Field No. 1, wartime pilot training center, as a gift from the United States Government with all of the buildings and facilities of that famous plant. The third ingredient, hard work, has related principally to the difficulties of private financing through gifts and bequests—the institute has no Government support whatever beyond the original gift of land and buildings.

BIG FIRMS EMPLOY GRADS

A partial roster of companies employing AIFT graduates tells the story: Goodyear Tire & Rubber, Otis Elevator, Columbia Pictures Corp., Socony-Vacuum, Sinclair Oil, First National City Bank of New York, The Texas Co., Firestone Tire & Rubber, Time-Life International, Underwood Corp., Sperry-Rand, International General Electric Co., Gibson Refrigerator, Sherwin-Williams, Sears, Roebuck & Co., International Petroleum, Procter & Gamble, Carnation Co., General Shoe Co., Ralston-Purina, Union Carbide & Carbon.

That is the record—the sort of report that tells forward-looking businessmen what they want to know about an operation that merits their close attention and support. It is the business end of a business institute.

THE CAMPUS STORY

But the American Institute for Foreign Trade is also a college of sorts—it is coeducational, it has its social life, its problems in discipline, its unique methods in teaching—and the story of the institute, worth many times the words the Arizonian can accord it, would be by no means complete with out a little of the story of campus life at AIFT.

AT AIFT WIVES JOIN HUSBANDS IN PREPPING FOR THEIR NEW LIVES ABROAD

There have been 90 women who have been graduated from the American Institute for Foreign Trade. Of these, a third have married classmates.

But the fascinating and intensely practical coeducational aspect of AIFT is the number of married couples, some of them with one or more children, who spend a school year at the increasingly famous training center for young executives who are to have their business careers abroad.

In most cases the wives are not enrolled as students, but they are encouraged to take full courses in language and area studies to prepare themselves to start even with their husbands in the business of building a life in a strange land. These courses are without additional cost for wives—only food and lodging come extra if a male student has a wife with him. There is also provision for children; a nursery on the campus with full nursing and medical care are good examples of the practical, businesslike attitude of the school toward its students and the down-to-earth business they are about.

Wife-conditioning for the sometimes difficult adjustment ahead as the couple takes on an assignment in foreign trade is particularly important in the concern of the school, according to President Carl A. Sauer.

"The No. 1 cause of a man's broken career in this field is the wife who cannot or will not adjust to circumstances in living out of the country," he says. "The firms which have hired our graduates have noticed that the turnover rate on the job is significantly lower than the general turnover rate for foreign work, and this is attributed in large measure to the attitude with which the wives of our graduates accompany their husbands overseas."

Sauer reminds visitors that each student—and his wife, if he is married—definitely expects to spend, not a few years, but the balance of his active career in some foreign country. That makes it doubly fascinating to watch the language classes and area study groups in which wives are as intent on learning as are their husbands. Another natural and helpful result is that couples who intend to live in Latin America or the Argentine or wherever, tend to live and work together on compus and to become mighty good friends because of their common interest in the strange new world for which they are fitting themselves.

The campus and its buildings would do credit to any school, and there is no lack of informal recreation ranging from tennis and swimming to dances and parties. But discipline is a minor issue, for AIFT students are more mature and settled in their purpose than most undergraduates, and their concentrated, purposeful preparation for the job directly ahead is an earnest, demanding business.

Economic View

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Economic View," by Harold B. Dorsey, which appeared in the May 21 issue of the Washington Post and Times Herald. This article is well worth reading, and I commend it to my fellow Members of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMIC VIEW

(By Harold B. Dorsey)

CREDIT POLICY NOT CAUSING SLUMP IN AUTOS

Last week the president of General Motors Corp. reduced his forecast of 1956 automobile production by 15 percent and seemed to place much of the blame for lower automobile sales on the restrictive credit policies of the Federal Reserve Board. Certain facts suggest that he picked the wrong "whipping boy": the real culprit may be the automobile industry itself, and/or the fickle public.

Personal disposable income (after taxes) in the first quarter of this year showed a $16.1 billion (6.2 percent) increase over the first quarter of last year, but an analysis of personal expenditures shows that, either by choice or by necessity, this increase in purchasing power was channeled to uses other than the purchase of automobiles.

In the first place, it is difficult to see how there could be any quarrel with a $16 billion increase in personal purchasing power, whether or not one chooses to criticize credit policies. An increase of that size is one of the best annual gains on record. Nor do we see any reason to believe that credit policies had much influence on the public's use of this increased purchasing power.

It so happened that the public decided that it wanted to spend $4.3 billion (annual rate) more for food and beverages in the first quarter of this year than it did a year earlier. So 27 percent of the splendid increase in purchasing power was absorbed for these items.

Another $6.1 billion, or about 38 percent of the year-to-year increase in disposable income, was absorbed by higher expenditures for services. Since this latter item includes a theoretical "rental value of owner-occupied homes," it may be said that the figure partially reflects increased carrying charges on residential mortgages, as well as expenditures for transportation, amusement, utilities, and other service-type expenditures.

An additional $4 billion, or about 25 percent of the $16 billion year-to-year increase in purchasing power, had to go for higher installment debt repayments. Last year, when the automobile industry was conducting the aggressive sales campaign that caused installment debt to rise very sharply, it was difficult to focus attention on the facts: (1) that the installment debt had to be repaid; (2) that some of the buying of cars then represented the spending of future earning power; and (3) that the abnormally high sales were borrowing from future sales.

The $14 billion year-to-year increase for these three items combined, namely, expenditures for food, for services, and for installment debt repayments, thus absorbed in the first quarter 90 percent of the $16 billion increase in purchasing power. But the public also chose to increase its expenditures for nondurable goods other than food by $3.2 billion. So, by choice or necessity the public decided to channel all of the increase in purchasing power to purposes other than buying automobiles. As a result the amount of purchasing power remaining for making downpayments on automobiles and houses, and for adding to liquid savings, was at the annual rate of $17.8 billion in the first quarter of this year, which was actually $1.5 billion less than it was a year earlier.

But why blame it on credit policies? If these policies had been able to restrict the sharp expansion of installment debt last year, repayments of that debt would not have been absorbing such a large proportion of purchasing power this year. There would seem to be more validity for criticizing the fact that credit policies were not restrictive enough last year than there is in criticizing the restrictive policies that have been in effect this year.

As a matter of fact, new installment debt was being granted at the annual rate of $37.6 billion in the first quarter of this year, which is $2.5 billion higher than it was in the first quarter of last year. When this fact is considered in conjunction with the lower level of automobile sales, it would appear that the latter are dependent to a greater degree on installment financing this year than they were last year.

Furthermore, the seasonally adjusted annual rate at which new installment debt was being granted in the first quarter was still $3.3 billion in excess of the rate of repayment of such debt, indicating that the repayment requirements are still in a rising trend. These charges against purchasing power, at the annual rate of $34.3 billion in the first quarter, were absorbing about one-eighth of personal purchasing power.

These statistics strongly suggest that the real explanation for lower automobile sales this year is to be found in the facts that: (1) the industry's sales policies last year were too aggressive and thereby temporarily saturated the market; and (2) the fickle public decided it would rather spend a larger portion of its purchasing power for food and other nondurable goods, and for services.

[Billion dollars: Annual rate]

	1947–49 average	1953	1st quarter, 1955	2d quarter, 1955	3d quarter, 1955	4th quarter, 1955	1st quarter, 1956
Disposable personal income	$181.6	$250.4	$261.0	$267.1	$271.7	$276.0	$277.1
Expenditures for:							
Food and beverage	$56.0	$71.9	$74.0	$75.9	$77.5	$78.3	[1] $78.3
Services	$56.0	$81.8	$89.0	$90.2	$91.8	$93.6	$95.1
Installment debt repayment	$13.0	$26.8	$30.3	$31.2	$32.1	$33.4	$34.3
Subtotal	$125.0	$180.5	$193.3	$197.3	$201.4	$205.3	$207.7
Percent of disposable income	68.8	72.1	74.1	73.9	74.1	74.4	75.0
Balance of disposable income	$56.6	$69.9	$67.7	$69.8	$70.3	$70.7	$69.4
Expenditures for nondurables other than food and beverage	$40.2	$47.0	$48.4	$49.4	$49.5	$50.5	$51.6
Balance of disposable income	$16.4	$22.9	$19.3	$20.4	$20.8	$20.2	$17.8
Percent of disposable income	9.0	9.1	7.4	7.6	7.7	7.3	6.4
New installment debt granted	$15.4	$30.3	$35.1	$37.2	$38.5	$37.8	$37.6

[1] Partly estimated.

Friendship International Airport

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. BEALL. Mr. President, the Capital's air traffic situation is becoming more critical every day, and there is general agreement that something should be done immediately to lessen the dangers which surround the overcrowded facilities at Washington National Airport. The major controversy in the matter is based on varying opinions as to the best remedy. Many of us who have studied the problem closely feel positive that the prompt use of Friendship International Airport is the only logical answer. There are others, however, who advocate that more than $50 million be spent to build a new airfield at Burke, Va., since they say the construction of such a facility would reportedly save about 15 minutes of ground-travel time for Washington passengers.

Several days ago, about 250 Washington-bound officials of the Civil Air Patrol—persons with a wide knowledge of airport facilities—were directed to land their planes at Friendship, because of the dangerous congestion at National Airport. They were then brought into this city via the Baltimore-Washington Expressway, and immediately reported that they found the trip shorter and easier than in most cities.

Among the numerous newspaper accounts which mentioned the incident was an editorial in the May 21, 1956, edition of the Baltimore News-Post. I ask unanimous consent that it be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BREAK FOR FRIENDSHIP

For a day, at least, Friendship Airport, stepchild of Washington officialdom, yesterday managed to punch a chink in the armor of Washington National Airport, fair-haired boy of these same officials.

Because of the dangerous congestion at Washington, 58 Air Force planes started flights into Friendship to bring Civil Air Patrol officials from all States to their annual meeting in Washington.

These officials, numbering about 250, were being transported from Friendship to Washington by bus without hitch and with little more expenditure of time than would have been entailed by use of Washington National port.

At the same time, about 1,000 Baltimore schoolteachers visited Friendship for Eastern Airlines' "Educators' Airlift" and thousands of other visitors viewed late-model Air Force and Navy planes on display there.

These events confirming the availability of Friendship for large-scale services, are provisionally gratifying, but they reflect only a temporary crisis at Washington. The CAP flights were just a crumb that fell from Washington's table.

The Baltimore area is not satisfied with such crumbs. It deserves and demands full

status as a regional airport for both Baltimore and Washington.

The brief new demonstration of Friendship's fine, ample facilities and its availability did, however, serve a purpose as a strong argument against the revived project to build a $50-million-plus supplemental Washington airport at Burke, Va.

Six members of the Interstate and Foreign Commerce Committee of the Senate have suggested that while Burke is being built the overflow from Washington Airport should be diverted to Friendship.

To our mind the events of this week-end pile up evidence that the Burke project should not be built at all—that it would constitute an unjustifiable waste of the taxpayers' money, at least until the full potentialities of Friendship shall have been absorbed.

The Soil-Bank Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. NEUBERGER. Mr. President, soil-bank provisions in the Agriculture bill passed Friday by the Senate have been the subject of many letters received from Oregon farmers in recent weeks. This past week there came to my desk a letter which spells out in detail how George S. Zimmerman, long a farmer in Yamhill County, plans to incorporate the soil-bank provisions into his farm plan. Mr. Zimmerman shows the true feeling of a conservationist. He is a man who believes that the acres he farms are lands placed in his trust to hand on to coming generations. Farms will be preserved from the heavy toll of erosion, noxious weeds, and soil depletion when tended by men dedicated to their stewardship of the soil.

Mr. President, I ask unanimous consent that Mr. Zimmerman's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GEORGE S. ZIMMERMAN GRAIN CO., INC.,
Yamhill, Oreg., May 15, 1956.

Hon. RICHARD NEUBERGER,
United States Senate Office Building,
Washington, D. C.

DEAR SENATOR: This is written to show you how a good soil bank will work on own farm to our advantage. My son-in-law and I operate a 620-acre farm in Yamhill County, which includes some leased acreage. We believe this farm to be pretty typical of the grain and stock farms found in this part of the Willamette Valley.

Like most of the valley farms we have Canadian thistle, morning glory, wild radish, and a little wild garlic. Part of this land needs additional drainage; the open ditches should be cleared out and their banks gently sloped. Soil needs additional liming.

We are definitely planning on a soil bank this year as you will see from the following steps already taken: Our 100-acre wheat allotment was voluntarily cut to 50 acres. Three acres have been put in permanent pasture. Forty-seven acres is at present in summer fallow with no crop this year. We are concentrating on the killing of Canadian thistle and other weeds, doing a thorough job because there is no crop on the land to interfere. We will also put in more tile and clean and slope open ditches properly, distributing surplus earth to best location. We will also lime this acreage and spread manure from livestock barns during next few weeks.

By systematically following this procedure on different fields for next 10 years, we can have a farm free from noxious weeds, with adequate drainage, well limed, giving us greater fertility.

This will be a better heritage for our children and grandchildren than money in the bank. Let us have some real action on the soil bank program immediately, so we may be adequately compensated for our efforts in preserving soil fertility for future generations. Please do not fail us.

Yours sincerely,
GEORGE S. ZIMMERMAN.

Wisconsin Honors Leo Crowley

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. WILEY. Mr. President, a week ago there was honored in the capital of my State, Madison, a hometown boy who had truly made good—an outstanding son of the Badger State and a truly great American. I refer to the Honorable Leo T. Crowley, chairman of the boards of the Milwaukee Road, as well as of the Wisconsin Public Service Corp.

A most noteworthy group of leading Wisconsinites was on hand to pay tribute to Mr. Crowley, who has held a great many posts of distinction in our Government, as well as in private life.

Leo Crowley is not of my political party, but he is certainly of the breed of Wisconsinites of which all Americans and all the inhabitants of my State can well be proud.

I send to the desk the text of an article which was published in Thursday's issue of the Wisconsin State Journal describing the festivities in his honor. I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HONORED AT DINNER, CROWLEY RECALLS FDR WARNING ON RUSS

(By Lew Roberts)

A few days before he died, Franklin D. Roosevelt advised against giving Russia any undue economic advantage, Leo T. Crowley said Wednesday night.

Crowley—the Madison boy who has sat in the halls of the mighty—was acclaimed at a testimonial dinner at Hotel Loraine here by 750 friends and business associates.

Crowley, chairman of the boards of the Milwaukee Road and the Wisconsin Public Service Corp., was accorded two standing ovations by an audience which included the justices of the Wisconsin Supreme Court and other leading officials of government and business.

Crowley's comments on foreign aid to Russia came after he was commended by the main speaker of the evening, Thomas E. Coleman, president of Madison-Kipp Corp., and a longtime leader in Wisconsin and national Republican circles.

The 67-year-old Crowley was in the limelight of the Franklin D. Roosevelt administration as one of the most influential men in Washington for 13 years.

Coleman praised Crowley for his work in writing the Federal Deposit Insurance Act and for holding to his commitments as head of lend-lease operations during World War II that lend-lease not be extended after the war.

"We handled $45 billion in lend-lease funds and we committed ourselves that it was a war measure, not to be extended to the post-war period," Crowley said when he spoke after Coleman.

"The last Friday night before President Roosevelt died I asked him after a cabinet meeting about lend-lease," Crowley said. "I told him the war was coming to an end and we must be sure to cut it off."

Crowley quoted the late President as responding:

"That's right, Leo. I want to do that. We must carry out our commitments but we must not give Russia an undue economic advantage. I have yet to get the first compromise out of Stalin, and I've been insulted by him."

Coleman said that one of Crowley's most important contributions "was that he thought perfectly straight and acted in a straight line when there were so many people down there (Washington) who were confused."

Harry Stuhldreher, former University of Wisconsin football coach and now a United States Steel executive, set the tempo with the comment that "everything Leo's ever done has been done for somebody else." Stuhldreher was toastmaster for the dinner.

Oscar Rennebohm, former governor and a member of the university board of regents, said that Crowley has shown the qualities that Wisconsin "is spending millions to try to instill in our students."

J. P. Kiley, president of the Milwaukee Road, credited Crowley with revolutionizing operations of the railroad since he joined it in 1945.

"Leo will never let me do anything around Madison unless it's going to redound to Madison's benefit," Kiley said. "Not that I'd want to."

James R. Durfee, Chairman of the Civil Aeronautics Board, said he was speaking as chairman emeritus of the Wisconsin Public Service Commisison in reminding the audience of the saying that public office is a public trust.

"There is a new concept now—that corporate office is a public trust," Durfee said. "You, Leo, exemplify that new concept."

Lt. Gov. Warren P. Knowles called Crowley "one of our most illustrous native sons" and gave him temporary custody of a loving cup which will be in annual custody of the president of the Madison Transportation Club, sponsors of the banquet.

A memory book signed by the guests at the dinner was presented to Crowley by Vern S. Bell, president of Bell & Farrell, Inc., a club member.

Elmer Layden, Chicago transportation executive and Notre Dame four horseman, who spoke at the first annual meeting of the Madison Transportation Club 6 years ago, gave Crowley an honorary membership in the club.

The program was opened by M. Lee O'Brien, president of the club.

Coleman was applauded when he suggested removal of Federal estate taxes which amount to $850 million a year. He said this tax was strangling the small-business man in Ameirca, while the United States was supporting foreign economies to the tune of billions.

Conservation Award to Nelson Brothers, of Morrow County, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. NEUBERGER. Mr. President, a clear pattern, I believe, is developing among America's leading farmers. They invariably seem to set an example for their neighbors in their adherence to the most progressive farm practices. They will not tolerate weeds, attacking them on every square foot of land, with a "massive retaliation" made possible by modern chemistry. Contour tillage, trashy fallow, seeded right-of-ways, scientific pasturage, crop rotation—these are terms one uses in describing a modern, progressive farm operation.

If we follow the modern farmer away from his acres we discover him using his time away from home participating in the community life—as master of the Grange, president of the Farm Bureau, chairman of the school board, or exalted ruler of the Elks.

Usually he has been to college and his wife, after winning prizes for her pickles at the county fair, may rush off to New York or Washington for a national AAUW convention.

I say these things, Mr. President, after reading the story written by Mrs. Tom Wilson, of Heppner, Oreg., reporting in the Pendleton East Oregonian of May 18, 1956, the award to the Nelson brothers, Alfred and Norman, of Lexington, Oreg., of the title "Conservation Men of the Year."

I ask unanimous consent, Mr. President, for the inclusion of Mrs. Wilson's report in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NELSON BROTHERS CHOSEN FOR CONSERVATION AWARD

(By Mrs. Tom Wilson)

HEPPNER. — Stubble mulching, sodded waterways, contour seeding, and grass rotations are among the conservation practices of Nelson brothers, which won for them the Morrow County "Conservation Men of the Year" award, announced Tuesday night at the Morrow County Wheatgrowers Association annual spring meeting.

Norman and Alfred H. Nelson, Jr., started stubble mulching on their 3,600-acre ranch 6 miles north of Lexington in 1934, and since 1948 have used only subsurface tillage with spikes to control their soil from wind and water erosion. An average of 1,600 acres is cropped yearly.

Firm believers in the benefit of grass rotations with wheat for improving soil structure, Nelson brothers have had as much as 400 acres in grass at one time and at present have 160 acres in grass. In 1950, they began nitrogen fertilizer application to augment soil fertility.

SEVERAL GRASSES USED

Grasses used in 20 acres of sodded waterways, seeded grass pastures and over 6 miles of field borders, ditches, and slopes are crested wheat, bulbous bluegrass, pubescent wheatgrass and sheep fescue. In addition they have seeded crested wheatgrass on about 2 miles of highway rights-of-way adjoining their property as a weed-control measure.

Listing the control of annual weeds as one of the biggest financial gains for wheatgrowers, Nelson brothers began working with the Morrow County agent, N. C. Anderson, on the program in 1948. Liquid spray has been applied yearly since the initiatory program of dusting with 2,4–D the first 2 years.

Early fall seeding when moisture permits is followed by the Nelsons who seed out field corners first and practice contour tillage with as much rough, trashy fallow as possible.

With their wheat operation Nelson brothers run 20 head of Herefords on over 200 acres of native grass and crested wheatgrass pastures and stubble. Registered bulls are used and a regular testing program followed. Farm buildings are in top shape and a complete ranch shop is maintained.

About one-third of the ranch is owned by Nelson Bros. and the remainder leased from their father, A. H. Nelson, Sr., who was born in Sweden and began operation of the ranch in 1913. Norman and Fred Nelson, who have worked on the ranch all their lives, began their partnership in the thirties and assumed full-time operation in 1946. They give credit to their father for his example in the practical and progressive care of the land. Nelson, Sr., was one of the sponsors of the Lexington Blow Control District of which Fred, Jr., is presently secretary. Mr. and Mrs. Nelson, Sr., retired in 1938 and now live at Oak Grove, Oreg.

ACTIVE IN WHEAT LEAGUE

Both brothers are active in farm organizations including the Oregon Wheat League, Morrow County Cattle Growers Association, Farm Bureau, and Lexington Grange, of which both are past masters. Norman Nelson is county agricultural and stabilization committee chairman, a member of the Wranglers Riding Club, and the Elks. Fred Nelson is a member of the Ione School Board, a 4–H leader, and member of the South Morrow County 4–H Council, and the Masons. Both attended Oregon State College.

In addition they are cooperators in the Heppner soil conservation district and expressed appreciation for assistance from both the district and the county extension service.

Mr. and Mrs. Norman Nelson have 2 children, Charles, 6, and Kristin, 4. Mr. and Mrs. Fred Nelson are the parents of 3, Kenneth, 12, Karen, 7, and Keith, 5.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. IVES. Mr. President, on the occasion of Polish Constitution Day, May 3, I was absent from the Senate because of illness. I had intended to make a statement to the Senate on that day, and I regret that I was unable to do it.

I ask unanimous consent that the statement to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR IVES

On this 165th anniversary of the Polish Constitution, lovers of freedom can feel new optimism that the chains binding Poland to the Communist tyranny will be broken in our time.

One cause for optimism is the debunking of Stalin by the Communist leadership of Russia. Does this mean that the slavemasters are aware of their monstrous crimes? Do they fear the wrath of the subjected peoples and seek to divert it to the dead leader? There is room for hope.

Another cause for optimism is the assertion by the Communist premier of Poland reecntly that there is to be more democracy in Poland, that the parliament there is going to be allowed more scope for debate and criticism. Here, again, there is room for hope.

The Polish Constitution of May 3, 1791, was a splendid document, closely paralleling our own Constitution—then 2 years old. It is one of the tragedies of history that the brave Polish people have been able to live only a few years under their noble charter of liberty.

We in the free world hope and pray that freedom of the type embodied in the Polish Constitution of 1791 will come again to the people of Poland.

With steadfast resolve on the part of liberty-loving Poles inside and outside of their beleaguered homeland, and with the unrelenting support of free peoples elsewhere, Poland can and will be restored to the ranks of a democracy.

Potential Hazard in Serving Liquor on Planes in Flight

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Christian Science Monitor on May 11, 1956, entitled "Follow the Leader to Tragedy?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOLLOW THE LEADER TO TRAGEDY?

Again airplane pilots, stewards, and stewardesses have spoken out against the potential hazard implicit in serving liquor on planes in flight. Again 2 bills—1 in the Senate and 1 in the House—are pending which would forbid interstate advertising of liquor.

The flight personnel are talking about the bald risk of having themselves and their charges imprisoned thousands of feet above the ground with one or several drunken passengers. Senator LANGER and Representative SILER are talking about the national risk of continuing to expose youth and susceptible adults to the massed forces of modern advertising importuning them to start drinking or to drink more.

The public concern that eventually will compel the airlines to take liquor off their planes is part of the same public concern that eventually will bring about a policing of liquor advertising. The airlines and the liquor industry both feel that concern.

The airlines suggest that the stewards and stewardesses really are less interested in safety than they are in extra pay for doubling as barmaids. If so, then why do the pilots, who are not called upon to be bartenders, also protest?

The airlines argue that competition forces them to serve liquor to stay in business. Aside from the obvious question as to how, then, do the 3 major airlines which don't

serve liquor stay in business, 1 is compelled to ask: Must the other 7 play follow the leader with competition until somebody goes over the brink? Until, to quote the president of the Airline Stewards and Stewardesses Association, "we have some great liquor-caused plane tragedy"?

The Los Angeles Temple of the Church of Jesus Christ of Latter-Day Saints

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to a concurrent resolution passed by the California State Legislature in our community. We are proud to honor the new Los Angeles Temple of the Church of Jesus Christ of Latter-day Saints. A great many of these fine Americans live and work in the community I represent in Congress. I want to join with many others in paying tribute to their daily achievements and their contribution to our wonderful America.

ASSEMBLY CONCURRENT RESOLUTION RELATIVE TO THE LOS ANGELES TEMPLE OF THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS

Whereas the people of the State of California have recently witnessed the completion and dedication of a beautiful and majestic edifice of worship and service—the Los Angeles Temple of the Church of Jesus Christ of Latter-day Saints; and

Whereas this notable achievement will be an impressive reminder of the part played by the heroic Mormon people toward the exploration and colonization of California in the midyears of the 19th century; and

Whereas the first contribution came when the good ship *Brooklyn*, under command of Samuel Brannan, arrived at San Francisco, July 31, 1846, bringing 230 people, many of whom figured notably in the early history of the bay region; and

Whereas the second contribution was the Mormon Battalion, a body of 500 men enlisted at Council Bluffs, Iowa, as United States Infantry, under orders to explore and chart a highway for transcontinental traffic between Santa Fe and San Diego. This body of men served as military patrol at San Diego and Cajon Pass. In Los Angeles they built Fort Moore and assisted in raising the United States flag, July 4, 1847. This marked the beginning of California-United States history; and

Whereas the third contribution was the colonization of San Bernardino in 1851 by a group of 437 people who made their way from Utah in 150 wagons. They became the founders of that beautiful city; and

Whereas in the past 80 years approximately 150,000 of these intelligent and enterprising people have settled in California and have made notable contributions to the progress and prosperity of this State in business, finance, manufacture, agriculture and industry, as well as in the cultural fields of literature, music, entertainment and education; and

Whereas in this same period of time these devout and progressive people have erected more than 200 places of worship in the communities of California—chapels, recreation halls, auditoriums and welfare centers: Now, therefore, be it

Resolved by the Assembly of the State of California (the Senate thereof concurring), That the Legislature of the State of California convey to the officials and members of the Church of Jesus Christ of Latter-day Saints the congratulations of the State of California upon the completion and dedication of the great temple in Los Angeles, and commend the church and its people upon the contributions made to the progress of the Commonwealth of California; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit suitably prepared copies of this resolution to President Daniel O. McKay at the general headquarters of the Church of Jesus Christ of Latter-day Saints in Salt Lake City, Utah, to the Los Angeles Temple of the Church of Jesus Christ of the Latter-day Saints, and to the Honorable Hugh C. Smith, 1021 Zelzah Avenue, Granada Hills.

Foreign Aid Is No Sacred Cow

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY.
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. HAND. Mr. Speaker, in connection with the current proposals for a complete reexamination of our foreign-aid program, I ask leave to call to the attention of the House a recent editorial in the Atlantic City Press entitled "Time for Stock Taking," which I think very well expresses the need for a complete review of the program. The editorial follows:

TIME FOR STOCKTAKING

The idea is growing in important quarters that a thoroughgoing review of this country's foreign-aid program is much in order. It makes much sense, since we have not had one since 1947.

President Eisenhower favors review by a high-level commission free of partisan leanings. Chairman WALTER GEORGE, of the Senate Foreign Relations Committee, earlier had advocated a similar study and his suggestion gained the evident approval of the members of his committee.

A full study of foreign aid, preferably by an independent group not directly affiliated with Government, would seem to serve significant purpose.

First of all, even assuming that those in the administration who now prepare foreign aid proposals are exercising utmost care, they are too close to the matter to see it with any detachment.

The program requires the dispassionate look of the outsider.

Back in 1947, when the Marshall plan was just shaping up, the Nation got such a study.

One group, nonofficial, considered aid from the viewpoint of our capabilities. Another, under then Representative Christian Herter, of Massachusetts, examined it from the standpoint of the actual needs of our foreign friends.

From that time on we have been advancing foreign assistance, either economic or military, virtually without interruption. The emphasis has shifted from Europe to Asia and from economic to military, but the program has gone on.

It is no reflection on those who annually frame new aid plans to suggest that a certain haphazard, unsystematic element may have crept into a program that is now nearly 10 years old.

We need to be sure that in 1956, as in 1947, we are spending our billions wisely in terms of both foreign needs and our own ability to bear the load.

We need to be sure, too, that if the program is going to go on and on it will do so because of clearly understood purpose associated with high Government policy.

Fears have increased over the years that the program is running to some extent on sheer momentum.

Some will say that a review of foreign aid would be designed simply to afford excuse for cutting it down.

It is known, for instance, that Senator GEORGE is in political difficulty in his native Georgia from former Gov. Herman Talmadge, a rival who is shooting at foreign aid giveaways.

We can acknowledge that reexaminations of foreign aid often are urged by its opponents (which GEORGE never has been). But we cannot for that reason say that an impartial, high-minded study of the question is either unnecessary or unwise.

Foreign aid is no sacred cow.

If it is necessary to the safety of this Nation and its friends, there is no doubt it will go on. Still, it is completely reasonable to seek an independent check upon it.

Vice President Nixon

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. YOUNGER. Mr. Speaker, just to prove the assistance which Vice President NIXON is giving to the President, I wish to have inserted in the RECORD the following article by Andrew Tully, which appeared in the Washington Daily News of Tuesday, May 22, 1956.

When it comes to social duties out in the blazing sun on the White House lawn, President Eisenhower can feel lucky he's got Dick and Pat Nixon in his official—and political—family.

The President and Mrs. Eisenhower gave their annual lawn party for several hundred disabled veterans yesterday afternoon and the Nixons saved the day. They did it merely by doing their job, while most of the other big shots shirked theirs.

At these outings, Ike and Mamie stand under a marquee outside the White House balcony and shake hands with the veterans as they file by. Then the vets disperse onto the south lawn where they are served ice cream, cakes and punch and, theoretically, are entertained by members of the Cabinet, military chieftains and the White House staff.

LONELY

But until the Vice President and Mrs. Nixon showed up, the vets were pretty lonely. Sherman Adams, assistant to the President, and Mrs. John Foster Dulles, wife of the Secretary of State, spread themselves thin chatting with the guests, but the other big names seemed to have urgent business among themselves. Generally under generous shade trees.

They were all genial enough, but they seldom ventured from their own little groups for more than a quick handshake.

But then the Nixons arrived and the veterans started to have some fun. While other official ladies stood prettily around the fringes, Pat Nixon grabbed a tray and started passing around punch.

TOAST

Several times she had a few sips from a cup herself to toast a wounded soldier or sailor. She posed for a dozen separate snapshots. She looked at pictures of wives and girl friends.

Meanwhile the Vice President seemed to be all over the place. He'd spend a couple of minutes with one group of servicemen, leave them laughing, then bust in, unannounced, on another covey. He traded statistics and historical facts with them on their home towns, quoted baseball batting averages and voted with the majority on climatic peculiarities of various sections of the world.

RECIPE

Once, chatting with Alexander Logan, of Kew Gardens, N. Y., the Vice President offered a recipe for chili. Joe Bulloch, an old-timer from the Old Soldiers' Home here via Anniston, Ala., told the Vice President the Republicans would win this fall "but jest by a hair." Mr. NIXON grinned a political grin and regretted that "I can't talk politics today."

The Nixons looked tired when the shindig finally broke up—tired and hot. After all, they'd worked pretty hard. But they'd done a swell job of turning a hot afternoon in the sun into a pretty good party.

The Importance of Small Business in Our National Economy

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. BETTS. Mr. Speaker, the importance of small business in our national economy should be of continuing interest to all of us. Many definitions have been given of "small business," but my particular interest, for the moment, is directed to the millions of independently owned and operated small local enterprises found in every community throughout the land.

I am vitally interested in this subject because of my conviction that small, independent business is essential to our free enterprise economy. The Federal Government's function should be to provide a healthful climate wherein our people will be given incentive to take the risks which go with commercial ventures.

Many of us were appalled a few years ago when the Federal Government attempted to seize the steel industry. But it would be next to impossible for a grasping National Government to seize our millions of small enterprises. They are a bulwark in the people's defense against Government domination of free men and private property.

Mr. Speaker, most of my colleagues recognize the big part played by small business in the growth of our country. Several proposals are now before the Congress which would provide varying degrees of tax relief to small corporations. It is my feeling that our present tax laws do not make sufficient allowances for the small unincorporated business operator to plow his profits back into his business. This is especially noticeable in the retail field.

Furthermore, Mr. Speaker, many small concerns can ill afford the heavy overhead expense made necessary by the numerous tax records required today. I am gratified to note that a study has been proposed to consider the impact of Federal taxes on individual taxpayers, small business, and the national economy.

I have asked a representative group of my small, independent business constituents to give me their views on these matters so that I may report more fully to the Congress the grassroots thinking on this important subject.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I submit the following resolution:

RESOLUTION

At a mass meeting commemorating the adoption of the Polish Constitution of the 3d day of May, held at the Polish Union Hall, 761 Fillmore Avenue in the city of Buffalo, N. Y., the following resolution was unanimously adopted:

"Whereas the year 1956 marks the 165th year of the adoption of the Polish Constitution of May 3, 1791, which document was the most liberal and the most democratic constitution of its day; and

"Whereas the Republic of Poland has been deprived of her political independence and has suffered the loss of approximately one-half of her eastern territory and 13 million of her citizens having been unjustly and arbitrarily absorbed by the brutal action of the Soviet Union and contrary to international law; and

"Whereas the Soviet Union is at the present time in total and in complete domination of what remains of the Republic of Poland with her Red army and the puppet Red government; and

"Whereas these unfortunate events that followed the end of World War II were conceived and agreed upon at the now infamous conferences of the Big Three at Teheran and Yalta, from which it appears that because of the temporary political expediency, democratic principles were forgotten and solemn pledges of the Atlantic Charter were broken.

"Whereas the present western boundaries of Poland on the Oder and Nisse Rivers have been historically Polish territory through the ages; and

"Whereas the present leaders of the Soviet Union have allegedly repudiated some of the dastardly actions and crimes against humanity of their later leader Stalin, having branded him a murderer and a disgrace to the human race; and

"Whereas the Red Polish Ambassador in the United States, Romuald Spasowski, and his agents have been systematically pressuring Polish refugees who found sanctuary in this country to return behind the Iron Curtain; and

"Whereas communism continues to threaten our own liberties in these great United States of America through infiltration into our schools, into our factories, into Government agencies, and various other institutions and organizations: Now, therefore, be it

"Resolved, as Americans dedicated to the freedom of all nations, we feel dutybound in the name of justice and equity to take a firm stand in defense and restoration of the just rights of our ally, the Republic of Poland; be it further

"Resolved, That we firmly believe that the decisions of the Teheran and Yalta Conferences concerning Poland and other nations, arrived at without their representation, be revoked and repudiated entirely; be it further

"Resolved, That we protest against any change in the present western boundaries of Poland as presently constituted, inasmuch as they have always been historically Polish; and the eastern boundaries as they existed on September 1, 1939, should be restored to Poland; be it further

"Resolved, That we petition our Government to remain alert and extremely vigilant to the assumed New Look of the present leaders of the Soviet Union until such time as they roll back the Iron Curtain and free the captive peoples of Poland and other enslaved nations, and until they admit and make amends for the massacre of the Polish officers and soldiers in Katyn Forest and the atrocities committed on our American soldiers in South Korea; repudiate the lie of germ warfare, desist from further aggression in the Near East and Asia, and return all prisoners now held in slave-labor camps; be it further

"Resolved, That we compliment and commend our State Department for the firm stand that was taken against the Red Polish Ambassador, Romuald Spasowski, relative to the coercion and pressure he has been exerting upon the Polish refugees who have found a sanctuary and haven in our beloved country; be it further

"Resolved, That we petition our Government to continue to eradicate communism from our land and our institutions, and that it continue to take all necessary steps for our defense that we remain prepared on land, on the sea, and in the air in order that we can properly defend our homes and our loved ones against any possible future aggression of the Soviet Union; be it further

"Resolved, That we, as loyal citizens of the United States of America, hereby repeat our pledge of loyalty and alegiance to our great and beloved country; be it further

"Resolved, That copies of this resolution be sent to the Secretary of State, John Foster Dulles, and to our Congressman, the Honorable Edmund P. Radwan; also to Hon. Herbert H. Lehman and Hon. Irving M. Ives, United States Senators."

Resolution committee: Chairman, Michael E. Zimmer, Judge, City Court of Buffalo; Chester Koval, Comptroller, City of Buffalo; Peter G. Zawadzlir, Councilman, City of Buffalo; Joseph S. Matala, Attorney at Law; Walt C. J. Jose, Attorney at Law; Rose Biedron, State Chairman of Polish Women's Alliance of America.

BUFFALO, N. Y., *May 6, 1956.*

America, Beacon of Hope

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. DORN of New York. Mr. Speaker, I should like to call to the attention of my colleagues the prize-winning essay of the America, Beacon of Hope contest, sponsored by the ladies auxiliary to the Veterans of Foreign Wars of the United

States in the 21st annual national contest, written by Regina Parisen, aged 16, of 331 East 33d Street, New York, N. Y. This young lady, who attends the Immaculata High School, has written an outstanding message from and to the youth of our country. Miss Parisen's essay was winner in the city of New York area contest:

AMERICA, BEACON OF HOPE

As the immigrant boats pull into our harbor, a strange and wonderful sight greets their eyes, for there is a large statue of a woman holding a torch standing in the middle of the water. Why is it there? It is there to welcome these people and to make a promise. A promise that the men will get work, that there will be enough to eat, and that the children will grow up to be good Americans. Her name? She is the Statue of Liberty, and her promise is made to all men, regardless of race, color or creed.

The story of America has been told many times, by learned men and by eloquent orators. But, what about the ordinary American, the man who is never called upon to tell others what he thinks about his country, the mechanic, the bus driver or the storekeeper? No, he does not orate on America, he hasn't got the ability to speak, but he shows his feelings in a far better way. For he is the man that fights and perhaps, dies for his country. He is the man that makes America what she is, the land of the free.

And what about American youth, how do they feel about America? What does it mean to them? Well, I'll tell you, because I'm an American teen-ager. It means that we can go to our own church on Sunday, and no one will stop us or harm our family because we went. It means that we can go to school and receive an education and someday be the good Americans that we want to be. And we want to be the best Americans we can, and be able to tell others about our country too, not as a statesman or an orator, but as an American citizen.

We feel that the ideals of America should not be kept for Americans alone but are for all the world. For they are the ideals of freedom, democracy, and love. To all men belongs the gift of freedom, because that is the way God made us, to be free. Some people say that certain countries are not ready for freedom. How can this be, when we are born free, and are ready from birth to take our place in the ranks of equality and fraternity? It is democracy that makes us free men, for we rule ourselves and our laws are our own. Perhaps this is not the only course to freedom, but it is our way and we have followed it successfully for hundreds of years. We are not trying to force any country, against their will, to be a democracy. We are only anxious that they enjoy the same freedom that we do.

Most important of all is the ideal of love. For despite tyrants, dictators, and democracies, love rules the world. It is the force behind all charity and religion. It is the force that makes America the refuge for the homeless, the poor, and the oppressed. These people are seeking love, and we have love to offer. The inscription on the bottom of the Statue of Liberty cries out for these people, for these are our people and America is their land. Is it any wonder that Americans will so readily defend their country? They built her and she is theirs.

Ours is a land of brotherhood. An American knows that wherever he is, he has a mighty big country and a great many friends back home. An American in trouble is never alone, but has a lot of people helping him, because he's no stranger, he's one of us.

But what about the immigrants on those boats, are they one of us? They are. America is a land of immigrants, and they are as much a part of her as we are, for without them, there would be no America. Will they understand that? Perhaps not. Perhaps the older people will always be waiting for that knock on the door that brings sorrow and pain. It will never come, I know.

The future of this country depends not on the older people but on the youth. It is they who will forge the future of our land. Therefore, it is up to us to teach them how. They learn in our schools, and from our teachers, but most of all they learn from us; the American youth. How can we teach them? Just by showing them why we think that our country is the best in the world.

We'll take a young immigrant boy and call him Joey. Where is Joey from? It doesn't matter, he's here now. But how shall we begin? We can tell him about the history of our country or about her great men, but how can we explain the thing that makes men die for her, the strange thing that makes us love her so much? Will the history of our country tell Joey what it is that makes America the land of hope and dreams? No; because it's not something that historians can write about in books. Ours is not just a country, it's an idea. Let's try telling it this way.

You know, Joey, a man named Lincoln once said, "this Government of the people, by the people, and for the people, shall not perish from this earth." And he was right. For as long as there is one American who lives, and loves, and can fight for his country, this Government shall not perish. America is not just a land, it's an idea and an idea not only in the minds of men but in every beat of their heart. Yes; Joey, as long as there is one oppressed man in whose heart the breath of freedom lives, then America lives on. If someday this land of ours should exist no longer, then know that Americanism has not died, but lives, and will live forever, in the hearts of all free men.

The Growing Narcotics Problem

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. MILLER of Nebraska. Mr. Speaker, as an outgrowth of my particular interest in the public health problem, it was my pleasure in the 83d Congress to introduce legislation dealing with apprehension and treatment of narcotics addicts in the District of Columbia. This legislation was subsequently passed by the Congress. It has, I believe, provided a solid framework upon which to build a system of control and eventual eradication of the foul menace of drug addiction.

In retrospect, it is apparent that the pioneer drug-addict law is lacking in several vital precepts. First, it does not provide for sufficient control over the individual once he is singled out for possible commitment as a drug addict, and the time lag between preliminary examination and commitment proceedings permits the addict suspect to drift away from this jurisdiction. Existing law does not provide for an interim detention order.

Second, enforcement officers are seriously handicapped by the strict Federal search-and-seizure rules under which they must operate in the District of Columbia. A suspected dope pusher's residence may not be searched at night except upon a warrant obtained by an affidavit from an officer who can swear that he has positive evidence narcotic drugs are located in the premises to be searched. While the probable-cause rule obtains for daytime searches, the nighttime positivity requirement operates as a serious handicap because practically all traffic in narcotic drugs occurs during the sunset to sunrise hours.

A third glaring weakness is to be found in the police officers' lack of authority to arrest on probable cause for misdemeanor violations under the Uniform Narcotic Act. A valid arrest for such violation may be made only when the officer has a warrant or when the violation is actually committed in his presence.

Similarly, neither Federal agents nor Metropolitan Police are authorized to make wiretaps, or to use wiretap information, in order to corroborate testimony or detect new evidence of narcotic law violations. Admittedly controversial, wiretapping is permitted in a number of States and, because the telephone plays an important role in the drug peddling business, use of the wiretap is highly desirable in illegal narcotics investigations. I am told that drug peddling has been virtually wiped out of Philadelphia because of two recent raids staged successfully by enforcement officers after they had gained the information they needed through wiretapping.

Yesterday I introduced an amendment, in which I am joined by a number of other interested Members of Congress, which broadens existing dangerous drug laws to include barbiturates and synthetics that are not presently covered. It also attempts to correct many apparent practical weaknesses in the existing statutes which are pointed out above.

I do not anticipate that there should be any substantial opposition to this bill, because all Members of Congress and all citizens who have the interest of our country at heart will want to do whatever is reasonable and necessary to stamp out the growing drug addiction problem in the Nation's Capital. One needs only to consider the fact that drug addiction is responsible for approximately 50 percent of all crimes committed in the larger metropolitan areas and 25 percent of all reported crimes in the Nation to comprehend the seriousness of this problem. Even more shocking is the fact that addiction has grown from a ratio of 1 addict to every 10,000 people, at the end of World War II, to about 1 to every 3,000 people in the United States at the present time, and about 13 percent of the addicts are minors less than 21 years of age.

Drug addiction is a contagious thing, with one addict spreading the habit to members of his family, friends, acquaintances, and associates. It should be treated as such. It is inevitable that this $500 million per year traffic will increase unless sharp measures are taken to remove the supplier and the user from society for appropriate treatment.

I would invite the attention of all my colleagues to the legislation I have introduced, which will provide more effective methods for dealing with this tremendous problem in one of the more troublesome narcotic drug centers of the United States, the Nation's Capital.

Preserve Our Textile Industry

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent article from the Boston Post entitled "Jap Textile Goods Peril Northeast Mills, Cause 20 Percent Cut in Employment."

This is an excellent article. It stresses in substance just what I have been stating to the House in past and recent remarks. It parallels some of the evidence, which I presented to the United States Tariff Commission in support of certain applications by Massachusetts industries for relief through the escape clause provisions of the Reciprocal Trade Act.

Reading this article, one can readily appreciate how serious the industrial situation created by very unsound and unwise provisions of pending trade treaties really is. One does not have to be a trained economist or even a member of the industries affected to realize how damaging these textile imports are to many industries, workers, and communities.

It is obvious that if this flood of imports continues or increases a great many more textile industries will be driven to the wall and forced to liquidate.

What kind of a program is it anyway, which as a national objective, chooses to increase prosperity overseas and at the same time cause distressing unemployment here in the United States?

Every reasonable American is willing to help foreign nations within our capacity and in every feasible way. But we should not be expected to render this aid in terms of billions of dollars and then in addition enter into agreements and create conditions which enable foreign imports to flood American markets and knock out American industries and throw thousands and thousands of American workers out of employment.

Viewing the operation of this law, one would wonder what the origin of it was, what motivation, sincere or otherwise, brought it forth, what brand of statesmanship permits its continuance with steadily aggravated damage and detriment to American industries and our own fellow citizens, who are employed in them.

Looking at this situation objectively, one could hardly be blamed for wondering whether we need economists, statesmen, or psychiatrists to furnish us with the explanations. But one thing is definite and certain—that unless relief efforts and remedies are soon vigorously sought and applied, there will be little, if anything, left of our American textile industry.

To make the situation even worse, we can take note of the sad fact that similar conditions are developing in many other industries in this country because of the operation of this law, and I can only express the hope that enlightened self-interest will soon prompt wise statesmanship to check this growing menace to the American economy.

Some may be absorbed with nuclear physics, quantum mechanics and the theory of relativity to such a degree that the handwriting on the wall may appear to them only as a dim mirage. It is much later for the textile industry and for the American economy in a very real sense than some people believe, and I hope and urge that action can and will be taken in the very near future to apply appropriate remedies, which will correct these intolerable conditions and put a stop to the unreasonable and growing flood of foreign imports, which are undermining and threatening to upset our economic balance, the stability of many established American industries and the employment of millions of worthy, faithful American workers.

The article referred to follows:

JAP TEXTILE GOODS PERIL NORTHEAST MILLS, CAUSE 20-PERCENT CUT IN EMPLOYMENT

Japanese textile imports flooding the American market have caused a 20-percent cutback in employment in New England mills, and further slashes are expected if the Federal Government does not act to halt the cheaply produced goods, it was disclosed yesterday.

In the past 3 weeks operations have been curtailed at a dozen mills by 3 New England firms employing nearly 12,000 workers.

Two major divisions of the Bates Manufacturing Co. in Maine have reduced their output. Berkshire-Hathaway, Inc., has cut back productoin 20 percent at 3 mills in Fall River and 1 in North Adams.

A number of other textile manufacturers in the area have said that if the Government does not take prompt action, they will be forced to close down completely.

William F. Sullivan, secretary of the Northern Textile Association, warned that New England manufacturers cannot compete with firms in Japan, where textile wages are less than 15 cents an hour.

"Japanese imports are having a particularly severe impact on fine combed goods, notably ginghams and velveteens, which are produced in New England," Sullivan said. "Bad business conditions, which are causing curtailment in our New England mills, are likely to generate further unemployment.

"It is apparent that unemployment and more short time will develop unless the Federal Government adopts a firm policy against the excessive cutthroat competition from low-wage countries such as Japan."

Sullivan added that the situation is aggravated by the present United States policy of selling raw cotton at cut prices to foreign textile manufacturers.

Sullivan said that while the cotton industry is trying to fight back against cheaply produced cotton goods, reports have been received that the Japanese now are planning to move into the woolen and worsted fields.

If this competition should materialize, he said, it would weaken the textile situation further in this area.

Federal Aid To Education

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. LAIRD. Mr. Speaker, under unanimous consent, I include in the RECORD an exchange of letters with the Board of Education of the City of Stevens Point, Wis. The letter dated May 16, 1956, from the Board of Education of the City of Stevens Point was signed by each member of the Stevens Point school board. The letters follow:

BOARD OF EDUCATION,
Stevens Point, Wis., May 16, 1956.

The Honorable MELVIN R. LAIRD,
House Office Building,
Washington 25, D. C.

MY DEAR MR. LAIRD: We are writing you in regard to H. R. 7535, introduced by Representative KELLEY, and S. 2905, introduced by Senator SMITH of New Jersey (for himself and 14 other Senators). These bills are designed to authorize Federal assistance to States and communities in financing public elementary and secondary school construction.

We oppose the Federal school aid as provided in these two bills for the following reasons:

1. State and local responsibility for schools is clearly established under the Federal Constitution and by the constitutions of the several States; it is deeply embedded in the American tradition.

2. American schools have made spectacular progress under State and local responsibility. Educational opportunities are now greater than ever before and greater than in any other country. School-building activity has established new records in each of the past 5 years. Each year more classrooms are being built than are needed to accommodate the increase in enrollment.

3. School needs can be seen and felt more clearly at the local level than in Washington. Action can be taken in communities and States. The Federal Government cannot give anything to the States unless it first takes it away from their citizens. There are no resources in the United States, no wealth or income which are not located within the borders of the 48 States and which are not subject to their taxing powers. Nor is there any restriction on State support of schools save the willingness of their residents to be taxed.

4. The Federal Government has taken on too many responsibilities, and its taxes and debt have become excessive. This would be made worse if new obligations were forced on the Federal Government. The States are in a better position to take care of school needs than is the debt-ridden Federal Government.

5. The trend of growing centralization is threatening to upset the balance of power between the Federal Government and the States. If continued it will destroy the Federal system, concentrate all power in Washington and turn the States into mere administrative subdivisions. If schools should be added to the responsibilities of the Federal Government, the balance of power would be irretrievably lost.

6. It is naive to expect that Federal control of the school system would not creep in and grow if Federal money were provided for school support. The effect of Federal aid would be to transfer the control of the schools from the communities to the professional bureaucracy.

Local school boards have long arranged for their own construction contracts and they bargain to save school funds. Under one of the proposed laws, even the wage rates paid in constructing local schools would be fixed under Federal law—or no Federal money would be granted. The Secretary of Labor would determine a prevailing wage rate and his decision would be final.

The Board of Education of Stevens Point, Wis., by unanimous decision is not in favor of these bills as proposed and we would respectfully ask that you vote against them.

Very truly yours,

Board of Education: T. G. Holthusen, President; A. E. Anderson, Vice President; Gordon Hanson; Leo Larsen; E. S. Hoppa; Francis Roman; Fred Klingbail; Dr. W. G. Wochinski; L. V. Courtney; M. E. Sorensen.

MAY 21, 1956.

Mr. T. G. HOLTHUSEN,
President, Board of Education,
Stevens Point, Wis.

DEAR MR. HOLTHUSEN: This is to acknowledge receipt of your letter of May 16, 1956, signed by all members of the board of education of the city of Stevens Point. I appreciated very much receiving your very explicit views regarding H. R. 7535 introduced by Representative KELLEY of Pennsylvania.

Two separate bills are before the Congress at the present time. The Kelley bill sponsored by the Democrats provides $400 million in direct grants to States for 4 years. Each State would receive the same amount, $11.30 per school-age child regardless of need, ability or present effort. The Eisenhower bill would provide for $250 million a year for 5 years giving more aid to those States with the least income per child and less aid to those States not making an effort in their own behalf, but paying some aid to each State. Regardless of whether the Congress takes the Kelley bill or the Eisenhower bill, the amount of money contained in each of these bills for direct grants is small when compared with the total school construction need of the entire country. Instead of putting this Federal aid out in dribbles, it should be used in those areas which have made the maximum effort to solve their own school problem but find it impossible to construct needed classrooms without Federal aid. Certainly the Eisenhower bill does an infinitely better job in meeting this need test than the Kelley bill. It is defective, however, in that it pays aid to States which have the ability to finance their own schools and to States which are not making the minimum effort in their own behalf. These two bills must be amended so that they will contain an adequate need requirement. Federal aid must be used where a State, because of inadequate resources, is unable to do the job.

It is wasteful for the Federal Government to give funds to all States, extracting tax money from the rich ones, deducting its administrative expenses and then returning it to the rich and the poor in the form of assistance. The Federal Government is justified in attempting to equalize the ability of States to meet their needs by serving as a medium whereby the richer States can contribute to the poorer States much as we apportion equalization aid to the various school districts in Wisconsin.

I certainly want to commend the Stevens Point Board of Education for making the very thorough study which was made of the Fedral aid to education proposals. Your letter to me of May 16 was evidence of the fact that this legislation had been very carefully and thoroughly considered by your school board. I further want you to know that your views have been and will continue to be given very careful and thorough consideration by me at all times.

With best wishes and kindest personal regards, I am

Sincerely yours,

MELVIN R. LAIRD,
Member of Congress.

South Atlantic Region of the Propeller Club of the United States Recommends Early Construction of Cross-Florida Barge Canal

---

EXTENSION OF REMARKS
OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. BENNETT of Florida. Mr. Speaker, I am pleased to bring to the attention of the House of Representatives and to the attention of the general public a resolution recently unanimously approved by the South Atlantic Region of the Propeller Club of the United States, in convention assembled. This resolution enthusiastically endorses the Cross-Florida Barge Canal and recommends the early appropriation of construction funds for this congressionally authorized project. In addition, the resolution sets out a great deal of valuable background information on this project. The resolution reads as follows:

Whereas a project to construct a waterway across north Florida to connect the waterways of the gulf and the Atlantic is as old as the recorded history of Florida; and

Whereas the Cross-Florida Barge Canal was authorized by Public Law 675, 77th Congress, approved July 23, 1942, in these words:

"In order to promote the national defense and to promptly facilitate and protect the transport of materials and supplies needful to the Military Establishment, there is hereby authorized to be constructed under the direction of the Secretary of War and the supervision of the Chief of Engineers a high-level lock barge canal from the St. Johns River across Florida to the Gulf of Mexico in accordance with the plans set forth in the letter of the Chief of Engineers dated June 15, 1942"; and

Whereas the early completion of the Cross-Florida Barge Canal in providing the connecting link between the Intracoastal Waterway system of the Atlantic and the gulf will afford economic benefits to the Nation, the South-Atlantic region and the State of Florida; and

Whereas this project is the key to other navigational projects in the southeastern area, as indicated by the Chief of Engineers to the Secretary of War in 1945, in his justification of the project for deepening the Intracoastal Waterway from Jacksonville to Miami to 12 feet, as follows:

"A protected waterway having at least a depth of 12 feet with widths ranging from 90 to 150 feet has been completed from Norfolk, Va., to Jacksonville, Fla. In Public Law 675, 77th Congress, approved July 23, 1942, Congress authorized a high level lock barge canal from the St. Johns River across Florida to the Gulf of Mexico which will have minimum widths of 125 feet and a depth of 12 feet. Plans have been completed for the early post-war construction of this Cross-Florida Barge Canal which connects with the early postwar construction of this Crossviously referred to, the waterway from Jacksonville to Miami, which will constitute a principal feeder to these other sections, has been completed to a depth of 8 feet for a width of 100 feet. I am firmly convinced that there will be an ultimate requirement for a project of 12 feet depth and suitable width to accommodate commercial needs of the waterway from Miami to Jacksonville. This requirement may not exist in the immediate postwar period, but will certainly become necessary when the Cross-Florida Barge Canal has been constructed and placed in operation"; and

Whereas the project will afford increased recreational facilities as is indicated by the resident member of the Board of Engineers for Rivers and Harbors in his report to the Director of Civil Works Division of the Office of Chief of Engineers in 1946, as follows:

"The recreational opportunities afforded vacationists from all parts of the country by the waters adjacent to the Cross-Florida Canal route constitute a national asset of unquestionable magnitude. Provision of the Cross-Florida Canal will make the recreational waters of the gulf coast and Atlantic coast accessible to each other, thus extending the cruising range and stimulating the use of this kind of craft. Direct benefits will result from dedication of previously useless land to use for mooring, storage, servicing, repair, and boatbuilding. There will also be a definite saving in the cost of passing between the recreational waters of the Atlantic and gulf coasts of Florida and the adjoining States"; and

Whereas the benefits to national defense which will be derived from the completion of the Cross-Florida Barge Canal are stated by the resident member of the Board of Engineers for Rivers and Harbors, in the same report, as follows:

"The Chief of Engineers has stated as his opinion that the authorized canal will represent, in addition to its economic worth, a value in national security considerably greater than its cost. During the actual conduct of hostilities, comparative means of placing essential supplies, in sufficient quantities, at the proper points, are measured, not in dollars, but in units of time, materials, and manpower against the available national reserves of these vital elements. The primary necessity for gaining the final military decision in war at the least possible cost in the lives of our nationals renders monetary yardsticks a secondary consideration. But there is, nevertheless, a definite value, apart from purely military considerations, in the avoidance of loss of ships and cargo through enemy action. The insurance value of the avoidance of war losses is, therefore, distributable on an annual basis and can be at least roughly approximated in dollars and cents for measurement against the monetary annual charges of providing and maintaining the facilities"; and

Whereas it has been recently estimated that the insurance value of the avoidance of war losses due to enemy action referred to by the Chief of Engineers and projected into the year 1955 to be in the amount of $16,440,000 annually; and

Whereas in 1951 the Secretary of Defense reported to the President that—

"The Corps of Engineers expressed the views that 'a barge canal will afford a short, economical, protected route across Florida for the movement of a large amount of long-haul traffic by barge and small freighters between gulf and Atlantic ports. * * * Large tonnages of raw materials as well as manufactured products are susceptible to movement between those points via protected inland waters at great saving. Completion of the canal would also permit quick, safe, and economical transfer between the east and west coasts of Florida, of floating plant and construction equipment now required to

move via the circuitous and dangerous Florida Key route.'

"During World War II, many cargo ships and tankers were lost off the coast of Florida due to enemy action. Many of the cargoes that were lost would and could have moved by barge or small freighter had the barge canal been in existence at that time. The saving in lives, ships, and valuable and critical cargoes would have been great. Similar and comparable savings would also accrue in future serious national emergencies if the canal is in operation"; and

Whereas Gen. Carl Spaatz has recently called public attention to the threat of the vast fleet of Russian submarines to the security of our Nation and the Washington Evening Star has recently written an editorial on the same subject; and

Whereas Congressman CHARLES E. BENNETT has made a statement in the extension of his remarks recently in the House of Representatives calling attention to the editorial on April 20, pointing out that there is urgent need for this country making a more adequate defense against Soviet warfare, and stated that "our experience in World War II with a much smaller German submarine fleet shows that we should not delay any longer the beginning of construction of the Cross-Florida Barge Canal. The canal would justify its construction costs many times from the savings which might be made against submarine-incurred shipping losses should we ever have another war": Now, therefore, be it

Resolved, That the South Atlantic Region of the Propeller Club of the United States, at its sixth annual meeting in Jacksonville, Fla., April 26, 1956, recommend the early appropriation of construction funds for this congressionally authorized Cross-Florida Barge Canal as being economically desirable and urgently in the national interest; be it further

Resolved, That copies hereof be sent to the Members of Congress representing the South Atlantic States, to members of appropriation congressional committees, to the Chief of Engineers, United States Army, to the Governor of the State of Florida, and to such other parties as may be appropriate.

Cyprus Echoes Irish History

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Evening Bulletin, Providence, R. I., of May 12, 1956. The title of the editorial is "Cyprus Echoes Irish History," and I commend it to the attention of every Member of this House. In my opinion the article draws a particularly apt analogy between the fight for Irish independence 40 years ago and the present struggle faced by the Greek nation.

The editorial follows:

CYPRUS ECHOES IRISH HISTORY

As somebody has said, just change the names in Cyprus and you have Ireland all over again.

The British experience in trying to suppress the deep passions of political nationality in Ireland by force should have warned the Eden Government of the increasing difficulties it would have to face in making the same attempt in Cyprus. The pattern runs true to form—and to history.

The execution of the two Cypriot terrorists by the British (they were called "patriots" by the Greek primate in Athens) had a direct parallel in Ireland. The leaders of the 1916 Easter Rebellion in Dublin, members of the Irish Revolutionary Brotherhood, an extremist minority, were executed by the British military for their uprising. The executed men included one severely wounded man who had to be helped to a chair to face his executioners.

The Easter Rebellion had at first shocked Irish public opinion as a rash and suicidal affair. Disavowals of complicity in it were speedy and vigorous. But when the rebel leaders were executed, national sentiment switched. Once the blood of the Irish was up in bitter anger against the executions, there was no turning back. Two years later, the patriotic Nationalist Party, Sinn Fein, swept the country in elections and set up a rump republic.

Because a handful of rebel leaders were executed and suffered martyrdom, the historic home rule issue died with them. After Easter week, the Irish would settle for nothing less than political independence.

The British campaign of repression in Cyprus is a familiar story in Ireland, and the responses of the Cypriots are the same. Reprisals have already started for the execution of the two Cypriots. It was basic policy with Michael Collins, the Irish guerrilla leader, to take lives for lives. When the British burned a house for sheltering rebels on the run, the guerrillas burned two British houses in Ireland. Like the Black-and-Tans in Ireland, the British troops in Cyprus rope off an area and search house by house for arms and rebels. As in Ireland, if the people refuse to give information about terrorists, collective punishment and fines are imposed upon the specified area.

The curfew is in effect in Cyprus as it was in Ireland. Fat rewards are his for the informer who comes forward to betray his countrymen; and, as in Ireland, his number immediately is up and the rebels concentrate upon shooting him. The frightening silence that at times settles over Cyprus is not the quiet of peace; it is freighted, as in Ireland, with sullen hatred. The British find, as in Ireland, that working against a civilian countryside loyal to the cause is like trying to pick up quicksilver. The tolling of the bell has a different meaning to the British from what it has to the Cypriots, as the British discovered in Ireland.

It is true that the British feel that in Cyprus their very existence is at stake because of the strategic importance of the island to the Middle East and its precious oil for British industrial and military life. But the Cypriots think like the Irish—they are reckless of all but their passion for freedom and independence from an outside power. The execution of the two will resolve doubts in the minds of the Cypriots and stir passion in the timid. The force of an aroused and uncompromising nationality is, like religion, extremely deep in human beings and, when aflame, can be suppressed only by a ruthlessness of which the Russian State is capable but which its own public opinion will not permit to the British Army in Cyprus.

Fluoridation

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. BURDICK. Mr. Speaker, I have here two letters from people who well express some of the arguments against the arbitrary acts of the Public Health Service in forcing the fluoridation of city water supplies upon our citizens. Under leave to extend my remarks, I ask that these letters be printed in the RECORD as I believe that this program of fluoridation presents a real menace to the health and rights of our people. No one should be forced to submit to this kind of medication against his will.

Immediately following the letters are some remarks of my own concerning the subject of fluoridation.

FARGO, N. DAK., *May 7, 1956.*

Hon. USHER L. BURDICK,
House Office Building,
Washington, D. C.

DEAR SIR: Upon learning that Congress has been asked to appropriate almost three million dollars to the United States Public Health Service to combat dental disorders, it becomes clear to me that this money would be used for one purpose and that is propaganda. Fluoridation is always paid for by the cities which put it in, but this agency always sends a team out around the country to wine and dine the dentists, public officials and P-TA members. This costs money to be sure and the newspaper advertisements which are all layed out for the newspapers to use cost money too. The "kits" which this department has printed up for use by the American Dental Association and to send to Congressmen are also expensive.

Whenever a court case comes up it is someone from the USPHS who travels across the country to testify against local citizens who do not want to be mediated by public water supplies. In our case here it was Dr. Nicolas Leone, who told us that now fluoridation is considered even good for adults and especially good for women over 40. He did not say in what way.

Please, sir, would you be favorable to a joint congressional investigation by an impartial committee entirely free from promoters of fluoridation? A committee composed entirely of trained statisticians would prove in a hurry that the figures and charts put out by the USPHS are deceiving and deliberately falsified. The whole subject should be traced back to the beginning of the idea and I am sure some very interesting information would be brought out.

With a son in the service I resent the order by some Government agency that all naval and Army bases be fluoridated. Why? Are there so many little children under the age of 8 on any base?

This program stems from the World Health Organization in 1951 and although France, Switzerland, and other countries have held fluoridation to be dangerous, we are forced to submit to it. France has held it to be against individual freedom and is France to be more concerned with such freedom than the United States? We need your help to get to the bottom of this menace and I hope you will do what you can to get such an investigation started. Thanking you for whatever you can do, I am,

Yours very truly,
GLADYS ZUBE
(Mrs. Arnold G. Zube).

SAN MATEO, CALIF., *May 8, 1956.*

DEAR CONGRESSMAN BURDICK: I am reliably informed that Congress has been asked to appropriate some millions of dollars to the Public Health Service to "combat dental disorders." It is strongly suspect that if such funds are made available they will be used in part or in full to disseminate propaganda in favor of fluoridation of public water supplies.

If it is deemed appropriate to grant the request, I urge the Congress to specifically stipulate that not one penny of it be used to beat the drums in favor of the strongly

suspect and highly controversial practice of fluoridation.

I am a graduate of the University of Washington and have taught chemistry for many years. The case against fluoridation is simple and logical. No doctor worthy of his profession would prescribe the same medication for an entire population regardless of whether the individuals were old or young, weak or strong, sick or well and I testify that fluorides in any amount constitute a medication. This is not to say that in some instances such poisonous substances as fluorides may not be beneficial. Strychnine may also be a useful medicine in some cases, but it is highly unscientific to prescribe either of these substances as a mass medication.

The second point against fluoridation is, that it is an invasion of civil rights. Never before in the history of this Nation has an adult been compelled, against his better judgement, to take any medication for the alleged prevention of a noncommunicable disorder. Fluoridation is an entering wedge. If water supplies can be medicated, then individually or in mass, citizens may be forced to take medications they do not need nor desire and they will therefore no longer be secure in their persons.

Fluorides are available in low cost, easy to take, tablet form for those who want and need them. Once water is fluoridated this salt cannot be removed by boiling or any simple means short of distillation, so everyone who drinks the water is being forced to take a medication.

I earnestly request that you read this letter to the Congress and have it, or some similar testimony, inserted in the RECORD.

Yours very truly,

CARL T. RICHARDSON.

Chemical treatment of drinking water is supposed to prevent the decay of teeth—that is what the experts say. This may or may not be true, but the advocates of fluoridation of water cannot say, at this time, what deleterious effects such chemicals have on the general health of the public. There is much evidence that they do have a noxious effect.

If a choice must be taken between sound teeth and life, then I submit that life should take precedence. Teeth can be artificially supplied, but life cannot—at least not yet. Any individual can struggle along with "store teeth" and still be able to conduct his business, profession, or calling with very slight impairment of his natural faculties, but if his life is ended prematurely it will not make much difference whether or not his teeth have been preserved.

Before we go too far with fluoridation the public should know what results the use of these chemicals have on the general health. A man can still be of some use in life with Sears, Roebuck teeth, but he will be considerably handicapped if his liver and other vital organs have been eaten up by chemicals.

Current Racial Tensions

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a statement on current racial tensions adopted by the Department of Christian Social Relations of the Protestant Council of the City of New York.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON CURRENT RACIAL TENSIONS ADOPTED BY THE DEPARTMENT OF CHRISTIAN SOCIAL RELATIONS

Recent events have made all Americans aware of the racial tensions which have developed in our southland. Amid the outcries of extremists, the crisis demands clarity of thought and unusual courage, free from the divisive spirit of hate, vengeance, and demagogy. As Christians, we are committed to justice and equality, sought vigorously through reconciliation and accompanied by continual expressions of love and understanding. We commend those individuals and groups—white, Negroes, and biracial—which have resisted the demands of mob passion and blind emotionalism. Our admiration has been especially stirred by the remarkable display of good will and religious faith.

This is not the time for Christians of New York or other parts of the North to think of the race question or of specific matters of discrimination and segregation as problems peculiar to the South. We are conscious of our own shortcomings in New York City. While nondiscriminatory employment is well established, we have moved only gradually in the direction of nonsegregated housing and interracial churches. In the changing racial makeup of our metropolitan area we incessantly undergo difficult adjustments. We recognize our own shortcomings in this field. Nevertheless, we feel compelled to speak out emphatically and without qualification against the un-Christian practices that have divided society along lines of race or color.

Our churches have already made their voices heard on the sin of segregation. We voice again the sentiments of the National Council of Churches which, speaking through its general board in 1952, renounced the pattern of segregation based on race, color, and national origin as unnecessary and undesirable and a violation of the gospel of love and human brotherhood, and stated its forthright intention to work for a nonsegregated church and a nonsegregated society. The implementation of this goal must be the persistent aim of all our people, not only in the Southland but in our own neighborhoods as well. Accordingly, we suggest to our churches as an immediate step a program of prayer.

One of the encouraging aspects of this otherwise sorry picture is the response of people everywhere to the suggestion of prayer. We urge a sincere and earnest participation in the several periods of prayer already being arranged. These include observances during Holy Week, as designated by the Right Reverend Horace W. B. Donegan, bishop of the New York diocese of the Protestant Episcopal Church; the prayer session scheduled for the evening of March 28 at Manhattan Center as originally proposed by the Reverend ADAM CLAYTON POWELL, JR.; and on May 17 the observance sponsored by the National Baptist Convention, U. S. A., and other groups.

We urge that these periods of prayer—those already arranged and those yet to be scheduled—be experiences of repentance, with emphasis upon our sense of contrition for the inadequacy of our living and of our failure to measure up to Christian principles in our relations with persons of other races. Let us pray that Christian people in all parts of our country will learn to work together, in due adherence to law, for the establishment of the standards given us in our Lord's teaching, concerning the equality and brotherhood which should prevail among God's children. Furthermore, we urge that these seasons of prayer be followed by concrete action, in order that what we speak with our lips, we may believe in our hearts and practice daily in our lives.

ORRIN G. JUDD,
Chairman, Department of Christian Social Relations, Protestant Council of the City of New York.

Some Observations on the Problem of Inflation

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. ROBERTSON. Mr. President, in the preparation of a discussion of economic trends for the annual meeting of the Colorado Bankers Association on Monday, May 21, at Colorado Springs, Colo., I gathered what information I could, plus seeking the opinion of the best informed men in our Government on the subject and I was forced to tell the Colorado bankers that there appeared to be no general agreement as to what the immediate trend is, much less what the conditions would be next year. So I gave it as my personal opinion that there are at work in our economy both inflationary and deflationary factors but if the Federal Reserve Board did not yield to political pressure I felt that the inflationary forces could be controlled. If controlled, the natural and probable consequence would be that the gross national product for the current calendar year would be somewhat less than for the previous year, although, of course, our economy would be on a safer and sounder basis.

I also said that if inflationary forces were not controlled by self-controls imposed by bankers and businessmen generally, the current boom would be pushed to higher and higher levels but that in the natural course of events the resulting price inflation would eventually price so many consumers out of the market that a boom of that character would inevitably turn to deflation and once that turn had occured the psychological effect of a switch from business optimism to pessimism would undoubtedly accentuate the deflationary movement and perhaps in a serious degree, notwithstanding the very high level of Government expenditures now being contemplated for fiscal 1957.

It was, therefore, gratifying to me to have those views more or less sustained in the address delivered in Boston the same day I was speaking in Colorado Springs by Dr. Arthur F. Burns, Chairman of the Council of Economic Advisers. And in asking permission to have inserted in the RECORD the full text of Dr. Burns' address I wish to emphasize the statement he made about the effect of inflation and especially his statement: "When an economy is poised on a very high plateau, as ours has been in recent months, the threat of inflation cannot

be very distant. The like, unhappily, is also true of the threat of recession."

In other words, in spite of what has sometimes been referred to as built-in devices against a future business cycle of boom and bust, it is still possible to have another experience of that character. Whether we do or not will depend in part, as Dr. Burns has pointed out, upon the exercise of Government controls, especially with respect to restraining or easing credit as the situation at the time may indicate. In that connection it is highly important for the Federal Reserve Board to maintain its independence. But even more important will be the willingness of businessmen and labor leaders to forego present opportunities for quick gains in behalf of a satisfactory level of enterprise generally on a sound and stable basis.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOME OBSERVATIONS ON THE PROBLEM OF INFLATION

(Address by Arthur E. Burns, Chairman of the Council of Economic Advisers, before the National Federation of Financial Analysts Societies, Boston, Mass., delivered May 21, 1956)

When you invited me several months ago to speak at this meeting, I sought protection under the umbrella of the title "Our Economy Today." But on looking through your program, I found that you will be reviewing with some care the current fortunes and prospects of our major industries. One of the general problems that you will be pondering in the course of this review is the future of the dollar, and it occurred to me that I might venture a few observations on this very large subject.

It is frequently said that we are living in an inflationary age, that the dollar is depreciating in value, and that it is likely to continue depreciating. The history of recent decades lends some support to this thesis. But it is well to keep in mind that the years from 1933 to 1939 were dominated by efforts to engineer a recovery of prices as well as of production, and that the broad movement of prices from 1939 to 1951 was dominated by war finance or its sequelae. Although the period is very brief, it seems desirable to give special attention to the course of events since 1952 if we wish to sense the forces that may be operating on the general price level in the years immediately ahead.

The past 4 or 5 years have witnessed an extraordinary economic expansion in our own country and Western Europe. People everywhere have been impatient with their standard of living and eager to improve it. Capital expenditures have been rising by leaps and bounds. Spending on armaments has added heavily to the surging demands for raw materials and labor. Unemployment has been low in practically every part of the Western World. Nevertheless, the average level of prices in consumer markets has risen little in most places, and it has been virtually stable in the United States. If there has been a tremendous upsurge of demand during the last few years, there likewise has been a tremendous expansion of supply. We must not overlook this fact.

Since 1952 the domestic level of consumer prices has moved within a range of about 1 percent. It rose eight-tenths of 1 percent between 1952 and 1953, rose another three-tenths of 1 percent between 1953 and 1954, then fell three-tenths of 1 percent between 1954 and 1955. In March the index of consumer prices was three-tenths of 1 percent higher than a year ago, but one-tenth of 1 percent lower than 2 years ago. These are diminutive movements. The essential fact is that the general price level in consumer markets has been quite steady.

We often hear that the steadiness of the consumer price level is largely the result of divergent trends in the prices of foods and other things, and that the price level of consumer goods would now be significantly higher if the prices of foodstuffs had not fallen. This is a dubious argument. For if the prices of foodstuffs had been higher than they actually were, people might well have spent more money on food and less money on other things, thus curbing the rise in the prices of goods other than foods.

But it is not necessary to engage in speculation on this point. The vital fact is that the prices of foods have not been alone in declining since 1952. Indeed, the general level of nearly every major category of commodity prices in consumer markets has moved downward. While the average of food prices was 3 percent lower in 1955 than in 1952, the average of apparel prices was 2 percent lower, the average of household appliance prices was 11 percent lower, the price average of furniture and bedding was 3 percent lower, and the price average of automobiles and related supplies was 6 percent lower.

When we take the commodities bought in consumer markets all together, it appears that a decline has occurred every year since 1952. In 1955 the average level of these prices was 3 percent below the level in 1952. This March the average level was six-tenths of one percent lower than a year ago.

The basic distinction in recent consumer prices is not between foods and other articles, but rather between commodities and services. While commodity prices have been declining, prices of services have been rising. The prices of some services—such as dwelling rents and medical fees—are still adjusting to the great inflation of the 1940's. These prices have been catching up, so to speak, to the broad price movement that occurred earlier. The prices of other services, such as work by domestic employees, barbers, and repair establishments, have been reflecting the upward trend of wages. When the rising trend of prices of consumer services is combined with the declining trend of prices of commodities, we get a virtually stable price level since 1952, as I've already noted.

I have been speaking of the consumer price level because that is the price level that figures in the thinking and lives of all Americans. What happens to that price level determines how much a typical family can buy with its dollars. What happens to that price level determines whether we can safely rely on the savings that we have accumulated in bank accounts, pension funds, life insurance policies, and Treasury savings bonds. By contrast, the movements of prices in wholesale markets are of direct concern to only a part of the population—those who are engaged in business dealings. However, wholesale prices are more sensitive to inflationary developments than are consumer prices, and it is therefore desirable to take notice of recent trends in wholesale markets.

Here, some substantial advances have occurred. The average level of prices of processed materials used in industry, including components, parts, and supplies, has risen steadily since 1952, and rather sharply since June of last year. The prices of finished goods purchased by business firms—that is, machinery and equipment—have behaved in similar fashion. Construction costs have likewise risen materially. These are the prices and markets that reflect the pressures of our great expansion in investment. Other price movements have been much tamer. Nevertheless, the average of all industrial prices, which rose gently in 1953 and 1954, began advancing rapidly around the middle of last year. The average of these prices is now 5 percent above the level of last June. It is the broad movement of industrial prices that has caused special concern and renewed fears of inflation.

However, it is well to observe that the wholesale prices that bear most closely on consumer markets are not depicted by an overall average of industrial prices. While the upward push of prices has been conspicuous at the wholesale level of consumer as well as producer goods, the fact is that since 1952 the prices of consumer durables have on the average risen less in wholesale markets than have the prices of producers' equipment. The prices of nondurables, exclusive of foods, have risen still less, while the prices of foods have declined.

In considering the general value of money in wholesale markets, we must take prices all together, regardless of the destination or character of the commodity. When we do that, we find only minor movements. The overall index of wholesale prices stood at 111.6 in 1952, which compares with a figure of 100 in 1947–49. The index dropped to 110.1 in 1953, then rose to 110.3 in 1954, and to 110.7 in 1955. Thus, the average level of wholesale prices in 1955 was about eight-tenths of 1 percent below the average in 1952. In the first 4 months of this year the index of wholesale prices reached 112.7, which is 2 percent above the level of the corresponding months last year, 3 percent above the level in the third quarter of 1954 when the economy resumed its advance after the 1953 recession, and only 1 percent above the level that prevailed during 1952.

The rough stability of the overall level of consumer and wholesale prices in recent years requires explanation. As I see it, four factors are largely responsible for what has happened. First, rising productivity and expansion of industrial facilities. Second, increasing business competition. Third, restraint on the part of many in advancing prices. Fourth, monetary and fiscal discipline on the part of Government.

Since the end of World War II business expenditures on new plant and equipment have been running at a very high level. Every year since 1951 these expenditures have exceeded $25 billion. Lsat year they reached $29 billion and this year they may amount to $35 billion or better. While these huge expenditures have put pressure on available resources and have served to raise the prices of metals, building supplies, and machinery, they have also resulted in a great expansion of industrial capacity and in widespread installation of modern and cost-reducing processes.

Back of these investment expenditures are huge outlays on research and development that have been steadily bearing fruit by increasing the amount of output that is obtained per unit of labor. In 1954 over 15,000 companies had research and development programs on which about 160,000 scientists and engineers were engaged. The numbers have grown since then. The more glamorous achievements of technology have recently been registered in electronics, jet and rocket flight, atomic energy and radioisotopes, metallurgy, plastics, and textile fibers. These achievements should not, however, obscure the fact that research and development activities have been expanding the variety of materials, products, or processes in virtually every branch of industry.

The drive to reduce costs is omnipresent. The processing stations of the factory are being integrated into continuous productive systems. Mechanization and systematic managerial planning have spread beyond the shop. They are already important features of office work and are almost as typical of the farm as of the factory. Indeed, very remarkable progress in reducing the amount of labor required per unit of production has recently occurred in agriculture, as a result of the spread and improvement of farm machinery, the increasing use of fertilizers, better varie-

ties of seeds, improved breeds of livestock, and other advances.

The upsurge of technology, managerial planning, and capital investment has not only served to increase industrial productivity in recent years, but it has pushed the advance in productivity well above the gains of earlier decades. Between 1950 and 1955 the output per manhour in the private sector of our economy rose at an average annual rate of about 3 percent per year, in contrast to an average of about 2 percent between 1910 and 1950. Dramatic reductions of labor requirements per unit of output have served to offset the influence on costs of the substantial increases in wages of recent years.

But if advancing productivity has helped to keep unit costs down, business competition has served to keep prices down. Apart from some of the hard-goods industries, there has been a broad shift of late from sellers' markets to buyers' markets. Indeed, much of our business investment and progress in productivity has been stimulated by the intense competition that has developed in industry. Customers are again being wooed. The art of salesmanship, which was dormant during the 1940's is again being practiced with vigor and ingenuity. The pace of competition has become especially keen in retail markets. New methods of distribution, symbolized by the discount house, supermarket, and suburban shopping center, have spread rapidly. Retail margins have generally narrowed and emphasis on volume of transactions has increased.

Many businesses have also been conservative in their pricing policies, that is to say, they have hesitated to pass on rising costs to their customers even when they could readily do so. Some businessmen have practiced restraint because they are aware of the dangers of inflation and feel a responsibility to do what they can to keep costs and prices from spiraling. Many others have taken a long view with regard to pricing in order to entrench themselves against competitive displacement when markets become weaker. The restraint of businessmen in advancing prices is often overlooked because it receives no publicity, in contrast to the notice that is taken of every upward revision in prices. Much the same is true of the behavior of workingmen. I do not like to contemplate what our present cost-price structure would be if every businessman, salaried official, wage earner, and trade-union leader sought aggressively to charge the full amount that current traffic would bear.

The private-economic policies that have helped to keep prices down have been powerfully reinforced by public policies. Through its tax and expenditure programs the Federal Government has been encouraging research, innovation, and investment. Vigorous enforcement of the antitrust laws has reduced temptations to escape competition by rigging markets or entering into collusive arrangements. Most important of all, monetary and fiscal policies have sought to contain inflationary tendencies no less than recessionary developments. During a large part of the period since 1952 the banking system has been under pressure, sometimes mild and at others quite substantial, to restrain the expansion of credit. The creation of new money has been held in check. The management of the public debt has been coordinated with general credit policy. While the physical output of goods and services increased 11 percent between 1952 and the first quarter of 1956, the money supply—that is, the sum of demand deposits and currency in the hands of the public—rose only 8 percent. Meanwhile, the Federal budget has moved from a zone of substantial deficits to a modest current surplus.

As a result of both private and public policies, we have thus had during the past 4 or 5 years approximate stability in the value of the dollar in consumer markets. This achievement should make us hesitate about describing our times as an age of inflation. Surely, many of the forces that have recently kept the overall level of consumer prices stable can be counted on to operate in the years ahead.

The cumulative forces on the side of costs and supply are less commonly recognized than the cumulative forces on the side of demand. They are, however, no less vital. Thus, the sources of supply of metals and industrial hard goods are expanding both here and abroad. Research and development are proceeding on a wide front. Indeed, the pace is quickening, partly because markets are generally expected to grow, partly in response to the upward tendency of wages, and partly because of the need felt by progressive businessmen to match or surpass what their competitors may have to offer. This year $3 billion will probably be spent on research and development by private industry and the universities, and perhaps another $3 billion will be spent by the Federal Government, in contrast to a combined total of about $5 billion in 1953 and of about $3 billion in 1950. As I have already observed, the trend of industrial productivity has of late moved forward at an accelerated rate. The opportunities created by expanding markets, by advances in technology, by business innovations, and by improved management bid fair to extend this trend. The pressure of wages on prices will therefore continue to be counteracted by a progressive tendency to increase output per unit of labor.

Consumer markets are likely to remain intensely competitive. Even the prices of consumer services will not necessarily continue on their rising course. The process of "catching up" on the part of dwelling rents and other lagging items will probably be completed before long. Mechanization is likely to penetrate in increasing degree various of the manual services that have been exerting an upward push on the consumer price level. Although retail margins may not be reduced further or may even rise a little, it seems likely that marketing research will be stepped up materially and pave the way for lower unit costs of distribution for primary producers and manufacturers. With productivity rising, industrial capacity expanding, the abundance and variety of consumer articles increasing, and our international trade growing, we may expect competition for the consumer's dollar to be very keen in the years ahead.

The main uncertainties with regard to the future of the dollar are therefore, first, whether wages will tend to rise faster than industrial productivity, second, whether businessmen will give sufficient heed to the longer-range consequences of their pricing policies, third, whether the monetary and fiscal policies of Government will be sufficiently disciplined to keep in check such inflationary pressures as may from time to time develop. Experience since 1952, while favorable and encouraging on balance, is much too brief to be conclusive. It may be that our private or public policies will become reckless in later years. It may be that we will throw restraint to the winds. But it cannot be justly argued from the evidence so far available that a high-level economy is necessarily biased in an inflationary direction. It is a disservice both to truth and to social opportunity to describe our times as an age of inflation. We are living in an age that can be either one of inflation or of general price stability, depending on the courage and wisdom that private citizens and Government officials bring to their responsibilities.

What I find most promising in contemplating future prospects is the fact that economic literary is spreading rapidly. Knowledge of economic movements, and of their causes and consequences, is no longer confined to specialists. Nowadays, great numbers of ordinary citizens understand that inflation can wipe out their savings just as effectively as can prolonged unemployment. They understand that inflation creates hardships for many salaried workers as well as for those living on pensions or on income from fixed-interest securities. They know that inflation reduces a nation's ability to sell in foreign markets. They know that inflation distorts the calculation of depreciation costs and of profits and thereby threatens the solvency or growth of businesses on which they depend for their livelihood. They know that inflation is often the precursor of depression and unemployment. Most important of all, they know that inflation is not an act of God, and they believe that a mature people should be able to conduct their private and public affairs so as to avoid both deflation and inflation.

This growth of economic knowledge and understanding has played a large role in maintaining the value of our dollar in recent years. It can be counted on as a major force to promote general price stability in the future, and to do so in other nations as well as our own. The need for monetary discipline is now recognized practically everywhere, and nowhere more than in the countries of Europe that have suffered most from inflation in the past. Experience is also teaching the nations of the world that the effectiveness of traditional monetary restraints has been reduced as a result of growth in the economic scope of the public sector. Under modern conditions an exacting fiscal discipline and some funding of the public debt may well have to accompany monetary restraints when inflationary pressures mount.

I have allowed myself in the course of these remarks to dwell largely on longer-run tendencies and prospects rather than on current developments. However, before closing, I wish to add an observation or two on the immediate situation. I have already noted that the level of wholesale prices has been rising since last year. This advance—which has been especially pronounced in some broad categories of industrial prices—has given rise to renewed fears of inflation. The potential danger of the rise in wholesale prices that has occurred during the past 6 or 12 months should not be minimized. But I think it is also important to see the recent price movements in perspective.

Since 1952 economic activity has been proceeding at a very high level. At no time during these years has our economy been very far from a position of practically full employment, and during most of this period it has been quite close to it. The physical output of goods and services is currently running at a level that is about 11 percent larger than in 1952 and 5 percent larger than a year ago. Employment now is 6 percent higher than in 1952 and 4 percent above a year ago. Had I been told toward the end of 1951 what the movements of production and employment in our country would be like during the next 4 or 4½ years, and also told of the great boom that would develop in the economy of Western Europe, I seriously doubt whether I would have predicted the degree of stability that has characterized the overall level of consumer and wholesale prices in recent years. In the light of the history of prices during the past century and a half, and especially of their usual behavior during periods of vigorous economic activity, I would have envisaged higher indexes of prices than are currently being recorded. The remarkable thing even about the level of wholesale prices is that, despite the widespread and accumulating pressures of de-

When an economy is poised on a very high plateau, as ours has been in recent months, the threat of inflation cannot be very distant. The like, unhappily, is also true of the threat of recession. Aggregate economic activity is now proceeding at peak levels, but divergent movements are going on beneath

the surface. Capital expenditures on the part of business have been rising rapidly, and governmental spending as a whole has also been moving upward. Homebuilding and retail trade, on the other hand, have been somewhat sluggish. I have the impression that relations among prices deserve no less attention than the overall level of prices. Rather wide discrepancies have been occurring in price movements. They have resulted in a cost-price squeeze not only in agriculture, but also in homebuilding, the automobile trade, the farm equipment industry, and some branches of the textile and appliance industries. The present cost-price structure is in process of being tested in the Nation's markets. While it is true that retail prices tend to lag behind wholesale prices, it is not yet clear that the recent advances of industrial prices in wholesale markets will be passed on to the consumer in significant degree. Developments in prices, inventories, and retail trade will bear careful watching in coming weeks and months.

Minor movements of the price level or of general business activity are significant not of themselves, but because of what they may portend for the future. Mistakes in diagnosis are bound to occur at times, and our only real protection against them is vigilance and a willingness to face the consequences of new facts as they develop. Our attention and efforts must center equally on the avoidance of inflation and of depression. The importance of maintaining general price stability is now recognized as widely as the importance of maintaining a high and rising level of production and employment. The paramount lesson of the history of the past few years is that these goals of economic policy are broadly compatible. It is this lesson and its great promise for mankind that I have tried to emphasize this morning.

United States Membership in the Organization for Trade Cooperation

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. UTT. Mr. Speaker, there has been a great deal of floor discussion on H. R. 5550, the bill which would authorize United States membership in the Organization for Trade Cooperation. The arguments, pro and con, are now familiar to us here in the House. There seems no need for me to repeat the arguments. Other distinguished Members have done this eloquently, both before the Ways and Means Committee and on the floor of this House.

In this discussion on H. R. 5550 I believe it to be of utmost importance that we go behind the formal arguments used. Supporters of H. R. 5550 have put forth their arguments with a pronounced air of self-righteousness. They have consistently appealed to questions of high policy to gain support for the measure. They make an argument of national interest for it—as glibly as Elmer Gantry.

I do not doubt that there are some proponents of H. R. 5550 who sincerely believe that such propositions constitute reasonable supporting arguments for H. R. 5550 and what it represents.

Unfortunately, I feel it my duty to disenchant unselfish and honorably minded supporters of the measure. I cannot sit idly by and see them becoming innocent dupes to a form of naked opportunism which threatens economic security in major areas of this land.

To illustrate my point, I need only cite an incident which occurred recently in our Capitol. During the 44th annual meeting of the United States Chamber of Commerce some of the more calculating OTC supporters appear to have attempted—and failed—in a complicated maneuver. In the opinion of many informed citizens, their effort was certainly not launched in the best interests of our constitutional system.

At that meeting the chamber delegates were presented with a policy statement on multilateral trade agreements which read as follows:

The chamber favors participation by the United States in international organizations which deal with international commitments for the relaxation of trade restrictions; provide mechanisms through which arrangements for trade negotiations would be facilitated, and serve as forums for the discussion of trade problems and the amicable adjustment of problems involving commercial rules and commitments mutually agreed upon by the members. Under no conditions, however, shall the United States surrender its sovereignty or submit to control or domination by any supranational organization.

As its proponents admitted after a flood of membership mail, this statement is tantamount to an endorsement of United States participation in the Organization for Trade Cooperation. Once adopted it would surely be used in support of H. R. 5550. OTC supporters could then claim that American business was behind the bill, and that the chamber favored the General Agreement on Tariffs and Trade or GATT. But it might also be taken to represent support of an ITO, and economic NATO, or almost any other combination under the sun. Fortunately, alert delegates preparing to go to the chamber's annual meeting detected this. The excellent letter from the Midland, Mich., chamber gave a strong alarm. Delegates realized that they were being railroaded into a position which was certainly not overwhelmingly of their own choosing and which did not express their own feelings. Ten speakers rose to oppose the proposal, and I am happy to report that the delegates voted 227 to 163 for the only opposition proposal—to submit the statement prepared under sponsorship of the Foreign Commerce Department Committee on multilateral trade agreements to a referendum of the whole membership. Now that members have been alerted to the real purpose behind this ill-contrived statement of policy, I feel sure it will be rejected by the chamber's members.

How was such a maneuver possible? In the case of the United States Chamber of Commerce, I think it is attributable largely to the man who chaired the chamber's foreign commerce department committee last year, Mr. John S. Coleman. It was Mr. Coleman who was instrumental in having the statement included in the chamber's proposal policy declarations. And I am certain that Mr. Coleman will play an even larger role in such matters in the forthcoming year as the president of the United States Chamber of Commerce. There can be no mistake that he favors the participation of this Nation in the General Agreement on Tariffs and Trade and the Organization for Trade Cooperation.

Certainly this stratagem within the Chamber was conducted in a rather devious manner. But it is important to note that Mr. Coleman has more than one string for his bow. He is also chairman of the lobbying group called the Committee for a National Trade Policy. This committee was the spearhead of support for H. R. 5550 before the House Ways and Means Committee. If you will recall, Mr. Charles Taft, who represented the National Committee for a National Trade Policy, appealed to the national interest in advocating passage of the bill. For the most part this group consists of, and is financed by, men with extensive foreign business connections. The committee takes a holier-than-thou attitude on foreign trade, trys to smear opponents as self-seeking, and hides or obscures the financial stakes of its supporters.

Do similar considerations motivate the committee's chairman, Mr. Coleman? Just what kind of a man is he?

In this connection I would like to review some testimony given last year before the Senate's Committee on Finance at hearings on H. R. 1, the extension of the Trade Agreements Act. I hasten to add that in addition to the other, shall we say, "public service" duties of Mr. Coleman, he is also president of the Burroughs Corp.—a manufacturer of business machines with far-flung overseas operations. And now I quote from the record of the Senate Finance Committee hearings on H. R. 1:

This company (Burroughs) manufactures adding machines and other business equipment in five locations in the United States and in the following foreign countries: Canada, 2 plants and 1 plant site; England, 1 plant; Brazil, 2 plants; France, 1 plant.

Marketing corporations exist in 20 countries. The corporate net profit in 1953 was $7,206,655 on sales of $162,035,781, of which over $2,068,978 represented dividends from foreign subsidiaries, or approximately $2,700,000 if taken before a loss of $608,143 which was sustained in remitting dividends from Brazil. This figure of $2,700,000 foreign profit does not include the company's Canadian business, the profit from which is lumped with the United States profit. Hence, even without including the nonsegregated Canadian profits, 37.5 percent of the company's earnings are coming from abroad. The investment in countries other than the United States and Canada is listed as approximately $8.5 million of a total corporate equity of some $70 million. Foreign contingent liabilities additionally are listed as $1,093,000 making the investors' foreign exposure around $9,600,000. (Accounting data is spelled out more fully in the annual report, audited by Price Waterhouse & Co.)

The company appears to have closed down one plant in this country and moved the production and jobs to Scotland.

The tax advantages to Burroughs of the president's proposals cannot be estimated from the data which the company publishes. With such a heavy foreign investment, it might be substantial. Nor is the extent

known to which Burroughs ships foreign-made equipment or parts to United States or other markets.

In the light of this report, is it any wonder that the president of the Burroughs Corp. should have supported H. R. 1 with all the means at his disposal?

Must we not acknowledge that his chairmanship of the chamber's foreign commerce department committee and his chairmanship in the committee for a national trade policy are moves which would give the Burroughs Corp. a public forum on foreign-trade matters? And does not this corporation make a large part of its profits through foreign trade? After all, have not both groups, the chamber and the committee been used to promote legislation which is in direct interest of the Burroughs Corp.? Have not they served admirably without establishing a direct connection between the corporation itself and so-called unselfish moves to support H. R. 5550? And would not it be asking too much of the committee on a national trade policy to reveal such information on its own initiative?

But let us move on to H. R. 5550, the legislation under consideration by the Congress. At its least, the passage of the bill would make more secure the program by means of which Mr. Coleman has expanded the interests and profits of his business abroad. Oddly enough, the Burroughs Corp. has not seen fit to outline for the Congress or its shareholders the plan and rationale behind its foreign operations. Its published financial reports do not give adequate data even on its Canadian profits, much less its plants for exporting its manufacturing facilities into areas where cheap foreign labor can cut American prices.

Fortunately for us, news reports on the activities of Mr. Coleman's company help to bring us up to date. Perhaps they also give us a further clue to the reasons why Mr. Coleman is able so nicely to mate idealism and calculated business deals, and why his company finds it convenient to obscure financial reports on its foreign operations.

Here is what Business Week had to report on the Burroughs Corp.:

Burroughs' new expansion into computers and similar machines is taxing its United States production and research facilities. The company's expansion of facilities hasn't been enough to accommodate both this new line and its old calculator and adding-machine business. That's why it has shifted all production of calculating machines to its plant at Strathleven, Scotland. This plant is now the sole source of Burroughs calculating machines, even for the United States market.

Meanwhile, Burroughs has wanted for years to round out its line by adding cash registers that could compete directly with the products of National Cash Register Co. Last fall, it found a way to do it without setting up an expensive United States manufacturing operation. Burroughs signed a contract as sole American distributor for Anker, a German firm that is making a line of machines for Burroughs roughly matching National Cash Register's line in the United States market.

On April 10, 1956, the Wall Street Journal suggested that a trend is evolving in the sales of business machines in this country:

According to the Government's import figures, the number of foreign-made typewriters brought into this country jumped to 15,673 in January 1956, from only 2,210 in January 1951. The dollar value of imported electric adding and calculating machines amounted to nearly $1 million in January 1956, compared with about one-fourth that total 5 years earlier.

These figures don't represent much in the multi-billion-dollar United States office equipment market. But many trade observers believe the steadily rising curve on the imports chart will continue to move skyward.

"I'm betting European typewriters and calculators will account for 25 percent of total sales in their respective lines by 1957," forecasts the sales vice president of one of the leading United States business machine manufacturers.

What do the moves of Mr. Coleman's Burroughs Corp. mean for the individual American? What are the consequences of the national trade policy which he advocates? The testimony last year before the Senate Finance Committee and the news reports I cited supply us with the answer.

Apparently it is the policy of the Burroughs Corp. to move production facilities existing in this country overseas and to acquire additional facilities there. The products manufactured overseas are then imported into this country. That makes lots of money for Burroughs.

In effect, Mr. Coleman and the Burroughs Corp. transfer American jobs to foreign lands where they are open to foreign low-paid labor. In addition, Burrough creates job opportunities overseas which might have been provided here. Moreover, Mr. Coleman's corporation spawns a foreign competition to our domestic products by exporting technical and managerial know-how developed in our own land—again, a foreign competition which is based on low-paid foreign labor.

Is Mr. Coleman content merely with endangering our native business machine industry in this manner? It appears he would make the migration of American industry to foreign lands even more profitable by lowering our slim measures of tariff protection, and binding us forever to it by an international cartel agreement GATT/OTC. I ask how we are to maintain our high level of employment and high wage rates if we continue in the direction that the Colemans of this Nation are taking us? Is this what our national chamber of commerce stands for? I for one, don't think so, and I don't think the chamber's members do either.

These, then, are the blatantly self-seeking consideration which lie hidden behind the high-sounding words which are used by Mr. Coleman and many of his colleagues who support our membership in GATT and the OTC. Once these facts are known, they will spread alarm throughout the Nation.

Yes; those of us who have consistently opposed H. R. 5550 and the foreign trade program which it represents can be called selfish in our own way. We seek to preserve the economic values of the Nation against the unlimited competition of foreign labor, just as Alexander Hamilton, Abraham Lincoln, and others of our forefathers did. We seek to preserve the high levels of employment and wages of this Nation, and to preserve the growth potentials of our own economy, particularly for our ever-burgeoning new industries. If these are selfish motives, then we plead guilty of them.

Address by Eugene Cook, Attorney General of Georgia, at Southern Regional Conference, National Association of Attorneys General, Old Point Comfort, Va., April 23, 1956

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Hon. Eugene Cook, attorney general of Georgia, at the southern regional conference, National Association of Attorneys General, at Old Point Comfort, Va., on April 23, 1956.

FEDERAL-STATE RELATIONS

The issue of Federal-State relations holds the key to our form of Government, and sets it apart from all other governments which heretofore have existed anywhere on earth for any appreciable length of time.

The Founding Fathers were impressed, from the hardships of experience, with the necessity for avoiding great concentrations of governmental power which would submerge the individual under the pretense of public benefit.

It was this realization which gave rise to our Federal-State political arrangement, whereby strength against outside aggression was to be achieved by a unity which would still reserve to State and local governments the powers of self-government over the multitude of rights and relations which governments had traditionally dealt with.

The first experience at unity. The Articles of Confederation, had proved a failure due to the inherent weakness of the Federal Government to cope with those phases of activity to which the powers of national, as distinguished from State, government, should normally extend. This had been particularly true with respect to the many retaliatory trade barriers which the States had erected at their respective borders—a practice which unfortunately has been largely responsible for the periodic and cyclic wars of Europe.

With this and other problems in mind, the Constitution was drafted, principally from the Virginia plan, which, among other things, conferred upon the Federal Government the power to regulate interstate commerce.

"In building a Nation out of diverse elements, the urgent need in the formative stages is to create a viable measure of union where unity is possible. The dangers of overcentralization may be foreseen and feared, but they do not materialize until later stages of national development,"[1] and hence it is only natural that the judicial decisions of our early Chief Justices, particular-

---

Footnotes at end of speech.

ly Marshall, would be prominently nationalistic in tenor.

However, the formative stages of our national development have long since passed, and I must regretfully report to you that the nationalistic tendency has gone so far today as to raise serious doubts as to the future preservation of our democratic way of life, which, like all others before it, must be forever vigilant to the tyranny and despotism which history teaches inevitably comes from overcentralization.

Our present dilemma has been accomplished principally by the Federal Supreme Court—recently described as having taken "the most consistently nationalistic position"[2] of all branches of the Federal Government.

This innovation, I believe, has been brought about primarily through two doctrines—the doctrine of Federal preemption, and the doctrine of substantive due process.

Preemption has its origin in our early constitutional history,[3] but due process necessarily must date from adoption of the 14th amendment.

Originally placed in the Constitution solely to preserve certain modes of procedure, particularly in criminal trials, the due-process clause was strictly limited in the Slaughterhouse cases,[4] with the disclaimer that the Court desired to become a "perpetual censor upon all State legislation"—the Court declaring that "the Federal equilibrium" had already been sufficiently upset by the results of the War Between the States and the Reconstruction.

It was not until 25 years later, in *Smyth* v. *Ames*[5] that the Court, composed in part of ex-corporation lawyers, gave notice of its intention to thenceforth review in detail the reasonableness of rates prescribed by State laws for public utilities, and in *Holden* v. *Hardy*[6] decided that same term, the doctrine of freedom of contract, was written into the Constitution.

These cases laid the way for the great volume of decisions striking down State laws which sought to deal with the economic problems wrought by industrialization and Mr. Adam Smith's division of labor,[7] and represented the first step in the imputation of a substantive content to the due-process clause. The paradoxical result of this philosophy is that it so disempowered the States to deal with these problems that, of necessity, the people turned to the Federal Government which has now regimented business to an extent which would petrify the corpses of the laissez faire judges who unwittingly brought it about.

The second step came in 1925, when in *Gitlow* v. *New York*, in treating a contention that the New York criminal anarchy statute violated the due-process clause of the 14th amendment in abridging the accused's freedom of speech, it was said for the first time:

"For present purposes we may and do assume that freedom of speech and of the press—which are protected by the 1st amendment from abridgement by Congress—are among the fundamental personal rights and liberties protected by the due process clause of the 14th amendment from impairment by the States."[8]

The course of history subsequent to this decision leaves little doubt as to the vast assumption of powers which the Federal courts have taken unto themselves, both over questions of personal and property rights.

This is not to say that the fundamental rights of liberty and property are not deserving of the most meticulous protection, but in the very scheme of our Government, it was the States, not the Federal Government, which were vested with the responsibility of vindication.

Footnotes at end of speech.

We have now reached the point where the due process and equal protection clauses have been, in effect, elevated to the status of a shorthand version of the first 8 amendments, and thereby made applicable to the States, although Marshall himself, the most outspoken nationalist up to the 20th century, early declared that the Bill of Rights was intended only as a limitation on Federal, and not State, power.

Also, the 5th amendment contains a due process clause identical to that of the 14th, and if due process embraces practically all the other Bill of Rights, as the Court has in effect held, the Founding Fathers were certainly given to redundancy in bothering with any but the 5th amendment.

In recklessly exceeding its powers and holding the individual citizen immune from any given State restraint, the Supreme Court undoubtedly considers itself as striking a blow for individual liberty, but the theory upon which our Government was based in the beginning, and which is responsible in large part for ts success, is that individual liberty will be best preserved in the long run by preserving the sovereign status of the States, as a buffer for all its individuals against encroachment upon their liberties by an omnipotent Federal Government, for in *Texas* v. *White*,[9] we were admonished that "it may be not unreasonably said that the preservation of the States, and the maintenance of their governments, are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States."

While the present dilemma is due mainly to the Supreme Court, the States themselves cannot disclaim all responsibility. In the Report of the Committee on Inter-Governmental Relations, it was concluded that one cause of increased Federal encroachment lies in the inability of the States, through overdetailed and restrictive State constitutions, to deal with problems requiring governmental intervention.[10] This has resulted in State and local pleas for Federal assistance and regulation in areas which should manifestly be dealt with only by the States.

One of the instances in which the Federal court's intervention into State authority has been most distasteful and burdensome is with regard to the review of criminal convictions in State courts. We have come to the point where in every criminal case attended with much publicity or interest, the normal procedure is to expect a succession of post-trial procedures by way of habeas corpus in Federal courts, in addition to direct review by the United States Supreme Court on certiorari.

Being composed of men having little or no trial experience, the Supreme Court is simply unable to understand that crafty criminal lawyers delight in holding back points for post-trial litigation in the event the jury verdict goes against them.

So acute has this problem become that the association has gone on record as favoring remedial legislation that would prohibit issuance of habeas corpus writs in Federal courts against State custody except in very limited circumstances.

The Supreme Court has also not hesitated to knock down on direct review any rules of procedure devised by the State courts as necessary expedients to securing justice and bringing criminal cases to a final disposition.

In *Williams* v. *Georgia* ((1955), 349 U. S. 375), it was held that the Georgia rule of practice prohibiting the challenging of a jury on grounds of racial discrimination after trial, would not be recognized. But upon being rebuked on remand by the Georgia Supreme Court (211 Ga. 763), the Supreme Court simply receded from its untenable position.

However, in *Reece* v. *Georgia* ((1955), 100 L. Ed. (advance, p. 109)), the Court declared as a denial of due process, the Georgia rule requiring a person held in jail on charges to challenge the grand jury before the return of the indictment, although this practice had been previously upheld for many, many years by the courts of 13 States and the United States Supreme Court itself—all this in spite of the fact that the demands of due process have always been tested to a large degree by the history and prevalence of the practice attacked.

In *Ullman* v. *United States* ((March 1956) 100 L. Ed. (advance, p. 361)), the Court held in sustaining the act of Congress granting immunity against the prosecution of witnesses in national security cases, that Congress, under the power to "provide for the national defense", has the power to override State penal laws by granting immunity from prosecution thereunder.

In *Rea* v. *United States* ((January 1956) 100 L. Ed. (Advance, p. 213)) it was held that a Federal district court could frustrate prosecutions in State courts by enjoining a Federal narcotics' agent from testifying as to evidence obtained as the result of an unlawful search and seizure, although such evidence was admissible in State court.

One of the most recent examples of the Supreme Court's dislike for State authority is *Pennsylvania* v. *Nelson* ((April 23, 1956) 100 L. Ed. (Advance, p. 415)), in which the sedition laws of 42 States were declared superseded by the Smith Act, on the basis of the latter's preemption, the decision resting upon decisions of the Court dealing with the interstate commerce which Congress had undertaken to regulate, rather than activities which both Congress and the States had sought to prohibit by passage of the sedition laws.

In *Slochower* v. *Board of Higher Education of the City of New York* ((April 9, 1956) 24 Law Week 4178, 100 L. Ed. (Advance, p. 449)), it was held that due process is denied a teacher by his discharge on the ground of his invoking the fifth amendment before a congressional committee. The Court apparently not only overlooked the fact that this was not a criminal prosecution, which the amendment was aimed to protect as distinguished from mere discharge from employment, but also the fact that the relevant part of the fifth amendment applied only against the Federal Government.

In the field of economic regulation, the court has not hesitated to strike down State regulation with equal vigor, when arrayed against the supposed intention of Congress to deal with the particular subject.

In Castle v. *Hays Freight Lines* ((1954) 348 U. S. 61), the States were held remediless to protect their highways by revoking the right of an interstate carrier to travel over same, as a penalty for repeated violations of State highway weight laws. It was determined that Congress had precluded such action by its comprehensive treatment of the subject in the Federal Motor Carrier Act.

Similarly in *Phillips Petroleum Co.* v. *Wisconsin* ((1954) 347 U. S. 672), it was held that an independent producer of natural gas who did not itself ship such gas in interstate commerce, but only sold it to others who did ship, was nevertheless subject to regulation by the Federal Power Commission under the Natural Gas Act, and that the producer was immune from regulation by the States. Under the theory of this case, an insignificent Georgia cotton farmer selling his cotton to a local gin which ships it by interstate commerce, could be subjected to a Federal control in degradation of State sovereignty.

In *Kern-Limerick, Inc.* v. *Scurlock* ((1954) 347 U. S. 110), the Navy Department was permitted to evade payment of State sales tax upon materials sold to contractors doing

Footnotes at end of speech.

construction work with the Navy, by upholding the authority of the Navy Department to enter into colorable agreements whereby the contractor was designated as a purchasing agent for the Navy. This decision necessarily will have a cumulative effect in that the less revenue a State collects, the more the people will have to depend upon Federal money to support public services, which results in a never-ending entanglement of Federal control.

However, when the shoe is on the other foot, the overreaching Federal courts have not hesitated to look through such legal procedures, for in the Virginia Parks case, *Department of Conservation and Development* v. *Tate* ((March 9, 1956) 24 L. W. 2483), the Fourth Circuit Court of Appeals invalidated a leasing arrangement by the State of a public park and went so far as to hold that it was incumbent upon the State to insert an express provision in the lease requiring the private lessee not to discriminate against Negroes.

Unquestionably, the doctrine of Federal preemption has received its most widespread application in judicial interpretation of the interstate commerce clause, although it has by no means been limited thereto. Within the realm of interstate commerce itself, the greatest application has been in the field of labor relations. One of the most glaring of these cases is *Amalgated Association of State Electric Railway and Motor Coach Employees* v. *Wisconsin Employment Relations Board* ((1951) 340 U. S. 383), where a State was held powerless to outlaw strikes in public utilities on the ground that the National Labor Relations Act precluded any such State action.

Garner v. *Teamsters' Chauffeurs Union* ((1953) 346 U. S. 485), held that the State court was without power under its labor law to prohibit picketing, the sole purpose of which was to coerce the employers into influencing its employees to join the union. Although the practice was considered an unfair labor practice under both State law and the National Labor Relations Act, the court held that Congress had preempted the field.

In *Weber* v. *Anheuser-Busch, Inc.* ((1955) 348 U. S. 468), the State court was held powerless to enjoin picketing for the purpose illegal under the State restraint of trade law. While the National Labor Relations Board had already determined the enjoined action not to be an unfair labor practice, under one section of the act, it was declared that the conduct involved was either an unfair labor practice, under the Federal act, or if not, was protected by that act (which has no relation to restraint of trade statutes). This case apparently modified the Giboney case, holding that a State could enjoin picketing conducted for a purpose deemed illegal under State public policy as expressed in the State antitrust law.

General Drivers, etc., Local No. 89 v. *American Tobacco Company* (348 U. S. 978). In a summary decision, the Supreme Court reversed the State court decision enjoining a clause in a labor contract requiring teamsters not to cross any picket line. State courts had held such a clause contrary to its public policy. The Supreme Court reversed on the preemption ground.

In *Federal Power Commission* v. *Oregon* ((1955), 349 U. S. 435), the States were deprived of their historic authority over water rights to nonnavigable streams, when it was held that the State of Oregon could not require a State license of one who had already received a license to construct a power project from the Federal Power Commission.

West Virginia ex rel Dyer v. *Sims* ((1951), 341 U. S. 22), presented the spectacle of the Supreme Court refusing to recognize the right of a State supreme court to construe its State constitution. In this case, the Court overruled a State court decision holding West Virginia unauthorized to expend money under the State constitution for carrying out of an interstate compact relating to river pollution. In substance, the Supreme Court merely held the State court's interpretation of the State constitution to be wrong.

In *Brown* v. *Western Railway of Alabama* ((1949), 338 U. S. 294), it was announced that any litigant electing to sue on a federally created cause of action in State court (under the Federal Employer's Liability Act) was not required, like all other litigants, to comply with the pleading requirements of Georgia law as to sufficiency of the petition against demurrer—this in the face of the ancient rule that a litigant electing to sue in State court on a Federal cause of action takes the State judicial machinery as he finds it.

Mention need hardly be made of the cause celebre of them all, *Brown* v. *Board of Education* ((1954), 347 U. S. 483), in which the States, in reliance upon the Plessy case had established vast and expensive school systems on the basis of segregation, only to be told 50 years later that this basis was no longer sustained by "modern authority." In a fashion the States were defrauded by the Supreme Court.

In *Griffin, et al* v. *Illinois* ((April 23, 1956), 24 Law Week 4209), by a 5 to 4 decision, the Supreme Court held that where a State provides for appeals in criminal cases, due process is denied if State law does not afford indigent defendants a free copy of the trial transcript to effect his appeal. This case goes further than any due process case to emanate from the Supreme Court in a long time, and simply amounts to the Supreme Court drafting rules of criminal procedure for the States under guise of due process. As pointed out by Mr. Justice Harlan's dissenting opinion, the effect of the decision is not to prohibit discrimination by the State, but rather to require that it discriminate by giving free to some that which others are required to pay for. If this case is extended to the limit of its logic, we will soon reach the point where a civil litigant can successfully claim as denial of due process the failure of the State to afford him a Phi Beta Kappa for legal representation, on the ground that his adversary, due to economic reasons, is able to employ more skilled and experienced counsel, than the former's financial condition would permit. If this is not the socialistic, paternalistic state, it is difficult to conceive of a situation that would be.

Growth for the Middle South

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an address by Mr. David Rockefeller, executive vice president of the Chase-Manhattan Bank, New York, which was delivered before the annual meeting of the Delta Council at Cleveland, Miss., on May 8. The Delta Council is one of the outstanding agricultural and civic-development organizations of the Midsouth. Mr. Rockefeller is one of the Nation's distinguished financial leaders, and we were honored to have him with us at the Delta Council meeting. His statements, devoted to the sweeping industrial development of the Midsouth and its tremendous potential for further development, are of significance, not only to the South but to the entire country:

GROWTH FOR THE MIDDLE SOUTH

(Address by David Rockefeller, executive vice president, the Chase-Manhattan Bank, at the Delta Council, Cleveland, Miss., May 8, 1956)

Ladies and gentlemen, when I was asked if I would come visit with you today, I was most happy to accept. Although I have been in the South many times, this is my first visit to Mississippi, and I am delighted to have the opportunity to see this beautiful area under such happy circumstances. I should add, however, that thanks to Bob Whitfield, who drove me over this morning, Mississippi is by no means a stranger to me, nor to any of us at the Chase-Manhattan Bank. As a matter of fact, Bob, who was a close friend and colleague at the bank for many years, has been trying to get me to come to Mississippi for some time—long before he retired and returned here to live. Mississippi has inspired in Bob a loyalty, devotion, and enthusiasm which could not but be highly contagious. Anyone who is associated with Bob comes to feel that he not only has enjoyed a deep breath of fresh Mississippi air but he is eager to come down and gain more. So here I am.

When I talked with Luther Wade, your president, about what I might say to you today, he suggested that I discuss the question of the industrialization of the Middle South and the impact that I thought it might have on the future development of our Nation. This seemed to me to be a very large order, and it is an assignment which I, as an outsider, did not feel particularly well qualified to handle. On the other hand, I am grateful for his suggestion for the stimulus of this talk with you has led me to dig more deeply into what has been happening here in the Middle South than I had ever had occasion to do before. As a result, I have not only gained a liberal education about a very fascinating and appealing part of our country but, in the end, I even concluded that there might be some merit to having someone who is not a native of the area convey to you his impressions, both as to the accomplishments to date and the potential for future development. My point of view may not be your own but at least it is fresh and, I hope, objective. At any rate, it is to this task that I should like to address myself this afternoon.

First, let me say that anyone who examines the economic record of the past two decades cannot help being impressed by the great progress you have made here in the Middle South. Perhaps the best measure of general well-being is the average income of all of the people of the region. Today the per capita income in this area is well over $1,000—$1,000 per year for every man, women, and child. This represents a very great gain from prewar days. Of course, prices are higher. But even after adjusting for higher prices, the average real income per person is more than double that of prewar. This is no mean achievement, by any standard. It is reflected in the many new homes that have been built, in the telephones and

electric appliances that grace those homes, in the tractors now on the farms, and in the autos that line the roads. As a matter of fact, prior to the war there was one car to every 10 persons here in the Middle South. Today there is 1 car to every 5 persons, and you now hold the somewhat dubious distinction of participating in the Nation's traffic jam.

The record you have achieved is one of substantial economic progress, both in absolute terms and in relation to the rest of the country. Such progress, of course, is never achieved without some change in way of life. The Middle South has recognized this fact, and it has been particularly aggressive in creating a favorable climate for new industry and in seeking new and better ways of doing things. You have gone to great lengths to provide tax incentives, to provide information and facilities, and to help in every way possible the difficult adjustment of a shift of labor away from your farms. The result is etched in the picture of your countryside, both industrial and agricultural. It is seen in the new plants that dot the landscape; in the tractors, flame cultivators and cotton pickers that work the fields; and in the far-ranging activities of organizations like your Delta Council. And buried in the statistics that summarize all this activity is the record of a quiet revolution. There has been a shift from an economy in which agriculture was the great dynamic force, to one in which industry and trade have become the dominant and moving elements.

As I have suggested, the Middle South has now taken a long stride forward in industrialization which has brought with it economic betterment. As a matter of fact, here in the Delta itself, you have abundant evidence of this process. Since 1950, I am told that $200 million has been invested in new and expanded production facilities in the Delta. You now have many nationally known companies active here—companies like International Paper, Commercial Solvents, Westinghouse, Spencer Chemical, and others of similar stature. Throughout the whole of the Middle South, the number of people employed in manufacturing has increased substantially, and the income that arises out of manufacturing is now greater than that from farming.

It is interesting and significant, too, to see the direction in which industry has been moving. A quarter century ago, the dominant manufacturing industries in the Middle South were textiles, clothing, lumber, furniture, and the like. These are all essential and important lines. But they also are lines that use less complicated types of machinery, and they are lines in which the productivity and the return to both capital and labor is relatively low, at least initially. In recent years, the greater part of the growth has been in industries such as the chemicals, oil and gas, aluminum, pulp and paper, and various equipment lines. These are all industries which use very large amounts of capital—industries in which the worker is given help by hundreds of inanimate slaves. The average cost of machinery and plant that is used by a chemical worker, for example, exceeds $25,000. It is little wonder, then, that the productivity of labor—that is the output per man per hour—is high in such industries, and that they contribute greatly to the welfare of workers and the whole community.

Although there is no doubt that the Middle South has made a strong start in becoming industrialized, one might well ask whether this trend is likely to continue, and, if it does, what the consequences are likely to be. My answer, in brief, would be that it seems to me highly probable that industry in the Middle South will continue to grow—perhaps even more rapidly than in the rest of the country. As it does, I believe that incomes within the area also should grow, and the gap with the rest of the country should be steadily narrowed. At the same time, however, it seems likely that the Middle South will remain a more diversified economy than most regions which are primarily industrial in character. You should be able to maintain a better balance here than in other areas between farming and industry and, in so doing, I should hope that you will retain a large portion of the charm of your countryside, which so impresses all who come here.

When we inquire why industry is growing as never before in this part of the country, we get a number of answers: but three stand out as being of particular importance. First, there are raw materials in the Middle South which are becoming of increasing significance to the country as a whole; second, you have a group of workers here who readily adapt themselves to the needs of modern industry; and finally, the steady advance in living standards has created within the area itself a larger market—one which can be served most effectively by greater local production.

I think you all know of examples that fit each of those cases: The expansion of the Shell chemical plant at Norco is based on locally produced raw materials; the move of the Alexander Smith Carpet Co. to Greenville was tied in no small part to the availability of a suitable working force; and the establishment of a Knox glass-bottle plant at Jackson is due to growth of the market in this region. It is difficult to say in every case which of these factors is the most important—very often more than one is involved. Nevertheless, I am inclined to feel that here in the Middle South your fortunate position with regard to raw materials is likely to play an increasingly decisive role in the period ahead.

On this score, the Middle South is much better off than many other areas within the Nation. Moreover, the materials you possess are ones which are becoming relatively more important with the passage of time. There was once a day when the chief basis for industrialization was the possession of coal and iron ore, largely for the making of steel. These were the raw materials that gave Britain her start, and which laid the foundation for the great industrial complex in the Pittsburgh-Chicago-Detroit triangle. Coal and iron ore are still important, and you are fortunate in possessing a regional center for converting them to steel in Alabama. But in recent years other materials have grown in relative significance—particularly chemicals and the lighter metals, like aluminum. Here in the Middle South you have in abundance many of the basic raw materials for chemicals—oil, gas, salt, potash and sulfur among them. And Arkansas possesses the Nation's largest deposits of bauxite, the source of aluminum. Couple these materials with efficient power and transportation, and it is little wonder that Reynolds, Kaiser, and the Aluminum Company of America all have been expanding in this area, or that 70 new or expanded chemical installations have been introduced into the Middle South in the past 5 years. Perhaps no other industry will develop so fast in the next decade as chemicals—particularly those derived from oil and gas. One of the South's own experts, Dr. F. J. Soday, of Chemstrand, has pointed out that already one-third of the Nation's chemical industry is located in the South as a whole, and that the proportion is expected to grow to no less than one-half a decade hence. Much of this grain will be right here in the Middle South.

There is still another element essential to production which is becoming increasingly scarce in many areas, but which you in the Delta are able to take for granted. I refer to water—a resource which industry needs more and more as it expands and becomes more complex. Scarcity of water has already become the No. 1 problem throughout large sections of the West and the Pacific coast. It has reached a point where it is curtailing industrial expansion, and it clearly will slow future development unless a cheap method of removing salt from sea water can be found. Yet I understand that twice as much water flows through the Delta each day by way of the Mississippi as is used by the entire Nation. I venture to say that your plentiful water supply will become a factor of increasing importance in drawing industry to the Middle South.

These then are your great assets for a further growth of industry—raw materials which are prized highly, ample water, good transportation and economical power. Nor must we forget that the Middle South, and indeed the South as a whole, is an area where a steady flow of new workers has become available to industry. Some of these are coming from farms where they can be spared, as a result of an increase in the use of machinery. Others are younger people who are taking jobs for the first time. Moreover, as you well know, many a small farmer has turned to farming on a part-time basis, while earning a good share of his income by work in a nearby factory. This is a trend which may well continue, particularly on farms which are not large enough to be efficient or to provide a good livelihood.

It is a fact that you have in this region almost all the essential ingredients for a further expansion of industry. Yet there are several roadblocks that exist, and it would be shortsighted to ignore them. It seems to me that the Middle South has two principal deficiencies which somehow must be made up: first, you lack adequate capital to develop fully the resources of the area; and secondly, it seems probable that you have a shortage of skilled managerial personnel—particularly men who have had the training and experience necessary to start up new industrial enterprises. I should like to look at each of these problems with you for a brief moment.

On the matter of capital the entire South has made outstanding progress in the past 15 years. This can be seen in the new houses, new appliances, new buildings, and equipment, all of which represent saving, much of it by your own people. Your progress is no less evident in the growing strength of your financial institutions. Here in the Middle South, for example, the assets of banks have increased more than fourfold since 1939—a rate of gain which is substantially greater than that for the Nation as a whole. Moreover, insurance companies and savings and loan associations have grown rapidly and now command assets which are 4 and 5 times those of prewar. Indeed, insurance companies throughout the entire South possess investments which exceed $18 billion in total.

These are all encouraging trends. But they are not fully adequate to meet the capital needs of the South. Your banks handle a good portion of the credit needs of the farmer and of those engaged in small industry and trade. Local banks also provide substantial sums of mortgage money, as do insurance companies and savings and loan associations. In addition, insurance companies in the South have helped supply local utilities and certain industrial companies with part of their capital requirements. In order to establish a modern industrial plant, however, huge amounts of equity capital are needed, as well as a large quantity of short-term money. To a considerable extent, these funds must still flow into the Middle South from other sections of the country, either through investment of retained earnings by large national companies or through loans and investments by major banks and insurance companies located in the financial centers of the Nation.

There is still some debate here in the South about this inflow of capital from other areas. It is sometimes objected that because interest and dividends go to investors in the North the South is paying a form of

tribute to that area. In my judgment, this type of thinking does not rest on solid grounds. The fact is that the growth of industry by means of capital from other regions has helped raise living standards throughout the whole South. Wages have been increased; storekeepers, doctors, and dentists have benefited; and even the farmer has commanded a better price for produce sold for local consumption as a result of the influx of capital. As a matter of fact, experience shows that any area, no matter where, with a fast developing industrial potential must be a net importer of capital. For many decades, in the 19th century the North was a net importer of capital from Great Britain and the Continent. Later the West was an importer, and today you in the South have become a sizable outlet for investment funds from other regions.

Newly established companies are normally energetic in training future management and technical personnel so that, for the most part, outsiders need only be brought in at this start. On this score, however, there is one further comment that might be worth making. You could undoubtedly hasten the time when you will be free of the need to import personnel by further attention to the technical training you provide in the South. Quite frankly, facilities for training engineers are particularly short here in the Middle South. I believe you have only 10 schools that offer any type of engineering degree, and today these graduate no more than 500 engineers a year. To a lesser extent, this is a national problem as well. As you perhaps know, the country as a whole has fallen behind Russia in the training of engineers—last year we graduated 23,000 as against 63,000 in the Soviet Union. Thus, anything you can do to improve engineering facilities and training will help the whole Nation as well as your own position.

And now I should like to say just a word about the key role which research is playing in industrial growth, both here and throughout the Nation. Outlays on research have grown enormously since prewar days—last year, for example, we spent almost $4 billion for industrial research, more than was spent during the entire decade from 1930 to 1940. When you study these research expenditures, one of the most interesting facts that emerges is the close relationship between the amount spent by a particular industry, and the rate of growth of that industry. The industries that are spending the most on research today are electrical equipment, chemicals, and aircraft industries. Even within those fields, it is the companies which are spending relatively more on research which are growing most rapidly. Indeed, it can be shown statistically that, on the average, companies which devote 3 percent to 4 percent of their sales dollar to research more than double their total sales in a decade.

Now these facts have significance for you in the Middle South in several ways. First, as I have already suggested, you are gaining the benefits of a research undertaken by large national companies which are operating in your area. These are the companies which are most active in developing new products and new ways of doing things. Some of them have research facilities located right here in the Middle South—Esso Standard Oil, Ethyl, and Lion Oil, for example. As a matter of fact, it has been estimated that at least half of the increase in per capita income in the South since prewar can be traced to the development, through research, of new products and new processes which utilize resources found plentifully in the South—oil, gas, and forest products among them.

By the same token, failure to spend money on research tends to have an adverse effect on the earnings of an industry. The textile industry, for example, has traditionally spent relatively little on research. This is particularly true in that segment which is concerned chiefly with cottons and woolens. Competing materials developed through research have made heavy inroads against the natural fibers in recent years. Yet cotton is one of your outstanding products. To improve the use of cotton as a material, I believe the cotton producers themselves will have to take responsibility for a certain amount of research pioneering. Already they have done this to some extent through the National Cotton Council, and I understand that the results to date have proved beneficial. I should think it decidedly in the interest of cotton producers to support this and similar research efforts. More than ever, we live in a day of research, and no group within our economy, no matter how important, can afford to rest content with the things as they are.

As I survey the future of the Middle South, I cannot help feeling that it is a highly promising one. True, agriculture which has long been a mainstay in your economic life, is in a period of transition. But, offsetting this, and helping in the adjustment, should be a continuing growth of industry and trade. Science has at last caught up with your resources, and many of them fit the needs of the mid-twentieth century particularly well. Progress thus seems assured—particularly if the Nation as a whole continues to grow. As time goes on, incomes here in the Middle South will rise, probably even faster than in the rest of the country. The growth in your own prosperity and strength will contribute to the stability of the country as a whole and, through it, to the peace of the world. If we have any lesson to learn from studying history and economics today, it is that the world is becoming more interdependent even as it become more nationalistic. We can thank God that this country stands together as one unit and that the minor differences we may have between one region and another do not prevent us from having unbounded faith and loyalty to our great Nation. It is a thrill for me as an American to be with you today to see the great things that are being done here in the South and to congratulate you on the bright future which is opening up in the years ahead.

Tomorrow's Merchant Fleet

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. JACKSON. Mr. President, on Tuesday evening, May 22, my distinguished colleague [Mr. MAGNUSON] made the principal address before the Propeller Club dinner, Washington, D. C., on "Tomorrow's Merchant Fleet." Because this address was in honor of National Maritime Day, and because of the great importance of the subject involved, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TOMORROW'S MERCHANT FLEET

(Address by Senator WARREN G. MAGNUSON before the Propeller Club dinner, Washing, D. C., May 22, 1956)

Distinguished guests, ladies and gentlemen, I consider it a great honor to be with you on National Maritime Day. It is the day Congress has set aside annually to pay tribute to, and reevaluate the progress, of our entire maritime industry. Throughout the day, in this country and abroad, our flag has been flying from all Government buildings in tribute to this great industry. American-flag ships, busy at their trade upon the oceans of the world, have dressed ship for this occasion.

We have gathered here tonight to do our small part and pay our small tribute. While doing so, every one of us should be reaffirming our pledge to do everything within our power to keep the merchant marine of the United States strong. To renew our efforts, during the coming year. To accomplish the tasks which will make the United States merchant marine the most efficient, the most modern, and the best-equipped merchant fleet in the entire world.

I wish that everyone could realize the importance of our merchant marine to them, as Americans, in time of peace as well as in time of emergency and war. Unfortunately, the industry is not of such a nature that it can show off its product. Unlike the air transport industry, it cannot present an impressing air show with echelon after echelon of new equipment passing overhead. Instead, we are limited to deep water areas to display our wares and thus limited in our personal contact with the general public. I am happy to say, however, that our ships are busy plying the trade routes of the world. The few that are resting in United States harbors tonight would be woefully inadequate to convey our message to the American people, and the importance of the health of our industry to them.

I might say here that I am informed on the average our dry cargo vessels spend 60 percent of their time in port and only 40 percent at sea. This condition is directly attributable to the unbelievable lack of progress during the past 50 years in the development of new cargo handling techniques and port facilities. I have mentioned only two of the many problems facing us today. The need for a better informed public as to the requirements of the merchant marine and its value to them. The need for more research and development to devise methods and equipment to improve our antiquated and inefficient cargo handling methods.

Tomorrow's merchant fleet is my topic. It would give me the greatest pleasure to be able to tell you that tomorrow's fleet is here now. As a matter of fact, I would be delighted to be able to tell you that tomorrow's merchant fleet will be here tomorrow. Unforunately, I can do neither. I can very definitely tell you that it is not here today.

I can also tell you that without the continuing efforts of all of you in the exercise of your daily duties that it will not be here tomorrow.

All of us know that the United States merchant marine is the fourth arm of our national defense, both during a cold war and in time of actual conflict. Unless we continue our efforts to protect it from those who would ignore its needs during peacetime, it will fall into decay and ruin as it did prior to World Wars I and II. We must continue our efforts to improve and modernize this great industry.

Let us suppose a child is born tonight who, upon reaching his 7th birthday asks his father to take him down to the docks to see the new ships flying the flag of the United States. If the father is well enough informed, he could explain that on the night the boy was born 7 years ago, over 70 percent of the United States merchant fleet was in such a condition that the vessels are obsolete in 1963. He could further explain that these were the ships built during World War II and that because the United States did not have a sound, long-range shipbuilding program, very few new vessels were

financed, designed and constructed during the intervening 20 years. This condition resulted in the decay of the major part of the merchant fleet. The father then could, and with great difficulty I believe, try to make the child understand that because we did not have an active, healthy, vessel replacement program, our shipyards fell into disuse. With the resultant disintegration of existing facilities, labor skills were lost. There was no opportunity to utilize the skills that had been perfected. He could point out that capital was not available to build ships, because opponents to a strong merchant marine or those who fail to understand this problem, insist that subsidies and aids provided by the Government be on a temporary and piecemeal basis.

Thus, shipowners and investment bankers, as prudent businessmen, could not advocate the necessarily large investment required for new ship construction because of the impermanent nature of our maritime aid program and our lack of a long-range, sound ship construction program.

Then, I am afraid, he would have to tell the boy, rather lamely, something along this line. "You see, son, back in those days we were at peace and we wanted to reduce our taxes and we just couldn't see giving aid to a private industry just so it could meet foreign competition. When the time came and we needed the merchant marine to supply our requirements away from home, we found that ours just wasn't much help." I am afraid all this would be rather complicated for a 7 year old boy. It seems to be too complicated for grown, mature adults, and our record, out of two world wars, proves this. But wouldn't it be wonderful if that father could take his son down to a harbor and point with pride to gleaming streamlined efficient vessels and say with pride, "There you are, son. That's part of the merchant marine of the United States—the finest fleet of any country in the world."

To build, to operate, to experiment requires labor. Our ships are manned by fine American officers and seamen. Each day they are on their jobs swells their fund of experience and knowledge of their particular duty. They become more efficient and better qualified. They are ready for advancement, either at sea or ashore. Such training and experience cannot be purchased anywhere on earth.

The labor problem in the shipyards is acute. It has been 10 years since the end of World War II. During that 10 years, many skilled craftsmen and engineers, who were essential to the success of the World War II shipbuilding program, have left the industry. Who is taking their place? In 1944, the young men were away at war. Yet, in 1964, in case of an emergency, it will be these same men who will be called upon to enter our labor force. Because of our lack of building during this 20-year period, we will not only lack an adequate merchant marine, but we will not have an adequately trained labor force.

Fortunately for us, the rumblings of World War II were loud and ominous enough to give a little time to prepare for the task ahead. We cannot count on a similar preparatory time in the future. In fact, everything that I have read and heard would indicate exactly the opposite. With no time to prepare, untrained labor, inadequate facilities, our position will be materially different than it was in 1940. It is necessary for all of us to do what we can to prevent this dismal picture from ever becoming a reality.

LEGISLATION

Merchant marine legislation, like other types of legislation, is not perfect. Changing times and conditions require amendments and additions to existing law. As chairman of the Senate Committee for Interstate and Foreign Commerce, I have personally supervised 34 merchant marine bills in the 84th Congress. Twenty-five of these bills have passed the Senate. Thirteen of these bills have become law. Probably one of the most important bills to the maritime industry in this Congress is S. 2584 which threatens the principle underlying our 50–50 law. That bill is now before my committee. In essence, S. 2584 would amend Public Law 480 and exempt certain cargoes from the provisions of Public Law 664 (50–50), which requires that 50 percent of all cargoes financed or purchased with Federal funds be transported in American-flag vessels. If I may, I would like to digress a moment and give you some background on the origination of this policy.

FIFTY-FIFTY

Historically, the United States has attempted to protect its merchant marine from foreign competition and to prepare it to act as the fourth arm of defense. Initially, such protection was directed to all domestic commerce in support of our overseas Military Establishment. Later it was extended to include all foreign shipments created by loans made by agencies of the United States. The 1936 act reduced this volume to a substantial portion of the United States export and import waterborne commerce. Public Law 664 (50–50) further defined the area as 50 percent of our foreign aid program. As a result, since 1946 foreign-flag vessels have steadily increased their advantage in this field until today they carry 75 percent of the United States foreign commerce. Cargo preference (Public Law 664) has been a great factor in retaining for United States flag vessels the 25 percent that we now carry. In the market place the American owner is at a disadvantage in competing for pure commercial cargo for several reasons. Exchange restrictions, the terms of sales imposed by overseas buyers and most important, the traditional policy of and economic incentives for foreign governments and citizens to patronize vessels of their own national registry, are the primary factors. Now, certain maritime nations are attepting to reduce the American-flag traffic to an even smaller figure by recommending the elimination of 50–50 to certain Government-aid cargoes.

Gentlemen, we should face up to this problem. The United States, to continue as a Nation, must maintain a strong and adequate defense system. An important and essential arm of that system is the merchant marine. To maintain a trained and efficient personnel and to stay abreast of maritime technological developments the peacetime American merchant marine must receive Government aid.

We certainly cannot accomplish this by removing the basic plans upon which our entire policy is founded, or by weakening legislation specifically designed to keep our merchant marine strong. We certainly cannot give our foreign friends a commercial carte blanche in peacetime and still give them adequately staffed and efficient ships in wartime. It merely evolves to the question of whether we desire unlimited free trade in peacetime and an inadequate or nonexistent American merchant marine—or whether we insist upon certain trade advantages for our own ships (which, incidentally, every foreign maritime nation does) and have a strong fourth arm of defense if the need arises.

I have been fighting for the latter principle for many years. I shall continue to fight for it. Changing times and conditions require changes in existing law. It is the function of Congress to determine whether such changes are in the best interest of the people of the United States. Accordingly, in the discharge of my duty, I ordered that hearings be held on the merits of this suggested amendment.

RESEARCH—ATOMIC SHIP

While it is necessary to work with the tools at hand to improve the status of our merchant marine, we cannot ignore the possible tools of the future. Nothing in this world is static. If we do not progress, we are, in effect, retrogressing. The speed of the retrogression is dependent upon how fast our competition is progressing. In the merchant marine field, our failure to devote a proper amount of time, money, and men to research and experimentation has retarded our overall progress. Our generation lives in the age of the atom. The experimental age, to be sure, but nonetheless, it is our lot to be faced with this challenging situation. If we meet the challenge, we can turn it to our advantage. If we fail, the world may go down with us.

I have advocated the construction and operation of a nuclear-powered prototype merchant ship. Certainly the national interest requires that the Federal Government take the lead and bear the brunt of the cost during the experimental and development stages. The full cooperation of the atomic-energy people, the nuclear-reactor manufacturers, and the representatives of the shipping companies would be essential to the success of such an undertaking.

With the reality of nuclear vessel propulsion upon us, I suggest the maritime industry is on the brink of an event of even greater impact than the coming of steam to trans-ocean movement of goods and people. The application of atomic energy to merchant vessels will make all of us hardly recognize this trade in the near future as judged by today's standards.

The potential carrying capacity of each vessel will be so great due to the increase in revenue space per ship and high speed that present trade volume could be handled with far fewer units. Concomitant changes will therefore be necessary in the entire steamship organization. Policy decisions will be rendered by or in close consort with engineers and physicists. Sea speeds will mean trade routes will necessarily be altered as distances shrink in terms of voyage days. Cargo handling time will stand in even greater contrast to present sea time and require courageous and forward-thinking solutions. Terminal facilities will require radical reshaping in order to adapt to the more modern ocean carrier. Port time must be cut to avoid retarding of the rapid movement of vessels.

Purely commercial and private operation of atomic-powered merchant vessels may be a greater distance away than their mere physical existence because of the heavy initial capital investment. Government and industry will have to work hand in hand to reduce the costs so that such a plan is practicable. Regardless of financial considerations, the private ownership of atomic-powered vessels is not so far off that the industry can dismiss the prospect of having soon to recast its total rate structure. With such recasting the true and total impact of atomic vessel propulsion will be felt. Competitive pricing of merchandise will undergo sharp changes worldwide as ocean transportation costs are drastically reduced. With the lower freight costs, goods will be moving across the ocean of a nature and in a volume as cannot presently be visualized. The atomic merchant ship will surely bring dramatically new patterns of international trade. These patterns will affect not our maritime industry alone but the very roots of our domestic economy. I hope the maritime industry stands ready to adjust to and pioneer in these developments. Ultimately, the net benefit thereof will be reaped by the peoples around the world.

The overall project is so vast and overwhelming that all of us could devote the remainder of our lives to this one task, and yet there would still be much to do. The fact that we may fail or encounter prodi-

gious problems along the way should not deter us one singe day. Who among you can tell me with accuracy how much time we have left to accomplish these necessities? The answer is obvious. Such research and development is essential to our national welfare and to the well-being of every operator of an American-flag vessel, as well as to the world.

Planning for ships which make up tomorrow's fleet is important. But we must plan ahead for the men to man them, too.

Finally, we are making important headway on the training facilities for the men our fleet will need.

By unanimous action of both the Senate and the House of Representatives the United States Merchant Marine Academy at Kings Point became a permanent Federal academy last February.

Ironically while administration spokesmen these days praise the American Merchant Marine, the Defense Department has threatened withdrawal of the Naval Reserve status held by the cadets at Kings Point and at the four State maritime academies. However, the Senate has passed a measure (S. 1748) designed to insure the continuation of this important reserve program and it is to be hoped tht the House will take similar action before they adjourn for the summer.

Veto of the Farm Bill

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. WATKINS. Mr. President, I have in my hand a copy of a letter to the editor of the Deseret News written by Mr. Evan M. Hess of Plymouth, Utah, which was printed in that newspaper under date of May 7, 1956, and called to my attention by Mr. J. A. Watts of Logan, Utah.

This letter, which commends President Eisenhower for his veto on H. R. 12, also exhibits a rare quality of self-reliance seldom seen these days. Because it is typical of the philosophy epitomized by down-to-earth farmers, and is a refreshing expression of individualism, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UTAH FARMER PRAISES THE VETO—PERMANENT SECURITY HELD UNATTAINABLE

Looking at the present farm situation through the eyes of one whose income is derived wholly from the soil, I find it impossible to find the proper words of praise with which to express the feelings of gratitude and thankfulness that came to me upon learning of our President's veto of a farm bill that would be impractical, impossible and nothing less than a burden on the Nation as a whole and a shortcut to farm regimentation, or in plain English, dictatorship.

After watching for 20 years or more the farmers of our Nation being sweet-talked into putting a price tag on their God-given right to do and act as they see fit, I can feel only respect and admiration for the action of our President and his Secretary of Agriculture in their attempt to loosen the chains of compulsory farm legislation and give back to us the priceless heritage of freedom our forebearers so gallantly defended for those who were to follow to enjoy because in this struggle for temporal salvation there is no man, body of men, or any political party that can guarantee temporal security in a material world.

Now that we are being offered an opportunity to think and act for ourselves and put to use our own initiative and ingenuity I sincerely hope the majority of the farmers of this great Nation can realize and understand more fully just what our President and Secretary of Agriculture are trying to do for us because it is when we sit back, drifting with the crowd and letting someone else do our thinking for us that we will eventually lose the right to do our own thinking and better would it be for us than were we mere beasts of burden in the field.

Strong men demand the fight for freedom while weaklings sit idly by and whimper for security.

EVAN M. HESS.

PLYMOUTH, UTAH.

Mike McDermott, a Democratic Missionary

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. MURRAY of Illinois. Mr. Speaker, if a future historian relates the contribution of our present political parties I have to concede that he would credit the Republican Party with making the advertising jingle and the soap opera a political asset. Likewise, he must credit the Democratic Party with the organization of individuals of all walks of life into a party that gives all the opportunity to effectively express their governmental ideas. The Cook County Democcratic Organization has been a leading contributor to this democratic achievement. Coronet, one of our national magazines, recently depicted the operation of the basic unit of the great democracy of Cook County, the ward or neighborhood organization. It relates the poiltical story of Michael H. McDermott, a close personal friend and committeeman of the 13th Democratic ward organization, part of which is in my own congressional district. I think the article ought to be included in the RECORD.

BOSS OF THE THIRTEENTH

(By James A. Skardon)

Chictago, like many big cities, is divided into wards which, in turn, are divided into precincts. Biggest of the wards is the 13th, sprawling along the city's South Side from 55th to 75th Streets, north and south, and from Ashland to Harlem Avenues east and west. The ward includes the Chicago Midway Airport, Marquette Park, industrial plants, many homes and some 100,000 residents.

Of these, it is doubtful whether any one of them is more important to the ward as a whole than 5-foot-5, 172-pound, 55-year-old Irishman who each Tuesday and Thursday evenings from 7:30 to 10 p. m. sits at a desk in a murky office at 6509 South Kedzie Avenue and receives an endless stream of visitors. He is Michael H. McDermott who, as committeeman of the 13th Ward Regular Democratic Organization is, in effect, Democratic "boss" of the ward. As such, he is a key figure in the party organization that starts on the block level with the workers, and goes up through the assistant precinct captains, precinct captains, ward committeeman, and county and State committeemen to the national committee, paralelling governmental offices and often exceeding them in power. For when the party organization is strong, as in Mike's case (he has never lost the ward to the Republicans), the organization not only decides who is to run but, through the officials it elects, it governs.

To the people of his ward, Mike is government they can touch. He worries with them over their problems, visits with them when they are sick and, in general, sees to it that the party takes care of its own.

In doing this, he wraps up the ward for the Democratic Party.

For most of his life Mike has known little but politics. His father was a Chicago precinct captain before him. Mike got his start 30 years ago as an assistant precinct captain, became successively a precinct captain and then, after 18 years, ward committeeman.

The organization chose him to serve out the term of a man who had died; and the party elected him to a full 4-year term in 1952. This year he is running again for a job that pays him no salary and takes up so much of his spare time, including 2 evenings a week and most of Saturday and Sunday. But there are benefits in being a strong party man. Mike earns $8,000 a year on a fulltime job as chief clerk in the county clerk's office and, as a representative in the State assembly, he serves 6 months every 2 years at a salary of $10,000 a term.

Mike does an untold number of favors for the people of his ward. Some are done out of friendship, some out of sympathy; but by far the greatest number are done for the good of the party—for the simple and straightforward reason that when Mike, or perhaps 1 of the 98 precinct captains who work under him, helps someone out, just one thing is expected in return for the time, trouble, and thoughtfulness of the organization's man. That one thing is a vote for the candidates of the regular Democratic organization.

For this vote Mike might help to make it easier to get a license to run a school bus, give a letter of recommendation, get a jail guard transferred, help a boy apply for Annapolis, get a tax assessment more fairly adjusted, or find a job for one of the faithful. This is the you-do-this-for-me-and-I'll-do-this-for-you game that gets candidates elected in the precincts of American democracy.

If Mike plays this game skillfully, he is able to count on enough votes among the 54,000 registered voters in the 13th ward to carry the ward for the Democrats. He has won new friends and workers for the party. And the more people he and his organization convert, the bigger and more formidable Mike's own little empire becomes; and the stronger the party grows all the way from the precinct to Washington.

Every Saturday and sometimes on Sunday, Mike makes the rounds of his neighborhood, checking on needed civic improvements, calling at the maternity hospital to welcome a new baby, chatting with priests, ministers, storekeepers, policemen, teachers, club leaders, and householders.

Most of Mike's activities are of the practical sort that deal with the voters in his ward and their immediate problems. He gains as much from the on-the-spot associations as the voters do; for, especially at election time, he and his men must not only get out the vote, but must be able to give the party chiefs a running, up-to-the-minute report on the political feelings and voting intentions of the people within his ward.

By talking with people, checking on situations at first hand, and studying the reports from his captains, Mike knows, almost to the house, how the voting will go in his ward.

Thus, he is the party's eyes and ears as well as its helping hand and its gentle but firm persuader.

In the chain of command that controls the operations of a major political party, Mike reports to the higher ups just as the precinct captains report to him. When he gets a problem he can't handle on his own level, he takes it downtown to Democratic headquarters in the Morrison Hotel, where he talks with County Committee Chairman Richard Daley, who is also mayor of Chicago.

To Mike, whatever they say downtown is law, be it about the choice of a candidate, the use of party funds, or the handing out of jobs. This absolute obedience is a prime requisite for success in Mike's chosen profession; for without it a party, like an army, would not be able to function. Mike's loyalty and obedience to the party are steadfast, for, as he says, "I was born a Democrat and I believe in them."

A bachelor, Mike lives simply with his widowed sister in the same house in which he was raised. He neither drinks nor smokes and likes to get in a round of golf when he can. Evenings, when he is not at headquarters or attending some party function, he studies the latest changes in Chicago laws and reads books on politics.

Outside of the Democratic Party, one of his main interests in life is his young niece, Sharon Doran, who lives just down the block and sees to it that Uncle Mike doesn't forget the $1 allowance he gives her each week.

People leave Mike pretty much alone at night; but they know they can catch him at home on Sunday mornings before 10:45 when he leaves to attend 11 o'clock mass. He will spend the rest of the day doing numerous local political chores.

With most of his time and energy voluntarily contributed to the party, Mike has little left for himself; but he would have it no other way. He is proud of his party, and proud to be able to serve it. He would fight you at the merest suggestion that his work is not as honest as any other; or that he is not serving the public good. For Mike loves people with the same intensity that marks his devotion to the Democratic Party.

As a result, things would not be the same for him if he were not able to walk along calling everyone by their first name and having them answer, "Hiya Mike!" This makes it all worthwhile, and for Mike it makes the 13th ward the finest place in the world to live and work.

Address of Hon. Kenneth A. Roberts Before Reserve Officers Association at Remington Hall, Anniston, Ala., April 28, 1956

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the speech made by my colleague, Congressman KENNETH ROBERTS, on the occasion of the annual convention of the Reserve Officers Association in Anniston, Ala., April 28, 1956. It is an excellent speech depicting the great contributions which have been made by our Reserve forces, and the important role they play in our national defense today. It is important that in this time of international tension, we all recognize and support the Reserve Forces Act of 1955 as one of our strongest bulwarks of peace.

The speech follows:

This evening we are observing Military Reserve Week. I think it is altogether fitting and proper that this meeting be held here at Fort McClellan as by this coming together, we are in a sense honoring an institution that has contributed in every possible way to the defense of this Nation and to the defense of the free world. I have met many people in other parts of the country who remember the days of World War I and World War II and the training at Fort McClellan which fitted them for the defense of this country.

I am sure all of us know that during World War II, 350,000 troops were trained at McClellan and went on to practically all of the battlefields where American troops were found during World War II. During the years of inactivity at Fort McClellan, which have been few, National Guard and Reserve officers have trained here and have gone on to participate in Korea and, in fact, on every front where democracy is being challenged. We are indeed grateful for the fact that McClellan is again being given its right to prepare not only our men, but also the women of the WAC for their duties throughout the world. McClellan occupies a three-fold position, or I may say, has a three-fold mission. It is the center for the Chemical Corps Training Command, the permanent home of the WAC, and is the center for National Guard and Reserve training in the Southeast. I could not in all fairness pay tribute to this three-fold mission without emphasizing the tremendous contribution which is made by Anniston Ordnance Depot at Bynum. I am sure you know that had it not been for the preparation made there, the readiness and the efficiency of this installation, our troops in Korea would have had no ready supply of armament in that conflict. It has been reported that MacArthur's intelligence told him that heavy tanks could not be used in Korea because of the flimsy bridge structures and narrow roads, but, as you know, those of you who were in the Korean conflict, tanks were used by the Communists and had it not been for the fact that installations like Bynum had prepared for this eventuality, we would have been kicked completely out of the peninsula of Korea. With these two great defense installations, both having a tremendously important mission, certainly Calhoun County has contributed a great share to the defense of democracy.

Now, let me get back to my mission which constitutes a rare privilege in many ways. In the first place, having served in the Navy as a member of the Reserve Corps, I think I have an understanding of the attitude and I might say I know something about the treatment Reserves have received in the past. I suppose there will always be a certain amount of healthy competition between the Regulars and the Reserves, and while we like to talk about the importance of the citizen soldier, I think that without the regular establishment we could never hope to compete with the military of the dictatorship nations. I know that I speak the sentiment of all here when I say that we are all proud of West Point, Annapolis, and the new Air Force Academy. We are grateful for the products of these institutions and you have to admit that these establishments have a great deal on the ball when you consider the fact that from these schools have come men like Robert E. Lee, U. S. Grant, Phil Sheridan, Chester Nimitz, John Towers, Smedley Butler, Dwight D. Eisenhower, James Van Fleet, Lawton Collins and many others who have attained the heights of glory in military achievement. At the same time, however, the great mass of military personnel has always come from the ranks of average citizens and it has been the ability to convert people from the plough handle, the store, the factory, the mine and the forest in a short time which has made them equal or superior to the Nazi storm trooper and the regular soldier of our enemies in arms.

So, you might say that with the leadership provided by the Regular Army, Navy and Air Force, this country will doubtless continue to rely on a highly trained Reserve.

It occurs to me, however, that with the new nuclear weapons and with the crashing of the sonic barrier, the United States will never again have a breathing spell between the time of the first enemy attack and the period of retaliation on our part. I think there is general agreement on this fact and I sincerely believe that upon the success of our military reserve training program may well hinge the outcome of the next conflict. Historically, the subject of trained reserves has been with us since the latter part of the 18th century, but never before has this subject been so well pointed up as it was in the Korean emergency. Never before has the cost of the lack of a military program been so illustrated in terms of human unfairness and military unpreparedness. Between World War II and Korea, about 4½ million men came of military age; about 1,100,000 saw service through induction or enlistment; 3,500,000 did nothing and although about 900,000 of the 3,500,000 would have been 4–F under present military standards, the balance were fit in every way for military service and were required neither to train nor to serve. When the Korean conflict came we had no source of trained manpower except the National Guard and the veterans of World War II who still had a reserve obligation. About 986,000 reservists were recalled for Korea and of this group 70 percent—between 600,000 and 700,000—were veterans of World War II. These men were heads of families, defense workers, scientists, technicians, farmers and just plain citizens earning a living. They were ordered into active Federal service regardless of any of the above situations which might have deferred them from induction, while others younger than they who had never before worn the uniform and who were heads of families, defense workers, scientists, technicians, farmers and just plain citizens earning a living were exempt or deferred from induction on that basis. It was an odd situation that the county would call up a 32-year-old World War II veteran, completely inactive in the reserve, with a wife and 3 children, and yet a young man 19 years old, a college freshman or sophomore taking a campus course could be deferred "in the interest of national safety and welfare" as essential to the civilian economy. Further, if this young freshman or sophomore could do some successful wooing and get himself a wife and become a father while the fighting was going on—and immense numbers of them did—he was given a permanent exemption from service on that basis. In short, some men paid twice for their ticket to freedom while a larger and younger group drew free passes. Such a situation was repeated thousands of times during the Korean conflict. It could not be charged to a lack of patriotism on the part of this younger group, but certainly it demonstrated the lack of a fair system and one might even say the lack of good commonsense. The Korean war began in June 1950 and in 4 short months over 300,000 reservists had been recalled. By the end of the year, 700,000 reservists were on active duty.

Now let's look at the draft. In July not one soldier was inducted. In August about 1,500 were inducted, and in September 50,000 per month. In the following months the draft level was about 50,000. It is crystal clear that the first and most horrible year of the Korean war was fought by regulars brought quickly up to strength by veteran reservists, some of whom were in Korea less than a month after receiving their recall.

Aside from the aspect of human suffering, what did this cost the country in terms of dollars? Roughly, before Korea, dependency allowances were about a quarter of a billion dollars a year. After the war began these costs jumped to $1 billion a year, or a grand total of $3 billion for the 3 years of the conflict. Clearly, since men with families were not inducted during this period, the bulk of this money was required because of the recall of reservists, most of whom had families. The older veteran cost the Government more for dependents, housing, and schooling, as well as for other nongovernmental expenditures for emergency needs of wives and families by the Red Cross. No matter who spends the money, the American people pay the bill.

I cannot spend time in this talk trying to convince you of the importance of trained men; your presence here is sufficient proof of your belief. I think most of us know also that it is not weapons alone that wins wars, but the men who handle the weapons. In the final analysis, it is the man, his training, his morale, his courage that determines the survival of nations.

It has been said that from the earliest days of the Republic, a military obligation has been recognized and it will be remembered that the first reservist to serve his country was the minuteman of 1776. Most of the States followed a plan of setting up the office of adjutant general as one of the first provisions in their constitutions. This was natural and proper because before the pioneers could establish homes, churches, and schools, there undoubtedly had to be some semblance of order and security. From Washington's time down to the present, the citizen's obligation to serve in the defense of his country has been legally established. It is sad to note, however, that until last year with the passage of the Reserve Forces Act of 1955, no mandatory training had ever been provided for the future soldiers of this country.

I suppose one might say that the reluctance to provide for military training is due in part to the fear of the people of military dictatorship. Having been oppressed for so long by the mother country, by having troops quartered on them without their consent, the heroes of the Revolution probably transferred their hate of the Red Coats down to successive generations, and I might say that I think this hate has served a good purpose. Today, however, when we are living on the brink of nuclear war; when we are, as Senator Barkley said last Saturday night, attempting to see how close to the brink we can rollerskate without going over; it is well that we officially establish not only military obligation, but mandatory military training. The Congress has determined that since we need military manpower, the best way and the economical way is to have a smaller standing regular force and a large Reserve of 3 million men trained and ready. So it is that the Congress last year, for the first time, passed a universal military training law which will, it is hoped, do much to remedy these weaknesses in the Reserve.

From the moment children are born parents watch over them, protect them, and prepare them for the life ahead. We teach them to be careful in heavy traffic on the way to school and we call the doctor at the slightest sign of sickness. We do without many things we would like to have and sacrifice so that we can give our children the best education within our means so that they will be prepared to meet the challenge of life and the professional or business world, but we have utterly failed to make available to them the military training that will be so essential for their service in the event of war. In previous wars many men lost their lives because of the lack of training. The new 6-months training program at least gives them a chance to learn physical survival.

I will not spend much time trying to explain the details of the new act as I am sure that this group is quite familiar with it. As you know, it provides that young men between 17 and 18½ years of age can join the Army Reserve, the National Guard, or the Marine Corps Reserve, take 6 months of basic training and return home for Reserve service of 7½ years. Going in at this age, these men by the age of 25 or 26 will begin to have family responsibilities or to advance in their civilian jobs and will be completely out of service. The program also provides that young men who are over 18½ years old can enlist in the Reserves for 6 years by volunteering for 2 years' active service and 4 years as a part of a Reserve component. Because he chooses 2 years' active service instead of 6 months, his total Reserve obligation is 6 years instead of 8. In the third category a man has the choice of being drafted instead of volunteering and he would then serve 2 years of active duty.

Generally speaking, we will have 3 categories besides the National Guard; one, the Ready Reserve, consisting of 2.9 millions, of whom 1 million will be available immediately in an emergency proclaimed by the President, the remainder being on call in a national emergency announced by the Congress. This is our fire brigade. Secondly, we will have the Standby Reserve, which can be called only in time of war or a national emergency declared by the Congress. The third group is the Retired Reserve, whose members may be ordered to active duty if the Nation is at war or if Congress declares a national emergency.

I cannot emphasize too strongly the importance of the cooperation of the group this evening in putting this program across. It has advantages to the Nation, to you and me, to every citizen, to every family in this Nation of ours. With the confused and discouraging picture which we face on the international front, we cannot afford to become overconfident nor can we fail to recognize the facts of life. While I have a feeling that things are never as good as painted by the Republicans nor as dark as painted by the Democrats in an election year, I would be less than frank with you if I did not say that we are facing an enemy that has for its goal the complete domination and control of the world. The enemy is resourceful, ruthless, and persistent. In the past we have been assured that we held the advantage in science and technology, but we know that the enemy has the world's largest submarine force in existence. We know that the enemy has the atomic and hydrogen bomb. We know that he is outproducing us in long-range intercontinental bombers. We have been told on pretty good authority that Russia may come up with a long-range ballistics missile which would undoubtedly carry an atomic warhead and would enable him to immobilize and destroy many of the overseas bases, as well as the countries in which these bases are located.

In conclusion, we have our work cut out for us and it may be later than we think. This week—from April 22 to April 28—has been designated as National Reserves Week by the National Security Committee. It has been recognized by the President, the Secretary of Defense, and General Sarnoff, Chairman of the National Security Training Commission. This Reserve program must succeed, and it is our business to see that it does. While today we marvel at the wonders of science, the next war will be won just as have all wars in the past—by the ingenuity and courage of man himself. I do not subscribe to the business of a 1-bomb or 1-rocket war. I believe that we can hold our own in the production of nuclear weapons and the means with which to employ them. If we ever lose a war it will be because of our own lack of decision, our softness, and the lack of a real basic spirit of sacrifice. Let us remember, too, that while we prepare and teach our young men the art of war we hope that in so doing we shall convince the aggressor of the folly of an attack on this Nation and the free nations of the world. Let us hope and pray that there will come about an understanding of men everywhere, and that by continuing to work through agencies such as the United Nations we shall eventually reach that time so desired and so desirable, the time of peace on earth and good will toward men.

Speech by Representative Edna F. Kelly at the 50th Anniversary Banquet of the Tralee Social Club, May 19, 1956

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable EDNA F. KELLY, of the 10th Congressional District of New York, at the 50th anniversary banquet of the Tralee Social Club on Saturday, May 19, 1956.

At the same time, I would like to take this opportunity to pay tribute to Congresswoman KELLY for the stanch support she has given to our efforts here in the Congress to secure passage of a resolution urging the elimination of partition in Ireland. Much of the credit for the success we have had in the past rightly belongs to Mrs. KELLY. She has been a great source of strength in the fight and her diligent work and intelligent counseling have been of inestimable help.

The ending of partition has long been a matter of concern to Congresswoman KELLY and she has devoted much energy and attention to it. Mrs. KELLY and I both feel that passage of the resolution would materially aid in bringing about mutual discussions and the eventual amicable settlement of the border problem in Ireland. I am sure that with the continued assistance and untiring efforts of Mrs. KELLY, the day will soon come when we will be successful in securing the approval of the House of Representatives in declaring that all Ireland should be united unless the people of that country, in a free plebiscite, otherwise declare.

The address follows:

I appreciate the honor of being called on to speak at the 50th anniversary banquet of the Tralee Social Club. I am grateful for this opportunity for many reasons. First, to pay tribute to your president, Bryan Sheehy, a constituent of mine, a neighbor, and a personal friend for many years. His loyalty, sincerity, and integrity are some of his characteristics which have contributed to his being an outstanding citizen of our community and of our city.

My second reason is to pay tribute to the Honorable John Joe Sheehy, of Tralee, Ireland. While of no relation to Bryan, I dare say they come from the same clan. John, too, is well known as an athlete and a statesman. He is visiting the United States to attend the Gaelic games next week, as the chairman of the Ballyseedy Memorial Committee.

Another reason for my being here is to rededicate myself and you to the cause which is a united Ireland. It was my responsibility the first year I sat as a member of the Foreign Affairs Committee of the House of Representatives, to guide through the committee the Fogarty resolution of which, incidentally, I was cosponsor. I succeeded in seeing the resolution through the committee but it went down in defeat on the floor of the House of Representatives.

We know that Ireland should not remain divided any more than Korea, Germany, and Vietnam. The United States is striving for the unification of these latter countries. Why not Ireland? Ireland, too, must be united for political, economic, social, and moral reasons. In 1918, after years of struggle, Ireland won her independence from England but the six northern counties of Ireland, gerrymandered by England to assure British control, remain under England's rule.

Unification is necessary in order that Ireland may take her rightful place in the community of nations. The principles of the Irish people are well known and are needed now more than ever in the affairs of the world.

History records Ireland's great contribution to western civilization. Let us never forget that when darkness engulfed the hearts and minds of men and the lamps of learning were blown out by the barbarian invasions in Europe, the only light that the eyes of man could and finally did take bearings by was the single strong flame which was kept alive on the little green isle. So powerful was this flame that no assault could cause it to flicker or sink, and it burns today in every achievement of the western world. It burns because it was nurtured by faith in God; His justice, His wisdom, and His mercy.

I renew my sponsorship for unification of Ireland and I need not, I am sure, urge you to do the same. Jointly we will succeed.

State Water Rights Must Be Reaffirmed

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Denver Post entitled "State Water Rights Must Be Reaffirmed." It deals with the need for legislation to protect our most vital resource—water.

The editorial follows:

STATE WATER RIGHTS MUST BE REAFFIRMED

So far as the 17 Western States are concerned, there is no more important legislation before Congress than the Barrett bill (S. 863). This measure which was introduced by Senator BARRETT, of Wyoming, is designed to settle and, in effect, quiet title to the water rights of water users in these States against claims that the United States owns virtually all the water in all the rivers and streams of the West.

The Barrett bill would (1) prohibit any Federal interference with the exercise of existing water rights which have been granted by the Western States, and (2) require that water rights for any Federal programs or projects shall be acquired in conformity with State laws and procedures relating to the control, appropriation, and use or distribution of such water.

"This legislation," Hatfield Chilson, of Loveland, attorney for the Colorado Water Conservation Board, told the Senate Subcommittee on Irrigation and Reclamation at the recent hearing, "merely places the Federal Government on a parity with other water users. If it wants to use water, it comes in and gets it with the same priority and by the same method that an individual or a citizen of the State would obtain his water right." That, we had assumed, has always been the rule. But the Supreme Court found otherwise.

"The position of the State of Colorado," Chilson said, "is that the State of Colorado, since it was admitted to the Union, is the owner and has full control over the waters and the water use in the State of Colorado. (That is in the State constitution which was accepted by Congress.) We do not recognize that the Federal Government has any rights in the body of water or water use in Colorado except such as they have acquired under the doctrine of appropriation, which is the official water doctrine of the State of Colorado.

"The basic issue involved is very simple. The question is, Does the Federal Government own and thereby control all of the unappropriated waters in the Western States; and secondly, Does the Federal Government by virtue of withdrawals and reservations of Government land thereby have a water right which was vested at the time of the withdrawal?"

The theory or philosophy of Federal control of western waters, of which J. Lee Rankin, Assistant Attorney General of the United States, seems to be the principal proponent, is:

1. When the lands which now compose the Western States were ceded to the United States, the United States became the owner of the lands and waters and the rights to use of that water.

2. While Congress has the power to give waters and the use thereof to the States, it has not done so and the title to unappropriated water remains in the United States.

3. Any water right initiated by a water user after the date of Federal withdrawal of public lands from settlement is subject to any future uses of water which the Federal Government chooses to make in connection with the withdrawn lands.

The construction placed by the Department of Justice on the United States Supreme Court in the Pelton (Oreg.) case has alarmed Western States. The time has come when Congress should say, in unmistakable words, that adjudication of water rights is exclusively a State matter, and that all claimants—Government or individual—are on the same footing. It can do that by passing the Barrett bill.

Eighty-fifth Anniversary of the Deisroth Stores of Hazleton and Bloomsburg, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Hazleton Plain Speaker on May 17, 1956, in which this newspaper calls attention to the long and successful history of the Deisroth Department Stores, which had its inception at Hazleton in the year 1871 and is now a flourishing enterprise:

DEISROTH'S 85TH YEAR

With three generations still active in the management of 3 stores operating under the family name, a business established by Peter Deisroth 85 years ago continues to grow. Today the firm operates department stores in Hazleton and Bloomsburg and an appliance store here, reflecting the progress made.

To commemorate its 85th anniversary, Deisroth's yesterday staged an oldtime street parade, with the participants wearing costumes, many of which were probably bought from Peter Deisroth himself.

As the unique demonstration moved down Broad street under a cloud-flocked sky, the garb brought to the minds of many of the older spectators the time when a great part of Deisroth's stock was displayed in sidewalk showcases.

Peter Deisroth entered the mercantile field in 1867 with the firm of Lauderburn and Smith, which occupied the site where Deisroth's store stands today. In 1871 he joined the firm and soon his name became a byword in Hazleton's growing business life.

Later his sons Will A. and Alvan Y. became associated in the business.

Will Deisroth died in 1933 and today his 3 sons, William M., Frederic W. and Philip M. Deisroth and several of his grandchildren carry on the traditions of the firm together with Alvan Y. Deisroth.

Mrs. Amanda Deisroth, widow of the founder, lived to a very ripe age, passing away in recent years. It was her pleasure to see, and to take part in the official opening of the modern Deisroth store in 1935, a year which marked the 87th anniversary of her birth.

Arthur B. Deisroth, another son of the founder, died at an early age and a daughter, Mrs. C. J. Kirschner, died in recent years.

Several years ago the family gave evidence of its appreciation to the community by giving the Deisroth homestead on North Church Street for use as a community center which today houses many of Hazleton's social service agencies.

The Greater Hazleton area extends best wishes to the Deisroth firm as it progresses toward its centennial.

Extend Authority for Flood-Protection Projects

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the text of a statement I made this morning before the Davis subcommittee of the House Public Works Committee on H. R. 9554.

The material follows:

EXTEND AUTHORITY FOR FLOOD-PROTECTION PROJECTS

(Remarks of Congressman PHILIP J. PHILBIN before House Subcommittee on Public Works, May 23, 1956)

I am very thankful to my distinguished friend, Chairman DAVIS, and all the other able members of this committee, for the opportunity to present my views on H. R. 9554 and similar pending measures to provide additional general authorization for small flood-protection work.

The basic bill before you was introduced by our good and able friend the distinguished majority leader, Mr. MCCORMACK. I have a

companion bill which relates to the subject matter and I understand that there are several other bills now pending.

Mr. McCORMACK's bill has already been passed by the Senate and I believe it is here before you.

I am sure that you all appreciate the extreme urgency of these measures not only for my district, State, and area, but also for the entire flood-stricken Northeast as well as other sections of the country, which are visited from time to time with devastating floods.

The objectives of Mr. McCormack's bill and related bills are very well known to all of you and I, therefore, will not take the time now to analyze their provisions.

In effect this measure, which I personally think is one of the best on the subject presented to the Congress in a long time, would greatly facilitate and accelerate urgently needed flood public works by increasing to $500,000 the present cost limitations in small flood control project authority.

As you know, yesterday the House passed the regular public works appropriation bill, which contained many necessary projects that will be very helpful to the States and communities concerned. However, even when these projects get underway there will be large gaps in the overall flood-protection program, which will have to be met by Mr. McCormack's bill and other bills now being considered by this very able committee.

I understand that the bill has been not only passed by the Senate as I stated before, but it is also approved in principle by the Secretary of the Army.

It unquestionably would promote speed and efficiency in carrying forward a number of not only desirable but urgently needed smaller projects and I think that it is imperative for the House to take action on the measure as soon as it possibly can.

In my opinion, it is the answer to the alleviation of a large variety of water resources and water-flowage conditions throughout the Nation. It will afford many necessary protective measures.

So far as my own district and State are concerned—and this is true of the entire Northeast area—the early passage of this bill would be of greatest value in helping us to secure relief and rehabilitation as well as future protection against the floods which have periodically ravaged us and with such terrible results last summer and fall.

I am confident that this capable committee will give this vital matter prompt, careful attention and come up as speedily as possible with the McCormack bill, or a composite bill containing its basic principles, so that it can be reported to and acted upon by the House at an early date.

I earnestly plead with you especially for expeditious action in this matter, and thank you all for your kindness in hearing me at a time when you are so busily engaged.

Thank you for your generous consideration.

The Agricultural Act of 1956

EXTENSION OF REMARKS
OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. ALBERT. Mr. Speaker, the House today completed final congressional action on H. R. 10875, the Agricultural Act of 1956, which was introduced by Hon. HAROLD D. COOLEY, chairman of the House Committee on Agriculture. The measure now goes to the President.

For the convenience of the Members and to answer numerous inquiries from throughout the Nation, I am inserting at this place in the RECORD a concise statement of the major provisions of this legislation.

Major provisions of H. R. 10875, as finally passed by Congress, are:

First. A $1,200,000,000-a-year soil bank, in two parts:

(a) An acreage reserve designed to reduce acreages of wheat, cotton, corn, peanuts, rice, and tobacco. Payments to farmers would be made to reduce their acreages of these crops below their acreage allotments and could be made as soon as the acreage is measured. The Department of Agriculture's present estimates of the payments to be made per acre for this reduction are: tobacco, $100 to $300; cotton, $48 to $60; peanuts, $50 to $70; wheat, $18 to $25; corn, $36 to $50; rice, $60 to $75. A maximum of $750 million a year could be expended on the acreage reserve for the next 4 years.

Deleted from the bill in its final form were three provisions relating to the soil bank which were included in the House bill. These would have provided acreage reserve programs for feed grains, other field crops, and grazing lands.

(b) A conservation reserve designed to remove acreage from crop production on a semipermanent basis, for which payments approximately equivalent to the rental value of the land would be made, with an annual national limit of $450 million.

Compulsory features, proposed in other soil bank legislation, were not included in H. R. 12—vetoed—or in H. R. 10875; limits have been put on the amounts that can be spent on specific crops, thus assuring an equitable distribution of funds; and provision is made for the protection of tenants and sharecroppers.

Second. Corn: The bill authorizes four different programs under which corn farmers may receive price supports on corn in 1956, as follows:

(a) Producers in the commercial area who elect to comply with the acreage allotments previously announced by the Secretary—at the rate of approximately 43 million acres—will be eligible for price supports at $1.50 per bushel—86.2 percent of parity—under that program, without putting land into the soil bank.

(b) For the operation of the soil bank the bill increases the corn acreage allotment for 1956 by 9 million acres to a total of 51 million acres. Corn producers in the commercial producing area may qualify for price supports at $1.50 per bushel—86.2 percent of parity—by planting within their allotment from the 51-million-acre base acreage, provided they put into the soil bank an amount of cropland equal to 15 percent of their base acreage of corn.

(c) Producers in the commercial corn area who do not comply with the regular acreage allotments previously announced nor with the base acreage setup for soil bank purposes will still be eligible for price supports, under the noncompliance program recently announced by the Secretary, at the rate of $1.25 per bushel—about 83 percent of the support level of compliance corn in the commercial area.

(d) Producers outside the commercial area will receive a support at 82½ percent of the level of the support for compliance corn in the commercial area—or about $1.24 a bushel.

Third. Feed grains: The level of price support for the 1956 crop of grain sorghums, barley, rye, and oats is set at 76 percent of the parity price for each commodity as of May 1, 1956. Thus, the 1956 supports will be: barley $1.02 per bushel; oats 65 cents per bushel; rye $1.27 per bushel, and grain sorghums $1.97 per hundredweight. These higher level supports thus supersede the 70 percent supports announced by the Secretary. The Secretary had set the supports at 93 cents for barley, 59 cents for oats, $1.16 for rye, and $1.80 for grain sorghums.

Fourth. The bill directs that the soil bank be started with 1956 crops, as provided in the bill as it originally passed the House. The Senate bill directed only that the Secretary start the program with the 1956 crop to the extent he deems practicable. The return to the House language is a clear indication of congressional policy that the fact that some crops have been planted is not to stand in the way of starting the program this year.

Fifth. Appeals procedure: Procedures are provided for appeal by producers whose soil-bank contracts have been canceled because of alleged violation.

Sixth. Production on Government-owned lands: The President is directed to restrict insofar as practicable the leasing of Government-owned lands for the production of price-supported crops in surplus supply.

Seventh. Cotton: (a) A freeze of the 1957 and 1958 national acreage allotments at no less than the 1956 allotment; (b) a provision that no State acreage allotment can be cut in 1957 and 1958 by more than 1 percent below 1956; (c) a special 100,000-acre national reserve is created to add to the allotments of small farmers; and (d) the Secretary of Agriculture is directed to sell Government cotton for export at the price necessary to regain America's traditional world market at around 5,000,000 bales annually.

Eighth. Transitional parity: The bill freezes transitional parity for the basic commodities for 1957. This will mean that the parity price of corn, wheat, and peanuts—the only three basic commodities currently affected by the transitional parity formula—will be 5 percent higher in 1957 than they otherwise would have been. The bill also requires the Secretary of Agriculture to make a thorough study of possible methods of improving the parity formula and to report to Congress thereon not later than January 31, 1957, and to include drafts of any legislation needed to carry out this recommendation.

Ninth. Rice: The bill provides that the State acreage allotments for rice for 1956 shall not be less than 85 percent of the final State allotment for 1955; and that the national acreage allotments of rice for 1957 and 1953 shall not be less than the final national allotment for

1956, and shall be apportioned among the States in the same manner as the 1956 final allotment. The bill provides a certificate program for rice. This is identical with the certificate program provided in the vetoed H. R. 12 except that inauguration of the program is discretionary with the Secretary of Agriculture and will not be put into effect unless he determines and proclaims that the initiation of a program is "administratively feasible and in the best interests of rice producers in the United States."

Tenth. Cottonseed and soybeans: The bill requires that whenever the price of either cottonseed or soybeans is supported, the price of the other shall be supported at a level which will cause them to compete on equal terms in the market.

Eleventh. Surplus commodities—Other provisions: The bill embraces improvements in the disposal of surplus commodities and other important provisions, some of which are discussed below.

To facilitate surplus disposal in the United States, the Secretary of Agriculture is authorized to process food commodities, such as grains, into a form—meal or flour—which can be used in the home and is also given authority long sought by both the State and the Federal Government to donate food commodities to certain penal institutions.

To facilitate surplus disposal abroad, the President is given authority to pay ocean freight on surplus commodities donated for use in other countries and to step up disposal under title II of Public Law 480 from $300 million to $500 million.

An attack is made upon the surplus problem affecting long staple cotton by again placing extra long staple cotton, now exempt from quotas, within the quota set up for all cotton longer than 1⅛ inches.

Solution of our surplus problem, particularly in textiles, would be substantially assisted by authority clearly given the President in this bill to negotiate voluntary agreements with representatives of other countries with respect to importations into the United States of competing agricultural commodities or products made therefrom.

An appropriation of an additional $500 million annually is authorized for section 32 funds, for use in surplus removal and disposal operations, particularly for perishable commodities.

The bill authorizes the appointment of a Surplus Disposal Administrator in the Department of Agriculture.

Provision is made for the appointment of a commission to study and make recommendations to Congress on increased industrial use of agricultural products.

In order to encourage further the underplanting of acreage allotments, the bill authorized a producer, for the first time, to plant only a part or even none of an acreage allotment for 3 successive years without losing his history and the right to future allotments. This could eliminate the practice of planting merely to retain history for allotment purposes, which is now required.

To make present production adjustment laws more effective, the bill increases to 75 percent of the support price the penalty for exceeding peanut-marketing quotas.

In addition to these specific new authorizations to deal with the surplus problem—authority which the Secretary of Agriculture does not now have—there are other directives in the bill designed also to deal with the surplus situation.

The Secretary of Agriculture is directed to make a study of proposals for disposing of surplus food commodities domestically through some kind of food-stamp plan. He is directed to report to Congress within 90 days on this important matter. He is directed to make a similar study and report on the matter of establishing strategic stockpiles of agricultural commodities both in the United States and abroad for use in the event of war or similar emergency. He is directed to use existing authority of the Commodity Credit Corporation to dispose of surpluses generally and long-staple cotton specifically.

Civil Rights Reports

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. HOLTZMAN. Mr. Speaker, I commend to the attention of my colleagues an editorial which appeared in today's New York Times, as follows:

CIVIL RIGHTS REPORTS

The majority and minority reports of the House Judiciary Committee on the administration's belated civil rights bill may not add greatly to the sum total of human knowledge but they do emphasize the unhappy sectional split over this issue, which needs no emphasizing.

The 32-man committee acted favorably on the bill late last month. For some reason the 2 reports have only just been released, revealing a minority of 6 Democrats and 1 Republican, all from the South, united in deep opposition. The measure, they say, is absolutely shocking, would devastate the principle of States' rights, and would permit the Federal Government to invade local jurisdictions. On the contrary, says the majority, the purpose of the bill is to make more certain that rights guaranteed by the Constitution and law of the United States will be enjoyed by all. We entirely agree with this latter view.

In brief, what the bill does is to set up a bipartisan commission on civil rights with subpena power, establish a new civil-rights division in the Justice Department, grant the Federal Government powers to prevent intimidation at the polls, and give persons deprived of their civil rights direct access to the Federal judiciary without first having to go through State courts.

The most interesting thing about this series of proposals is that the administration did not see fit to embody them in legislative form sooner than the spring of this presidential election year, when they would be calculated to cause maximum embarrassment to the Democratic Party. But that does not alter the fact that the proposals themselves are entirely desirable and ought to be adopted.

Whether they can get past the difficult barrier of the Rules Committee, then the House itself, and above all the Senate, is another question. Chances are slim, and the late date at which this legislation is being pushed doesn't increase the probabilities.

Mr. Speaker, Americans care much less about the politics involved, who will get credit, or who may be embarrassed by this legislation than they care about giving every citizen a fair shake under our Constitution.

I can see no partisanship in a matter so basic as the strengthening of civil rights, and urge the Committee on Rules to report out this legislation without further delay.

The Carrot Approach To Integration

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. METCALF. Mr. Speaker, for several months, the threat of the Powell amendment has hung over H. R. 7535, delaying action on the Kelley bill to provide needed Federal aid to school construction.

Meanwhile, we have at hand the alternative approach offered by our colleague from Arizona, Congressman UDALL, who would have the Federal Government share the cost of integration.

Under the heading "The Carrot Approach To Integration," Mr. Richard L. Strout discussed these two contrasting approaches to integration in the following article in the May 19, 1956, issue of the Christian Science Monitor:

THE CARROT APPROACH TO INTEGRATION
(By Richard L. Strout)

WASHINGTON.—If I lift my glance from my typewriter and look out across Pennsylvania Avenue, I can see a glint of gray-blue water a mile or so away (over the red tile roof of the enormous Commerce Department Building) and that is the Potomac River. On the other side of the river is Fairfax County, Va., an area that apparently is willing to go ahead with integration of schools. But Fairfax County is in a State where (although its ratio of Negro population is lower than that in the District of Columbia) integration is frowned upon. (The District of Columbia, incidentally, has integrated its schools and is a practical example both of the difficulties and possibilities involved.)

Well, Representative STEWART L. UDALL, Democrat, of Arizona, lives over in Fairfax County. He comes from a State which maintained dual school systems until the Supreme Court ruled them illegal. And now Mr. UDALL comes forward with a moderate, middle-road proposal which is attracting much attention. It is an application of the ancient idea of using a carrot instead of a stick.

Why shouldn't the Federal Government, he asks, pay some of the heavy costs of school integration in those areas which are willing to undertake it? Why not drop the punitive features of the so-called Powell amendment (by Representative ADAM C. POWELL, Demo-

crat, of New York, barring States from Federal school aid which continue segregation) and substitute the proposals of the Udall amendment, to have the Federal Government help meet the costs of integration?

Mr. UDALL told the House about his proposal last February 21; a House labor subcommittee has just this week approved it. It's now or never for the pending $1.6 billion Federal aid to school construction bill. If it doesn't pass in the next 2 months it will be lost for this Congress. Educationalists call America's overcrowded schools a disgrace, but the chances of getting the pending bill through hinge very largely on whether the stick approach is tried (the Powell amendment) or the carrot approach (the Udall amendment).

The thing that stands out in the District of Columbia experience with integration is that the schools for Negroes that were supposed to be separate but equal were not in fact equal; that the educational standards of the Negro students were well below those of the whites; and that integration means a big new cost unless the whole Washington school system is to be leveled down.

Here is the start of the argument Mr. UDALL advances. Southern States built up a dual school system believing it legal (as it was for 58 years). Now it is suddenly illegal and a great many old school buildings will have to be abandoned and a lot of new ones built, let alone other costs.

Doesn't the Nation owe an obligation to meet part of this cost? Wouldn't the application of some of the proposed new school-construction money to this purpose—say $25 to $50 million annually—be warmhearted testimony to areas concerned that the rest of the country appreciates their difficulties and stands behind them?

Mr. UDALL recalls that, for a while, Representative POWELL thought of withdrawing his own punitive amendment if the Udall proposal were adopted as a substitute. That compromise fell though. But the Udall idea still stands.

A feature of Mr. UDALL's proposal is that local school districts would be allowed to apply direct to Washington for aid irrespective of the official attitude of their State as a whole. Obviously few districts would apply in some Southern States. But Mr. UDALL now has evidence that a lot of marginal areas, willing to apply local option, like the idea very much.

Dr. Clifford Blackburn, superintendent of schools, North Little Rock, Ark., for example, said it would aid many districts. Dr. Oscar V. Rose, superintendent of schools in Midwest City, Okla., writes Mr. UDALL that he and Dr. Oliver Hodge, State superintendent, think the proposal of inestimable value.

Again Dr. Robert R. Martin, Kentucky school superintendent, writes that the plan has outstanding merit and value. It is not integration itself but the cost of integration, Dr. Martin points out, that puts a terrible burden on many small affected areas.

Mr. Speaker, an editorial in the same issue of this great newspaper calls attention to the effect of the punitive provisions of the Powell amendment, and to the fact that its adoption would probably lead to defeat of H. R. 7535 without helping integration at all. The editorial follows:

POWELL AMENDMENT: COSTLY, FUTILE

Supporters of the measure to extend Federal aid to education now believe they have enough votes lined up in the House of Representatives to defeat the Powell amendment. With this out of the way, passage of the aid bill has seemed a foregone conclusion for some time.

The Powell amendment looks reasonable enough at first glance. The Supreme Court has ruled laws invalid which would segregate public school children simply because of race. The Powell amendment would deny Federal aid to school districts which continued to separate Negro and white children.

But rearranging institutions and practices which in most of the 17 States affected have always been based on segregation is a complex and costly business. It is also a delicate business. For the change flies in the face of mores centuries old.

In fact, the feeling runs so deep that if the Powell "rider" were attached the school-aid bill would fail. For opponents from the Deep South would be joined by some who oppose Federal aid anyway and would likely welcome the opportunity to defeat it without attacking it directly as such.

A vote for the Powell amendment would put some Congressmen on record before some of their constituents as striking an ostensibly sturdy blow for integration and punishing those who hold out for segregation. But this would be done at the expense of the children, both Negro and white, from whom better facilities would thus be withheld. And it would not help the cause of racial desegregation one bit. To put it more strongly: It might set back progress in racial amity and make even more difficult an already difficult search for solutions.

Why is this so? Because the Powell amendment is punitive. It says to school districts: If the school buildings or additions you are building or plan to build are not opened to both races when they are finished, you get no help. And the feeling in many areas of the South is now so strongly aroused that the effect of such an approach could only be to harden, not to weaken it.

The Powell amendment would undertake the delicate process of adjusting to desegregation with the bulldozer of legislation instead of with the trowel of equity powers in the hands of the local Federal courts. It will be recalled that the Supreme Court directed these tribunals to retain jurisdiction and to give utmost consideration to individual local conditions and difficulties.

If Congress feels, for any reason, that the school-aid bill must be designed to further the desegregation decision, let it enact the Udall bill. This would offer extra and direct Federal aid to school districts which must and wish to build additional facilities in order to obey the Supreme Court's decision. This would proceed upon encouragement, not upon punishment—use the carrot, not the stick. This bill would work toward solutions, not provoke defiance.

For is it not apparent now that if the substance, not the mere legal shadow, of equality of opportunity between the races is to be achieved, citadels of resistance must be won by the warmth of a pervading sunshine, not the blasts of an angry wind?

The Kremlin and Katyn

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of May 20, 1956, which discusses the Katyn massacre of 4,000 Polish Army officers in 1940:

Justifiably, freemen everywhere are skeptical when the scissors of world communism snip whole chapters from history books—even when the revised version tallies more closely with generally accepted fact. The whole Orwellian technique of using scissors and paste to rewrite history is odious to the free world. Yet—although Soviet motives are often dubious—it would be a mistake merely to scoff every time Russia's new masters admit that Stalin's version of history was a grotesque perversion of truth.

A case in point is the still unconfirmed report that the Polish Communist Government may reopen the case of the notorious Katyn massacre in 1940. This mass slaughter of more than 4,000 Polish Army officers has been steadfastly blamed on the Nazis by Moscow historians. Other investigations have established that the Russians themselves were responsible, and there has been a good deal of testimony in the United States Congress on the subject. But now, according to reports, Stalin may now be made the scapegoat for the massacre.

If this admission should be made, it would be significant and welcome. And although such an admission might be considered as another flip-flop in the Soviet line, surely it is to the interest of the free world to encourage further confessions of responsibility for such Communist offenses against humanity as the Korean war and the germ-warfare fraud—even if, to save face, they must be blamed on the unspeakable Stalin. Even an approach to the truth that would recognize Communist fallibility in the party's history books would be a major gain.

Israel's Peace Move

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. HOLTZMAN. Mr. Speaker, an interesting editorial appeared in the New York Times today, entitled "Israel's Peace Move," and I would like to insert it at this point.

ISRAEL'S PEACE MOVE

In a new and dramatic bid for peace Premier Ben-Gurion of Israel has offered to meet Premier Nasser of Egypt at any time and in any place, including Cairo itself, to discuss a settlement that would end the technical state of war between their countries and serve as a model for a peace settlement for the whole Middle East. What is more, he has offered to discuss any questions Premier Nasser wishes to raise, including not only political, economic and military matters, but also the issues of the borders and of the Arab refugees.

This offer assumes special significance in view of still unconfirmed reports that Premier Nasser is also revising his policy toward Israel and is now advising all Arab states to drop their insistence on the United Nations partition plan for Palestine, which would strip Israel of about one-third of the territory it now holds, and to adopt a new policy based on the demarcation lines of the armistice agreements of 1949. If true, this revised policy would open up new and hopeful possibilities.

The way to such promising developments was paved by the recent mission of Secretary General Hammarskjold, who obtained new ceasefire pledges which, if kept, would rule out a settlement by force. But the developments themselves were initiated by an unprecedented visit to Israel by an Egyptian newspaperman who came with the approval of both sides and is now presenting to the Egyptians a picture of Israel rather different from that offered them by their own prop-

aganda. He is able to tell them that, contrary to their propaganda, Israel does not want war and that peace is the dream of all Israelis, from the Premier down. He is also able to tell them, again contrary to their propaganda, that Israel is not falling apart and is actually making great economic and industrial progress.

Thus the first breach in the curtain set-up by the Arabs against Israel has let some fresh air into a stifling atmosphere, and the visiting newspaperman, Ibrahim Izzat, and his magazine, Rosa el Youssef, deserve due credit for this. May others follow their example.

Mr. Speaker, at a time when Egypt has already recognized Peiping, and at a time when Syria is due to follow, it would be nice if we could get the Arab states to recognize Israel and the fact that it is here to stay. Certainly peace in the Middle East could be assured if the Arabs would accept this simple fact.

It would also be nice if Mr. Dulles recognized from all of this that we must never abandon our proven friends if we are to continue to deserve the respect and confidence of our allies.

One Party Press?—Which Party?

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. HOSMER. Mr. Speaker, the Long Beach Press-Telegram of May 21 carried editorial comment of exceeding interest to those who make, echo and reecho "one party press" charges every campaign period. The eye-opening editorial is as follows:

POLITICAL NEWS REPORTING

As the campaigns enter the climactic phase, the old cry about the so-called "one-party press" echoes in the hustings.

By now any newsman can recite the charges heard from Democratic partisans:

The press is a propaganda organ for the Republican party.

Democratic activities are squeezed into the corners or not published at all.

The people don't get a chance to hear "the other side."

Curious as to the truth of the charge about disparity in the space devoted to Republicans and Democrats, a member of our staff took a ruler the other day and thumbed through the home edition of one of the newpapers.

He measured the inches of space devoted to the local reporting of activities of the two major political parties.

His survey, which can be duplicated by any interested person, covered the period since April 16 when the present election campaigns were beginning to get under way in earnest in this community.

Here are the results:

Inches devoted to Democratic activity	362
Inches devoted to Republican activity	84
Pictures of Democratic partisans	9
Pictures of Republican partisans	2

Do these results mean that our political editors have been bending over backwards to print Democratic publicity, meanwhile giving the Republicans a cold shoulder?

That theory is no more correct than the accusation that Democratic news is suppressed.

The fact is that the Democrats have simply been making more news. The Republican presidential preference primary offers no contest, while on the Democratic side, Adlai Stevenson and ESTES KEFAUVER have been talking volumes. Both, incidentally, have brought their campaigns into their community personally. Meanwhile, the intraparty contests for assembly and congressional nominations in this community are on the Democratic side. Republican candidates are unchallenged in their respective races for Republican nominations.

Under such circumstances, it is quite natural that most of the action should be taking place on the Democratic side of the fence. And it is quite natural that the news reported in the press should be in the proportions noted above.

Talk of maintaining a balance of news—in the sense that Democrats and Republicans must get the same amount, line for line—is obvious nonsense.

It's the newspapers' job to report what happens. If more is happening in the Democratic Party than in the Republican, then of course there will be more Democratic news. If more is happening in the Republican Party than in the Democratic, the opposite will be true.

Another factor influencing the handling of political news is the importance of other news which occurs simultaneously. A political story that might make page 1 on Monday might be cut short and pushed to inside pages on Tuesday—because some other event may have occurred which overshadows it.

The fact is, however, that in the Nation as a whole, the Democratic Party comes out very well when the press space is measured after the elections are over.

When Democratic bigwigs talk about a one-party press they are just venting their spleen at publishers for reserving a bit of space on the editorial page to express their views.

They Will Not Revolt

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News, Tuesday, May 22, 1956:

SOVIET SATELLITES VERSUS RUSSIAN POLICE-STATE RULE: THEY WILL NOT REVOLT

(By Ludwell Denny)

(EDITOR'S NOTE.—The Moscow-dictated new look among Russia's Eastern European satellites could mean 1 of 2 drastic results—they could revolt, or go maverick Communist like Tito. In this, the second of a series of five articles, Ludwell Denny pinpoints the possibilities and analyzes the risks the Kremlin runs by trying to pretty up the face of puppet regimes.)

VIENNA, May 22.—The Allies hope the police-state relaxation in the satellites will lead to anti-Communist revolt, or at least the Tito-type national communism.

But there's no firm evidence of this yet—and none in sight, short of a world war.

There is fear in the puppet regimes that relaxation may be getting out of hand. And it's true the populations are 80 to 90 percent anti-Communist and anti-Russian.

It's also true the East European peoples for centuries have been very nationalistic and still are.

FACTORS

So revolt seems the logical result. Unfortunately, however, other more powerful factors are operating. Even a major attempt at rebellion is unlikely. These unfavorable factors include:

Complete Soviet military and police control.

Western Europe's preference for Soviet-style peaceful coexistence at satellite expense.

Fear of German revenge which makes Poland and Czechoslovakia dependent on Soviet alliance to hold their German territories.

Lack of any popular will to revolt, except remnants in East Germany and Poland.

Lack of able anti-Red and anti-Russian leaders—all are dead, imprisoned, or in exile.

Russian military and police control of the satellites has not been lessened by the much-publicized new look in Moscow.

The fact that the Kremlin has relaxed its police state method a little in some satellites (as Poland and Hungary) but tightened control in others (as East Germany) shows that it is moving cautiously.

GAMBLE

Controlled relaxation is a good gamble because of the propaganda value of neutralizing the North Atlantic Treaty Organization (NATO) and getting more production out of slave peoples. But the Kremlin would not consider these results worth risking the loss of the satellites.

Of course Moscow can misjudge the situation. But the significant fact is that if relaxation does go too far to suit the Kremlin it has the will and means to crack down—even to the point of slaughtering millions, as has been done in Russia in the past.

Red regimes not only have all the guns and the populace none, but the regimes also have a secret police system which sees into every factory, office, farm, and virtually every home. Relaxation instead of weakening has strengthened this internal spy system by uncovering critics. Any incipient revolt would be permeated by Red agents.

A second factor—the satellite peoples' loss of faith in the West—is increasingly important. This distrust began when the allies failed to come to the rescue in the heroic, unarmed revolt of East Germans against Soviet tanks June 17, 1953.

BETRAYAL

The American and allies' phony clasp of friendship with the Soviet dictators last summer at the summit conference seemed a betrayal to the satellite countries. So did the recent London welcome of Red party boss, Nikita Khrushchev and Soviet Premier Nikolai Bulganin, and the pilgrimage of the French Prime Minister and Foreign Minister to Moscow.

Overall, the satellite peoples know that Soviet developments of the hydrogen bomb eliminates the slight possibility Western Europe might help them win liberation.

At the same time, West Germany's spectacular economic recovery and potential as major military power, plus revival of German nationalism, force even anti-Russian Poland and Czechoslovakia to cling to the Soviet alliance. That's their only protection against Germany's claim to her lost provinces.

DISSATISFIED

The satellites in general are very dissatisfied now but not in the sense of rebellion. The will to fight for freedom, which the Poles have shown in the past and which the East Germans demonstrated 3 years ago, is not typical.

Czechoslovakia lost her freedom to Nazi Germany without fighting, later lost her freedom to Russia without fighting, and is now even more timid. Hungary, where hatred of Russia probably is greatest, has accommodated to the regime almost as much as Czechoslovakia. Rumania and Bulgaria

have given up and are virtual Russian provinces.

This complaisance—general throughout the satellites except in East Germany—is the result of economic controls as much as police terror. When keeping a job or room or food depends on going along with the regime, and this desperate situation is prolonged year after year, even the strongest rebel either escapes or is broken.

INFLUENCE

Titoism has had surprisingly little influence on any satellite so far. The only major effect has been that imposed by Moscow to woo the Yugoslav Maverick.

The Kremlin, in line with its de-Stalinization program, has replaced Bulgaria's anti-Tito leader, Vulko Chervenkov, with another stooge.

In Hungary, Tito's arch-enemy, Matyas Rakosi, remains in power though he has "rehabilitated" Foreign Minister Laszlo Rajk who was executed for Titoism in 1949 and has released some of Mr. Rajk's friends from prison.

There's no Tito-type national communism of any importance in any Red satellite parties except in Poland where it is only potential. If the first step, "relaxation" of police terror, is successful, probably the second will be satellite autonomy—a la Titoism. But if so, it will be prapaganda camouflage applied by Kremlin orders without reducing Soviet control.

DIFFERENCE

The basic differences between Yugoslavia and the major satellites is that she was never under Russian military rule and they were—and still are.

Geography enables Tito—the only non-Russian European Communist of any stature—to free himself from military and economic dependence on Russia and therefore any part subservience to the Kremlin.

Titoism is making more headway in western Europe, the Middle East and Asia than in eastern Europe.

Arms Against Israel

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. MULTER. Mr. Speaker, I desire to call the attention of our colleagues to the following editorial which appeared in the Brooklyn Daily of May 21, 1956:

ARMS AGAINST ISRAEL

We wonder whether it is stupidity or ignorance that leads the State Department into its continuing faux pas in connection with the arms to the Middle East situation.

On one hand we had the administration sanctioning a second shipment of arms and ammunition to Saudi Arabia last Tuesday and then condoning the cancellation of a shipment of half-tracks to Israel last Friday.

Does this appear to be discrimination? It sure does. Can we blame Senator LEHMAN, Congressman CELLER, and others in Congress from screaming their lungs out at this apparent inequity? We cannot.

As Adlai Stevenson remarked when told of the Saudi Arabia arms shipment, "This is a curious way to end an arms race."

We think Messrs. Eisenhower, Dulles, and their advisers better take stock of the predicament they are in very quickly.

It appears that a case of rank favoritism has set in as regards the Near East. And it appears all too boldly that little Israel is getting a kicking around from Washington.

This blatant double standard practiced by our State Department has done us much harm already. It seems that we've not only lost face with the free nations abroad, but this double dealing has sickened a lot of us here at home.

Bradley Commission's Recommendations Should Not Be Carried Out

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. ANFUSO. Mr. Speaker, this morning I had the distinct pleasure of attending together with other Members of Congress, a breakfast given by the Disabled American Veterans. This honored and venerable organization is opposed to the recommendations recently made by the President's Commission on Veterans' Pensions.

The speech which I am inserting into the CONGRESSIONAL RECORD was made by Mr. Irving Peltz, national service officer of Brooklyn, and spokesman for the New York Department of DAV. Mr. Peltz is a disabled veteran of World War II with a total disability for multiple amputations. He would, in all probability, personally benefit if the Bradley Commission's recommendations were to be carried out. From experience gained in this field, however, he knows that adoption of the recommendations would be harmful to thousands of other disabled veterans and he, therefore, opposes them as do the 2½ million disabled and partially disabled veterans throughout the country.

I have always felt that, in order for our Nation to remain secure, we must not only be strong ourselves but we must also have strong allies. For that reason I have been an ardent supporter of foreign aid legislation. But in doing so, we should not forget for a single moment our own boys who have bled and who continue to suffer from the wounds inflicted on their bodies and souls by the ravages of war. Any doubt, if such doubt exists, should be resolved in their favor because they gave wholly of their body and spirit without the slightest reservation.

It is a source of deep regret to me that our veterans should have to come to Washington to plead their cause or to defend themselves, when actually we should be doing everything in our power to alleviate their suffering since we can never sufficiently discharge our great obligation to them.

I believe that both major political parties would be discharging a small measure of this obligation if they were to include a plank in their 1956 platforms opposing the recommendations of the President's Commission on Veterans Pensions, because they are harmful to the interests of our veterans.

Mr. Speaker, the text of Mr. Peltz's speech referred to above is as follows:

It is indeed a pleasure for me to be here, and I am appreciative of the opportunity to appear before you. It is not, however, by any stretch of the imagination, a pleasure to present to you the views of the 15,000 members of the Department of New York, Disabled American Veterans, on the recently issued report of the President's Commission on Veterans Pensions, which has wrongly gone into the question of compensation of wartime service-connected benefits.

It seems Disabled Veterans, are always on the defensive; fighting overseas defending against our Nation's enemies, later defending ourselves against the ravages of our service-connected injuries, diseases, and wounds, only to be forced again to appear before our representatives to defend ourselves as citizens, veterans and disabled veterans. The President's Commission on Veterans Pensions has made a statement, "military service in time of war or peace, should be treated as discharging an ogligation of citizenship, and not of itself as a basis for future government benefits."

We have always felt dutybound to defend our country against its enemies in time of war. We don't need the President's Commission to tell us that defending our country is the duty of every citizen. When we landed on the shores of Normandy, Iwo Jima, Anzio, did we do so because we wanted to preserve our Nation and our way of life, or did we do so because of possible Government benefits? We resent the implication of the President's Commission that the benefits and not our Nation were uppermost in our minds.

We are of the firm conviction that this commission does not know the true picture concerning veterans benefits. They state, "Veterans programs on the whole are meeting veterans needs effectively." Then they reverse themselves and a proposal is made to completely dismember the basic structure of present rating criteria. This, by employing physicians, economists, sociologists, phychologists, and lawyers, to revamp Veterans Benefits. They apparently don't know, or don't care to know, that the Veterans' Administration is expertly staffed with the finest medical brains, psychologists, attorneys, etc., who have been doing proper evaluation for over 40 years. The Veterans' Administrator has full authority, already law, to revise rating schedules. This is done daily via Veterans' Administration instructions, regulations, and procedures, to conform with present day medical and social knowledge.

The basic law is vested in Veterans Regulation 3A which states, "The Administrator of Veterans Affairs shall from time to time readjust this schedule of rating in accordance with experience." This experience is gleaned from the finest experts within the Veterans' Administration and outside sources, in the field of medicine, law, economics, sociology, psychology.

General Bradley, himself, the Chairman of this Commission, was highly instrumental when he was the Administrator of Veterans' Affairs in creating the present structure and policies, which resulted in the finest care for veterans the world has ever known. It is strange indeed to see the former Administrator of Veterans' Affairs, who was instrumental in the creation of our present-day Veterans' Administration, heading a Commission to destroy it.

It is discouraging to our veteran population when there are moves in this country to restrict veterans' benefits. This, occurring in a country which has always been known as the veterans stanch and trusted defender, makes such moves particularly painful. The psychological impact on our veterans populations moral and trust would be a far greater loss than any possible monetary savings would justify.

The Bradley Commission speaks of the welfare of our veterans within the welfare of our country. They cite that the disabled veterans have higher income than the average nonveteran. Will they help the welfare of our Nation by reducing veterans' benefits?

These negative type recommendations on veterans' benefits present to the American people and veterans an appealing Christmas package chockfull of arsenic candy. We can think of a no greater blow to the morale of our vast veterans population, than to implement this report.

To know veterans and disabled veterans in their preoccupation, their hopes, their worries, is an absolute necessity to complete a true report. The Bradley Commission does not know them. It is from these realities that reports should be compiled, and not only from cold, inflexible statistical studies, that have proven in the past too easily twisted, distorted, misapplied, and harmful.

We say to you that for the first time in the history of veterans organizations, all veterans organizations are banded together as one, for the sole purpose of condemning the infamous recommendations presented by this Commission. We know that you, our representatives, will not allow the veteran, the disabled veteran, his widow and dependents to be forsaken.

Why Work in a City?

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 23, 1956

Mr. COTTON. Mr. President, the May, 1956, issue of Dun's Review and Modern Industry contains a most interesting and informative article, written by Mr. Louis B. McCarthy, of Exeter, New Hampshire, on the advantages of relocating industrial plants in northern New England, specifically in New Hampshire.

I believe the article is of wide general interest and of considerable importance in connection with the dispersal policies of the Federal Government, and, therefore, I wish to commend it to the attention of Senators and others who read the CONGRESSIONAL RECORD.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY WORK IN A CITY?

(By Louis B. McCarthy)

It's quite possible that some day the historians of our economy may decide that the tide of urban industrialization, which flowed so strongly through the earlier years of our era, turned back at the century's midpoint. At any rate, there's a sizable number of us newcomers to upper New England in general, and New Hampshire in particular, who appear to support this premise.

That early drift to big city markets and big city labor had been further aggravated, in this neck of the woods, by departure of the textile industry to the South, beginning with cottons in the 1920's and followed by woolens in the 1940's. It was seduced by promises of public financing, tax concessions, and, at least temporarily, cheaper labor. Textiles were unraveling for fair. Along many a stream or river, whose dammed-up power had whirled a thousand spindles or moved a hundred looms, many a fine old brick or stone mill stood empty. As one Manchester bank president put it, not profanely, "There are more New Hampshire plants vacant, by a dam site, than there are occupied."

Yet, by 1950, northern Massachusetts, New Hampshire, and southern Maine were already gaining new industries. In the intervening years this trend, steady, though as yet slow, has become increasingly apparent.

What leads a manufacturer to decide to move out of a city or a congested industrial area into the more or less wide open spaces? What are the things to look for in this kind of relocation? Most of all, how do the advantages and drawbacks stack up for employees as well as employers after the period of shakedown? As one who has recently been through this particular mill, along with many of his corporate neighbors and friends, I may be in a position to supply at least some of the answers.

At the beginning it is well to recognize that hard and fast advantages do not automatically follow the transfer of a plant from city to small town. Whether such relocation is desirable for you, and where, depends on what you make, the number of workers and the kind of skills you need, the sources of your raw materials, and the location of your market. My own commentary, of course, focuses on New Hampshire. Other areas and other States may well prove more desirable for your firm. In any event all relevant facts about any contemplated community should be pondered before choosing it.

In the majority of instances the factor that motivates a move is the outgrowing of existing plant and layout. This was undoubtedly the biggest single reason with us here at Macallen, as it was with a number of other New Hampshire recent arrivals such as Gates, Inc., of Antrim (makers of chests and boxes for precision tools), Sanders Associates, of Nashua (electronics), Hudson, of Franklin (overhead doors), and Armstrong & Botsford, of Bath (machine parts). It is also a reason why little relocating is done except in periods of general prosperity when volume is expanding and labor and desirable space are in limited supply. A concern will put up with bad plant conditions for years, through force of habit. It usually moves only when it must.

Broadly speaking, desirable plant space in great cities and heavily industrialized areas is not easily found. City ordinances and zoning codes restrict most manufacturing to industrial slums, out of which all but the least skilled and lowest paid labor has migrated, thus posing, among others, growing problems of public transportation and private parking. Bars and taverns, always cheerfully willing to cash pay checks, surrounded us in our former Boston locale, contributing their share to Monday morning tardiness and absenteeism. Land, for building, is scarce, sometimes prohibitively priced, and heavily taxed.

REAL ESTATE IS CHEAP

In towns and villages well out of such metropolitan zones, however, not only is real estate cheap and construction costs a little less, but where vacant plant space already exists it can often be bought or leased at a fraction of the cost of urban facilities. This is especially true where a factory can be shared by a number of smaller tenants who can jointly use its main powerplant, elevators, loading ramps, sidings, warehouses, and other features.

Almost all these firms who have come up to New Hampshire and southern Maine in the last few years report some tax savings. Indeed, taxes appear to be the second most important reason for moving. Fred Chamberlin, of Hudson, for instance, reports material savings. In our own case the tax on property is about one-third of what we paid before the move—a saving of one-fifth in State taxes, by no means inconsiderable. Tax laws of other States, along with local assessments and rates, should be examined before deciding where to relocate.

A third reason for moving that I've heard frequently mentioned is traffic congestion and the fact that it's darn near impossible these days to get adequate parking space near plants in metropolitan districts. This was a big reason for the move of the Insuline Corporation of America from Long Island to Manchester, N. H.

But let me warn you that though there's a lot of gold in "them thar hills, way out yonder," there's a lot of tailings, too. Take the training of new labor. Country people learn pretty fast and up here in Yankeeland they're traditionally versatile—but, even so, the training period is apt to stretch out longer than you think. If your experience runs parallel to ours, it's unlikely you'll be worrying much about excess profits, or any profits, the first year or two. On the other hand, once this is over, the slightly lower wage scales of smaller communities, plus the increased efficiency and loyalty of small-town workers, compensate for this initial cost.

You'll find insurance rates higher, on the average, unless your new building is sprinklered and you're more than apt to end with a larger inventory tie-up. Local dealers don't carry much stock of spare parts, office supplies, and other such items on which you've been accustomed to prompt delivery.

If you're a large consumer your utilities rate will be about the same. If you're small or only fair-to-middling, it's apt to be higher, as are oil prices, too, the further you get from a basing point. Or you may have to use bottled gas, which is more expensive, though pipelines are spreading fast. Also, you're apt to have more power failures than in the city, due to overhead lines. On the other hand, if your plant can use river or lake water, you will have little trouble finding all you want at a marked saving. Freight rates have no relevancy to the problem of city versus country but rather to markets and raw materials.

What of the workers? What are their gains or losses in this matter of town and country?

Well, there's no universal yardstick. What's one family's Arcadia is another family's Siberia. But it's my observation that our own employees enjoy a higher standard of living now than before. Take housing. Nearly 10 percent of our folks made the transfer up here from the Greater Boston area. As the truckers who moved them put it: "Seems as if we moved everybody into a better place than we took them out of." In terms of cost, space, light and general surroundings, rural community housing is apt to be better.

WORKERS AS FARMERS

On the score of food, prices run considerably lower for locally raised staples. Most of our people have gardens and a lot of them keep chickens or a cow. Quite a number, with the help of their families, even go in for small-scale farming. Rural communities are often in or near hunting and fishing country and this adds spice and variety to the larder. In this respect, our location at Newmarket is an especially happy one.

Our plant is located on a meandering little river called the Lamprey. A lot of our people have homes along its banks, almost within a stone's throw of their work. There's pretty good fishing in the Lamprey, and in Fall and Spring it's popular with migrating Teal and Mallard. You may have glanced at the picture that shows our mill and the wide pond below our dam where the river broadens before merging with Great Bay and the Atlantic. Here the tides ebb and flow and here a lot of our folks keep skiffs and small craft, as you can see, for clamming and lobstering and salt-water fishing. The State Game Commission keeps adjacent fields and coverts well stocked with pheasant, and in a dry year the deer can be as much of a nuisance to our gardeners as they are a joy, in season, to our hunters. In

fact there are almost as many hunting licenses among our force as there are driver's licenses.

This brings up an interesting aspect of the situation. As I believe I mentioned earlier, the Yankee employee, hereabout, is a rather versatile and self-reliant character. For several generations the Portsmouth Navy Yard sort of set the pace of employment and wages around the area. When the "Yard" wanted carpenters, most everyone showed up as a carpenter. When it was hiring plumbers and steamfitters, the local talent just left their tool chests at home and appeared with a Stilson wrench and a lead pot.

I've already mentioned that nearly everyone has a garden or a farm of sorts, and the number of Nimrods and Waltons runs about 12 to the baker's dozen. The point of all this is that if your business is subject to wide seasonal or cyclical fluctuations, laid-off workers suffer far less hardship and return with far less resentment than city dwellers. A week or two off in Spring or late Summer can be very useful in sowing or harvesting. Chicken houses and barns always need roofing and houses, painting. A few days with a power saw can turn hurricane windfalls into a Winter's supply of firewood.

TREATING BUCK FEVER

It took us a year or two to learn, but we make sure that some of our official holidays, when we close the plant, fall within the hunting season. We might just as well; they'd be taken unofficially anyway. The personnel manager calls this virulent and contagious malady, which results in a marked increase in "out sick" reports for a few weeks each fall "buck fever."

Our friends, Armstrong & Botsford, are a good example of what I mean. They moved upstate to the little village of Bath, N. H., from Stamford, Conn. They make machine parts, chiefly for dirt moving and road equipment. Their main reason, like many others, was cheap and suitable space. They found it in an abandoned church with a concrete basement and reinforced hardwood floor that would support heavy machinery. They've rebuilt what were the balcony and choir loft into general offices. The two principals brought only a foreman with them when they moved up. The rest of their handful of employees, all machinists, they hired in the area—including one machinist, struggling along as a farmer, who had served an apprenticeship under his father, a master mechanic with a prominent firm in Glasgow, Scotland.

A couple of years after they established themselves in Bath the recession of 1953 hit them with cancellations. They explained the situation to their small force, who, knowing that the two owners had plans for certain eventual alterations to the premises, volunteered to work on these property improvements until more orders came in. A couple turned out to be excellent carpenters and 2 or 3 stonemasons. Another, who had a tractor, brought it along. As a result, floors and partitions were constructed, ground leveled and drained, and a 4-foot retaining wall raised along one side of the property. When things picked up they all went back to their machines. It's hard to imagine this happening in any large city.

THE GOOD LIFE

School conditions vary widely. Our New Hampshire schools rate well above the Nation's average but in many towns they're below it. In general, smalltown instruction runs fair to good and overcrowding is definitely less.

On the score of medical care, emergency, and specialized clinical facilities are not usually available, as in cities. General hospital care, however, is almost always within reach, as are good general doctors, and fees run below urban charges.

Only in the area of entertainment and cultural life does the city offer marked advantages. Theaters, art galleries, lectures, good music, and musical instruction are lacking in the country unless you're fortunate enough to be located in or near a university or college town as we are. While TV is bridging the general entertainment gap, there is no doubt that very talented children desiring to pursue the arts are handicapped in their development. Average kids find a healthy, truly American cultural and moral environment in the country. Chores at home and the nearness to woods, fields, seashore, streams, and ponds, all keep growing youngsters occupied and happy.

FRIENDLY FOLKS

In conclusion, there's one thing which all of us who have moved up here from the city, managers and workers alike, have noticed and commented on. It might be termed friendliness or neighborliness and, just as taxes and plant investment, it has a tangible value. On the individual side I'll just cite one incident which is typical of what I mean.

One of our folks, a mother of several children, cut her hand badly and was rushed to the hospital. Everyone in the plant knew about it and by the time the first shift went off at 3 o'clock that afternoon an informal ways and means committee had been organized. Volunteers took the children into their own homes. When the mother returned a week or so later, badly shaken, her right hand bandaged, relays of neighbors cooked, cleaned, babysat, and generally ran the house. In the city her close friends might live blocks or miles away, and her apartment-house neighbors might never even have heard about her accident.

These smalltown and country folks take a real interest in their jobs and they value them. This slows down turnover and boosts productivity. It extends to the community, too. Officials and local organizations are glad to have you and show it in their cooperation, in many ways, for you bring in desirable income that is considered a community asset. Every hundred employees represent hundreds of thousands of dollars more personal income per year to the community. They also add proportionately to local bank deposits, hundreds of thousands more in retail sales, and actually add over 200 more folks who will vote, swell the tax rolls, support churches, charities, and clubs—in short, strengthen the country community.

The Problems of Asian Labor

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 23, 1956

Mr. HUMPHREY. Mr. President, a significant article entitled "The Problems of Asian Labor" appeared in the AFL–CIO American Federationist March 1956 issue. Its author, Richard Deverall, is a man whose experience qualifies him as an authoritative voice on the subject he discusses. I ask unanimous consent that this article be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROBLEMS OF ASIAN LABOR

(By Richard Deverall)

The Asian labor movement, in the days before World War II, was closely linked with, if not dominated by, radical and leftist parties. In some countries of Asia organized labor was used as a transmission belt for the struggle against colonialism. Organized labor was not, as in the West, directed principally to securing economic gains for the working people through collective bargaining.

In Japan, from the time of World War I forward, the unions were highly political. They were under the influence of anarchist-syndicalist, Socialist, and Communist ideologies. The authorities, regarding all unions as anti-Japanese, repressed them.

In India, Mahatma Gandhi was the first well-known labor leader. His labor philosophy derived from his ideology of nonviolence and peaceful negotiation. As the Indian labor movement grew, Gandhi tied it to the overall struggle for independence. By the mid twenties such men as Ben Bradley and Philip Spratt had journeyed to India from Britain to give aid and encouragement to the All-India Trade Union Congress, and thanks to their work that organization was penetrated by the Indian Communist Party. Then the Government of British India sternly repressed trade-union activity, which was regarded by the authorities as both communistic and directed against British power in India.

In Indonesia, in prewar days, the Communists made themselves felt in the then tiny unions. The Dutch Government wrecked the country's Communist Party and made trade unionism rather dangerous. In Indochina and other colonial areas of Asia, the association of trade unionism with communism, in the period prior to World War II, was bad for both. And when the Chinese were involved in trade union activities, as in Thailand and Malaya, the political unions were split by the Kuomintang-Communist quarrel and struggle for power.

Even in the Philippines, where working people evidenced a surge for self-organization as early as World War I, the later association of unions with Socialist or Communist activities was such that organized labor in the islands did not grow as one might have expected it to do under American rule.

In much of Asia, in the early days of unionism, such know-how as the early labor movements received often came from such writers as Karl Marx and Lenin. In those days any labor organizer who went to India, Ceylon, Indonesia or Japan would be deported as a subversive alien. The illegal dissemination of Communist and leftist trade union propaganda enjoyed a virtual field day.

Another major characteristic of the development of labor in Asia has been the colonial labor legislation, which had the effect of discouraging free collective bargaining. Colonial governments wanted labor-management disputes to be submitted to labor courts and settled by those courts. As a result, many of the men in Asian countries who professed to be labor leaders were not workers but lawyers—men who had never toiled in factory or mine but, having been educated in the law at universities, knew how to make use of the labor laws and the industrial courts.

Illiteracy has been another significant characteristic of much of Asian labor. For example, in colonial India the illiteracy rate ran as high as 99 percent. It was just as high in Indonesia. Mass illiteracy of working people and the role of government in industrial disputes attracted to Asian labor leadership—in addition to the lawyers—a number of social reformers, welfare workers and politicians.

From my first days in Asia, I pointed out that William Green and Philip Murray came out of the coal mines and were genuine working people. Usually the Asian workers who heard my statement were amazed, for in their own countries, they said it seemed that leaders of labor, in most cases, were anything but workers.

Yet another problem in Asia is that, while labor is national, employers very often are international. Tea, rubber, and tin are produced by large companies which are part of vast cartels controlled from Europe and subject to the conditions and manipulations of the world tea, rubber, and tin markets.

Because of this situation, Indian tea laborers could not secure significant wage gains for the simple reason that the Indian tea producer who granted higher wages would be out-pricing himself on the world market and might bring down on his head the wrath of the operators of the huge cartels which play such a vital, if little realized, part in the exploitation of Asia and the world market.

In 1940, as Pearl Harbor approached, the Japanese Government dissolved such unions as still existed in Japan and the areas ruled by Nippon. All workers were put into a government-run "union" called Sampo. As the Japanese armies advanced, they stamped out any genuine unions in the vast occupied areas stretching all the way from the Philippines to Burma.

In India, where the nationalist leaders were bitterly opposed to the Allied war effort, the government jailed most of the top leaders. However, after Russia entered the war, the British released the Communists jailed in India, and during the rest of the conflict the Indian Communist Party ran a production-minded AITUC while consolidating its hold over the Indian labor movement and the peasant unions which had been built so carefully by Mahatma Gandhi's Congress Party and the smaller Congress Socialist Party.

Japan's surrender in 1945 marked the beginning in Asia of a new trade-union era. Throughout Asia the organization of trade unions became more popular and less difficult. In Japan itself the government of the defeated country was ordered to favor and give encouragement to democratic trade unionism, and model labor legislation was rapidly formulated. Unfortunately, prewar Communists and Socialists were able to grasp leadership of the Japanese trade-union movement. Communist domination advanced rapidly, and in 1950 General MacArthur purged 12,000 alleged Communist union leaders.

The Communists in Asia also seized their opportunities after the war in the Philippines, Thailand, Burma, and Ceylon, and in Indonesia they obtained working control of SOBSI. In Malaya, where the Communist hold was strong, the government cracked down, and one result of the government's action was that the Chinese leaders took to the jungle in 1948 and joined the Communist guerrillas.

In 1949 the Communist-controlled so-called World Federation of Trade Unions held an Asian-Australasian conference in Peking. That conference directed Communists and trade unionists throughout Southeast Asia to take to the hills and wage guerrilla warfare against their respective governments. This Communist order took many Asian Communists out of positions of labor leadership, thus in a sense opening the door to the rapid expansion of the International Confederation of Free Trade Unions which soon followed.

With the departure of the British from India, that country was divided into India and Pakistan. The labor movement of Pakistan which has since developed has been remarkably free of leftist politics. Pakistan's trade unionism is quite similar to that of the West. In India, where Communist control of the unions was strong, Home Minister Sardar Patel took the lead in inspiring the formation of a trade-union center which would be friendly to the aspirations of the Nehru government. Angered at this move, India's Socialists joined with independent labor centers to form their own trade-union movement. Today India has three major trade-union centers—one following the ruling Congress Party, one following the Socialists and one following Moscow.

I have outlined some of the postwar developments in Asian labor to demonstrate that, if anti-colonialism dominated the labor movements before Pearl Harbor, the period following Japan's surrender has been one in which Communist and Socialist forces have played a major role in winning trade-union leadership. There is an expanding area for trade-union organization in Asia as a result of the end of occupations and the achievement of independence by India, Pakistan, Indonesia, Burma, and the Philippines. The leftists have tried to make the most of the situation.

We have seen that in India the political party in power inspired the establishment of a national trade-union center in opposition to that of the Moscow-dominated Communist unions. In Socialist Burma the Government smashed the Communist union organization and inspired the formation of a more nationally disciplined organization. In Thailand the Communist-dominated General Labor Union was countered by a Government-inspired Thai labor union, now known as the Thai National Trade Union Congress. In Malaya, after the Government smashed the Chinese-dominated unions, skilled British trade-union advisers played an important role in building up an educated rank and file who could take over and successfully run free and democratic trade unions.

Thus, if in prewar days colonial governments interfered to minimize the impact of labor unions in Asia, the situation in recent years has been vastly different. Since the war governments have repeatedly intervened to support anti-Communist labor movements in order to blunt the force of Communist movements.

There have been two notable exceptions. One is Japan and the other is the Philippines. Since the end of the occupation, Japan has seen the rise of a sound trade-union center, Zenro, which is dedicated to work with the International Confederation of Free Trade Unions, pledged to freedom and democracy, and absolutely opposed to Communist or any other intervention. Since April of 1954, Zenro has conducted several clearly economic strikes and has won each one. On the other hand, Japanese unions in which communism remains a force have been unable to win their strikes.

In the Philippines, following a police raid on the CLO, various disunited unions went their own way, as before the war. A new trade-union center, the Free Workers, appeared. The past few years have seen new groupings, such as PAFLU and PTUC. Although they have not done so well in growth and size as has Zenro in Japan, the varied labor groups in the Philippines have pointed a course toward nonideological trade unionism, which I believe will lead, in time, to the emergence of a freely united, democratic labor movement worthy of the respect of all Filipino workers.

Left-wing and nationalist forces which are active today in many of Asia's trade unions insist vehemently that there be "no outside influence" impinging on their labor movements. Others claim that the International Confederation of Free Trade Unions is European-dominated and subject to European ideas and therefore unable to understand Asia's problems. Naturally, the Red Chinese ACFTU and its World Federation of Trade Unions manipulators have been ready to seize upon such rumbles.

Last May they tried to organize an Afro-Asian Trade Union Council with the object of splitting the ICFTU and reestablishing the Communist hold over Asian labor that obtained in 1948 and 1949 before the World Federation of Trade Unions committed temporary hara kiri in Asia.

The charge of "outside influence" is extremely interesting, especially when one reviews the different types of influence at work. The oldest outside influence is, of course, the disciplined Communist Parties of Asia and their various union transmission belts, such as AITUC in India, SOBSI in Indonesia and Sanbetsu in Japan.

Since 1952 the so-called World Federation of Trade Unions, working through the Chinese ACFTU, has interfered enormously in the affairs of labor movements in other parts of Asia. Just one among many examples is the appearance in Japan not long ago of Liu Ning-I, vice president of the WFTU. This Communist "labor leader" lectured Sohyo leaders on strategy. He told them to maintain contacts with the International Confederation of Free Trade Unions while at the same time promoting unity of WFTU ideology and ICFTU affiliations. If any American or Briton had appeared before the leaders of Sohyo to tell them how to manage their international and national strategy, he would have been denounced.

When I arrived in India in 1949 as a representative of the Free Trade Union Committee of the American Federation of Labor, Indian trade unionists were suspicious. But when they discovered that the AFL had no ax to grind and had nothing to sell except democratic trade union know-how, friendships developed and a healthy interchange of ideas took place. In Burma, on the other hand, I found many of the trade unionists rather hostile. For some odd reason, they seemed to fear that if they read the American Federationist, it would lead to American domination. I pointed out to the Burmese trade unionists that ideas are universal and that American labor sought only to spread the idea of democracy and its practical implementation through democratic and effective trade unionism. In both Japan and the Philippines, as in other Asian countries, this friendly type of outside influence has been a force assisting nascent Asian labor unions to grow stronger.

History tells us that in its early days our own American labor movement received enormous assistance from European labor in the form of the migration of millions of men and women to America—men and women who brought precious know-how of trade unionism, credit unions, and workers' education across the Atlantic Ocean. Asian labor has experienced no similar windfall. It is natural and quite in the order of things, it seems to me, that a nation and labor movement which so freely received gifts of European labor know-how in past decades should want now to share some of these gifts of know-how with our brothers and sisters of Asia.

In Calcutta, India, there is now in operation the ICFTU Labor College. This college, which is operated by Asians and for Asians, has among its instructors men from non-Asian areas. The participation of the non-Asian instructors has not been regarded as interference in Asian trade-union affairs, but as an utterly good outside influence.

In recent years, and particularly with the development of the American foreign-aid programs, such as the Economic Cooperation Administration, the Mutual Security Agency, the FOA and now the ICA, United States labor men have entered our Government's service and have worked in Asia as labor officers and labor information officers. Today, in many an Asian country, the American Embassy has both a labor attaché and a labor information officer. These men, on a governmental and official level, observe and report on the progress of labor in the countries to which they have been assigned and—when asked—inform Asian trade unions about American trade-union procedures. The British Government follows the same

practice, as do the Governments of Argentina and Yugoslavia.

American trade unionists having no extensive knowledge of an Asian country's history and its unions are inclined, at first look, to conclude that the unions are not really unions. Such a conclusion is unfair, for it overlooks the historical circumstances which have conditioned the rise of trade unionism in most of Asia. It should be remembered, too, that the Communists have been active in Asia since the 1920's, whereas we are latecomers. In offering either criticism or unsought advice, Americans in Asia should be cautious.

As communism has been and is a major influence and a conspiracy in so many Asian countries, it seems proper and inevitable that American trade unionists, to counter the Communist influence, should be eager to share their know-how with the workers of Asia. The word "share" is used advisedly. If there is anything which is certain to meet with disaster, it is any action wherein any American tries to play politics with Asian trade unions or attempts to manipulate their internal affairs. On the other hand, the friendly sharing of experience is dignified and shows our respect for our Asian brothers and sisters. And in the long run this is the only way to help new and relatively inexperienced trade unionists anywhere to build strong unions.

Another disastrous mistake is to back one union against other unions. In Japan some organizations inside Sohyo are openly pro-Communist, while other Sohyo unions are anti-Communist. There are also dozens of independent unions. While it is natural to feel at home with Zenro leaders, one must never forget that many other union leaders in Japan are aiming at the same target of free and democratic trade union growth. This situation is found not only in Japan but also in the Philippines, Malaya, Thailand, Vietnam, Hong Kong and other places.

Asia's trade unions are coming of age at a time when the so-called World Federation of Trade Unions, through its oriental bureau, is stepping up racist appeals to try to win away Asian trade union centers from the democratic International Confederation of Free Trade Unions.

I think it is incumbent upon American trade unionists in Asia to share their experience with all trade unionists and trade union centers that are pro-democratic and anti-Communist, just as we support the work of the International Confederation of Free Trade Unions in strengthening existing bona fide trade union centers in Asia and assisting in the efforts to organize the tens of millions of Asian workers who are now unorganized and exploited.

From the immigrant trade unionists who came to American shores from various European lands, our trade unionists of the past obtained valuable labor know-how and aid. Today, in our turn, American trade unionists should be glad to give assistance to our Asian brothers and sisters who are striving to establish effective, democratic unions in their countries.

Personal Explanation

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. DODD. Mr. Speaker, because of an unavoidable delay in airplane travel from Hartford to Washington today, I was 1 minute late for the vote on the farm bill. Had I been present, I would have voted for passage.

That Recaptured Initiative

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. MULTER. Mr. Speaker, the following column written by Joseph Alsop, which appeared in the New York Herald Tribune of May 20, 1956, is of extreme importance. I learned of the facts reported by Mr. Alsop when I went through the Middle East last fall. I am certain that other Members of both Houses of Congress learned of these facts during their travels in that area last year.

It seems that everybody knows these facts except our traveling Secretary of State, who has never had time to learn them first-hand or to read them from the reports which are in his files in Washington.

The article follows:

MATTER OF FACT

(By Joseph Alsop)

THAT RECAPTURED INITIATIVE

BAGHDAD.—Ever so often, the bewildered traveler stumbles upon an episode of American foreign policymaking so strange and apparently irrational that it poses the question whether we have any policy at all. Such is the story of the Baghdad Pact. This defensive alliance among Iraq, Turkey, Iran, Pakistan, and Britain, is one of the hottest potatoes in the Middle East—which is so full of hot potatoes that the area sometimes makes you think of one vast potato roast. And the first thing to note about this major Middle-Eastern hot potato is that the primary responsibility for the pact clearly lies in Washington. It is all but impossible to resist the suspicion that the real reason for Washington's original sponsorship of the Baghdad Pact was the hankering for some Middle-Eastern development that could be advertised as proof of a "dynamic new foreign policy," a "recaptured initiative." The hankering was strong in the early days of the Eisenhower administration, before world events began to catch up with the Madison Avenue phrase makers. It looked good on paper to link up the so-called Northern Tier of Middle-Eastern States in an alliance against Soviet aggression. To be sure, the real danger in the Middle East was not and is not Soviet aggression. Instead, the real danger here is, was and always has been, internal subversion and Soviet political chicane.

To be sure, all the prospective Baghdad Pact states already had military and economic aid agreements with the United States, and close general relations with the West. If they needed more military power, therefore, the machinery already existed for providing it. All the same, it made a fine headline when the first news of the pact was published at home. Our "recaptured initiative" was mentioned with gratifying frequency in the ensuing editorials.

In this early period, the United States took the lead in encouraging Iraq and Turkey, the first signers of the pact, to get together to establish the Northern Tier defense system. As Washington observers with good memories will recall, the State Department in those days haughtily accused the British of "dragging their feet." And at that time, the present American Ambassador to Iraq, Waldemar Gallman, was actually sent to Baghdad with instructions that securing the signature of the pact was his most important mission.

Iraq and Turkey signed. Egypt's Premier Nasser promptly exploded, partly because he genuinely regards the pact as Western imperialism in a new guise, and partly because he disliked the leading role accorded to Iraq's Nuri Pasha. All the same Pakistan came in. The unimaginative British foot dragged, then they signed up too, perhaps because they could find no other way to maintain their established treaty relations with this country. And last came Iran.

In Washington, however, presumably because of Premier Nasser's attitude and the Israeli dislike of the new pact, the recapturers of the initiative were now blowing on their finger nails in an embarrassed manner and saying, "Who, us?" when it was suggested the new pact was their work. This ostentatious American tepidity toward the pact was rather prolonged.

If the State Department had followed up its first initiative with boldness and decision, other Middle East states might well have joined the pact. Then the position of one of the West's best friends in the Middle East, Prime Minister Nuri Pasha, would be a great deal easier today. In any case, the American tepidity in itself rather gravely undermined Prime Minister Nuri's position. This deeply alarmed the British. British protests and representations, beginning roughtly with the Eden-Eisenhower meeting in Washington, then caused the dawn of the third or present series of American pact policy.

In this period, warnings of the need to help Nuri Pasha and somewhat ungentle reminders of the original American responsibility for the pact, have driven the State Department as far as "Darling Daughter" in the old song. We have, in effect, taken off all our clothes but have not gone near the water. In other words, we have joined the antisubversion and economic committees of the Baghdad Pact, but we have not joined the pact itself.

There is only one trouble about this strange intermediate position. The expectation is universal here in Baghdad, and it is reportedly universal too in the Turkish, Iranian and Pakistani capitals, that the United States will join the pact as a full member after the election. If we do not then join the pact, the resulting disappointment will deeply damage the whole Western position in the Middle East.

One might say that if this represents "recapturing the initiative," then this famous phrase needs a new dictionary definition. Maybe it might be translated as "making the worst of both worlds," or "falling between two stools" as alternative renderings.

United States Foreign Aid During the Period July 1, 1940, Through December 31, 1955

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, from time to time I have been submitting for the RECORD figures on the extent of foreign aid. At this time I submit the figures for United States foreign aid during the period July 1, 1940, through December 31, 1955. In other words the record on our spending programs abroad is brought down almost to date, at least to December 31, 1955.

The information contained in this report was furnished by Dr. Ernest S.

Griffith, Director of the Legislative Reference Service, and particularly by Mr. Hermann Ficker, Analyst in International Trade and Finance, Economics Division. I am indebted to these men for this material and commend them for the excellent service they have rendered:

As summarized in the first table United States foreign aid to all countries and international organizations for the period covering World War II and the postwar period ending December 31, 1955, amounted to $111,126,234,000. This total does not include United States capital investments in the International Bank for Reconstruction and Development ($635 million) and the International Monetary Fund ($2,750 million) although these add to the foreign aid underwritten (reclaimable) by the United States Government.

Lend-lease totals were divided into two sections, namely for the war emergency period and for the postwar period. During the postwar period additional funds were not authorized; the totals extended for lend-lease were merely for the supplies in the so-called "pipelines" and final settlement of goods not yet delivered.

Grants-in-aid are also divided into the war and postwar periods. In general no repayment was requested. The only condition stipulated in all grant agreements was that the United States could request a return of a percentage of Counterpart Funds in national currencies or in strategic raw materials from the recipients of aid.

On the other hand, net authorized credits are loans or other agreements which gave rise to specific obligations for repayment. Utilized credits for the war period amounted to $1,096,000,000, but only the total for the overall period July 1940–December 31, 1955, is given by country as there was a continual readjustment in payments as well as previous grants being transferred to the loan account.

Summary of aid

Lend-lease (grants-in-aid):	
I. (a) July 1, 1940–June 30, 1945 (war period)	$46,728,287,000
I. (b) July 1, 1945–Dec. 31, 1955 (postwar period)	2,040,033,000
Total	48,708,320,000
Grants-in-aid, other than lend-lease:	
II. (a) July 1, 1940–June 30, 1945 (war period)	1,400,010,000
II. (b) July 1, 1945–Dec. 31, 1955 (postwar period)	44,102,380,000
Total	45,502,390,000
Net authorized loans and credits:	
III. July 1, 1940–Dec. 31, 1955 (war and postwar period)	16,855,524,000
Summary total	111,126,234,000

Swiss Watch Tariffs

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, under permission granted to me to extend my remarks, I am including a very fine editorial which appeared in the Memphis (Tenn.) Commercial Appeal entitled "Swiss Watch Tariffs."

It is all too often that the national interest is not considered when it comes to a matter of tariffs. This editorial offers an eloquent need for improving our foreign-trade policy. The logic of the editorial is sound and the time is at hand when I think we should give serious consideration to this matter.

The editorial follows:

SWISS WATCH TARIFFS

Switzerland has been consistently among the best customers the United States has had in Europe. It has paid in cash, too, for a wide variety of our basic products, including considerable amounts of cotton. From this point of view alone it is difficult to understand why it should have been decided back in 1954 to raise the tariff against Swiss watches by 50 percent.

It is axiomatic that the Swiss, like anyone else, must sell if they are to buy and the watch industry is one of substantial importance to them. Aside from the alienation of the Swiss, however, the boost in the tariff on their watches was so at variance with the overall policy of the Nation in regard to reducing barriers and making international trade more free and easy that apprehensions were roused elsewhere.

When President Eisenhower announced the increase on Swiss watches, he indicated that he was moved in part by a feeling that his decision was necessary to maintain over here a number of workers skilled in the making of precision instruments adequate to safeguard us in this field in the event of war. At that time and since there has been question of the accuracy of that point of view. In any event, it has been proposed that other means would be preferable to unduly reducing trade with Switzerland if help is required to hold precision workers together.

At the present the Office of Defense Mobilization is studying fresh appeals from domestic watchmakers for additional protection which would accentuate the cutdown in Swiss trade and further alarm other countries. The Tariff Commission is restudying its 1954 recommendations for higher watch tariffs. The new proposals will be in the President's hands by the end of July and it is to be hoped the long-range view will be his.

It is understood it would not be expedient to remove all restrictions on export-import trade, but the general economic welfare of this Nation and the world are served if Swiss watches are permitted to enter here on a basis of fair and reasonable competition.

The Late Eugene J. Butler

SPEECH
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. KEOGH. Mr. Speaker, many years ago, as a student at the Fordham University Law School in New York, it was my pleasure to become acquainted with a fellow student, Eugene J. Butler. A few years later, upon my election to the 75th Congress, our acquaintance ripened into a friendship founded on my part by my deep respect and admiration for him. Everyone with whom he came into contact in connection with his work for the National Catholic Welfare Conference shared that respect and admiration.

I was profoundly grieved to learn of his passing a few days ago after a long and painful illness. The fortitude with which he bore the long ordeal of his fatal affliction was a mark of the sterling character that he had displayed in his daily work. Never have I heard one

word of adverse criticism of him. By the same token, never would he voice a word of criticism against any of the thousands of persons with whom he became associated in his long years of service. That service has now come to an untimely end. Gene Butler will be sorely missed by his family, his employers and fellow workers, and by the membership of the Congress.

Dance of Death

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Ludwell Denny which appeared in the Washington Daily News on Monday, May 21, 1956, in which Mr. Denny analyzes the "new look on the face of Russia's European satellites":

DANCE OF DEATH—RED RELAXATION OF TERROR IS REAL, BUT LIMITED

(There's a new look on the face of Russia's European satellites, but it's only skin deep. The Red terror has been relaxed, but how far this has gone and what results it's having will be told in a series of five articles of which this is the first by Scripps-Howard's foreign editor and news analyst.

(In subsequent articles, Mr. Denny will cover these questions: Will the satellites go Titoist—or revolt? Is communism or religion winning the satellite youth? Is the Communist economic system working in the empire of puppets? And are the satellites a military asset or liability for Russia?)

(By Ludwell Denny)

VIENNA, May 21.—Russia's relaxation of Red terror in her East European satellites is real but limited.

There is no change in the fundamentals of Soviet dictatorship—absolute control by the Communist police-state regimes ruled by the Kremlin.

Any relaxation of that basic control would be suicide—and is most unlikely.

The shift to softer methods varies in different satellites. In general, it follows a similar trend set in the past year in Russia which was formalized by the recent Moscow Communist congress and the demotion of the deceased Stalin from a Red god to a Red devil.

There has been some relaxation in Poland, Hungary, and Czechoslovakia, less in Rumania, Bulgaria, and Albania. And the least in East Germany.

Results are mixed. The non-Communist 80 or 90 percent of the satellite populations are generally pleased but skeptical, and hate the regimes no less. Communist Parties are confused, disillusioned, and disorganized. Red puppet bosses are cautiously and cravenly trying to follow the unclear Kremlin line and guess its next move.

This is a net gain for Russia. The strain on the satellite parties is unimportant as long as Russia maintains military, police, and policy control in those countries.

MILDER METHODS ARE QUITE IMPORTANT TO THE KREMLIN

Meanwhile, milder methods of dictatorship in the satellites, as in Russia, have two all-important results for the Kremlin.

It is a most effective propaganda method for "peaceful coexistence" to neutralize Western Europe, the Middle East, and Asia, to destroy NATO and SEATO, and to isolate the United States.

At the same time, these milder methods get higher output from the satellites which are producing for Soviet world military supremacy.

Actually, the relaxation is less than advertised. It is limited and tentative even in Poland, where it is the most advanced. Political prisoners, including some famous Reds and Socialists, have been released. But these most dangerous to the regime have long since been killed. They remain as dead as before their present "rehabilitation."

Among the living, far more still are in Red prisons and suffer in slave labor camps than have been released. Cancellation of Stalinist "laws" violating so-called Leninist rules of justice are called a "return to legality." But in the satellites, all this is still a promise rather than a fact, and the promises contain loopholes which make them meaningless.

All that has happened is that several police chiefs have been made scapegoats for the dictators who controlled them and still control. Since all law is by dictatorial decree and all judges are tools of the regime, legality is a farce and justice is nonexistent.

FREEDOM OF CRITICISM HELD TO CONGRESS LINE

There's more freedom of criticism. This shows in the press, radio and—in the case of Poland and Albania—their so-called parliaments. But it's limited to the Moscow Congress line.

An attack on anything which can be called Stalinism is all right. Puppet dictators are lambasted for their crimes committed under Stalin and for which they already have expressed public regret.

There are demands for more honest and efficient management in food and housing. But there's no hint of criticism of party boss Khrushchev, not the faintest challenge of Communist control or Russian domination.

There is no press or radio freedom in the democratic sense, no academic freedom, no labor union freedom, no political freedom. Even so, dictators are fearful this limited de-Stalinization may go too far. Every one of these regimes has issued warnings that any attempt to "misuse" this criticism to undermine Communist control or relations with Russia will be punished severely.

Like freedom to criticize the lifting of the Iron Curtain has been much exaggerated. The widely publicized Hungarian promise to remove the barbed wire along the Austrian border was accompanied by an increasing number of guards and deepening of the border death zone which makes escape more difficult.

CZECHS DEEPENING THEIR AUSTRIAN DEATH ZONE

Czechoslovakia is now deepening its Austrian frontier death zone in preparation for another propaganda "curtain-lifting." East Germany is tightening police lines to prevent escapes into West German freedom.

Even more interesting, Russia is increasing the barrier on her Polish border. Satellite jamming of foreign broadcasts and bans on circulation of foreign newspapers are as tight as ever. Foreign diplomats and journalists are being watched even more closely.

Propaganda that the satellites are being de-Stalinized by purges of Stalinist bosses and substituting of so-called collective responsibility is phony.

No outsider knows just how much collective dictatorship exists in the Kremlin or how much "more equal" Mr. Khrushchev is than his rivals for Stalin's power. But it is clear that no collective responsibility can exist in any satellite regime because all are absolute puppets of the Kremlin.

Of the 7 Stalin satellite puppets, only 2 chiefs have been purged. Neither of those two was removed for ideological reasons, both were replaced by stooges who had been Stalinites. Poland's Jakub Berman was replaced by the equally vicious Edward Oachab. Bulgaria's Vulke Chervenkov, who as the Kremlin's chief anti-Titoist operator before the "new look," was fired as a sop to the now wooed Tito.

NO OFFICIALS RECENTLY DISMISSED WERE STOOGES

None of the other officials recently dismissed in the satellites was really a top stooge, although some had big titles. East Germany's Walter Ulbricht, Czechoslovakia's Antonin Zapotocky, Hungary's Matyas Rakosi, Romania's Gheorghe Gheorghiu-Dej, all are the same old Stalinists. That, of course, is one reason the public hates the regimes as much as ever and why satellite Communist Parties are so demoralized by the new look.

The spectacle of these notorious Stalinists, who murdered so many anti-Stalinists in the past, now denouncing Stalin as a criminal, is as unconvincing to others as it is embarrassing to these criminals themselves.

Undoubtedly the Kremlin will purge Messrs. Ulbricht, Zapotocky, Rakosi and Gheorghiu-Dej—particularly Mr. Rakosi as another sop to Tito—if and when it can spare these odorous specimens. But there are so few able Communists in the satellites after the periodic purges of the past, that it is now hard to find efficient stooges. The Kremlin needs very smooth satellites operators to make the de-Stalinization trick work.

The Troika

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. MULTER. Mr. Speaker, in this morning's issue of the New York Herald Tribune, Mr. Joseph Alsop discloses some additional very interesting information about the situation in the Middle East. Like the facts contained in his article of May 20, 1956, which I have also placed in the RECORD, everybody interested in the area is able to learn these facts except our Secretary of State. In traveling through that area, he could have avoided learning these facts only by closing his ears and his eyes. He could have learned them by staying right here at home and reading the reports that have been coming out of that area for several years last past.

The article follows:

MATTER OF FACT

(By Joseph Alsop)

THE TROIKA

DAMASCUS.—The Troika, as someone has called it after the three-horse team that draws a Russian sleigh, operates all over the Middle East. But here in Damascus, the lovely city of the seven rivers, the Troika not only operates but rules.

Syria's President, Shukri Kuwatly, does not govern his country. Except for a tendency to oratory, very little is left of the fiery Arab independence leader who once defied Turkish torture. Nowadays Kuwatly seeks only peace and comfort, perhaps comfort above all; so he obeys the Troika.

Syria's amiable, astute, decidedly temporary Premier, Said Ghazzi, does not govern

his country either. Even the chief of army intelligence, Abdul Hamid Saraj, the young, dynamic, left-wing captain who has the most important influence on the Syrian Army and is constantly being tipped as Syria's next military dictator, does not exercise any final authority. For both Ghazzi and Saraj also obey the Troika.

What then is this Troika, which has acquired predominate power in this country where the slightest hint of foreign influence used to stimulate paroxysms of anticolonial rage? It is simply the strangely assorted but highly effective combination of Egyptian political leadership, Saudi Arabian bribe money, and Communist organizational talent.

Of these it is necessary to say at once that the Communist Party is measurably the least important as yet. In the last year, the crafty chief of all Middle Eastern Communists, Khaled Baqdash, has managed to make communism almost respectable in Syria. He can turn out a street crowd of several thousand whenever he chooses. His organizers have partly penetrated the other left-wing groups.

But although Baqdash has the usual organizational advantage of Communists everywhere, he has much less real appeal as yet than the other left-wing leaders like the fiery Socialist, Akram Hurani, and the military politician, Captain Saraj. Furthermore, men like Hurani and Saraj are much more nationalist than they are leftists. And their angry, suspicious and violent brand of nationalism does not lend itself to final domination by the Communists.

As for Saudi Arabian bribe money, this is one of the most extraordinary phenomena in the whole Middle East. In Syria and Lebanon, the main centers of expenditure, the Saudi Arabian Government is rather reliably reported to be investing something like half a million a month of its American oil dollars in politicians and the press.

You hear well-authenticated tales of organized press visits to Saudi Arabia, in the course of which the Syrian and Lebanese editors were each sweetened by a tactful little envelope containing the equivalent of $1,200—which is a lot of money hereabouts. Any one who wants to start a newspaper in Damascus, however silly his rag may be, can reportedly count on a sufficient monthly subvention from the Saudi Arabian Embassy to make journalism a paying proposition.

The stories of Saudi purchases of politicians of all colors are equally well authenticated and even more numerous. Altogether, the discovery of oil in Saudi Arabia has brought a glowing new prosperity to public life in this part of the world.

But Communist organization only give impetus; Saudi money only imposes unanimity. The real direction of Syrian affairs comes from Egypt, and more specifically from Egypt's Gamal Abdel Nasser.

Undoubtedly, Nasser's authority in Syria is strongly reinforced by the other members of the "Troika." Undoubtedly, too, Egyptian authority is all the easier to assert because Syrian politics currently resemble nothing so much as a basket of eels. All the eels are in competition. The Egyptians, so to speak, hold every eel by the tail. Even Captain Saraj does not apparently have the strength to take over the Government without Egyptian backing, which there is good reason to believe he would like to have but cannot get.

For the purpose of any practical analysis of the Middle Eastern situation, it is vitally important to note these truly remarkable features of the situation here in Syria. But one should not stop there. Normally, the Communist organization would not be so effective. The Saudi bribery would arouse more indignation. The Egyptian leadership of Syria would be resented.

But recent history, and particularly the Palestine war, have created an abnormal mood in Syria, in which Gamal Abdel Nasser's special blend of militarism and anti-Westernism have a great appeal. And it is this all-dominating mood which causes the activities of Nasser's allies to be tolerated, as it also caused the voice of Nasser to be heeded at all times.

Fair Trial for the Farm Home Loan Farmer?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. METCALF. Mr. Speaker, last week I called the attention of my colleagues to the disturbing reports about the Farmers' Home Administration.

My appearance before subcommitees in both bodies and the editorial which I included with my remarks on page A3945 of the CONGRESSIONAL RECORD of May 15, 1956, prompted an editorial entitled "Fair Trial for the Farm Home Loan Farmer?" in the May 10 issue of the Ravalli Republican, published at Hamilton, Mont.

The editorial listed eight questions for me to answer, although the man who wrote the editorial did not bother to send them to me.

As you will see, the editorial singled out a Farmers' Home Administration borrower. Here is the editorial:

FAIR TRIAL FOR THE FARM HOME LOAN FARMER?

This being a political year one can expect almost anything in the way of ballyhoo to curry favor for those important votes.

However, many people (Democrats and Republicans alike) were surprised at a recent article and editorial in which the Republican Party and the Democrat-instituted Farmers' Home Administration (including the local office manager who has no control of policy) were taken to task by the Honorable LEE METCALF and his local spokesman.

They made a big "to do" about some alleged individual cases which they would mistakenly lead us to believe had been unfairly treated by the local FHA office. We are reliably informed that although Representative METCALF was home at Easter he did not call at the local FHA loan office and investigate the Grenfell case or any of the other cases which they placed in question. As a one-time impartial jurist we are surprised that Representative METCALF does not believe in going to the source of what he and his spokesman are trying to stir up as trouble for the Republicans.

Our investigation indicates that there is definitely another side to the issue, the right one, which does not substantiate Representative METCALF'S or his henchman's charges, and to an inquiring voter should result in distrust of their motives.

The true facts can best be determined by the answers to a few questions which we feel Representative METCALF should answer for the benefit of the taxpayers who support the loans made by FHA. The answers are illuminating and should make the farmer wonder whether Representative METCALF is championing their cause or his own.

The questions:

1. For how many years has Mr. Grenfell been carried delinquent by the Farmers' Home Administration?

2. How much money did Mr. Grenfell pay to the Farmers' Home Administration during 1955?

3. How much money did the Farmers' Home Administration release to Mr. Grenfell for living and operating during 1955?

4. What was Mr. Grenfell's gross income for 1955?

5. Did the Grenfells raise a substantial garden for home use and canning?

6. What percent of Farmers' Home Administration borrowers are being carried delinquent in Ravalli County?

7. How does the average production of Mr. Grenfell's cows compare with others in the grade A field?

8. If the FHA supervisor ever refused to release mortgaged beef, pork, chickens, eggs, milk, and butter for Grenfell's family consumption?

Mr. Speaker, Mr. and Mrs. Frank Grenfell, the borrowers named in the above editorial, sent me a copy. They also wrote that "the content of these questions is such that it is certain the editorial writer must have had access to our confidential files with the Farmers' Home Administration." I have asked the FHA Administrator, Mr. R. B. McLeaish, to make a prompt investigation of this complaint.

Mr. and Mrs. Frank Grenfell already have answered the questions raised by this editorial. They did so in the following letter to Editor Miles Romney, who published it in the May 17, 1956, issue of the Western News at Hamilton, Mont.:

This letter is written by Frank and Dorothy Grenfell. We live on a farm near Stevensville which we bought in 1946. Frank Grenfell is a native of Stevensville. He attended school there and went into farming. He was married to Dorothy Donaldson when she was attending high school at Stevensville. We have six children. We have always tried to meet our obligations and believe we have many friends in the Stevensville district. Frank is a member of the school board.

It is not a happy state of affairs to be put into a position where intimate family matters must be discussed publicly. But when your home and years of work are at stake it is necessary that we no longer remain silent.

When we bought our farm it was necessary to go into debt. In order to better finance our operations in 1950 we took out an FHA operating loan and in 1951 a farm ownership loan.

We have continued to farm our 150-acre place and have been able to produce increasingly from it. By this we mean porducts such as milk and butterfat, livestock, feed, and so forth. But at the same time we have seen prices for the things we produce sink, until in 1955 our gross money return for the things we produced was approximately two-thirds of the gross money of years past.

Our financial condition began to get bad in 1952 and has got worse as time progresses. This despite the fact we have worked harder than ever and grew bigger crops.

An editorial in the Republican says this is a political year. This fact has nothing to do with our case as our trouble started several years ago as prices began to go down. This is shown by the fact that we have been delinquent every year since 1952.

Our trouble is twofold: Prices dropped and our obligations to the FHA stayed at the level at which we borrowed, which was upon a basis of high prices. We just can't pay off at the same rate with less income, even if we grow bigger crops. We couldn't even if we had a sympathetic administrator in the Ravalli FHA office instead of an administra-

tor dedicated to liquidating farmers who he smugly considers insufficient.

We Grenfells are not the only farmers who are experiencing such difficulties. We know numerous other farmers who are having trouble with Mr. Rodgers of the FHA. Some of them talk to us about the trouble but do not speak up for fear they will be persecuted. Pray tell us how we can be hurt more than we are?

Some farmers have gone to banks and secured refinancing to solve their problems. This is true of many farmers who do not have FHA loans as well as those who have FHA loans. We know of few farmers who are enjoying prosperity now. The Grenfells are not alone in this plight.

What we and many more farmers need, far more than painting word pictures in newspapers, and experiencing the humiliation of having to listen to Mr. Rodgers' diatribes without protest, is refinancing on a commonsense base whereby we can work and meet our obligations. If the people at the head of FHA in Washington would send somebody to the people on the farms, bypassing those in the field who seem dedicated to eliminating us from farming, perhaps the facts would be understood and the present cruel and impossible policies changed. Or does the National Government want to chase us from our homes and farms?

The editorial in the Ravalli Republican of May 10 shows that somebody, not us, gave the Republican editor access to our private confidential files in the Hamilton FHA office. So that editorial asks us eight questions:

1. For how many years has Mr. Grenfell been carried delinquent by the Farmers' Home Administration?

Answer: Ever since 1952 when President Eisenhower took over.

2. How much money did Mr. Grenfell pay to the Farmers' Home Administration during 1955?

Answer: More than $1,100.

3. How much money did the Farmers' Home Administration release to Mr. Grenfell for living and operating during 1955?

Answer: Nothing for living; released money to pay for 10 tons of hay and some grain and taxes. Rodgers wanted we Grenfells to sell all our young stock and turn the money over to the FHA. We saved the young stock and Rodgers released the money we finally realized from sale of it so we could pay taxes in 1955.

4. What was Mr. Grenfell's gross income for 1955?

Answer: A little over $6,000.

5. Did the Grenfell's raise a substantial garden for home use and canning?

Answer: Mrs. Grenfell was expecting a baby and not able to grow and maintain a garden; Mr. Grenfell in farming 150 acres and caring for his dairy, etc., was not able to properly maintain a garden.

6. What percent of Farmers' Home Administration borrowers are being carried delinquent in Ravalli County?

Answer: We have no access to FHA books to determine this answer; the editor of the Republican, having access to such confidential data ought to be able to answer his own question.

7. How does the average production of Mr. Grenfell's cows compare with others in the grade A field?

Answer: The Grenfells have no way of determining. Mr. Rodgers wanted us to sell our producing cows for which we might have got around $75 each and buy proved dairy stock which would cost us $400 or more a head. While we realize our cows are not the best in the county and we would like to improve our herd, as we have been trying to do, we know enough about dairying to know such a sale would have wrecked our production and broke us. Probably Mr. Rodgers or the Republican editor could do the trick but we don't think most dairy farmers would try it in one operation.

8. If the FHA supervisor ever refused to release mortgaged beef, pork, chicken, eggs, milk, and butter for Grenfell's family consumption?

Answer: We never asked for such authority nor need we as it is unnecessary. Such living expenses, like operating expenses; come before payment to FHA under terms of our mortgage.

There, we have tried to answer the Republican questions. We are wondering if the Republican editor or Mr. Rodgers would answer questions about their private affairs more honestly? As people endeavoring to be good citizens, raise our family, and finally own our own farm and home, we doubt if it is smart to gloat over misfortunes brought upon farm people through no fault of their own. We wouldn't even want the Republican editor to have hard luck, nor even Mr. Rodgers, though we think he should prefer, henceforth, to have some other FHA official visit our farm when official visits are necessary.

But we are not quitting. We hope someway to work out our problem. We have not given up hope that the FHA will come to its senses and refinance people in our situation. There are probably around a hundred families in the Bitter Root financed through the FHA (that's just a good guess) and if they all pay a thousand dollars in taxes (county, State, school, and irrigation district) as we do, it would mean a hundred thousand such dollars lost in this county alone. Multiply this over the Nation and it means a heap of money. We Grenfells don't think any Government in Washington is so unwise as to want farmers eliminated in order to achieve this end. Do you?

MRS. FRANK GRENFELL.
FRANK GRENFELL.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages. (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Wofford, Thomas A., *S. C*——
Young, Milton R., *N. Dak*——Quebec House So.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, ———, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The Merchant Marine

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, May 24, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Propeller Club of New Orleans, La., on National Maritime Day, Tuesday, May 22, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CHARLES E. POTTER BEFORE THE PROPELLER CLUB OF NEW ORLEANS, LA., ON NATIONAL MARITIME DAY, MAY 22, 1956

Mr. President, members of the Propeller Club of New Orleans and distinguished guests, I find it difficult to tell you in adequate terms what a very great pleasure it is for me to be your guest here in New Orleans today to celebrate national maritime day and to commemorate the 137th anniversary of the sailing of the first American steampship across the Atlantic.

Senate business brought me to your wonderful city of New Orleans—the Queen City of the South—in June 1953.

I shall never forget your warm reception, your friendly cooperation and your magnificent, unparalleled hospitality. I long to return, and in fact, as chairman of the newly constituted subcommittee on water transportation, I had scheduled another visit to your fascinating city for December 1953. What more perfect opportunity to renew my brief but enjoyable acquaintance with New Orleans hospitality and, at the same time, seriously to view this great port providing access between the vast agricultural and industrial heartland of America, the Mississippi Basin, the Gulf States, and the ports of all the free world. I thought nothing could prevent my visit at that time, but fate decreed otherwise.

I have had to wait until now to come back among you.

I was, therefore, not only honored, but greatly pleased to be invited to appear before you on this occasion. My only regret is that the press of business in these final months in the Senate will keep me from lingering long enough to savor the atmosphere and hospitality of New Orleans as much as I would like.

Today we are celebrating a major national anniversary, one of deep significance to this country whose origins and growth developed from commerce on the seas. This banquet here tonight is being repeated all over the country by the hundreds of thousands of informed Americans who know the part that our maritime commerce has played in making the United States, from pioneer beginnings, the greatest nation on earth. They believe, with firm conviction, that we must develop and maintain a strong merchant marine if we are to continue to enjoy the bounteous blessings of this great and productive country of ours, and remain secure against forces from without that would destroy our culture and our way of life.

When we celebrate birthdays or anniversaries we frequently think in terms of growth and the making of comparisons of one year with another.

Today, more people with higher incomes are creating an expanding market for homes, durable goods, and for many items which were once considered luxuries or nonessentials. Along with all this demand for new goods has come new demands for travel, brought on by paid vacations and a reduction in the workweek. At present the population of the United States is increasing at the rate of almost 3 million persons per year. I have heard estimates that by 1965 it will be one-fifth larger than it was in 1953, while production will be one-half again greater, disposable income per person will be one-third larger, and the hours of work one-tenth less.

This amazing growth is vividly reflected in the overall tonnage flowing through the port of New Orleans from 1950 through 1955. Considering domestic, foreign, Department of Defense, and in-transit cargoes, we have seen a steady rise from just over 35 million tons in 1950 to well over 41 million tons in 1955, an average annual increase in total volume of waterborne trade in excess of 1 million tons. The picture is similar when we examine the overall export and import foreign commerce through New Orleans, where over 8 million tons of cargoes were handled in 1950, as compared with the import and export foreign trade of approximately 11 million tons enjoyed in 1955.

Making still another comparison, at present levels our total export foreign trade is almost 3 times the monthly average of approximately 2 million tons exported in 1938. And our 1955 imports are double the 1.7 million tons imported monthly in 1938.

We are clearly, then, enjoying a growth and expansion of economy unprecedented in the history of the world.

MERCHANT MARINE ACT OF 1936

Maritime Day this year seems to me to have more than usual significance. Almost exactly 1 month from today marks the 20th anniversary of the enactment of the Magna Carta of American shipping—the Merchant Marine Act of 1936.

In 1935, after over 15 years of effort to establish a privately owned merchant marine—with almost every conceivable form of aid—the Government owned some 250 vessels, approximately 40 of which were being operated under agency agreements on four foreign service lines owned by the Government. There were around 300 vessels in private operation engaged in the mail contract services—only 29 of which had been built under the provisions of the 1928 act.

American ships were carrying less than 35 percent of our overseas foreign commerce.

Many of our ships were already obsolete, and most of them, ranging in age from 15 years up, had an economic life of 5 years or less to go.

The net working capital of the ocean mail contractors was a little more than $4 million, and the net worth of the companies operating those 300 vessels was only a little more than $76 million.

Two oil tankers, each of about 9,000 gross tons, were the only seagoing merchant vessels under construction in the shipyards of the Nation. The ship-repair segment of the industry was comparably impoverished.

The maritime situation in those early prewar years was depressing and steadily worsening. When the small, but threatening, dark cloud of Hitler's rise to power in Europe was recognized by only a few, the Congress was directed to bend its full efforts toward restoration of our merchant marine.

The committees of the House and Senate worked arduously and continuously for over 18 months. Seven or eight legislative proposals were introduced and exhaustively examined before the final resulting compromise, which became the Merchant Marine Act of 1936.

In the long and sometimes bitter battle that produced the act the future of the American merchant marine frequently hung in the balance between the forces who favored Government ownership and operation and those who—while recognizing the necessity for Government aid—fought for the maximum degree of private ownership and operation. Above all, however, the sense of the majority of both Houses was for the need for a strong merchant marine.

In the final compromise—adopted in the House of Representatives on June 20, 1936, by a vote of 225 in favor and 21 against—the private-enterprise proponents won out overwhelmingly. This victory came only after yielding to the proviso that if private enterprise could not, or would not provide what was needed, the Government itself must take the initiative to establish or augment essential services until competent private ownership could take over.

The framers of the act insisted that its provisions be made applicable to the carrying out of a specific long-range program of additions and replacements to be developed immediately after its enactment to meet the needs of commerce and defense in the foreseeable future. Immediately after the new act became effective, the Maritime Commission, on consultation with the Navy Department, directed itself to the task of determining a realistic and tangible program to serve as the guide and goal for action during the coming years.

The record discloses that such a program might be made effective in a minimum of 7 years.

The Commission studied the flow of our overseas commerce, and established a system of some 30 essential trade routes. Account was taken of the flow of our trade existing at that time, and trade which might be developed to the long-range advantage of our national economy.

The Navy indicated that its minimum mobilization needs required the construction of about 500 modern ships in the ensuing 10 years.

Thus, it was that the Commission adopted its long-range building program calling for 50 ships a year over a 10-year period to rehabilitate the dry cargo portion of the merchant marine.

Happily, time was on our side, and the early steps to implement the long-range program previously adopted proved—as has been repeated time and again—the wisdom and foresight of those who conceived and molded this basic legislation.

It is now history that the start we made in the few years before war broke out in Europe in 1939, revitalized our shipbuilding

industry and provided us with a nucleus of modern ships which may well have been the margin of victory in World War II.

TWENTY YEARS OF THE 1936 ACT

Implementation of the 1936 act had scarcely begun before World War II broke out in Europe. And the abnormal conditions prevailing throughout the world from September 1939, until the end of the war, denied us the opportunity of true perspective on the effectiveness of the act during its first 10 years. The second 10 years has also been characterized by violently changing conditions, not consciously anticipated in the prewar years.

In the first years after the war, before the rehabilitation of the foreign fleets—when we were carrying better than 50 percent of our foreign commerce—I have heard cynics say that the Merchant Marine Act was in no way responsible for the health of the American merchant marine. They pointed to the impending war—to the war itself—and to the devastated condition of the rest of the world as being both cause and effect in the development of our maritime strength.

I cannot argue against the obvious fact that wartime construction and the wartime demands for transportation greatly accelerated the attainment of the original goal of the framers of the act. They strengthened the financial position of operators who were in serious financial straits in 1935. Wartime and postwar conditions, plus the Ship Sales Act, brought previously nonexistent operators into the American-flag fleet.

Yes, those things are true, but from the vantage point of a score of years, let us look at that part of the merchant marine today which has been operating under the provisions of the 1936 act, and decide whether it has been effective—whether it has proved its worth.

The original Maritime Commission went into action immediately upon its formation, and established a definite program for the immediate future. In this program was the development of the excellent, high-speed, modern, and safe C-type cargo and combination vessel, designed in collaboration with vessel owners, to meet the requirements of our commerce and defense. Many of these fine ships were actually in being long before we got into World War II. Their construction affected the revitalization of our shipbuilding capacity. The operators who acquired them, under the carefully developed requirements of the 1936 act, set about the improvement of their services on the previously determined essential trade routes.

The fast, regular, and frequent services required under the law are now paying dividends to American exporters and importers, and to the areas which they serve. As was stated by your own E. J. McGuirk, president of the New Orleans Steamship Association, and dean of the New Orleans steamship fraternity, "In spite of all the provisions of nature, the great port of New Orleans did not begin to grow until there was established regular and dependable services by the American merchant marine." The farsighted terms and requirements of the 1936 act are responsible for the highest development of the conception of regularity and dependability of shipping services.

The wartime chairman and the other members of the Maritime Commission kept their eyes closely on the postwar needs of the merchant marine under the 1936 act. They firmly insisted that a good part of the emergency ship construction program be devoted to building of modern vessels suitable for peacetime commerce—those ships are the backbone of our present fleet.

Today, as we approach the 20th birthday of the act, we find that the original 12 operators have grown to 16. They are presently operating 300 large, fast vessels. Through the wise provision for the establishment of reserve funds and replacement obligations, they are now beginning to replace their present fleets on an orderly basis with ships of the latest design. Twelve of the sixteen subsidized lines, having existing replacement obligations, will build 180 new ships between 1955 and 1970, at an estimated total cost in excess of $1,500,000,000. We have seen the strengthening effect of the 1936 act dramatically reflected in comparison of the net worth position of the mail contract operators in 1935, and the subsidized operators today, as mentioned earlier, the net worth of the companies operating 300 vessels under the 1928 act was only a little more than $76 million. According to the latest available figures—as of September 1955—the subsidized lines had an aggregate net worth of approximately $550 million. The working capital of most of the individual subsidized lines today exceeds the $4 million which was available to all of the mail contract operators in 1935. And, by no means the least of the achievements made possible by the 1936 act, are the standards of safety, working and living conditions, and wages of the American seafarer, who can no longer be labeled a second-class citizen.

The Merchant Marine Act of 1936 was conceived and developed as an integrated whole, each section and each chapter deliberately and carefully interlocked with one basic objective—the development and maintenance of an adequate American merchant marine.

Every precaution was taken to assure that that merchant marine should be owned, operated, and manned by American citizens, and that the Government's substantial interest and contribution be protected. But the objective was paramount in every provision.

THE MERCHANT MARINE TODAY

I have recited the phenomenal facts of growth and development of our national economy and our foreign commerce. I believe I have presented the facts that prove the foresight of the fathers of the 1936 act—facts which show that its principles have been sound and effective, where previous efforts had met miserable failure. Therefore, having painted such a rosy picture, you may wonder why I have entitled this address "Hope for the American Merchant Marine"—for hope implies the need for correction of an unsatisfactory situation.

I do not wish to belabor you too much with statistics—but a few figures can sometimes tell a story better than a thousand words.

Our national maritime policy has been construed as setting a goal of approximately 50 percent American-flag participation in the foreign commerce of the United States. Yet, since World War II, we have seen our participation drop from 70 percent in 1946 to 54.8 percent in 1948, to 35.8 percent in 1952, to 29.6 percent in 1953 at the conclusion of the Korean war. Then, in 1954, it dipped to 27.8 percent, and by the end of 1955, the American-flag was only carrying 22.7 percent of our foreign trade—far lower, even, than the proportion which was viewed with alarm in what were deemed to be the dark days of 1935. This depressing but baffling situation prevails despite the firm retention of the 50–50 principle in the carriage of our vast Government programs. It exists despite the fact that all, or nearly all, of our subsidized operators are in a substantial recapture bracket, signifying highly profitable operation in recent years.

Within the past 4 years, our privately owned oceangoing merchant fleet has dropped from the postwar peak of 1,300 vessels in 1952, to 1066 vessels as of the 1st of April 1956. These things have occurred while our export and import foreign trade has nearly doubled itself since 1946.

The shipbuilding picture is nearly as bleak as it was 20 years ago. And the projected replacement plans will not maintain a safe level of activity in the shipyards.

Three years ago, I was appointed chairman of the Water Transportation Subcommittee of the Interstate and Foreign Commerce Committee of the Senate, and directed to conduct merchant marine studies and try to find why our relative position on the seas was plummeting so drastically and so rapidly. Our subcommittee was directed to find the answers.

Our aims in the studies that were commenced at that time were somewhat similar to the aim of the fathers of the 1936 act. For the problem was relatively the same in many respects.

We took note of the violently changing times, the accelerating pace of our industrial economy, the shifting patterns through the world as the result of the hot war and the tensions of the cold war. We attempted to evaluate our maritime needs in the light of the completely new era which burst upon the world with the explosion of the first atomic bomb at Alamogordo, N. Mex.

We wanted to find out what our needs were for commerce and for defense—how close we were to satisfying those needs—and finally to take action accordingly. In the course of this program, we wanted to determine the adequacy of the 1936 act to serve its high purpose in a world vastly different from that in which it was conceived.

In hearings held throughout the spring, summer, and fall of that year we compiled a voluminous and valuable record on the first phase of our program—a study of the size, composition and quality of a modern American merchant marine. While the particular program which I had determined upon could not be carried to fulfillment, the subsequent years have seen continued dedicated efforts in the Congress to adjust our merchant marine legislation to the postwar world.

Thus, no one can say that we have been guilty of the complacency of indifference and ignorance which led to the disappearance of the American flag from the seas after the passing of the clipper ship era, prior to World War I. Each year since World War II has seen some new legislative approach designed to arrest our downward trend, by patchwork amendment to our basic shipping laws, and other measures. They are obviously not measuring up to their purpose, however, for despite these well-meant efforts, we are faced with the sobering fact that our participation in foreign trade is only 22 percent. Ships are annually disappearing from the American flag. We have built only three new passenger ships in the last 10 years, in the face of ever-accelerating waterborne passenger traffic. Our shipyards are depressed notwithstanding recent programs for tanker construction, modernization of Liberty ships, repair of reserve-fleet vessels, and conversions of mariner vessels sold to private operators.

This time we recognize the dangers of an inadequate American-flag merchant marine, and we are making motions in the hope that we can restore ourselves to our proper place among the fleets of the world. I firmly believe that this can be done. Before we do so, however, we must overcome another type of complacency which derives from a strong tendency in the shipping industry to preserve the status quo. There seems to me to be a failure to realize that we are in a completely new era of world development, notwithstanding some notable steps of a revolutionary nature being taken in some segments of the industry. Finally, the intervention of World War II and the special postwar problems that had to be met by new legislation have obscured the fundamental soundness of the clear concept of original 1936 act. Too much reliance has been placed on patchwork panaceas, and too little adherence to the carefully integrated principles which brought about the creation of the hard core of what is left of our merchant marine today.

With all humility, I would like to suggest the following steps which, if taken by the Government and supported by the industry, offer hope for a modern American merchant marine, adequate in all respects to serve our commerce and national security in this new era in world civilization.

First, I suggest that there be a redetermination made as to the size, composition, and quality of an American merchant marine adequate to meet our initial mobilization requirements in the immediately foreseeable future to carry our domestic waterborne commerce and at least 50 percent of our foreign waterborne commerce. The importance of such a goal cannot be underestimated. Only through the establishment of a previously determined program can we know for what we strive. There is not now any tangible target of this kind.

Secondly, I suggest the initiation and adoption of a long-range program similar to that called for by section 210 of the original 1936 act. That program, excellent and adequate though it was for the times in which it was adopted, has been virtually completed, even though there still remain some few essential routes or services not served by American-flag vessels.

Thirdly, in developing such a program there should be no hesitancy in departing from traditional concepts if they offer adequate promise.

Fourthly, when the goal and the program have been determined—we should then proceed to take whatever action is necessary to assure the accomplishment of the program. If new blood and sound new ideas can be brought into our merchant marine, all necessary assistance should be provided by the Government.

We should not be inflexible. For example, in insistence upon private financing, which would prevent the birth of a new venture and the type of growth and expansion of the 16 existing subsidized operators. This is not an advocacy of getting the Government more deeply into the shipping business. On the contrary, some direct Government financial assistance to private enterprise embarking upon new ventures will, I am sure, make it less necessary for the Government to construct and operate ships that are needed to build up our mobilization potentials.

None of these recommendations are in any way revolutionary. They merely restate, in the context of 1956, what was contemplated in the Merchant Marine Act of 1936. They urge that that act be carefully reexamined and viewed as a whole. They urge that the objectives and statement of policy of the act, which are as sound as ever, should override restrictive influences which are of only incidental importance in relation to the goal we are trying to achieve.

In closing, I firmly believe the basic principles of the 1936 act can produce the merchant marine we need just as they produced the merchant marine we have.

An Opinion Shared by All the Farmers

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Valley Journal of Halstad, Minn.:

Here's one newsman's opinion on the farm situation:

"How long does it take a surplus to turn into not quite enough to go around? Ten years? Five years? One year or a couple of months? Who knows? With all this discussion in the newspapers and magazines about what to do with food that is stored away, some people have come to believe that we'll never run short again as we did during World War II. So let's take a good look around.

"Look, for example, at what is happening to soybeans and flaxseed. A year ago many diverted acres diverted out of wheat and corn went into those two crops. A lot of farm experts began to fear that there would be a surplus. What has happened? Just the opposite. There's a big demand for export, because of poor crops in a number of countries. Now we're scraping the bottom of the bins for soybeans and flax. Prices have edged upward. Soybeans have hit $3 a bushel, flaxseed is nudging at the $4 mark. It shows for one thing, that nobody can ever predict the future for sure.

"That same thing could happen to other crops. Almost overnight it might happen. There's drought now in a big section of the country. It might get worse. Let's hope it won't. But the truth is we don't know.

"So all of us ought to be thankful for one thing we do know about—the big reserves of crops like wheat and corn that we've got stored away. Plenty is cheap when there's danger of scarcity. Of course, there's no danger we'll be hungry as a Nation. Farmers will see that we have plenty to eat by bettering their already fabulous efficiency record.

"But what happens when food surpluses turn into shortages, when there is barely enough to go around, even with careful scrimping? Every housewife knows the answer. Prices go up. It costs more to fill family dinner plates. The wage earner's paycheck doesn't go as far. We are sure that won't happen, but farm prices can't continue to go down and down forever. They're down about 30 percent now from 1951. All that time we've had a steady inflation in prices of manufactured goods, in rents, services, wages, clothing, and so forth. Low farm prices have hidden that inflation—balanced it off. The cost of living hasn't changed, because farmers have been carrying the cost of consumer price stability on their backs."

Water: Our Valuable Resource

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, a very fine editorial on the Perilous Water Waste appeared in the Evening Star of Wednesday, May 18, 1956. This editorial extols the activities of the 43d annual convention of the National Rivers and Harbors Congress, which was held in Washington, D. C., on May 11, 1956. I take pleasure in presenting this editorial to the Congress:

PERILOUS WATER WASTE

The National Rivers and Harbors Congress last week evidenced justified concern over the continuing waste of our most important resource, water. Our negligence in taking adequate steps to prevent the senseless dissipation and deterioration of our once-abundant water supplies could lead to grave shortages in the foreseeable future. Senator SYMINGTON, of Missouri warned that unless prompt conservation measures are adopted on a nationwide scale the Nation within two decades will face a critical water scarcity.

Senator SYMINGTON proposed a six-step remedial program that, while involving nothing new, is nevertheless worth reviving and adopting now. Some of the plans already are being carried out, although usually through a piecemeal approach. Others are awaiting action by Federal, State or local authorities. Mr. SYMINGTON urged the Rivers and Harbors Congress to give vigorous support for these resolute steps: (1) Development of a coordinated program of flood control, water storage and power production through multipurpose reservoirs wherever feasible; (2) a cooperative national and State program to control rainfall runoff; (3) a strong antipollution program, calling for interstate teamwork and Federal grants-in-aid for sewage treatment plants; (4) reclamation of used water; (5) tapping of new underground water reservoirs; (6) a national research enterprise to study means of including rainfall artificially, desalting of sea water and development of fresh-water substitutes in industry and agriculture.

The threat of a water scarcity is too serious to permit of the brushing off of such proposals as "old stuff." We have been indifferent too long to a national resource which generations of Americans have been inclined to take for granted. Recent reports on the extent of river and stream pollution, shoreland erosion and falling water tables should be sufficient warning against further neglect of an element that is just as vital to life as the air we breathe.

Agricultural Appropriations for 1957

SPEECH
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. H. CARL ANDERSEN. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, I would first like to commend the chairman of the subcommittee for a very good statement on this bill.

May I ask the chairman one question for the RECORD. I believe we should make this record positively clear in case there is need for interpretation.

You will note that on page 5 of the report we use this language under the heading "Soil Conservation":

In this bill, the committee has exceeded the budget for the Soil Conservation Service by $5 million, to assure adequate technical assistance to an increasing number of soil conservation districts, and to accelerate the watershed protection and flood prevention programs of the Department.

Further, on page 9 we use this language which could be construed as contradictory. This is under the heading of "Soil Conservation Service":

The committee has substantially increased funds for soil conservation technicians to enable this organization to meet the additional responsibilities which will result from the new soil bank program.

I am sure the chairman joins me in the interpretation that despite the need for the soil bank program the increased funds here made available are definitely for additional technical help to soil conservation districts for this nationwide operation.

Mr. WHITTEN. The gentleman is right. Our reference to the soil bank and to the problems that would come from it was an indication that that would increase the need for technicians and all that within the regular existing service. Of course, actually the soil bank is not yet the law and we have had no intention of trying to implement that law through any separate organization. This merely implements the existing Soil Conservation Service so that it can meet its existing problems and such other work as may be referred to it in the future.

Mr. H. CARL ANDERSEN. That is correct. I appreciate the gentleman's interpretation, which is in agreement with mine.

Now, I would like to say a few words about the bill we have before us. As is customary, the subcommittee chairman has just presented a detailed analysis of the various appropriation items. In the years in which I have served as chairman of the subcommittee it has been my responsibility to make such a presentation to set the stage, so to speak, for debate and approval of our bill. The gentleman from Mississippi [Mr. WHITTEN] has done his usual excellent job, and little remains to be said other than by way of emphasis.

AGRICULTURAL RESEARCH SERVICE

As has been indicated, we recommend a total of $49,972,000 for research. This is $10,816,845 above the appropriation just last year. It is also an increase of over $18 million over 1953, an increase of 56 percent in just 4 years. That is a most significant increase, and it reflects an important trend both in agricultural appropriations and in the administration of the Department of Agriculture.

Personally, I am pleased with this trend and am proud to have been party to it. Agricultural research, like most research, is designed to find answers to problems. American agriculture is faced with a complex array of problems ranging all the way from falling commodity prices to invasions of our forest lands by gypsy moths and our fields by alfalfa aphids. Research takes time and money. Time is always running against us and our only hope to catch up is through expenditure of more money on vital research—and this bill out of our committee makes that additional money available.

As the gentleman from Mississippi [Mr. WHITTEN] has said, we have shown our confidence in the research personnel of the Department of Agriculture by leaving them rather wide discretion in the budgeting and use of the funds proposed for research. We have approved the full budget estimate of $29,503,708 for payments to the States, representing an increase of $4,750,000 or about 20 percent above the funds provided last fiscal year. This expansion of research in partnership with the States is most encouraging to those of us interested in concrete results from our research dollars.

EXTENSION SERVICE

Our committee has taken into consideration the fact that research by itself is no end unless the results of such research are given practical application, and we have accordingly materially expanded the appropriation for the Extension Service. We recommend $49,615,000 for payments to the States and Territories. This is an increase of $5,125,000 over last year, and is more than $17 million above 1953—an increase of 54 percent in 4 years.

You will note the close relationship between the increases for extension and those for research. In the last 4 years, we have provided a total of 54 percent in increases for extension and 56 percent in increases for research. There is a very sound reason for this. From a purely practical standpoint, research is wasted if the results are not applied in actual practice. Primarily, it is the job of the Extension Service to convey research findings to the farm people who need them and thus complete the research process. The Extension Service—all the way from the land-grant college to the county agent and his assistants—bridges the gap between the scientists and the men and women on the soil. That is why I have through the years urged approval of increased appropriations for the Extension Service not only to help our farm people help themselves but also to protect our investment of tax dollars in important agricultural research.

The men and women who make up the Extension Service throughout the Nation have done an outstanding job in their field, and I can assure you that this is one of the wisest possible expenditures of agricultural dollars. I cannot too strongly urge approval of the full amount we propose for this purpose.

SOIL CONSERVATION SERVICE

We are recommending $67,500,000 for conservation operations—an increase of $4,557,255 over last year of which $2,285,000 is above the budget estimate. As one of the more persistent advocates of an expanded and effective Soil Conservation Service, perhaps I owe a brief explanation of my personal position on the subject.

While most of the agricultural programs included in this overall appropriation are for the immediate benefit of agriculture and farm people, the work being carried forward by the Soil Conservation Service is not only of benefit today but represents a permanent contribution to the physical wealth and well-being of our Nation. Many of the problems of agriculture could be solved tomorrow almost as well as today, but this is not true when it comes to conserving our precious soil and water resources. Topsoil is not replaceable. Once it has washed away and been deposited in the Gulf of Mexico or the bottom of the great rivers and tributaries, it is lost forever.

Our scientists have found substitutes for almost everything else, but so far they have not presented us with satisfactory substitutes for soil and water. It therefore behooves us, as a Nation looking to the future, to take steps now to conserve for our own time and for the generations yet to come these irreplaceable resources.

As has been established in the exchange a few moments ago between the gentleman from Mississippi [Mr. WHITTEN] and myself, we fully intend that these increases be made available to the Soil Conservation Service without any contingency upon soil bank or any other legislation which may be subsequently enacted. Reference has been made in our report to the pending soil bank legislation, but that is purely explanatory and has no real bearing upon the funds we propose to appropriate in this bill.

The increases over last year fall in three major categories. As I said earlier, $4,557,255 of the increase is for conservation operations. This will provide for more technicians in the present conservation districts and also for the staffing of new districts as they are organized. We have also suggested to the Department that clerks be employed where needed to relieve highly skilled and higher salaried technical personnel from clerical duties. By this provision of additional technical guidance and leadership to farmers interested in conservation, we fully expect to obtain many, many times the cost of the program in actual conservation practices.

The second major category is watershed protection, and we propose an increase of $5,505,935 in this field. This is an increase of $1,500,000 over the budget estimate. I have a deep personal interest in the watershed protection program as evidenced by my joint authorship of the Andersen-Hope pilot program and active support of Public Law 566 which came the following year.

The watershed programs have been widely accepted and are proving to be extremely popular not only with farm people but also with municipalities seeking protection from flood damages. In my own congressional district, I have seen townspeople join enthusiastically with their neighboring farmers in efforts to advance the watershed projects. I am happy to report that later this year we will start actual construction on one of the major watershed treatment projects in my district and the people in that area are giving it their all-out support.

The appropriation proposed for flood prevention is an increase of $2 million over last year and an increase of $1,300,000 over the budget estimate. We hope by increased appropriations and emphasis on this important work to make a further contribution to efforts to reduce the devastating effects of floodwaters on the upper streams with collateral benefits on the main channels themselves.

AGRICULTURAL CONSERVATION PROGRAM SERVICE

We propose an advance authorization of $250 million for the 1957 program and an appropriation of $217,500,000. If this

appropriation is insufficient, the committee is agreed that it will recommend more money as needed. We also feel that this program serves an extremely important purpose in its own right and should be continued whether or not a soil bank program is enacted. The fundamental purposes of the two programs are quite different and the enactment of the soil bank would have no bearing on ACP as a conservation program.

AGRICULTURAL MARKETING SERVICE

Research and related marketing services are vital to our agricultural economy. We propose an appropriation of $26 million to be divided equally between research and marketing services. This is an increase of $1,672,860 above last year. Personally, I would like to see even more funds made available for this important work if overall budget conditions permitted.

The very substantial increase we propose will facilitate expansion of crop and livestock reporting services and increased marketing research. As the hearings will show, our committee has impressed upon those responsible for research in the Department of Agriculture the desirability of placing increased emphasis on utilization and marketing research to develop new outlets and uses for agricultural products and to expand the old. Proper emphasis on such research can do much to solve the perplexing problem of surpluses of some commodities.

SCHOOL LUNCH PROGRAM

As in previous years, we have materially increased above the budget the appropriation for the school lunch program. We propose $100 million for the next fiscal year—an increase of $16,764,788 over last year.

Personally, I recognize the urgent need for even greater increases in this item and we propose to meet that need in part at least by increased distribution of surplus foods and perishables under the section 32 program. Despite past increases in the Federal contribution to the school-lunch program, the Federal share of the cost of individual meals served in the public schools has been shrinking each year. This is attributable to both increased school enrollment and improvements in the quality of the meals.

FOREIGN AGRICULTURAL SERVICE

We recommend $3,600,000 for the Foreign Agricultural Service, an increase of $157,000 over last year. I am sure our colleagues are well aware of the intense interest our committee has demonstrated insofar as the Foreign Agricultural Service is concerned. We have nurtured it through the years and now we believe it to be on the threshold of outstanding service to American agriculture. With a staff of men and women who excel in their field, this agency is now moving our agricultural products in increasing volume into markets throughout the world. Today, we are not only recapturing old markets lost through inept handling or neglect in previous years, but we are also opening up new markets we never enjoyed before. It is to the advantage of this Nation as well as our customers to move our abundance of food and fiber into world trade channels for the good of all. We are much encouraged by the progress that has been made and look with confidence to the future of this program.

RURAL ELECTRIFICATION ADMINISTRATION

For electrification loans, we have approved the entire budget estimate of $145,300,000 in regular funds and have increased the contingency funds from the budget estimate of $25,000,000 to $68,700,000. This will make available a total loan authority of $214,000,000, if necessary, to meet the maximum demand anticipated by the REA co-ops.

The REA program has shown good progress in recent years and we want to assure sufficient loan authority to maintain that progress. Among the encouraging developments in recent months was the approval of a loan to the Elk River Cooperative in Minnesota to facilitate the construction of an atomic-energy generating plant. Here we have demonstrated the pioneering of REA co-ops and in the months and years ahead this new plant is expected to contribute not only to the area it serves but also to the badly needed experience and know-how of this new source of power.

We have also approved the budget estimate of $49,500,000 in regular loan funds for the telephone loan program plus contingency funds of $50,500,000 for a total loan authority of $100,000,000 if needed. Again, we are pleased with the progress that is being made and want to assure sufficient loan authority so that no deserving application will be denied or delayed.

The repayment experience in both loan programs has been so outstanding as to warrant the full confidence of the Congress in them. I strongly urge the approval of our recommendations on these items.

FARMERS' HOME ADMINISTRATION

We have approved the entire budget estimates for loan authorizations of the Farmers' Home Administration. These include $19 million for farm ownership loans; $140 million for production and subsistence loans; and $5,500,000 for soil and water conservation loans—a total loan authority of $164,500,000.

Both farm mortgage and short-term debt have been rising sharply in recent years. Accompanied by continuing declines in farm commodity prices and farm income, credit has gradually tightened in farming areas. As a result, it may well be that many farmers who previously had little or no difficulty in obtaining necessary credit from commercial sources will find it necessary to turn to the Farmers' Home Administration for credit.

This credit problem is being met in two ways. First, I have introduced bills to materially liberalize the credit operations of the Farmers' Home Administration. If enacted, these bills will permit the consolidation of existing indebtedness and also the refinancing of both unsecured and mortgage obligations. A number of other bills have been introduced along the same general lines, hearings have been held by the House Committee on Agriculture, and I hope that such legislation will be enacted at this session.

The other step we are taking is the provision in the bill before us of a contingency fund of $50 million to meet these anticipated needs as they arise. This additional credit may mean the difference between survival and failure for many good farmers throughout the Nation.

COMMODITY CREDIT CORPORATION

The committee will note that on page 19 of the report we have made available for restoration of the capital fund of the Commodity Credit Corporation the total sum of $929,287,178. That constitutes about one-half of the money in this bill.

The point I should like to call to the attention of the committee at this time is that basic commodities, concerning which we have had all the fuss and furor in the Congress recently, have consumed only $194 million of this $929 million. In other words, the only loss chargeable to the five basics which could possibly be shown on the books of the Commodity Credit Corporation amounts to approximately one-fifth of the total figure.

If you will refer to the bottom of page 18, you will see that we have expended $441 million that could be construed as a loss on dairy products, a mandatory nonbasic commodity, and on other nonbasic commodities we have entailed a loss of $162 million. This, with about $135 million in administrative expenses makes up the total of $929 million restored to the Commodity Credit Corporation in this bill.

I would think the fact that we have found it necessary to restore only $194 million properly attributable to basics, in itself would be clear proof that the 90 percent of parity price-support program on the basic commodities has not been prohibitive as far as the taxpayers of the United States are concerned. Advocates of flexible price supports would do well to consider that it was necessary to practically give away $441 million worth of dairy products in this past fiscal year, largely because the Secretary reduced price supports on dairy products from 90 percent to 75 percent. Why, Mr. Chairman, dairy products represent more of a loss to the taxpayers of the Nation than the so-called potato fiasco. But, the point I am emphasizing here now is that in the face of these facts and figures certainly no one can make out a good case for flexible price supports.

Will the Farmers Beat Eisenhower?

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kittson County Enterprise which the editor of that paper thinks

is a good approach to the coming election. These facts are substantiated by mail which is being received in the congressional offices of Members from the farm-belt States.

WILL THE FARMERS BEAT EISENHOWER?

From the shaky end of a limb, some political statisticians began forecasting last December that a revolt among farm votes could produce a long-shot Democratic victory next November, even over President Eisenhower.

They based their projection on the size of the farm swing vote in Harry Truman's upset victory in 1948, and they offered three premises for a repeat performance in 1956. First, the farmer is mad. Second, the farmer blames his troubles on Ike. Third, farm prices will skid still lower during record fall marketings of catttle and hogs next September, within 60 days of the election.

When such forecasts first appeared 4 months ago, they had been wishful thinking. Today, judging by Midwest opinion polls, primary election voting, and a sampling of congressional mail, a major switch of Republican votes to the Democrats in the farm belt is no longer questioned. Some careful vote analysts, after receiving the April farm forecasts which indicate beef will slump next October to its lowest price in 10 years, are quietly predicting a switch of half the farm belt States to the Democrats.

The argument of the analysts runs like this. In 1952 President Eisenhower carried all of the 12 Midwest States—North and South Dakota, Nebraska, Kansas, Minnesota, Iowa, Missouri, Wisconsin, Illinois, Michigan, Indiana, Ohio—and the 3 adjoining States—Colorado, Idaho, and Oklahoma. These 15 States represent 155 electoral votes. Four years earlier Harry Truman won 120 of these electoral votes. These are the swing States that elect or defeat candidates.

Assume, the analysts suggest, that the Democrats hold the 89 electoral votes captured by Adlai Stevenson in 1952. Add to this the 120 farm State votes which Truman carried in 1948, and also the 4 Southern States which went to Eisenhower in 1952—Florida, Tennessee, Texas, and Virginia. This adds up 89, plus 120, plus 57, for a total of 266. That is the exact number required to elect a President.

Under these assumption the Republicans could take New York, Pennsylvania, California, and Michigan, and still lose the election. Or conversely, if Democrats carry anyone of the big industrial States they could lose several States to the Dixiecrats, and still recover the White House.

Evidence to prove that events in 1956 are moving toward this political outcome is admittedly fragmentary, but the evidence is growing and is impressive when set against the pattern of 1948.

In 1948 farm prices began to drop in January, and the decline continued for 2 years, until reversed by the Korean war boom. Farm income dropped 10 percent in the election year of 1948. Several developments caused the farmer to blame his troubles on the Republicans. For example, in the spring of 1948 the Republican-controlled 80th Congress passed a law forbidding the Commodity Credit Corporation from building any more Government storage bins for grain. When the bumper crops of 1948 were harvested—more than a billion bushels of wheat in the spring, more than 3 billion bushels of corn in the fall—there was not enough storage space, and since a farmer can get a price-support loan on his grain only if it is properly stored, most farmers could not qualify. Their crops were sold for cash, causing the price of corn to skid from $1.78 a bushel in September 1948 to $1.38 in October, to $1.21 in November. That was election month.

In the midst of this disastrous grain market slide, Harry Truman traveled tirelessly around the Midwest, denouncing the 80th Congress. One of his noted speeches of the campaign was delivered at the national plowing contest in Dexter, Iowa, on September 18. He told an audience of 90,000, gathered in a cornfield:

"These Republican gluttons of privileges are cold men. They have already done their best to keep price supports from working. Many growers have sold wheat this summer at less than support prices, because they could not find proper storage. How many times do you have to be hit on the head before you find out what's hitting you? This Republican Congress has already stuck a pitchfork in the farmer's back."

When the voting was over, Harry Truman owed his reelection to the windfall of farm votes in the six Corn Belt States of Ohio, Illinois, Wisconsin, Minnesota, Iowa, and Missouri.

Compare this pattern, then, with 1956. Farm prices have been declining for 4 years—that is, since the last year of the Democratic administration, but at an accelerating pace during the Eisenhower years. In 1955 farm prices dropped more than in any other year of this century. Hogs dropped within 2 Eisenhower years from a high of 25 cents a pound liveweight to less than 10 cents at the close of 1955, which is actually below the break-even point. Since then hog prices have recovered moderately this spring, because of scarcity, but another big run of hogs to market, normally accompanied by a price slump, will begin in September.

Fat beef cattle are another principal form in which Midwest farmers send their corn crop to market. Cattle dropped during the Eisenhower years from a high of about 38 cents a pound liveweight to a present top of about 22 cents. This year farmers have put a record number of cattle into the feed lot, partly as an escape from the disastrous hog market. Those cattle will begin to flood the market in September. By election day the top price of fat cattle will sink, according to present forecasts, to the lowest top price since V–J Day, probably 18 or 19 cents a pound. That is below the break-even point for the farmers who do the feeding.

Thus the election campaign of 1956 will be fought against a background of acute farm distress in the Corn Belt, just as it was in 1948.

The farmer who feeds his corn neither to cattle nor hogs can get a price support loan from the Government. There will be no acute shortage of storage space as in 1948. But the politics of the Government farm program will take another form. Since the President vetoed the 1956 farm bill, Democratic candidates will blame the President for the existing low level of crop loans. It was President Eisenhower who denounced the bill. It was Vice President Nixon who cast the deciding Senate vote against 90 percent supports.

The politics of farm prices has begun to change the farmer's vote, 7 months before the general election. This was brought into the open in the Minnesota primary of March 20. Total Democratic votes in the primary exceeded Republican votes on a ratio better than 2 to 1, whereas President Eisenhower had carried the State in the 1952 election by a margin of 5 to 4. To some extent the percentages are affected by the fact that President Eisenhower did no campaigning in Minnesota, whereas both Stevenson and Kefauver traveled extensively in the State.

Nevertheless, the genuineness of the shift away from the Republicans was borne out by a Minneapolis Tribune poll taken in mid-March but published after the election. In a "trial heat" Minnesota farmers favored Kefauver over President Eisenhower 52 to 45 percent, while in the cities Ike led 56 to 40 percent.

The Wall Street Journal, after interviewing Minnesota farmers for a week following the election, concluded that 3 out of every 5 who voted for Eisenhower in 1952 would vote Democratic this November.

Farmers gave various explanations for their political shift. A Blue Earth, Minn., corn-hog farmer, Richard Quaday, told one of the Journal reporters: "This is a real farmers' rebellion against Ike, his hired man Benson, and their farm program. You bet I'm voting Democratic this fall. I never knew I would hurt myself so much when I voted Republican in 1952."

Another Blue Earth farmer, Francis O'Neil, commented at his 240-acre farm: "I switched over from Ike to the Democrats last October when I got as low as $9.25 a hundred for 250 hogs I marketed."

A farmer from Ortonville, unloading hogs at the South St. Paul yards, told the reporter: "I don't know what some folks got against Mr. Benson. I wish I had a hired man that good. He does everything the boss tells him to do." This farmer said he voted for Ike in 1952, for KEFAUVER in the 1956 primary, and will support any Democratic candidate in November.

In the Wisconsin primary of April 3 farm opposition again hurt President Eisenhower and helped Senator KEFAUVER. KEFAUVER made his largest gains among the corn-hog farmers along the Iowa and Illinois borders, and among the smaller dairy farmers in the northern part of the State. The fact that cyclones struck the State on election day held down the rural vote considerably.

A clearer indication of how Wisconsin farmers feel about the administration farm program was presented in a State-wide poll of the Wisconsin Agriculturalist on March 1, a month before the primary. Directed only to farmers, the poll obtained the following opinion on how Secretary Benson is doing:

	July 1953	September 1954	September 1955	January 1956
	Percent	*Percent*	*Percent*	*Percent*
Doing good job	30	14	12	4
Doing fair job	42	38	34	20
Doing poor job	13	37	45	56
No answer	15	11	9	15

The poll indicates a rapid increase in hostility during the closing months of 1955 when hog prices dropped to the lowest level since World War II.

In North Dakota the decision of the Nonpartisan League to break away from the Republican Party after a four-decade affiliation and file this year with the Democrats, an action announced March 29, was prompted in part by the bitterness of farmers within the league.

In the same State a poll of Stutsman County taken by the Jamestown (N. Dak.) Sun, in connection with the regular township elections on March 20, asked this question: "If the following men were the Republican and Democratic nominees for President, which one in the group would you vote for?" The results:

(A) Eisenhower, 225; Stevenson, 293.

(B) Eisenhower, 145; Kefauver, 446.

In 1952 this same county favored Eisenhower over Stevenson by more than 2 to 1, and even in 1948 it supported Dewey rather than Truman by a closer margin.

C. J. Barry, administrative assistant to Representative USHER L. BURDICK, Republican, of North Dakota, offered this comment on the Stutsman County poll:

We know there are plenty of Republicans planning to vote Democratic. In 6 years of reading a Congressman's mail, I have never seen people so mad. I can recognize a phony protest when I see one, but these people are heated up. We can only hope that the voters

will not take out their anger on Republicans like Mr. BURDICK who have fought for higher supports and against the administration program.

In Iowa a February poll by the Des Moines Sunday Register reported nearly two-thirds of the Iowans on farms and in small towns, and just over half of those in cities, feel the Democratic Party best serves the interests of farmers. A poll of Wallace's Farmer published February 18 showed only 15 percent of Iowa farmer operators think the Eisenhower farm program will bring any improvement in conditions in 1956.

On a national scale a Gallop poll of January 18, 1956, asked farmers only: "Are you satisfied or dissatisfied with the way the Republican administration is handling the problem of farm prices and supports?" The replies:

	January 1956 percent	October 1955 percent
Satisfied	24	30
Dissatisfied	62	43
No opinion	14	27

The notable hardening of farm opinion against the administration in the last 3 months of 1955 is consistent with the results of most Farm Belt polls, and coincided with the hog market slump.

The farmers' opposition to Eisenhower farm policies is likely to have more effect of the presidential race than upon congressional elections, since the majority of Sentors and Representatives from farm States have opposed the administration farm program and championed higher supports. The same was not true in 1948, when Democrats captured 35 House seats from Republicans in the Midwest farm States, including 6 in Illinois, 5 in Indiana, two in Michigan, 3 in Minnesota, 8 in Missouri, 1 in Nebraska, 8 in Ohio, 2 in Wisconsin.

The Wall Street Journal interviewers in Minnesota reported that farmers who plan to switch their Presidential votes to the Democrats show little inclination to vote against rural Republican Representatives, all of whom opposed the administration farm policy.

The New Republic recently asked the principal farm editor in each of 12 Midwest States to express his personal opinion on how many Congressmen would be defeated next fall because of farmer opposition. Their replies indicated the possibility of 2 or 3 Republican losses in Illinois, 3 in Indiana, 1 in North Dakota, 1 in Kansas, and 2 in Iowa.

All this evidence on the farm revolt should suggest an answer to the question: Will 1956 prove a sequel to 1948? The best answer at this time is:

In 1948 Harry Truman could not have won without the swing votes of the farmers, which gave him six swing States in the Corn Belt. Even there he could not have won, despite his furious campaigning, without the disastrous slump in corn prices during the 60 days before election. Farmers were hurting worst at the time they entered the voting booth.

What of today? In April 1956 the evidence that farmers are revolting against the Eisenhower administration is not sufficiently strong to suggest a National Democratic victory if the election were held today. That was the conclusion of all the farm editors polled by this magazine. It is undoubtedly correct.

But falling of the second shoe immediately before election—that is, the predicted drop of cattle prices below the break-even level, and the seasonal decline of hogs to a point approaching last winter's disaster—would recreate the hot anger of 1948. And if farm forecasters are right in their count of cattle now fattening and sows now farrowing for the fall market, a political time fuse is already burning.

—New Republic.

Reclamation

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, as president of the National Rivers and Harbors Congress, it gives me much pleasure to present a very able address delivered at the 43d annual convention of the National Rivers and Harbors Congress in Washington, D. C., on May 11, 1956, by Hon. WAYNE N. ASPINALL, Representative from Colorado. The address is as follows:

RECLAMATION

It is a happy and pleasing experience for me to be here at this time to meet with this congress dedicated to programs for flood control, river and harbor development, and navigation. I know that much of the success of the programs in these areas is due to the diligent effort of this rivers and harbors congress, and I wish to compliment not only the officers of this group but all of those on the working front.

I cannot in the few minutes of your time which I propose to take do justice to the subject of reclamation. I cannot in this time cite to you all its virtues, nor even trace its history. Federal assistance in the "reclaiming of land" in the West is nothing more or less than a continuation of the historic land policies of this Nation. It has been of great and demonstrable value to the whole Nation, and its value is becoming more evident every year, even though opposition to this wise development program has, if anything, increased of late years. It has never been my policy to lambaste the opposition in any field. There are many comments I could make about various narrow and sectional types of opposition that reclamation has faced in the past, faces today, and undoubtedly will face in the tomorrows, but I much prefer to make my case on the merits. I am convinced that merit is on the side of reclamation.

Reflect with me for a moment. This Nation was founded in no small part by those who wished to acquire their own land—a hope denied to them in their homeland by laws of primogeniture and entail and by the great estates of the nobility. Early attempts at communal agriculture here in this New World established the real worth of the individual unit of the family farm. The land policy in this Nation, over the years, represented a struggle between the speculator and land monopolist on the one side, and the individual enterpriser on the other. Hardy pioneers forced the Nation to accept the principle that he who first reclaimed the land from the forest or grass and, unfortunately, the native Indian, had first right to continued possession. Unfortunately, the issue has never been clearly resolved—nor will it ever be. In our own time, we are seeing an inexorable reversal of our pattern of land ownership. There is a steady decrease in the number of family-unit farms; a steady increase in the average size of farms, and, right, now, a most serious decline in family-farm income. It is my conviction, both from experience and from study, that this Nation owes much to the determined men who carved farms out of the wilderness and who then insisted upon their possession. You may take it as histrionics if you like, but I am convinced that the hardy enterpriser who fought for land and who carried the tide of settlement westward to the Pacific, has done more to advance the continuing democracy in this land than any other single force. This great force is recounted in many places, but none greater nor better known than Frederick Jackson Turner, the great historian, who traced the value of the frontier to this Nation. We should never forget, in an age when the pursuit of the Jones family or the romance of certain Hollywood stars seems to constitute the major interest of the Nation, that the individual who has a life interest in the soil will contribute far more to a good society than a host of modern-day serfs or factory farms.

By the turn of the century hardy pioneers had settled and developed the favorable lands of the West—the private development had reached its limits. Accordingly, President Theodore Roosevelt proposed to the Congress that the Federal Government should enter the field for, as he said, "The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and the Mississippi Valleys brought prosperity to the Atlantic States." The Reclamation Act of 1902 still stands, with some modifications, as a process by which construction costs advanced by the Government are to be repaid by water users, with public lands made available to family unit farms under homestead laws. True, the initial thought that interest-free money for 10 years would do the job has proved to be too optimistic, but the amendments to the act providing for a longer repayment period and incorporating the multiple-purpose concept of water development, have served to maximize the development of the West to the gain of the Nation.

Nothing less than a major program would have been adequate. Policies which had been adequate for land settlement in humid areas, that is, the 160-acre homestead under the act of 1862, proved to be of little value in the more arid West. Other programs were tried and had value, but they tended to be at variance with established land settlement policy. I am proud that this Nation, in 1902, saw fit to continue the policy of providing an area of operation for the family unit farm for enterprising individuals. I am happy presently to support programs which still aim to reward individual initiative by aiding in the establishment of family unit farms under reclamation—farms not to exceed 160 acres in size for each individual or 320 acres for a man and wife. Indeed, in many reclamation projects the average landholding is much less than this where the nature of the crop permits a family operation on smaller units. We should here, I think, examine some of the special problems faced in the West and the "why" of reclamation development.

First, although it is vastly different than your usual problem of too much water, especially at certain times, the major problem of the West is a persistent shortage of water. West of the 100th meridian, it is almost impossible to grow crops without irrigation, except for wheat on a rotating basis. The average moisture available, the great bulk of which comes in the winter, is just not adequate for row crops. In my home area where we raise some of the world's finest peaches, the average rainfall is on the order of 10 inches annually. All through the summer, the ground loses more moisture than comes from the heavens. Irrigation is essential to make the desert bloom. Without a sure supply of water, we have little but a dry and seared desert, hardly capable of supporting animal life, let alone great cities like Denver, Boise, Spokane, Phoenix and others. Without irrigation, the population of the West would be negligible indeed and it would not constitute its present great market for the goods of Detroit, Pittsburgh, and other great manufacturing centers.

This is not to indicate that it took the helping hand of the Government to provide all of the irrigation development. Something on the order of three-fourths of all irrigated land in the West was developed under private plans and programs, including

some 10 million acres under the Desert Land Act of 1877. An additional 1 million acres were developed under State programs and the Carey Act of 1894. Reclamation projects now bring water to something over 7 million acres scattered in some 69 projects over the 17 Western States. This land is divided into about 125,000 family unit size farms. An additional 125,000 suburban units receive water from these projects and there are over 400 towns with a total population in excess of 1,600,000 within these projects. Taking it all together, that is, irrigation, power, municipal and industrial water, more than 5 million people in the service areas of reclamation projects obtain their living directly or indirectly by reason of the Federal project development program.

Many figures exist to show the buying power of these people—the market they form, the taxes they pay—and any, or each, of these are but additional testimony to the national value of reclamation projects. Taking tax returns alone, it is carefully estimated that the cumulative returns to the United States Treasury from net new income created by these projects totals over $3 billion, an amount comfortably in excess of total expenditures to date for reclamation. I might also remind you, although I do not wish to labor the point, that these tax returns and market potentials are cited for demonstration only, as, under reclamation law, all reclamation projects are required to repay the great bulk of their costs to the Federal Treasury. When these loans, and the fact is that the Federal contribution should be considered a loan, are repaid, many revenues, especially power revenues, will continue to come back to the Treasury. These returns, of course, include all interest on moneys advanced for power and municipal water features.

I wish it were possible to report that each and every project was either on time or ahead of schedule in repayment, but the situation is not that rosy. Many of the early projects have not worked out as effectively and successfully as originally expected and hoped for. Most of these difficulties were due to the newness of the program and the lack of information that can come only with experience. However, the record has, over the years, improved and we are looking forward to an increasingly sound investment-return program. May I also make passing comment that we have what is known as the reclamation fund—the reclamation area's own "operation bootstrap." It is not too well recognized that a substantial proportion of the land in the States in the West is held as public domain by the Federal Government—in some Western States over half of all land. We collect no taxes as such from that land. Still, it is not without virtue, for much of this land is valuable for oil and gas and other minerals and metals. A portion of the royalties and fees obtained by the Government from these leases goes into the Federal reclamation fund, and each year, we are able to supply an increasing percentage of all reclamation expenditures from this western generated fund and a decreasing percentage from the general treasury. This is a revolving fund and repayments now being made from big projects like the Central Valley in California and the Coulee project in Washington, will be most helpful.

It took the mighty Hoover Dam to break the back of the wild and dangerous lower Colorado River, making it a servant and not a menace to man. The vast storage provided sure supplies of water for irrigation and municipal use and also flood control for a river that had run rampant many times with great damage to cities and rich agricultural areas. The falling water activated turbines to provide power, vital power, for the development of the whole metropolitan area of southern California—one of the most important industrial complexes we have in this Nation.

Likewise, other great projects are as useful—the Central Valley in California, the Grand Coulee in Washington, and many more. In my own State—Colorado—projects range from small single-purpose projects to substantial transmountain diversion projects, and each is of great value to its own area and to the Nation. I have a little clipping, hardly deserving of the dramatic story it tells, stating that the Colorado-Big Thompson project contributed an estimated $126 million in direct and indirect benefits to its users—or to say, this represents $126 million of income and spending power obtained by water users of this project which otherwise would not have existed. This might be compared to another story from Colorado where, on lands not under irrigation, farmers suffered a loss of $290 million from drought, high winds, and other causes from 1952 to 1955. The benefits of reclamation are tangible, measurable, real. That $126 million of income cited above, like all income, was spent for many goods—tractors, cotton shirts, fertilizers, irons, furniture—goods produced all over this broad land.

There is much more that I could say, but it could not tell the story any better. Reclamation makes the desert bloom and become productive. The net new income which it generates contributes to the well-being of the whole Nation, as well as to its own area.

We who have lived on the edge of disaster, have a great sympathy and understanding for other water problems, including that of too much even though with us it is most often too little water. We of the West have an understanding of the benefit of low-cost transportation for we have long been a high rate area for transportation. Water is our life and we understand its importance in all its uses as well as its destructive force when not properly harnessed and controlled. We are great believers in multiple-purpose development—in controlling a whole river or river basin so that the water can be put to the use of man—so that it may become man's servant and not his everlurking enemy. We have accordingly been pleased over the years to lend our support to projects and programs distant to our area and different than our own needs—great flood-control projects, including dams and new channels and floodways. We have seen the benefit of water transportation and harbor improvement. We are conservationists by conviction. We are dedicated to the wise use of our resources, especially water, for we have seen productive land lay idle and bake in the sun, and sudden torrents of wild water that cut and scar the land, washing away its productivity.

Our interest in water extends from the raindrop or snowflake to the ever-increasing flow of water right down to the sea. Our interest is that water should not be wasted nor waste the land. Water, controlled and regulated, is the servant of man providing irrigation and food, municipal and industrial water for our great productive machine, recreation for a busy people, transportation for our goods, and power for the wheels of progress. Uncontrolled and unregulated, it becomes a vicious enemy, eating away the soil, despoiling the city and factory, and carrying our vital topsoil to the sea.

Curbing the Supreme Court

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of Thursday, May 17, 1956:

REVIEW AND OUTLOOK—CURBING THE SUPREME COURT

Some 70 bills which would in some way or other affect the United States Supreme Court have been introduced by Congressmen disturbed by recent rulings of the Court. A great many of these Senators and Representatives discern a pattern in decisions which takes power from the States and thus makes more powerful the central Government. Others see in the rulings a tendency to say what the law should be rather than what the law is.

In the school segregation cases, the Supreme Court knocked down the separate but equal formula for race separation which had been the land's law for 75 years—and that decision was based as much on a psychological interpretation of the Constitution as on a legal interpretation. The ruling nullified laws of 17 States.

In the 1954 National Gas Act decision, the Supreme Court closed its eyes to a specific exemption for natural gas producers from controls Congress had written to cover pipelines. The Supreme Court decided Congress was wrong to exempt producers. The decision affected a great industry. Thirty States produce natural gas.

In the sedition case, *Pennsylvania* v. *Steve Nelson*, the Supreme Court outlawed all State laws prohibiting knowing advocacy of overthrow of the Government by force. The Court said that since Congress had passed a similar law Congress had "preempted" that field of legislation and the States had no right to legislate on such matters. This rule invalidated the sedition laws of 42 States, Alaska and Hawaii.

In the Slochower case, the Court held unconstitutional a New York City charter provision requiring dismissal of employees who refuse to answer questions asked by legally constituted bodies. The automatic dismissal of Professor Slochower, the majority said, violated due process. The decision threw a cloud over similar laws elsewhere, as well as a protective cloak over teachers who choose to be less than honest and forthright.

It is no wonder, then, that Congress is disturbed or irritated or just plain bewildered. And the views of Congress are reflected in dissents of members of the very Court that decided some of these cases.

Of the Slochower decision, Justice Harlan wrote that "a State may justifiably consider that teachers who refuse to answer questions concerning their official conduct are no longer qualified for public-school teaching, on the ground that their refusal to answer jeopardizes the confidence that the public should have in its school system."

The majority opinion in the Nelson sedition case moved Justice Reed to observe "This Court should not void State legislation without a clear mandate from Congress."

Of the Natural Gas Act ruling, the minority wrote that the majority had transgressed the exemption granted producers and that good faith required the Court to interpret the act as "its terms read, and as we have, until today, declared it." Other minority opinions can be found that are equally forceful and equally critical.

It is just this situation which has led the authors of the 70 bills to seek a way to do something about the Supreme Court. Exactly what to do about it is another thing entirely.

Former Supreme Court Justice Byrnes points out that the Congress has the constitutional power to limit the jurisdiction of the Supreme Court in a great many matters. To do that, though, would raise more problems than it would settle.

One problem raised immediately would be the effect of a curb on the Court on our concept of a government of balanced powers. A curb on either the judicial or the legisla-

tive or the executive would necessarily throw the power out of balance. There will be men in Congress today who will remember—or should remember—that Congress itself once stood as the champion of a Supreme Court a Chief Executive sought to "reform" by packing it with men he thought more loyal to him than to the Constitution's words. It is not too much to say that the present Court suffers still from that proposal; it suffers because politics since has played as much a part in choosing members as has any other factor.

The cure for this, though, is not in attempts to make over or reform or curb the powers of the Supreme Court. To do that could lead to destruction of an institution when the gentlemen in Congress are angry not about the insitution but only about its occupants. No responsible Congressman would wish to destroy the office of President because the Nation happened to choose an unwise or irresponsible one for a time.

There is a cure, though, for what presently bothers so many people in and out of Congress. And it is a cure which does not endanger the Court or our Government of separate but equal powers.

The Congress can, as Senator BYRD has proposed, tell the Supreme Court to stop reading into Federal law destruction of State laws unless Congress spells that out. The Congress also can pass laws to remedy rulings when it believes the Court has wandered from the judicial field into the legislative.

Above all Congress can demand the highest qualifications in experience and learning in the law of the men a President nominates for the Supreme Court or other Federal courts. The Congress can do this through action of the Senate.

There is no need to curb the Supreme Court's powers. There is only a need to curb the use of the Court as a reward for political service or a sine-cure for political friends.

The truth of the matter is that every Justice sitting on the Supreme Court is there by vote and choice of the United States Senate.

Armed Forces Day Speech by Rear Adm. John E. Clark, United States Navy, Delivered at the Armed Forces Day Program, Altoona, Pa.

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. VAN ZANDT. Mr. Speaker, one of the finest Armed Forces Day speeches that I have ever heard was delivered May 19, 1956, in my hometown of Altoona, Pa., by Rear Adm. John E. Clark, United States Navy, Director of Guided Missiles, Department of the Navy.

The speech follows:

PRESENTATION GIVEN BY REAR ADM. J. E. CLARK TO ARMED FORCES DAY GATHERING IN ALTOONA, PA.

Mr. Chairman, your honor Acting Mayor Adams, reverend clergy, honored guests, ladies and gentlemen, it is a genuine pleasure to be here with you on this Armed Forces Day and a privilege to have this opportunity to talk to you about your Army, Navy, and Air Force. To tell you in a very compressed way something of where we are and where we hope we are going. And at the same time to try to answer for you some of the questions current and classic that keep appearing in the daily press and which are confusing even to those who deal with them intimately day in and day out.

Armed Forces Day, it seems to me, should be three things. First, an objective manifestation of unification about which I will have more to say later. Second, the day on which the Armed Forces make their annual status and progress report to the Nation. This we do by means of the press, by holding open house at military installations, and by means of personal appearances such as mine before you here. We are grateful for the confidence that is constantly displayed in us and we owe you such a report. And further than this, we find at every turn that it is the sincere desire of the public to help us and cooperate with us wherever they can and without such a report your help and cooperation cannot be intelligently directed and applied. Finally, Armed Forces Day should be a day of high resolve and renewed dedication to the battle for freedom and liberty, for sadly enough it is a never-ending struggle. Jefferson said, "The price of freedom is eternal vigilance," and believe me the battle is grimmer and of more terrifying proportions today than ever before because of the lightning-like suddenness with which disaster can strike. Never before has America and the free world faced a threat so serious nor so vast, for international communism is nothing more nor less than a bid for total, complete world power and the imposition of a way of life that reduces freemen to the status of chattel. And we must guard constantly against falling for Russian gestures of apparent friendship—for proposals that every sane man's whole being yearns to accept—none of them are sincere—the recent statement that Russia intends to cut her armed forces by 1,200,000 men is just another Trojan horse. And the struggle will never be over so long as man inhabits the earth; communism is simply the threat of the moment; if it isn't communism, it will be something else just as vicious—it always is.

Where do we stand today in readiness. The gigantic strides in technological progress since World War II are truly staggering and a prodigious effort is called for to keep abreast of this progress. In a little over 10 short years, we have stepped up the yield of aircraft bombs from a thousand pounds of TNT to well over a thousand million pounds of TNT. We have discovered the means of employing nuclear power for propulsion as exemplified by the submarine *Nautilus*. Guided missiles for use by surface forces and by Air Forces both for attack and for defense are in the hands of the forces in the field and on ships at sea. Electronic marvels that detect, classify and track surface and air objects are in daily use and have become commonplace. And the pace of progress is so rapid and constantly accelerating that almost before we can complete a new weapons system it is on the brink of obsolescence. In fact since this weeks's issue of Time magazine, I'm not not so sure this speech which I wrote last weekend isn't obsolete. And we dare not relax the pace for in the face of the world situation we must at any minute be ready with weapons that are as advanced as the state of technology at that minute can provide us with. Right here I wish to pay tribute to the scientists and engineers who work for us and with us. There are hundreds who devote full time to the matter of studying our research and development programs, to assure that there is no duplication of effort and what is more important that no bets are missed. There are hundreds of others who devote many hours of their own time to us in an advisory capacity—university presidents, leaders in industrial research organizations and many others of the scientific fraternity.

We have developed in the free world the capability for retaliation as the best deterrent to a full-scale Soviet attack. We also have developed a flexibility of military power so that its use may be selective and adapted to circumstances, both military and diplomatic.

Our 1956 defense program is designed to meet the military needs of today—superior retaliatory potential, flexibility, and defensive capability. It represents the continuation of a reorientation of our Armed Forces to meet current needs that has been in progress since cessation of hostilities in Korea.

The program makes provision for steadily increasing efficiency in step with scientific advances. It is designed to assure a stability that will not veer, like a weather vane, with every wind of propaganda by unfriendly nations.

Our 1957 defense program places renewed emphasis on the purchase and development of missiles. The proposed budget for the coming fiscal year provides $2 billion expenditures for missiles Of this amount, $1¾ billion would be for procurement and production, and the rest for research and development.

Our airpower plays a primary role in both defense and retaliation. The budget estimates an expenditure of nearly $7 billion for procurement of aircraft, chiefly by the Air Force and Navy. This will mean continued acceleration in the production of the Air Force's B–52 long-range bombers, the F–101 and F–104 supersonic interceptors and substantial procurement of the Navy's new supersonic F8U fighter.

The Air Force, during the coming fiscal year, will complete its planned buildup to 137 wings, with personnel planned at 936,000 by mid-1957. The buildup of the strategic air command forces is scheduled to be completed by June 30 of this year. The medium bomb wings are already fully equipped with jet-powered B–47's. All Air Force combat wings except those using B–36's will be jet equipped by June 1957. The Air Force also will increase the number of airborne early warning squadrons for the continental defense system.

The Army is adding to our deterrent power by development and expansion of its atomic capabilities. It is streamlined and pointed toward an active duty strength of slightly over 1 million. It has Corporal guided missile battalions, Honest John missile batteries and 280 mm. gun battalions, all with atomic capabilities.

Under its expenditure allocation of $8½ billion and its prescribed force level, the Army at the end of 1957 will be organized into 19 divisions, 10 regiments and 140 antiaircraft battalions. There will also be an increase in units armed with new weapons.

One infantry division will be converted to airborne, raising the number of such divisions to three. The new airborne division will be devoted to experimental work in organization, tactics, and weapons.

During the past few years the Army has been testing various organizational and tactical concepts to determine how it should fight an atomic battle. The third infantry division and the first armored division were reorganized in accordance with atomic fighting concepts and recently tested. Study of the effectiveness of these changes will affect the future organization of Army units.

Doubtless a significant part of our deterrent force is the presence of American soldiers in many foreign countries. Although they make up an important segment of NATO forces their real deterrent power lies in the fact that they are constant reminders to would-be aggressors of our unshakeable resolve to defend free peoples everywhere.

The Marine Corps fills a vital need of a predominantly maritime nation. Since the time of the American Revolution, the United States has appreciated the principle that a naval commander, in order to operate effectively at sea, must have the means to project his power ashore in any locality the control of which is essential to the accomplishment of his mission. The more than 300 landings made by marines during the last 180 years have been in response to this principle.

All Fleet Marine Force units are constantly engaged in a program of vigorous air-ground training. When possible this training is conducted in conjunction with fleet exercises. During the past year marines have taken part in combined NATO exercises in the Mediterranean and European areas. In the Pacific, the Navy and Marine Corps conduct a coordinated amphibious training program.

Present plans indicate that the marines will make future landings from fast-moving, dispersed ship formations in assault helicopters, under a protective shield of closely coordinated fire support delivered by planes, guns, and missiles. This will be followed by the early seizure of beaches from the rear to facilitate the rapid buildup of logistic support ashore. A new doctrine for the conduct of the amphibious assault, reflecting major alterations in organization, tactics, weapons, and equipment has been placed in the hands of forces in training and is now included in the instructions at all Marine Corps schools.

For some 170 years our welfare, our freedom, and our security have depended, in great measure, on the seas that surround us and on our ability to use those seas in peace and in war. In this—the air-missile-nuclear age—our welfare, our freedom, and our security is threatened by forces that would control the world if they could have their way. But so long as we can exercise control over the seas that protect us, so long as we can control the sea approaches to our allies and our forces overseas, we can deny the enemy his objectives.

The traditional role of the Navy has been to keep our sealanes open—those between our country and the countries of our allies. This means control of the seas, the air above, and the depths beneath.

Since 70 percent of the earth's surface is water, this in itself is a gigantic task.

Since the days of the Phoenicians, the dominant nations of the world have been seafaring nations. They have exploited the sea to build up trade and develop their industry.

It may be difficult for you here in Altoona to realize that North America is in fact an island surrounded by the Atlantic, Pacific, and Arctic Oceans, and the Gulf of Mexico.

We are not self-sufficient, but must rely on imports, in whole or in part, for over 60 basic materials vitally necessary to pursue a major conflict, and thereby escape annihilation in event of a surprise attack.

Do you realize that annually we import by ship: Petroleum, 520 million tons, 40 percent of our needs; Iron ore, 143 million tons, 20 percent; bauxite and aluminum ore, 7 million tons, 90 percent.

Some of our other imports include manganese, tungsten, uranium, asbestos, chromite, cobalt, lead, nickel, industrial diamonds, cork, copper, quinine.

During World War II the Allies lost 24 million tons of shipping in 5 years—this equals 1 ship per day of the war. Furthermore, our Government is fully committed in writing to defend nearly 700 million people and 21 million square miles of land in 39 nations on 6 continents and across 3 oceans.

There are only 164 million of us, yet the United States is the military guardian of 29 percent of the land area of the world. In addition to this we have mutual security and mutual defense assistance agreements with 25 other nations. These do not bind us to go to war, but they do imply a strong obligation.

The United States has therefore, in effect, undertaken to defend a total of 64 nations, 28 million square miles with 1½ billion people, or a total of 54 percent of the world's population.

How is the Navy prepared to play its role in carrying out this committee? By convincing any potential enemy that if he strikes first, he cannot prevent an overwhelming and possibly fatal counteroffensive. By being prepared to put the man with the bayonet on the other fellow's beach. For this mission we have tough, thoroughly trained, combat-ready, amphibious marines qualified with the latest weapons and prepared to utilize helicopters to establish beachheads deep in enemy territory. By maintaining fast carrier task forces in a high state of readiness—able to launch high performance aircraft in the area where they can be most effective.

As far as we know, submarines are likely to be not only an enemy's greatest naval threat but his greatest total threat. Today we believe that one potential enemy has about 400 submarines. This is more than 7 times as many as Germany had at the beginning of World War II. What can we do about this?

We would endeavor to restrict submarines from leaving their home bases by destroying these bases, as well as the shipyards where they are being built; we would mine their habors and channels leading to the open seas and would place our own killer submarines across their exits.

We would form hunter-killer groups to isolate and destroy enemy submarines on the high seas, using the latest weapons science has developed, including nuclear antisubmarine weapons.

To do these things our Navy must be strong. To do this our Navy must be ready. To do this our Navy must maintain deployed elements in many parts of the world. This, with the trust and understanding of the American people and with the support of their Representatives in Congress, I sincerely assure you the Navy is doing and will continue to do to the very limit of its available strength.

This we do in peace. Should war come, obviously the Navy must expand. That expansion must be rapid. It obviously must depend upon capable, trained naval Reserve officers and men. These are the members of our community who, as loyal citizens, give part of their time—give part of themselves—in order that the demands of war can be met without undue delay. It is of such people that the Navy is deeply proud.

As you undoubtedly know, United States Navy Capt. JIM VAN ZANDT not only in his role as a public servant but also in his enthusiastic leadership within the Naval Reserve, has done much to insure the readiness for the tasks for which the Navy must be prepared. It is quite appropriate that on this day—Armed Forces Day 1956—the Navy express its appreciation to him.

To the question of where are we going, I can only say that we are dedicated to the proposition of progressive action and advanced thinking. And as more technological wonders make their appearance we hope to be alert to their application to defense purposes and incorporate them into our weapons systems. We are constantly monitoring and improving our training and service educational systems to the end that this complex equipment may serve us to its maximum efficiency. For despite the fact that modern machinery and equipment do awe-inspiring things automatically, there must still be the man to care for it and under many situations exercise judgment which can't be built into a machine. In the final analysis these things are new tools in a trade which has never and likely will never change in its fundamentals.

At the beginning of this talk, I said that I would have more to say about unification—a subject about which there is probably as much misunderstanding and confusion as any other concerning the Armed Forces. To begin with unification does not mean, and Congress never intended it to mean, merger. Unification was conceived as meaning an elimination of duplication in certain areas of weapons development, an elimination of competition between the services for goods, people and services and finally a closer collaboration in war planning and in the meshing of complementary and mutually supporting functions. While there is still room for improvement in all areas I am pleased to report to you that all services are sincerely supporting these policies and that there exists a unity now that some years ago would not have been thought possible. It would be rare indeed to walk into a committee room or a planning agency in the Pentagon and not find officers and civilians from all three services represented. We have single service procurement in many items—systems are established for cross servicing in the field not only in supplies but in services such as repair and maintenance and now-a-days no service would think of initiating a research and development program for a weapons system without advising the other two and taking steps to incorporate the special requirements of the others if they say they have an interest in such a program.

Related to this question there is currently in progress, as you are well aware, a congressional investigation as to the adequacy of our airpower. The subject has likewise been explored at length in all our newspapers.

This subject is of profound interest to the Navy for, as you well know, the Navy is geared to the employment of airpower. So when the question is asked "How much is enough?" let us not forget that included within the national airpower there is a strong contribution from the Navy. Navy airpower is overseas today. It is in the Sixth Fleet in the Mediterranean. It is in the Seventh Fleet in the western Pacific. It is flexible and mobile. It can be moved into troubled areas on a moment's notice. It is ready to do its job.

But, the Navy is not naive. The Navy is not complacent. We know that, despite the fact that ours is the best Navy in the world, the United States is not secure without, in quality, the best army and the best air force in the world. Our sister services are good. In quality they have no peer and it is with great pride that the Navy—on this Armed Forces Day—salutes the United States Army, the United States Air Force and that great arm of the Navy, the United States Marine Corps.

Together, the Army, the Air Force and the Navy are teamed to do a job—a big job. It is difficult—perhaps impossible—to say how much is enough of any particular weapon or equipment. But it is completely healthy and assuring to know that the people and Members of the Congress keep such questions foremost in mind. So long as this attitude prevails, we can feel certain that as the facts and figures become more concrete, the people will approve, and their public servants will promote, the Army, Air Force, and Navy strengths required to preserve our freedom and our security. It will be expensive—it will be fantastically expensive, but as to this I would remind you that there is only one thing more expensive than an adequate defense and that is an inadequate one.

And finally while it is popular to say that in modern war there is no winner, it is better to win and win nothing than to lose and lose everything.

Republican Giveaways: The Charges and the Facts

EXTENSION OF REMARKS
OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. UDALL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article Republican Giveaways: The Charges and the Facts, which was written by Warren Unna and published in the May issue of Harper's magazine. This piece is a major contribution to the discussion of the conservation policies of our country:

REPUBLICAN GIVEAWAYS: THE CHARGES AND THE FACTS

In this presidential election year when party issues are far too few, the Democrats have borrowed the giveaway slogan from television's guessing games and pasted it liberally over the Republicans' natural-resources program. The Democrats hope their charge will stick to the Eisenhower administration the way mink coat and deep freeze stuck to Truman in the 1952 campaign. Charges so gross demand fair and public weighing.

Giveaway has already been applied to everything from public power dam sites to synthetic rubber plants; from offshore oil deposits to national forest timberlands; from public domain grazing lands to rapid tax-amortization certificates. The conservationists and the public-power advocates have backed up the politicians. The United Auto Workers have gone so far as to compute a facetious giveaway price tag: $1 trillion. And the Democratic National Committee in its monthly Digest last fall, named the Secretary of the Interior, who was then Douglas McKay, "The Giveaway King."

Now it is true that neither the Democrats nor the conservationists nor the public-power advocates are the exclusive guardians of the 768 million acres of public land in the continental United States and Alaska. The great protectors of natural resources, President Theodore Roosevelt and his forestry adviser, Gifford Pinchot, were, after all, Republicans.

But it is also true that if the giveaway charge is justified against the Republican administration, such gifts of the Nation's property are irretrievable—no succeeding administration can hope to recoup them.

To investigate—let alone prove or disprove—these charges is a job beyond the scope of one article. However, I have made a reporter's check of career and political appointees in this administration and the last, of key members of Capitol Hill watchdog committees, and of lawyers and conservationists close to the issue.

The basic facts are these:

(1) There is definite substance to some of the giveaway charges—in some instances to a greater extent than the Democrats have intimated.

(2) A good many Republican projects might have resulted in giveaways if the Democratic Congress had not thwarted the administration.

(3) There are resources still in danger of being given away.

(4) Some of the giveaway charges are quite unfounded and, in at least one field—the national parks—the Republican record is better than that of the Democrats.

THE GIFTS ALREADY GIVEN

Taking the blackest side of the score card first, what exactly have the Republicans given away? And to whom?

By March of this year, in six major instances, pieces of Federal property or national rights have been passed, sold, or surrendered to private hands. Here they are:

(1) The national wildlife refuges, heretofore sacronsanct, have been opened up to the drilling rigs of the oil industry. Not all, but plenty of them.

Historically, the Nation's 264 refuges have been off-limits to oil exploitation, with 2 exceptions: in cases where previous owners never did surrender their mineral rights to the refuge land; and in cases where the Government entered into cooperative agreements with oil companies which were drilling nearby to prevent them from sucking out all the oil from underneath the Government's own land.

In August 1953, not long after coming into office, Interior Secretary McKay issued a stop order on further leasing ostensibly to tighten up the regulations. Last October 27, McKay assured an audience in Corvallis, Oreg.: "I can tell you flatly that no new regulations will be authorized unless they give far more protection to our refuges than they did before the stop order."

Then began some of the choicest bits of doubletalk heard in Washington for some time.

Interior now concedes it granted some 274 leases between August 1953, when the stop order began, and last December 2, when it was revoked. Not many more leases have ever been granted in the 34 years of refuge history, and these without the so-called protection of a stop order.

In addition, Mr. McKay issued new orders in December to "protect" the refuges in future leasing. Hereafter, he promised, 12 of the refuges would be inviolate from all leasing and the other would be leased only under controlled conditions. The trouble with that promise was that these 12 refuges had never been sullied with oil derricks anyway; and the "controlled conditions" for the 252 other refuges will be supervised by the Director of the Fish and Wildlife Service, an office McKay made subject to political instead of career appointment.

Inaugurating the new regulation, Interior granted the Frankfort Oil Co., of Bartlesville, Okla., a subsidiary of Segram Distilleries, permission to seek oil on 12,000 acres of the Lacassine National Wildlife Refuge in Louisiana. Frankfort gained the lease under noncompetitive terms at the minimum 50-cents-per-acre fee and 12½ percent royalty. The lease was curiously dated December 1, 1955, a day before McKay's new regulations permitting it had even been promulgated. Interior later explained the lease actually had been back-dated at the oil company's insistence.

2. A sizable parcel of national forest timberland in Oregon is now being cut over by a private company, under the legalistic guise of complying with the Federal mineral laws.

Until Congress changed the law last year, the country had sought to encourage discovery of its underground mineral resources by granting title to the land to any prospector who could show there was enough ore to justify a "prudent" man in mining it. This law included national forest land. Previous administrations, aware that high lumber prices might induce "timber mining," kept a wary eye out for applications on these forest lands.

Such an application came from the Al Sarena Mining Co., of Trail, Oreg. In 1948, under its new owners, the McDonald family, of Mobile, Ala., the mining firm had applied for 23 patents in the Rogue River National Forest in southern Oregon. They announced there was sufficient gold and silver under the forest floor to justify putting the mine back into active operation. Eight of the claims were granted. But the 15 others, totaling 303 acres, were denied after the Bureau of Land Management, Forest Service, and several private assay firms failed to find sufficient evidence of gold and silver ore to justify either Al Sarena in its digging or the Government in ceding its land for the nominal $5-per-acre fee.

The McDonalds had Democratic Representative FRANK W. ("All is made for love") BOYKIN, of Alabama, intercede for them with Democratic Secretary of the Interior Oscar L. Chapman but got nowhere. They have had better luck with Republican Representative HARRIS ELLSWORTH, of Oregon and the Republican Under Secretary of the Interior Clarence A. Davis. Unbeknownst to either the Forest Service or Bureau of Land Management, Davis ordered a third government agency, the Bureau of Mines, to take a new look at the case and specifically to permit the Al Sarena people to have their say about which assay house should test the ore samples. The McDonalds accordingly chose a firm in their native Mobile, 2,400 miles from the Oregon site, which up until then had specialized in testing timber for telephone poles. Once a favorable report was made, representatives of both the company and the Bureau of Mines disposed of the spare samples of the ore by tossing them into the Rogue River. Davis himself was so solicitous for the company's welfare that he personally telephoned the Bureau of Mines employee out in Oregon to find out how the case was coming. He then approved the Al Sarena claim, in January 1954—days before the required field report had ever reached Washington.

Davis has subsequently told Congress he was acting completely within the law. He has not chosen to notice the fact that since being granted its $250,000-or-so hunk of the National Forest, Al Sarena has timbered off lumber worth more than $100,000 but has not mined 1 cent's worth of gold or silver.

(3) At least one parcel of the National Forest in Minnesota has gone into private hands through a secret long-term lease.

International Nickel Co., anxious to justify investing $56 million for nickel and copper mining in northern Minnesota's Superior National Forest, had asked the Democratic administration for a 99-year lease on 12,000 acres. It got nowhere. Once the Republicans came in, the company confronted the Forest Service with an Office of Defense Mobilization letter declaring the national welfare would be endangered if the mining were not permitted. International Nickel next visited the then Assistant Interior Secretary, Orme Lewis. In the presence of a former high-ranking Bureau of Land Management official, Lewis told the company officials:

"If you gentlemen draft the kind of lease you want, we'll be glad to look it over."

The 50-year option they gained is an irrevocable commitment by the Government. Yet Lewis E. Hoffman, top minerals official of the Bureau of Land Management, says that as far as his records go International Nickel has only a 2-year prospecting permit, and that the memorandum of conversations with Assistant Secretary Lewis "is in the confidential file of the Secretary [McKay]."

Fifty-year leases in the National Forest are unheard of, yet M. A. Hanna Co., formerly headed by Secretary of the Treasury George M. Humphrey, and Kennecott Copper, have similar agreements pending with Interior for Superior National Forest Land.

(4) The Federal Power Act has been rewritten through a sort of administrative fiat, as the public-power advocates call it.

This involves the Hells Canyon controversy in which Secretary McKay withdrew his predecessor's objections to private development of the Snake River Gorge on the Idaho-Oregon border. McKay also told the Federal Power Commission that it would be nice if the Idaho Power Co. applications were approved so that the project could be developed by private enterprise.

After 18 months of hearings, an FPC examiner said that a high Federal dam at Hells Canyon, the deepest untouched natural gorge in the United States, would produce the maximum development of the area. But the examiner also declared that since Congress had repeatedly refused appropriations for a Federal dam, it would be only practical to let the Idaho Power Co. go ahead on 1 of 3 proposed smaller dams. The Commission waited until Congress went home last summer. It then announced approval of not 1, but all 3 of the private utility's proposed dams.

By this giveaway, Oregon's 2 Democratic Senators, WAYNE MORSE and RICHARD L. NEUBERGER, say that the country will lose potential electric power, since the 3 low dams can never develop as much energy as the single high dam. They further contend that the private dams will result in higher power rates to consumers and less water storage, flood control, and navigation benefits. They also argue that private-utility development of the Hells Canyon area will make impossible the low-rate power necessary to mine Idaho's vast phosphate deposits.

(5) The Government's $35 million synthetic fuel plant in Louisiana, Mo., has gone to the Hercules Power Co. for $5 million.

Here the so-called giveaway ratio is 14 cents on the dollar—considerably more of a disparity than the 25 cents on the dollar charged by the Democrats. Hercules originally built the plant to manufacture ammonia for the Army during World War II and retained an option to meet the high bidder whenever the plant was put on the block. Before the sale in December 1954, the plant was used to experiment in the production of oil from coal.

(6) The traditional wheeling regulation—which required private power companies using Federal power to transmit some of this power over their own lines to such preference groups as cooperatives and public power companies—has been abrogated.

Buried in an unpublicized memorandum of the Department of the Interior, this change in policy went unnoticed until last year, when the House Public Works and Resources Subcommittee, headed by Democratic Representative EARL CHUDOFF, of Pennsylvania, uncovered it. Ten of the memorandum's 13 recommendations—including the one on wheeling—were copied verbatim from a paper submitted by the Pacific Gas and Electric Co.'s Washington lobbyist, Herman Kruse. Two other recommendations made by Kruse were adopted in substance. All found their way to the desk of Interior Under Secretary Davis and were promtly promulgated.

THE MIGHT HAVE BEENS

So much for what has already been done. How much more of the Nation's natural resources might have been given away, if the Democrats in Congress had not nipped the Administration's incipient generosity? The list is impressive:

(1) The offshore submerged oil lands (the so-called tidelands) might have been given in their entirety to a few lucky States and, probably, from them to the large oil companies.

The Republican majority in the 83d Congress voted to give the Coastal States the rights to oil found by drilling in the shallow waters just beyond their shore lines. The Democrats, however, tacked on amendments guaranteeing the Federal Government continued ownership of whatever oil was discovered further out. Most States now own drilling rights in a strip of submerged land reaching only 3 miles out to sea. Texas, however, was granted a 10½-mile strip for historic reasons and Louisiana is trying to get the Supreme Court to recognize a similar offshore limit for her. Even so, it has been estimated that 80 percent of the submerged oil wealth lies beyond the State territory—in that part of the Continental Shelf still controlled by the Federal Government.

The Interior Department issues glowing reports declaring the Federal Treasury is richer by $252 million in offshore oil-lease revenues since the program began. But the Department consistently fails to add a footnote explaining it was the Democratic amendments which made these revenues possible.

(2) The D'Ewart grazing bill (H. R. 4023) would have given 17,000 ranchers now holding grazing permits in the National Forest the right to deed them to their heirs or sell them at will.

This bill was sponsored by Montana's former Republican Representative Wesley A. D'Ewart, whom the administration made Assistant Secretary of the Interior for Public Land Management, after he lost out for reelection. Although D'Ewart's bill had the backing of the National Wool Growers and the American National Livestock Associations, it never was reported out of committee. At stake were 200 million acres of grazing lands in 14 States. Only about 3½ percent of all western stockmen would have benefited from the bill. Since the Federal grazing charge is only nominal—15 cents a cow per month; 3 cents a sheep or goat per month; 30 cents a horse per month—the advantage of possessing a grazing permit as a vested right would have been considerable.

D'Ewart was not very happy with the treatment his bill received and declared sarcastically during a Washington interview:

"If the Federal Government cares for natural resources it is conservation. But if private individuals seek to acquire any land now publicly owned, the object is steal."

Even Interior Secretary McKay called D'Ewart's bill lousy in an unguarded moment. But then he could afford to: D'Ewart was not yet on his payroll and the bill came under Agriculture Department legislation, not Interior.

(3) The Ellsworth timber exchange bill would have given a private lumber operator the right to select a piece of public timberland as compensation for land the Government might have to acquire from him for a public dam or reservoir.

This bill was sponsored by Oregon's Representative HARRIS ELLSWORTH—of Al Sarena fame—and managed on the floor of the House by D'Ewart. Democratic Representative LEE METCALF of Montana said the bill would have permitted "big lumbermen to trade stumps for trees." He found its worst aspect was in creating a legal precedent in condemnation suits which in time might well have obligated the Federal Government to replace gas stations in kind to make way for highways, and the like. The Government agency deeding over this land to a timberman was to be given no control over what piece he selected; no insurance the land the Government was acquiring had been maintained under "sustained-yield" conservation conditions (the harvesting of an annual crop—no more—from the forest); nor any guarantee that the private operator would continue sustained-yield timbering on the Government land he took over.

The fight in behalf of the Ellsworth bill supposedly had a direct effect in the 1954 defeat of both Senator Guy Cordon in Oregon and Congressman D'Ewart, who at that time was running for the Montana Senate seat.

When a House subcommittee held a hearing on the bill on July 14, 1953, testimony was taken from James L. Lanigan, at that time acting chief counsel for the Bureau of Land Management. Lanigan began itemizing the bill's shortcomings.

The transcript then reads: "Lanigan: 'I just had a message that I had a telephone call. They want me to answer before I finish testifying.'"

Lanigan never returned to the witness stand after that call from his superiors in the Department of the Interior.

(4) Government-owned helium-production facilities worth $20 million would have been sold.

These valuable properties were endangered twice in 1954. Early in that year, Representative CLARE E. HOFFMAN of Michigan and Senator JOSEPH R. MCCARTHY, then chairmen of the Government Operations Committees, introduced identical bills—presumably at the Administration's behest—to give the Interior Secretary the right to dispose of the Government's helium properties. These facilities have been rigidly conserved as a Government monopoly for 30 years. Such a bill as HOFFMAN and MCCARTHY introduced is normally considered procedural and rides through unnoticed. However the Democrats spotted this one and tacked on enough amending words to nullify its intent.

A few months later, a Bureau of Mines survey team composed of an oil and a copper corporation executive, two coal-mine operators, and a mining-school dean recommended, among other things, that the Government make its helium properties available for private purchase. Secretary McKay's profuse letter of thanks to the survey team failed to note exception to its helium recommendation. It was then that Montana Congressman LEE METCALF couldn't resist remarking that the Secretary's request for helium-plant disposal seemed "premature" in that the administration at that very moment had pending a request for $5 million to purchase still another helium plant.

A few days later, the then Interior Under Secretary, Ralph A. Tudor, declared there were no "immediate" plans to sell the helium plants.

(5) Federal inspection of mines might have been jeopardized by the confirmation of Tom Lyon as Director of Interior's Bureau of Mines.

Lyon, who has a revocable annual pension of $5,000 from the Anaconda Copper Co., was one of the Republican administration's first nominees. At his Senate confirmation hearing he unhesitatingly declared he had no use for the Federal mine-inspection laws he would be required, as director, to enforce. He explained:

"Human life is becoming very cheap these days on the globe."

If there was any doubt that the Senate might refuse to confirm Lyon, this clinched it. President Eisenhower withdrew the nomination.

This, however, did not end Interior's tinkering with the Federal coal mine safety law. The same Bureau of Mines survey team recommended in July 1954 that the States take over coal-mine safety regulations. Congressmen, on both sides of the aisle this time, took a dim view. They declared a coal-mine operator could look forward to greater leniency from a State inspector than from one responsible to Washington. Republican Representative JOHN P. SAYLOR (Pennsylvania) termed the recommendation a "direct defiance of the 1952 Federal law."

But Interior has inched ahead anyway by creating a new office of "education" to help States get into the inspection habit. Already some half-dozen States are conducting joint inspections with Federal authorities.

ON THE DOCKET

The Eisenhower administration has indeed run into decisive opposition in many of its attempts to dispose of national properties. But even more substantial giveaways, it is charged, are in prospect. Here are the cases pending:

(1) Under the guise of partnership, Pacific Northwest power groups are slated to receive all power revenue from the huge 1,500,000-kilowatt John Day Dam on the Co-

lumbia River border between Washintgon and Oregon.

Senator WAYNE MORSE calls this the real payoff. He says the private utilities involved will be getting a low-cost Government loan for 50 years. They will receive tax-free revenue for Federal power, delivered on Federal transmission lines, which they can market at high rates, and yet they will be under no obligation to put up any of their own capital in advance.

Legislation has already been introduced by Representative SAM COON, of Oregon, with the administration's blessing.

(2) The Nez Perce Federal dam site on the Northwest's Snake River is to be abandoned in order to permit private utilities to build smaller dams elsewhere—thereby pinching off maximum utilization of the watershed.

Instead of a Federal Nez Perce, the Pacific Northwest Power Co., a private utility combine formed by Washington Water Power, Pacific Power and Light, Portland General Electric, and the Montana Power Co., is expected to gain approval for two smaller dams at Mountain Sheep and Pleasant Valley. It is estimated that, compared with the Nez Perce development, this will mean a loss of 4,300,000 acre-feet of water storage and 500,000 kilowatts of power capacity. Abandonment of the Federal high dam at Hells Canyon, also on the Snake, has been estimated to mean a loss of another 2.9 million acre-feet of water storage and another 500,000 kilowatts of power.

(3) The Government may forfeit all future power development in the Northwest.

The administration has curtailed the Bonneville Power Administration's budget for further long-range planning in the huge Columbia River Basin. The planning function has been taken over by an ad hoc committee composed of the Governors of Idaho, Washington, Oregon, and Montana—all outspoken opponents of public power. As their executive director, they have hired an official of Ebasco Services, Inc., the Electric Bond & Share Co., subsidiary which figured so prominently in the now defunct Dixon-Yates power proposal. The Northwest Governors have even permitted their executive officer to remain on Ebasco's payroll so that he may retain retirement benefits. Interestingly enough, Idaho Power Co., which has never announced membership in the Pacific Northwest Power Co. combine, was nonetheless billed by Ebasco for services rendered, along with the other private utilities.

(4) The "downstream benefits bill," proposed by the President in his 1954 budget message and now pending in the Senate Interior Committee, would suddenly permit upstream private dams to charge the Government for "storage" of water on its way to a downstream Federal installation. Although the FPC has told Congress the idea for such legislation was its own, Kinsey Robinson, president of the Washington Water Power Co., couldn't resist informing a reporter a while back that paternity really rested with him.

(5) Speculators may find it easier to obtain bits of Government land with no strings attached. Under the terms of a June 1955 Interior executive order which eased the Small Tracts Act regulations, a purchaser may now acquire land without first showing his good intent by leasing and improving it for a 3- to 5-year period. The easement supposedly is confined to areas where local municipalities have their own power to regulate building, sanitation, and water supply. Interior says it has so far only applied the easement to the Las Vegas area, where there was a backlog of 20,000 applications for small tracts on the public domain. But if this easement on the regulations goes unwatched it might assist land speculators in obtaining Government land cheap, selling it high, and still not being inconvenienced by having to get near it.

(6) The Government may drop its protection of the Indians.

Secretary McKay has already made it emphatic it is high time to stop looking on the American Indian as a "museum piece." He thinks the Indian should have the right to dispose of his own share of the tribal lands, the same as any other adult citizen. He estimates the Government can get itself out of the Indian business in 25 or 30 years.

What will happen to an Indian's land rights once a slick grazing, timber, or oil man starts to bargain with him? Already the Klamath Reservation in Oregon has been given the right to sell 1 million acres of tribal timber now, instead of drawing income from the land in the years to come. Similarly, the Department sponsored a congressional bill to remove protection from some 200,000 acres of timber on the Menominee Reservation, Wisconsin's last sizable forest land.

STILL OUR OWN

Now, finally what has not been given away? Despite wholesale charges against them, the Republicans have preserved certain basic and precious natural resources.

(1) The National Parks have actually gained 130,000 acres and had their current budget boosted from $32 million to $44 million

"To give the devil his due," one disgruntled former Interior official declares, "it isn't all bad. The National Park Service is getting better appropriations and he, Secretary McKay, is beginning to do something about the terrible condition of roads." McKay's "Mission 66" means to put the parks in shape to accommodate the estimated 80 million people who will be visiting them in 1966, the 50th anniversary year of the National Park Service.

(2) Some national refuges and park lands have escaped threatened incursions. Secretary McKay himself mounted a white charger in their defense.

When the Army angled last fall to acquire 10,700 acres of the Wichita Mountain Refuge in Oklahoma as part of a 36-mile long, 3-to-6-mile wide gunnery range for Fort Sill, McKay generously offered to let the boys fire from the Wichita refuge and into Fort Sill proper—but allowed absolutely no monkeyshines the other way around.

When the Air Force had its heart set on nightlong photoflash bombing on Matagorda Island, within a mile of the Aransas National Wildlife Refuge in Texas, McKay hearkened to the conservationists. Aransas is the only wintering ground of the world's 28 remaining whooping cranes, the largest and probably best publicized birds on the North American continent. The Air Force has since decided to do its photoflash bombing somewhere else.

McKay also stood firm against lumber interests who wanted the boundaries reduced on the Olympic National Park, Washington's huge virgin wilderness which covers an entire Puget Sound peninsula.

(3) National forest timber on the Kentucky-Tennessee Cumberland plateau was not ceded under the guise of mineral rights. Secretary of Agriculture Ezra Taft Benson rode to the rescue this time.

The Sterns Coal & Lumber Co., of Sterns, Ky., sold 47,000 acres of land to the Government with the understanding that the company retain the mineral rights. After the sale, Sterns contended its quest for coal entitled it to strip the surface as well, particularly since only strip mining was profitable. This would have meant a nice bonus to the company in valuable timber. Secretary Benson, who is guardian of the National Forest, turned the company down flat last summer.

(4) Many small land parcels have been sold from the public domain—but they are considered expendable.

The administration has sold some 163,000 acres in small tracts during the past fiscal year, more than double the 74,500 acres the Democrats sold during fiscal 1952. However, the Democratic administration, as far back as 1949, agreed that some 3,500,000 acres of physically isolated public-domain land could not be managed effectively by the Government or policed for fire hazards and trespassing.

Here then is a rough "giveaway" scorecard on natural resources: items which the Republicans have indeed given away; items which they might have given away if it were not for Democratic opposition in Congress; items which are on the brink of being given away right now; and items which have never been given away at all, but only falsely included in the overall accusations.

Since President Eisenhower's February veto of the amendment to the Natural Gas Act, the political potency of the "giveaway" charge has been considerably watered down.

After all, lifting Federal controls from the production of natural gas carried a price tag too—between six and eight hundred million dollars a year in increased annual income to a relatively few oil and gas companies, according to Democratic Senator PAUL H. DOUGLAS. And though more Republicans than Democrats finally voted for the bill, it was pushed hell-bent by the Democratic Party's House leadership in 1955 and its Senate leadership in 1956.

The scorecard ends up with dollar signs opposite both teams.

ODM Supports Program of Nickel Expansion

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I include a letter I received from Dr. Arthur S. Flemming, Director of the Office of Defense Mobilization, in reply to my letter of April 10, 1956. On April 10, 1956, I transmitted two letters to Dr. Flemming wherein Col. Willard F. Rockwell, chairman of the board of the Rockwell Spring & Axle Co., raised a number of pertinent questions with respect to the current nickel situation. Because of the widespread interest in this subject I placed Colonel Rockwell's letters in the CONGRESSIONAL RECORD on April 10, 1956, and advised Dr. Flemming that I should do likewise with his reply.

The following is Dr. Flemming's reply of May 21, 1956, wherein he reviews the history of the nickel situation as he sees it for the past several years, and his conclusion that—

The fundamental problem faced by both Government and industry is that there is not enough nickel available to the United States market to satisfy actual total demand for defense and nondefense purposes. The only solution to the problem is to accelerate the bringing into production of additional sources of supply. On May 17, 1956, we announced a program designed to provide incentives for achieving expansion additional to that already underway.

The insertion of Dr. Flemming's letter in the RECORD does not mean that I agree with his solution of the problem. As I have stated, it seems to me that two

steps are desirable prior to engaging in a costly expansion program. They are:

First. Discontinue the stockpiling of nickel for an indefinite period of time.

Second. Establish, under the supervision of the United States Government, some minimum requirements governing the allocation and use of nickel.

I consider it only fair to Dr. Flemming, however, to insert his entire letter in the RECORD in order that numerous interested people and concerns may have full opportunity to consider the full statement relative to action taken and proposed:

EXECUTIVE OFFICE
OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., May 21, 1956.

Hon. JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. MCCORMACK: This has further reference to your letter of April 10, 1956, in which you asked for an analysis of 3 letters which you forwarded from Mr. William F. Rockwell, of the Rockwell Spring and Axle Co. of Coraopolis, Pa.

The burden of Mr. Rockwell's letters may be summarized as follows:

(a) He asserts that nickel from stockpile diversions and normal sources of supply for nondefense uses is finding its way into the premium price market.

(b) He further asserts that nickel allocated by the Government for defense purposes is in excess of defense requirements and that such excesses are also finding their way into the premium price market.

(c) Being a member of the plating industry, he refers to the severe shortage of nickel and the results thereof on his industry and the added cost burden which members of that industry have to bear because of purchases of premium price nickel in order to stay in business.

(d) He criticizes the stockpiling of nickel for defense purposes.

Before replying specifically to each of the foregoing, it would be well to review several aspects of the recent history of the nickel industry.

During the Korean period the Government entered into contracts for the expansion of nickel production which have or will ultimately result in additional capacity of 124 million pounds of nickel annually. Had it not been for this Government assisted expasion program, industry would face a much more serious situation in nickel today.

After the termination of hostilities in Korea important segments of the nickel-consuming industry petitioned the Government to take off all controls on the use of nickel. In November 1953, the Government acquiesced in this request and lifted all controls on the distribution of nickel in the civilian market. The reasons for such action were reflected in a memorandum which was filed with the Joint Committee on Defense Production, a copy of which is attached hereto for your consideration.

Since that time the Government has not exercised any control over the distribution of nickel except to the extent of assuring the availability of adequate supplies for defense and AEC orders. You will note from the attached memorandum that prior to removing controls on the distribution of nickel, the Government was assured by the producers that they would exercise their best efforts to distribute the amounts of nickel available for nondefense purposes in a fair and equitable manner.

Toward this end, the producers adopted a pattern of distribution which was based on a historical use of nickel by industrial consumers, adjusted to take care of certain factors such as special arrangements for those industries which had severe end-use restrictions during Korea, new industries, etc.

The Department of Commerce through the Business and Defense Services Administration has maintained close liaison with the suppliers of primary nickel to facilities an equitable distribution. In this respect, major suppliers have voluntarily allowed BDSA personnel to conduct a monthly audit in order to make sure that consumers do not place duplicate orders. In a statement furnished the Office of Defense Mobilization, it reported that in its judgment the periodic surveys and audits of the distribution system have indicated that generally there has been an equitable distribution of nondefense nickel since decontrol. Where inequities are observed or reported, the Department of Commerce calls this to the attention of the supplier.

During the past year and a half Defense and AEC requirements for nickel have been increasing. As a consequence of a slowly improving defense position for nickel and in order to offset the impact of larger requirements on the normal supply, it has been possible for the Government to divert increasing quantities of nickel from scheduled deliveries to the Government. These diversions have approximated or exceeded the increase in defense requirements and thus availability of nickel for nondefense uses has not lessened over the past 2 years.

The Office of Defense Mobilization does not exercise control over nickel diverted from deliveries to the stockpile. Any effort to do so would represent a partial imposition of controls. Under our free-enterprise system we do not believe controls on nickel for civilian purposes can be justified in the current situation.

When the diversions are authorized and appropriate contractual arrangements are made, the Government, in effect, releases the producer from his obligation to deliver nickel to the stockpile or DPA inventory and permits him to sell it directly to United States industrial customers. However, the producers are requested to use their best efforts to sell the diverted nickel in an equitable manner. Arrangements also are made to avoid windfall profits for producers and subsidies for the consumers when the material is sold to industry.

We do not believe that the controls that were taken off in November 1953 should be reimposed at this time. We believe that if they were, no benefit would accrue either to the nickel-consuming industry or to the economy as a whole. The available supply of nickel would not change. There would still be a substantial shortage. Since controls would be imposed under a defense authority, there would be inevitable pressures for a larger share by industries claiming to be defense-related, and demands for prohibition against the use of nickel for non-defense-related purposes, e. g., decorative or other nonfunctional uses. The use of substitutes in these areas could bring about the loss of normal markets and as a matter of equity this situation could result in demand for imposition of controls on other materials. Further, the burden of filling out the inevitable Government forms that are an inherent part of the administration of controls would not be welcomed by industry. While all of this was going on, we would still be faced with the fact that the demand for nickel is considerably in excess of the supply.

In light of the foregoing, the several assertions made by Mr. Rockwell can now be considered.

It is the opinion of BDSA that most of the highest price nickel originates in Japan, France, Germany, and from the sale of secondary nickel obtained from scrap. The sale of this material at higher than market prices is not illegal. However, if there is any substance to the assertion that nickel from stockpile diversions and usual normal sources of supply for nondefense uses is finding its way into the exsessively high-price market, it would mean that some consumers are receiving more than they can currently use, and thus the pattern of distribution is faulty. As was pointed out above, the Department of Commerce is well acquainted with the methods and manner of distribution of nondefense nickel and is persuaded that there is no substantial basis for criticism. In addition, it must be remembered that the only alternative to the present arrangement is the imposition of Government controls and that such a system in theory could result in a leveling of prices only if the area in which nickel could be used were limited to such a degree as to assure that the supply would equal or exceed the demand.

We are informed that the sales contracts used by nickel producers and suppliers generally provide limitations on the resale or remeltng for resale of nickel. This is one of the methods which nickel producers have employed to discourage resale of nickel at premium prices. In addition, nickel suppliers attempt to maintain a close surveillance of their customers' use of nickel since it is not to their advantage to have such nickel resold at premium prices.

Mr. Rockwell charges that there are excess allocations of nickel for defense purposes and at one point makes the somewhat equivocal statement that: "We have absolute proof that some steel companies have sold nickel which they received in excess of their requirements for military orders."

The BDSA has a strict and explicit regulation which prescribes the disposition that is to be made of allocated nickel which is found to be in excess of defense needs. Violation of this regulation carries with it criminal penalties. If Mr. Rockwell knows of any such violation he has an obligation to notify the proper authorities of the circumstances.

In addition, the BDSA is vigorously patrolling the use of defense rated orders and nickel received thereunder. We are informed that these investigations have revealed that only an insignificant portion of the nickel allocated to defense orders has been improperly used.

Mr. Rockwell's third point deals primarily with the added cost which the plating industry has to bear because of its resort to premium price nickel. We assume in this instance that Mr. Rockwell refers to very high cost nickel and not to the more moderately priced nickel deriving from Government diversion. As you know, some of the nickel distributed through regular channels comes from diversions of premium price nickel from Government contracts. However, the price of this nickel in ingot or ferro nickel forms ranges from about $1 to $1.25 per pound, or approximately the cost to the Government.

The sale of certain imports of nickel or nickel excess to nondefense consumer needs at very high prices is not illegal. While the Government has complete sympathy with the problem of the consumers regarding the added burden that is placed on them by any necessary purchase of high cost nickel, it has no acceptable alternative course to follow which would substantially improve the situation, as indicated above.

The last point referred to by Mr. Rockwell deals with policies which are followed in accumulating stockpiles of nickel for national security purposes. He refers to several informal conversations with officials of other countries and concludes that our present stockpile policy is unrealistic and detrimental to the needs of the economy as a whole.

As indicated above, almost all of the material being acquired for the stockpile comes from expanded capacity brought about by

Government financial assistance or from Government-owned plants. Industry would not now be receiving as much nickel as it is by reason of current diversions, were it not for the enormous expansion program undertaken and financed by the Government.

Lastly, it is sufficient to state that stockpiling policy is determined on the basis of advice from the National Security Council, the Joint Chiefs of Staff, the Defense Mobilization Board, and other cognizant agencies. These policies are revised from time to time and adjusted in accordance with changing defense and world conditions.

The fundamental problem faced by both Government and industry is that there is not enough nickel available to the United States market to satisfy actual total demand for defense and nondefense purposes. The only solution to the problem is to accelerate the bringing into production of additional sources of supply. On May 17, 1956 we announced a program designed to provide incentives for achieving expansion additional to that already underway.

Sincerely yours,

ARTHUR S. FLEMMING,
Director.

American Friends of Middle East: Spokesmen for Arabs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. MULTER. Mr. Speaker, the following article entitled "American Friends of Middle East: Spokesmen for Arabs" is deserving of the attention of every Member of this House. It appeared in the April 6, 1956, edition of Israel Speaks:

AMERICAN FRIENDS OF MIDDLE EAST: SPOKESMEN FOR ARABS

(EDITOR'S NOTE.—Within the network of pro-Arab propaganda activities in America, the American Friends of the Middle East (AFME) holds a central and strategic place: it is, in fact, the most effective pro-Arab and anti-Israel organization in this country. Precisely because its approach is more subtle and its designs less candid is it able to make greater advances than the blatant and violent official Arab propaganda.

(The face AFME puts on for the American public is that of a pious neutralism seeking only peace in the Middle East and the protection of American interests. The Zionists, in AFME literature, are darkly referred to as "special interest groups" and "pressure groups," though Zionist organizations openly proclaim their "special interest" in the welfare of Israel. AFME, however, though in fact a pressure group for Arab interests, has chosen to conceal its purposes and has consequently misled many Americans who accept its stated aims at face value.

(On the following pages, we present a factual report on AFME—its sponsors, its composition, its activities and its financial sources. The report was prepared by writers with much experience in the investigation of pro-Arab and anti-Semitic activity in America, with the collaboration of the editorial staff of Israel Speaks. In order to protect the writers' future work, their names are being withheld.)

The American Friends of the Middle East (AFME), a name both patriotic and high-sounding, is an outfit set up for pro-Arab and anti-Israel activity—the first such organization to make significant inroads in the traditional friendship of the American people for Zionist aspirations and for the state of Israel.

The sponsorship of AFME is American and distinguished. The top executives are Dorothy Thompson, the well-known journalist, and Garland Evans Hopkins, a clergyman best known as an international committee promoter. They are buttressed by a board of directors and a national council of some 65 influential makers of opinion: writer-lecturers, ministers and executives of church organizations, educators, and a few lawyers and businessmen; and a paid staff of over 30.

AFME carries on a wide range of activities: news conferences and releases (1,254 items last year), radio and TV programs, an information service, speakers, lecture and study programs, pamphlets, student activities, travel and numerous others. The major objective of these activities is to make the Arab cause acceptable to Americans and to generate hostility both to Zionists and to Israel.

As its national center of operations AFME maintains an East Side mansion in New York City called Middle East House. AFME has 59 representatives well placed elsewhere in the United States and 20 centers in the Middle East. The American representatives are teachers, clubwomen and the like who can provide audiences for itinerant pro-Arab propagandists and distribute the several pieces of free literature, mailed first-class, that AFME sends out each week.

OBJECTIVES

As announced in its initial full-page ad in the New York Times on June 27, 1951, AFME was set up to "increase understanding of common spiritual values of some 200 million people of Islam and 7 million others, Jews and Christians among them. Americans and the peoples of the Middle East must strengthen their bonds of culture and religion, of literature and education. • • • We shall encourage a mutual effort to advance the cause of human freedom and dignity." The people of the Middle East—meaning Arabs—were told that "they are democracy's outposts against communism" and that "more than bread alone, they must also have American friendship and understanding."

These laudable objectives, stated in this high-flown language, were intended to characterize the organization and to attract new recruits to its program. A close study of the activities of AFME since its inception, however, indicates that the organization was set up expressly to carry on pro-Arab and anti-Israel propaganda. The phrase "Middle East" in its name stands for the Arab states: Israel has been amputated from the heart of the Middle East as a sort of useless appendage poisoning the rest of the body. The effect of AFME's propaganda is to deny the right to existence of Israel as an integral part of the Middle East. It is this objective of the self-proclaimed "non-political" organization which inspires AFME's declaration that it proposes to tear away "the curtain of obscurity and distortion" in the Middle East.

STUDY OF MATERIAL SHOWS PRO-ARAB BIAS

An impartial study of AFME's material was recently made to determine whether it really presented, as the group claims, both sides of the Arab-Israeli conflict or whether it presented one side more favorably with a view to influencing public opinion—in other words, not enlightenment but propaganda.

This content analysis was made by Eugene Maier, a student in the divinity school of the University of Chicago. He set out to test Dorothy Thompson's assertions about AFME's policy, such as: "I want to emphasize that we are not a propaganda organization and we are not out to grind axes for anyone." And: "We only want the American public to learn the facts as important observers see them."

Maier analyzed by modern opinion measurement techniques over 1,500 pages of AFME material: news letters, pamphlets, and AFME conference reports, from mid-1953 to mid-1954. He came up with the conclusion that about two-thirds of this material was strongly pro-Arab and over one-fourth of it was anti-Israel. A similar content analysis of AFME's propaganda since 1954 would undoubtedly show a larger proportion of it pro-Arab and anti-Israel. The organization's anti-Israel bias has grown through the years and has increasingly come out in the open.

THE MAJOR THEMES

The plight of the Arab refugees has understandably been given major emphasis in AFME's material as the appeal most likely to touch people's hearts. The origin of the problem in the Arab invasion of Israel, and Israel's repeated offers of compensation receive little notice.

AFME's next major technique is to panic Americans: If we do not make concessions to the Arabs we will lose the Middle East to Russia. Of late this theme has taken first place. That the Arab States are buying arms from the Communists and welcoming their missions, indicates, by a peculiar AFME twist, not their bad faith toward us but our guilt for not giving the Arabs more arms ourselves.

Another important theme is the harm done by Zionist activities, a subject given major emphasis by both AFME and the Arab propaganda network. At the AFME convention in January 1955, for example, about half the time was given up to attacks on Zionists and on Israel.

Two further arguments given prominence are: The State of Israel wants to expand its territory at the expense of the Arab States; Israeli armed forces have committed atrocities. In the report already cited, Maier found 27 references to atrocities by Israeli armed forces in the AFME material he analyzed for 1953–54; but none by Arabs. The few pro-Israel statements that did appear in AFME material, Maier notes, were used as a preface to something hostile to Israel.

Maier's conclusion: "AFME has overt and covert purposes. AFME is not friends of the total Middle East, but only of the Arab Middle East, and with a pronounced bias against Israel."

LEADERS OF AFME: THOMPSON AND HOPKINS

AFME's record of hostility toward Israel and toward Zionists generally can be put at the door mainly of the president, Dorothy Thompson, and the executive vice president, Garland Hopkins, supported by a compact executive group with varying degrees of aversion to the Jewish State.

What has come over Dorothy Thompson? During a great part of her life, she stood up as the champion of oppressed people and as the enemy of dictators; today she is a paid propagandist of AFME, an outfit speaking for the Arabs and their feudal societies and military dictatorships.

On repeated trips to the Middle East she and Hopkins have consorted with kings and dictators. They have not concerned themselves with reforms to remove feudalism from the Arab countries. AFME is scrupulously careful not to stress subjects distasteful to the Arab leaders or which may make a wrong impression on the American reader. AFME nowhere hints that perhaps Arab politicians themselves have been exploiting the plight of the Arab refugees to gain sympathy abroad. AFME describes frontier conflicts as results of the Israeli Army's aggression while Arab incursions are those of poor Arab farmers trying to visit their former homes in Israel.

MISS THOMPSON AND ZIONISM

Once an eloquent Zionist and friend of Jews, Dorothy Thompson's reversal has surprised many observers. As possible explanations, various personal experiences have been

cited. Miss Thompson herself, however, explains her change in attitude by saying that originally she "was touched by the tragedies which befell European Jewry under the Nazis." She favored a home for them in Israel. But on a visit to Israel years later she became convinced that she had been misled on basic assumptions and that Israel's evolution was not compatible with what was humane or even democratic.

Back in 1943, in I Speak as an American, Miss Thompson wrote:

"The Jews are alive today because they remembered Zion. From the time when, by the waters of long-extinct Babylon, they sat down and wept, yea, hung their harps upon the willow and wept because they remembered Zion, they have remembered, and remembered without a break. * * * And how any Jew can divorce his religion from his nationhood is beyond my powers of comprehension. * * * The fear exists that the recognition of this nationhood will prejudice the status of Jews as citizens of other countries. I hold that to be an exact perversion of the real situation."

But in April 1952 she was awarded a Medal of Honor by the Syrian Government for her services to the Arab cause.

POLITICAL SALESMAN

Garland Hopkins is the dominant executive in all AFME activities. A man in his early forties, articulate, energetic, and smartly dressed. Hopkins is an enterprising sales manager pushing his merchandise with a Messianic tinge to his convictions. Hopkins likes to regard himself as a man of many talents, and has long been a champion joiner.

In origin, Hopkins' background is that of a small-town Virginia preacher. He early identified himself with everything having an international flavor: he taught French, became active in the English Speaking Union, and became a non-Government delegate at United Nations sessions. Hopkins also was notably active in the Committee for Peace and Justice in the Holy Land and in the Holy Land Emergency Liaison Program.

Hopkins has both the handicaps and talents of a jack-of-all-trades. He gets around and has met everybody. While he has failed to make a name for himself as a writer, he does influence opinion effectively in a number of ways. He knows the kind of emotional appeal that moves the hearts of his listeners or readers. He feels himself an authority on almost any international political question. He also likes to think of himself not as a clergyman but as an unofficial ambassador calling on top statesmen here and abroad to lend them his counsel. He has boundless energy and ambition.

HOPKINS AND THE JEWS

In the first years of AFME, Hopkins made an effort to stay friends of both Jews and Arabs. He contacted a number of leading Jews and Jewish organizations and emphasized that his friendship for the Arabs and opposition to Israel should not be taken as hostility toward American Jews. On one occasion he even invited an Israeli Counsel to an AFME social function. But this caused such an uproar among the Arab officials that he hastily explained to them the invitation had been extended in error. But on his annual trips to the Middle East, Hopkins has gone to great pains to ingratiate himself with Arabs in high places by registering his hostility to Israel and to Zionists generally.

Hopkins still clings to his hope of maintaining friendly contact with American Jews. Only a few months ago he publicly registered his disapproval of crack-pot anti-Semitic letters AFME received and said that he had turned some of them over to a large Jewish organization for analysis. This distressed some of his associates who felt that this was an indiscretion which might alienate some of their following.

It is American Zionists who are the chief butt of Hopkins' attacks, in which he exploits the old charge of dual allegiance. But increasingly the line between Zionists and Jews is blurred—as it certainly is for most of the American public—and the American Jews as such become the objects of what Max Lerner has called Hopkins' "Goebbels line."

WARNINGS

Hopkins was quoted in the "American Zionist," April 5, 1953, as saying: "If the American people ever find themselves losing another war in the Middle East, and begin to ask why, and discover what the cause has been, you will find the same things happening here (to the Jews) as happened in Germany. I hesitate to think what might happen in New York."

On his return from the Middle East, October 10, 1955, he said:

"Zionist activities in the United States might raise the question who is responsible for the loss in the Middle East. That is the kind of question which could produce a wave of anti-Semitism here."

In a speech to the annual AFME convention in January, 1954, and repeated in the anuual report as AFME's policy, Hopkins warned Israel:

"Israel is in the Middle East and of the Middle East and must eventually conform to the pattern, or it has no other alternative but to cese to exist." What the pattern is that Israel must conform to is not spelled out, but the threat of extermination is used repeatedly.

The matter of the corrupt and feudalistic autocracies of the Arab States is not, as mentioned above, given prominence by AFME or by Hopkins. When it is considered, however, it is handled in terms like these:

"Democracy as we know it is a luxury of the literate. It simply cannot exist in a largely illiterate country. In such countries the army is not infrequently the most democratic institution in the land. I is about the only organization in which the son of a poor peasant has some chance of getting to the top. Its personnel is drawn from all elements of society. Its group thinking in the barracks comes a lot closer to representing the people than do the members of parliament * * *."

With such logic, Hopkins hopes to persuade his American readers that in the Arab countries the autocratic and oppressive Army dictatorships are actually models of democracy.

VALUABLE AID FROM DISSIDENT JEWS

Collaboration of prominent dissident Jews with AFME is a special chapter in itself. Here it may be sufficient to mention only two.

Rabbi Elmer Berger, executive head of the American Council for Judaism, has been giving valuable assistance to AFME from the start. He is a member of the board of directors, and helped AFME get its office started with the cooperation of his own staff. He even made the mailing lists of the two outfits interchangeable. He has been a frequent speaker for AFME. Last year he spent two months in the Arab countries and a couple of days in Israel—also mainly for AFME. Hopkins always is lavish with praise of Berger and speaks of the effective work their organizations are doing together.

Among Berger's services to the Arab cause in the United States is his advice on how to combat "Zionist propaganda." In a speech given to an Arab student conference in Colorado in 1954, Berger exhorted his audience not to "yield to the human temptation to answer in kind the Zionist vilification, character assassination and slander. Give your audience the facts and leave the Zionists to wear out their own audience with a surfeit of invective."

ANOTHER FRIEND

Rabbi Morris Lazaron is on AFME's council and also is given a prominent place at AFME functions. At the organization's conference this year, Lazaron gave the invocation. This was at a luncheon where the main speaker was Comdr. Elmo H. Hutchison, a notorious anti-Israel soldier, and now AFME's chief representative in the Middle East. Lazaron gave a long and dignified invocation, mainly in Hebrew, followed by Hutchison who gave as bitter an anti-Israel analysis of border conflicts as was ever given outside of Cairo or Damascus.

Lazaron, accompanied by 1 Protestant and 1 Catholic clergyman, went on an AFME-sponsored trip to the Middle East. On their return, the three participated in round-table discussions at meetings, and on the radio, and wrote a pro-Arab pamphlet, all given wide distribution by AFME.

Lazaron has been concerned about what he considers the second-class citizenship accorded the Arab minority in Israel, which leads him to the following interesting conclusion:

"If Israel continues to treat its minorities as it does, what is to present other nations where Jews live from treating their Jewish minorities in the same way?"

THE MEMBERSHIP

Little need be said about the group of 59 prominent American clergymen, educators, writers, and businessmen who are on the national council of AFME. This is because their active participation in office operations has been insignificant. Some of them were associated with American groups working with the Arabs. As such they have a paternalistic concern for their former Arab wards and students. The pro-Arab slant of educators from American colleges in the Middle East is well known. Some of the board lent their names to AFME, an organization whose announced aims sound worthy, without troubling to look too closely into it. Some of these may still not be aware of the actual intent and operation of the group.

AFME's prestige is that of the distinguished educators, Protestant pastors and missionaries who sponsor it. They have in common the fact that most of them have ben associated in the past with American institutions in the Near East. Today these educators with their special knowledge are influential in the State Department. Others have found well-paid consulting jobs with the oil companies operating in the Near East. Others are still active in American colleges.

Members are primarily window dressing in a propaganda outfit like AFME. The leaders of the organization like to convey the impression that AFME is a popular movement of patriotic Americans interested in fair play in the Middle East. Actually, after 5 years of activity, AFME has less than 3,000 members. Members' dues have shrunk from 11 percent to 4 percent of AFME's income. AFME activities from the start have been run with little concern for the number of members, the amount of their contributions, or their desires. Members do not elect directors and have nothing to say about policy.

WHAT AFME HAS ACHIEVED—AND HOW

AFME's score on newspaper effectiveness is not clear. Dorothy Thompson has complained bitterly about neglect by the press, and protested particularly to the New York Times. But in the last annual report, AFME stated: "Our coverage in the Middle East press approximates the spendid coverage, with some few exceptions, that the American press has given us." The Arab press, of course, gives the organization flattering notices.

On the score of pamphleteering and group activities—lectures, discussions, etc.—AFME's energetic propagandizing has been clearly effective. An increasing number of pamphlets have been brought out dealing with special subjects. These provide material for AFME's associates around the coun-

try as well as information for members, schools, and the like.

AFME has considerable lecture talent and it is here that much activity is currently concentrated. Now that the Middle East is on the front pages again, Hopkins has recently been appearing several times a week in debates and discussions on radio and television. Among AFME's sponsors are many others with first-hand knowledge of the area and they too are busily lecturing. In addition, AFME has provided live TV shows. Canned propaganda on platters is distributed to radio stations. Now color films are being produced, the first two on Egypt and Turkey.

PROPAGANDA ON CAMPUSES

Student affairs are given a fair amount of attention in the organization's program. Last year 43 college campuses were visited by members of AFME's staff. In the first year of AFME, before the anti-Israel pattern had taken such definite shape, AFME proposed calling a conference of students from all Middle East countries, including Israel. But the Arabs protested so violently that the conference was deferred for several months, finally dropped, and instead AFME sponsored one for Arab students only. This was held at the University of Michigan in 1952.

AFME called these Arab students "ambassadors of good will" and offered to assist them in fulfilling this role. AFME helped the Arab students form a national organization and then set up local campus clubs.

Arab governments at first did not see the full propaganda potentialities in using their students on college campuses, but in recent years they have made up for lost time. In the last 2 years, the Arab States, and now the Arab League through the Arab Information Center in New York City, have taken over the direction of Arab student propaganda, notably by intensive advance briefing. Many of these Arab students have too scanty a knowledge of conditions in their own countries to be effective ambassadors. But they can arrange invitations for visiting Arab propagandists and can distribute literature. This they do zealously.

Intercultural relations are emphasized by AFME, including visits of Americans to the Middle East and visits, mostly of Arabs, to this country. Arab propagandists speaking good English are given priority and AFME arranges speaking dates for them across the country. For example, Mrs. Hussein, wife of the new Egyptian Ambassador, was sponsored on such a trip. AFME assisted in arranging lectures for Mrs. M. F. Jamali, wife of the Iraqoi Foreign Minister.

A lecture tour of Anwar Nashashibi, of Jordan, a lawyer with a good command of English and well known for his violent anti-Israel attitude, was financed by AFME, and allowed him to engage in such declarations as, "Communism in the Middle East is directed by Red underground movements in the Arab states and the legal Communist Party in Israel."

AFME has been spending money freely to get Americans over to the Middle East who can return and do effective propaganda. In 1953 the organization arranged a lecture tour in the Middle East for Rev. Edward Elson, pastor of the Presbyterian Church which President Eisenhower attends. He lectured at numerous colleges there and paid special attention to the Arab refugee problem. On his return he came out strongly for the anti-Israel line and has become chairman of the National Council. Among Elson's choice declarations: "Israel has no moral right to exist."

WHERE DOES THE MONEY COME FROM?

Last year AFME operated on a budget of about half a million, $497,622. This is about twice the size of the budget of 3 years earlier. If volunteer aid and activities related to AFME, but financed separately, are added, AFME did well over a million in propaganda last year. In contrast to this is a lag in AFME's membership, and a lag in payment of even the nominal $2 a year dues. How then does AFME finance its operations?

The picture has been intentionally blurred by AFME's executives. They keep their financing as much of a mystery as possible. The picture given the public is of enthusiastic members and "devoted friends" who come forward with money. In its early days AFME announced "hundreds of responses and contributions ranging from $1 to $1,000." The initial funds came through Treasurer Cornelius van H. Engert from unnamed foundations and from "generous friends." To this unspecified initial capital was added in the first year "$75,000, of which $50,000 was from a friend of Miss Thompson's who desired to remain anonymous."

OIL CONTRIBUTIONS

Why this passion for anonymity? No individual donors were named. About half of the revenues seem to have come from the Dearborn Fund. This fund was set up by a group of Chicago businessmen of whom Clarence Randall of Inland Steel is the best known. The fund name, incidentally, comes from nearby Dearborn Street in Chicago and has no connection with Henry Ford nor the old Dearborn Independent.

Earlier, Hopkins chose to mention that there were no oil contributions, but added that oil contributions would be welcome. His wish was granted because some of the Dearborn funds are believed to come from oil and this past year the San Jacinto Fund of Texas, believed to be mainly oil, gave a contribution.

It was stated in the last report that "the Arab American Oil Co. has again made a grant." But AFME had mentioned no previous grants. It should be noted, however, that oil companies with interests in the Middle East and notably ARAMCO have shown a sympathetic interest in AFME's activities from the start. Terry Duce, vice president of ARAMCO, has been a close friend and an honored guest of AFME, and his assistant Harold B. Minor is on the AFME board, the top steering committee. This support from oil companies with their interests in Arab countries goes far to explain some of AFME's anti-Israel activities.

SERVING ARAB PROPAGANDA NEEDS

Today AFME is performing a useful propaganda service for the Arab States in this country, a service at which, over the last decade, the Arabs themselves failed miserably.

The Arab States, shortly after the close of World War II, set up an information center in Washington that failed and later an Arab-American group in New York City that also failed. For some 5 years, the Arab League played with the idea of opening an information center in New York before getting one underway last year.

What was wrong with the Arab's approach that led to their propaganda failure?

Arab spokesmen were ineffectual because they did not know how to present their views in a way that does not annoy or irritate their listeners. They employ too much emotional violence. In addition, their mutual distrust is a handicap. When two or more of them appear on the same platform, they vie with each other in patriotic zeal, more with an eye on the effect back home than on how effective they are in persuading their American audience.

Arabs found it difficult to recruit Americans for the defense of feudal and dictatorial systems. They had to turn to propagandists and political adventurers who either did not know the Middle East or who could stomach the rottenness of the Arab political and social systems.

The common attribute of most of the Arabs who came to America was their passionate hostility toward Israel and their aversion for Jews. They therefore found American anti-Semites their most willing recruits. But association with these professional anti-Semites was poison for reputable American citizens.

Many Arab propagandists assumed that the kinds of primitive pressures and bribery used at home would also work here. As a result, they antagonized many media people. Instead of analyzing and correcting their failures, they found an easy scapegoat by throwing it all on the Jews, blaming their shortcomings and blunders on Jewish hostility and on the worldwide Zionist conspiracy. Thus they started out with a distorted sense of values, blunting their own critical sense, and annulled much of the effectiveness of their propaganda.

AFME TO THE RESCUE

With the rise of AFME, an important advance was made in Arab propaganda work in America. The "cause" was the same—the bolstering of corrupt and antidemocratic forces in the Middle East. The facade was new.

The relative success of AFME was that it had a distinguished American sponsorship. It did not start off with the initial handicap of being an official Arab agency or even an avowed pro-Arab agency. AFME made its operation appear as the encouragement of friendship with an important area of the world. It painted an attractive picture of the "free peoples" of the Middle East invited to join the free peoples of the West in defense against communism. Such an appeal, at a time when the Western World particularly needed friends, was, for some Americans, convincing.

AFME's operation is based on the latest discoveries of Madison Avenue. It is smooth and well-oiled, in many senses of the term, and has a veneer of respectability. It utilizes skillfully and effectively American public-relations techniques.

But both in intent and in actual operation, the line it has been selling is not far removed from the official Arab propaganda line aiming ultimately at the destruction of the State of Israel.

A GARLAND OF TRICKS

The quality of Garland Hopkins' smooth and slippery performances may be gaged from his handling of AFME's Jewish collaborators. These are typical maneuvers:

He presents Elmer Berger as the leader of an important Jewish organization. Nowhere does he mention that the membership of the American Council for Judaism is insignificant in number and has been overwhelmingly repudiated by the American Jewish community.

Morris Lazaron is presented as a Jewish leader of importance rather than what he is: a well-heeled aspirant to leadership—with no following.

At the annual convention of AFME this year, a Zionist "spokesman" was found in the person of a young ultranationalist extremist. This member of a minority Zionist group proceeded to fall into the trap laid for him by declaring, among other things, that Israel must annex adjoining territories—whereupon the Arab League propagandists on the program had a clear field for charges of Israeli aggressive and expansionist policies.

A couple of years ago, for a meeting of American tourists, Hopkins had Israel represented too. The representative: an unkempt member of Neturei Karta, the minute ultra-orthodox sect of Jerusalem.

One Hundred Years of Work and Worship

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MARSHALL. Mr. Speaker, St. John's University at Collegeville, Minn., is observing its centennial as a Catholic educational institution for men dedicated to carrying on the ideals of the Order of St. Benedict.

Last Sunday marked the 100th year since the first Benedictine monks came to Minnesota to carry on the work their order has been engaged in for 14 centuries—preserving, enriching, and handing on the secular learning and religious thought of the Western World.

To Rt. Rev. Abbot Baldwin Dworschak and the monks of St. John's we offer our felicitations on 100 years of work and worship and our best wishes for the centennial observance.

Mr. Speaker, I include a brief article from the Minneapolis Sunday Tribune picture magazine of May 20, 1956, entitled "St. John's Is 100 Years Old.":

Exactly 100 years ago today, 3 Benedictine fathers and 2 brothers stepped off a Mississippi River boat at Sauk Rapids, Minn. At the request of the Most Rev. Joseph Cretin, first Catholic bishop of Minnesota, these five sons of St. Benedict had come to central Minnesota from Charlemagne abbey of Metten, Germany, via St. Vincent's abbey in Pennsylvania, to build the now world-famous Benedictine abbey of St. John's and found St. John's University.

St. John's is the oldest Catholic college in the State and Minnesota's oldest institution of higher learning in continuous existence. The seminary that began classes in November 1857 with 5 students has grown into modern St. John's with a 1956 enrollment of 1,350 men. From their first priory on the banks of the Mississippi, St. John's monks moved in 1866 to the present Collegeville site, 12 miles northwest of St. Cloud. In 1866, too, the priory was raised to the full status of an autonomous abbey.

Mr. Speaker, I also include an article from the St. Cloud Daily Times of May 21, 1956:

COLLEGEVILLE.—One hundred years ago Sunday evening the first Benedictine monks to arrive in Minnesota stepped off the Mississippi River boat *H. M. Rice* at Sauk Rapids and began to build what is now the world-famous Benedictine Abbey of St. John's, located 12 miles northwest of St. Cloud.

The 1 priest and 2 brothers who came up the river by steamer were soon joined by 2 fellow Benedictine priests and most Rev. Joseph Cretin, of St. Paul, who had made the trip by stagecoach.

It was Bishop Cretin, first bishop of Minnesota, who had invited Abbot Boniface Wimmer, of St. Vincent's Abbey in Pennsylvania, to send monks who could assist him in administering to the spiritual needs of the German Catholic immigrants settling in central Minnesota.

Two of the priests had been ordained only the day before, on Monday, by Bishop Cretin, and after a day and a half journey the party entered St. Cloud, a metropolis of five buildings, about 5 p. m. on Tuesday, May 20, 1856.

The attic of a two-story frame building belonging to Joseph Edelbrock was the scene of the first mass which was offered for the public on May 22.

The first monastic buildings were two "claim" cabins on the banks of the Mississippi below the present site of the St. Cloud Children's Home. The buildings and 320 acres of land had been donated by two Catholic pioneer settlers, the brothers Louis and Wilhelm Rothkoop.

In the following months, however; it was the foresight and shrewdness of Rev. Bruno Reiss that brought the pioneer monks to establish claims in the "Indianbush" country west of St. Joseph on the shores of Lakes Watab and Sagatagan.

Meanwhile, Prior Demetrius de Marogna, a former Italian nobleman who led the small community, and John L. Wilson, "the founder of St. Cloud" and representative in the Minnesota Territorial Legislature, were busy obtaining a charter for St. John's Seminary. The prior was anxious to begin a school in which he could educate pioneer youths for the priesthood.

The monks opened their doors to five students, Henry Emmel and Anthony Edelbrock, of St. Cloud; Joseph Duerr, of St. Joseph; Henry Klostermann, of Richmond; and Andrew Stahlberger, of Lake George, on November 10, 1857, and the first Catholic institution of higher learning in the State began holding classes. Since that date St. John's has been the only college in the State to never close its academic doors.

It was 3 years later in 1859 that the monks moved west to their "Indianbush" property after a claim-filing error had cost them their property on the river. And so it was that at Collegeville St. John's has grown steadily for the past 97 years.

Statement in Support of Housing Bill Introduced by Hon. Victor Wickersham, of Oklahoma

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. WICKERSHAM. Mr. Speaker, I am introducing today a bill to amend the National Housing Act to assist in the provision of off-base housing for occupancy by or rental to military or permanent civilian personnel and their dependents. At the present time, there is no housing law under which financing can be made available for the construction of 1 to 4 family dwellings for such personnel in areas or communities outside of military bases. Therefore, I believe this will provide a most worthy and needed addition to present military family-housing laws and one which will certainly prove useful to the armed services in the State of Oklahoma and I feel sure in many other States.

My bill would authorize the Federal Housing Administration to provide insurance on mortgages for 1 to 4 family off-base housing, under the same terms as provided in the basic FHA title II sales-housing program. Because I believe housing constructed under these provisions will prove most useful to military and other personnel if they are held for rent by builders, I have provided that the FHA Commissioner shall have power to require properties covered by mortgages insured by these provisions to be held for rent for such periods of time as he may prescribe.

This bill should provide our armed services with another housing program which will supplement those now in the laws and which should prove extremely useful in providing off-base housing for those enlisted and officer personnel for whom the Armed Forces cannot now provide on-base housing. Because I am also advised that the provision of housing for atomic-energy installations is a similar and closely parallel problem, I have included language so that the Atomic Energy Commission may also take advantage of the financing provided by this bill.

Under the provisions of this bill, either the Secretary of Defense or the Atomic Energy Commission, as the case may be, is in a position to control the number of units which will be available under this program. As a further safeguard, the FHA is given veto power over their requests unless, in an exceptional case, the Secretary of Defense or the Atomic Energy Commission is willing to guarantee the FHA's Armed Services Housing Mortgage Insurance Fund.

Afghanistan Celebrates Its 37th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. POWELL. Mr. Speaker, I wish to feliciate the people of Afghanistan, His Majesty Zahir Shah, King of Afghanistan, and His Excellency Mohammad Kabir Ludin, Ambassador of Afghanistan upon the occasion of the celebration of the 37th anniversary of independence of Afghanistan, May 27, 1956.

As soon as King Amanullah had establish himself upon the throne of Afghanistan, he gave voice to the long-suppressed desire of his people for independence of their land. This demand resulted in the Afghan War of Independence, 1919. The termination of the war brought freedom and independence for the people of this long-oppressed nation. Having achieved the goal of independence, the nation then turned its attention to the necessary reforms in internal affairs and the required orientation to prepare themselves to play their part in international affairs. In 1933 His Majesty Zahir Shah, the present King of Afghanistan, assumed the leadership of his people and continued to work for the attainment of the objectives of sound development.

The government has vigorously attacked the basic problems of the country and is looking hopefully toward the future. Programs of economic and social development have been undertaken which bespeak the interest of the people in the vital needs of the nation.

Afghanistan has adhered to the principle of full participation in the international life of nations. She supports the

cause of independence for all peoples, and is desirous of preserving world peace. To these ends Afghanistan has been anxious to take part in international activities. A faithful member of the League of Nations until its dissolution, Afghanistan today attaches great importance to the work of the United Nations. She is also a member of the United Nations Specialized Agencies: the International Labor Organization, the World Health Organization, the Food and Agriculture Organization, UNESCO, and the International Civil Aviation Organization.

Afghanistan remained neutral in the First and Second World Wars and the justice of this policy was recognized by the nations of the world when in 1946 Afghanistan was unanimously admitted to the membership of the United Nations.

I salute Afghanistan as she embarks upon her 37th year of independence and pray for her continued success and progress.

Ike's Aid Program Slaughtered in Committee

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the May 21 edition of the Detroit Free Press entitled "Ike's Aid Program Slaughtered in Committee":

IKE'S AID PROGRAM SLAUGHTERED IN COMMITTEE

The administration's foreign-aid program is being dealt a series of blows by the House Foreign Affairs Committee.

The Senate, and the full House itself, are still to be heard from. But there is no minimizing the effect of these committee jolts.

Then can tend to brake the momentum of foreign spending which has zipped along since before World War II for a fantastic mileage of more than $100 billion.

This is an election year—a time when the hearing of Congressmen tends to become remarkably acute. What they hear from all quarters of the country is opposition to further long-range, grandiose giveaways bringing the United Sates no specified benefits in return.

Logically, therefore, the vote went against commitments for economic projects taking a long time to complete. This was the heart of the New Look in the United States giveaway program. Its backers asserted that in order to compete with the Russian economic programs, ours, too, had to be based on planning ahead.

For the first time in the 8-year history of the present aid program, the committee voted to put all economic assistance on a loan basis and severely to restrict general regional development assistance.

The administration has had to employ its pressure to restore key parts of the program.

The whip was cracked at first against those nations which ship goods to Russia or her satellites and allies if the goods in question are on United States lists of strategic materials. This would automatically cut almost all our allies off from further aid.

Now White House influence has caused the committee to drop this ban.

When Ike has been right he generally has had his way. Much of the country is behind him, even in making hard choices, like on the farm bill.

The President wields the great prestige he enjoys because, until now, he has exhibited a remarkable political intuition for a man who only 4 years ago was an unblushing amateur. Almost unfailingly he has seemed to embody the will of the majority—a talent which is a great asset to his country.

But we doubt that even the President's great popularity will see the foreign-aid bill through in the form that its backers want. And we doubt that the President's advisers are themselves well-advised in placing his reputation behind this plan.

The plain fact is that most people cannot see any value in further frittering away of tax billions.

By this time most of us would agree that if there are any Hottentots who need milk, and who haven't got it, we will try to get it for them. But the administration program comes too close to saying that every Hottentot who wants a hydroelectric dam in his backyard ought to get one from the American taxpayer—and before the decade is out.

The voice the House committee has been hearing from the countryside keeps saying "call it off." Ike should give ear to it also.

Jordan Celebrates 28th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. POWELL. Mr. Speaker, I wish to extend greetings to the people of Jordan, His Majesty Husayn al Hashimi, and His Excellency Abdul Monem Rifa'i, Ambassador of Jordan, upon the occasion of the celebration of the 28th anniversary of independence of Jordan, May 25, 1956.

On May 25, 1928, the people of Jordan threw off their shackles and proclaimed their freedom and independence. It was not until 1939, however, that the sovereignty of the country was recognized. Later, in 1946, Jordan started establishing their diplomatic relations with other countries and the nation was declared a monarchy under the kingship of his late majesty, King Abdullah, the founder of the state.

The Kingdom of Jordan is rightfully proud of its accomplishments during its period of national life. The nation has always stood in defense of the principles of democracy and freedom. It is well remembered that its gallant army fought side by side with the Western Allies in the last World War.

In the words of His Excellency Abdul Monem Rifa'i:

The Jordan Kingdom is the protector of the holy places in Jerusalem and Bethlehem, where the Dome of the Rock and the Mosque of Omar stand side by side to the Church of the Holy Sepulcher and the Church of the Nativity, a living symbol of brotherhood and fraternity.

Well aware of the tensions in the Middle East, the Kingdom of Jordan is contributing to the stability of the area by shouldering many of the burdens of the Arab refugees. By offering shelter to more than half the number of the Palestine Arab refugees Jordan is to a great extent alleviating their suffering.

I salute Jordan as she embarks upon a new year of national life and pray for her continued success and progress.

What Would Pat Henry Do?

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Kansas. Mr. Speaker, the season is about upon us to hear the ringing declarations of why we must continue our foreign aid programs with American tax dollars. My own position on these international WPA projects has not been changed from the inception of this giveaway of American tax dollars. Instead of cutting these appropriations a billion or so, I have always advocated cutting them off entirely—not a dollar should be spent. I append to these comments some very, very timely remarks from a county editor, Mr. Ned Huycke, of Ellsworth, Kans.:

[From the Ellsworth (Kans.) Reporter]

WHAT WOULD PAT HENRY DO?

The cases or barrels of tea which Pat Henry and his Boston tea party boys dropped into the ocean in protest against England's taxing the Colonies without representation, was only an iota drop compared to the multitude of things which the American people of today should drop into the laps of the tax instigators—without representation. If taxes seemed high to Pat in his day, he would be petrified at the gigantic load which has been harnessed on the shoulders of the poor American today—and such an immense part of that load is only because of foolish squandering.

The greatest rathole into which our hard-earned dollars are poured goes under the name of "foreign aid." Our slaphappy tax-money spenders at Washington toss billion-dollar appropriations around like a circus juggler does a dozen articles, only his act is amusing, but our Washington spenders' act is critical to our American wage earner and small-business men. The learned men whom we have elected in good faith to save our country from ruin and disaster think nothing of throwing $4 million away as a gift to Israel some more billions on a project of building a dam in Egypt, which in all probability not even the "big-hearted donors" will ever see or reap any benefits from its construction; and their latest brainstorm calls for $4,900,000,000 as vital foreign aid (gift) to save us from the enemy. These "learned" men have spent such huge sums of our hard-earned wages for "foreign aid" that there aren't enough zeros to fill the average line of type to denote the amount spent; all in the name of "buying friendship of foreign nations."

Russia, the big bad wolf, which is the cause of this perpetual fear, hasn't spent a red coin to buy anybody's friendship—and

yet they are making inroads into every country on earth, and internally as a nation are pulling themselves up by their bootstraps to a well-grounded national economy. Her offers of assistance have rarely involved more than simple proposals of trade, at considerable disadvantage to the beneficiaries. Should we not wonder if the recent Soviet offers of assistance to our Western allies? cause dark forebodings both in and out of our State Department?

Can we as a Nation continue to be complacent to these perpetual gifts which have reached the point in the psychology thinking of the receivers that we either continue to give, or else—?

How many of you readers are aware of the fact that in the past 10 years the lawmakers whom we sent trustingly to the Nation's Capitol to wisely steer the ship of state have foolishly and intentionally squandered approximately $51 billion net. Of this, 64 percent went to Western Europe, 20 percent to East and Southeast Asia; 8 percent to the Near East and Africa; 2.1 percent to Eastern Europe, and a meager less than 2 percent to Canada, the U. N., and other international agencies all rolled into one?

While the American wage earner and small-business man is stooped under the huge taxload, West Germany is proposing a tax cut, under the plan a married man with two children and earning the equivalent of $1,400 a year, would pay only about $10 in tax instead of the $53.

On top of all this we learn that despite the fact that we are praying and pleading for peace, more than $12 billion worth of arms have been shipped to our allies. Will we collect cash or get paid in trade for these arms; or is this just another gift in the name of bringing peace into the world for which you and I will have to help pay in high income taxes on the wages we earn; and maybe in the end once again spend the most priceless treasure on earth, the lives of our young men on the very battlefields where these very arms will be used against them.

Yes, Patrick Henry, we wonder what you would have done about taxes with representation.

Falls Power Still Stymied

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. RADWAN. Mr. Speaker, I submit herewith the following editorial which recently appeared in the Buffalo Evening News, Buffalo, N. Y.:

FALLS POWER STILL STYMIED

The picture page of Wednesday's News, showing what rapid progress the Canadians are making in developing their share of Niagara Falls power provides an ironic background, and indeed an infuriating commentary, on the political deadlock in our Congress which, after 6 long years, still permits the American share to go completely to waste—except for the part that Canada is able to use.

Next week the Niagara power issue will finally come to a head in the Senate. But the bill being debated finds New York's two Senators sharply divided, and neither of them on the same side as the majority of the States' Representatives in the House. Meanwhile, the Eisenhower administration is still standing aloof, and the chance of this Congress actually settling the issue and getting some kind of development underway is practically nil.

Three years ago the House voted better than 2 to 1 for the private-enterprise bill sponsored by Representative MILLER, Republican, Lockport, but that bill died of strangulation in the Senate when the 83d Congress adjourned. Now, with the adjournment of the 84th Congress only weeks away, the Senate is debating Senator LEHMAN'S bill, which goes to the opposite, public-power extreme. Senator IVES, who has been moving unhappily between the two, is leading a fight to get the Lehman bill recommitted, but apparently hasn't decided what to support instead.

Enough Senators apparently are undecided so that the vote could tip either way. But even if the Lehman bill is passed, it hasn't a chance of getting passed by the House, and if the Lehman bill is killed, there probably won't be time to put anything in its place, so another Congress seems on the verge of passing out of existence with nothing finally decided about the Niagara power development.

One thing the Senate debate and vote may accomplish, besides giving the whole issue a thorough airing, is to give proponents of all the rival plans a better measure of where they stand in terms of votes. It may thus provide some clues as to what kind of compromise may have to be made if the deadlock is to be broken any time soon.

Certainly the time has come when almost any plan of development is better than no development at all. Meanwhile, there is one way that the project could be started now. Representative RADWAN, Republican, of Buffalo, is still waiting in the wings with his bill to authorize the Army engineers to start building the project at once, and then bow out of the picture whenever Congress can make up its mind who should run it. That interim plan at least has the merit of making constructive use of the time now being wasted in fruitless deadlock.

The Big Boondoggle

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. BEAMER. Mr. Speaker, after reading the very able minority report of the Public Works Appropriations Subcommittee accompanying H. R. 11319 which passed the House on May 22, the following editorial from the Indianapolis Star of May 19, 1956, is very appropriate:

THE BIG BOONDOGGLE

The Tennessee Valley Authority, which President Eisenhower once described as creeping socialism, has stopped creeping and started running. It had an assist from the United States House of Repesentatives and, indirectly, from Republican leaders who sacrificed principle to politics out of fear of giving the opposition an issue.

The House voted permission to TVA to use revenues from the sale of electric power to build and expand steam generating facilities almost at will, without further consultation with Congress. The vote was a clear abdication of congressional duty and a tacit invitation to runaway bureaucratic socialism.

The administration had opposed use of TVA income to build steam plants, and on very sound economic and political grounds, but backed off from a last-minute fight in the House to avoid an election-year debate over TVA. We believe it was a misguided withdrawal, even from the standpoint of political expediency. There is no good reason to believe that a majority of American voters would favor further entrenching socialism in the national life.

Entrenchment it is, for this is now the situation: American taxpayers from Maine to California are forced to contribute toward maintaining TVA existence on an artificial economic level while the Government ownership advocates who run TVA are encouraged to divert revenue into creating an even more gigantic system. It should not be overlooked that it is not "profits" out of which new plants will be built, but revenue—total income.

If the same proposal were put forward in any private corporation, the protests of the stockholders would kill it overnight, even in the unlikely event that it got through the board of directors. Yet here the board of directors—Congress—has in effect said to the operating personnel, "Do whatever you please." And the stockholders—the taxpayers—are not given so much as a chance to hear the matter debated.

TVA has never presented a fair comparison with private utilities. Its financial statements cannot be believed, because capitalization, amortization, and similar accounting items have no real relation to business as it must be done in private enterprise. Its rate structure is highly artificial, set up as it is against a background of taxpayer support.

Indirectly, but nevertheless truly, TVA taxes the many across the country for the support of the few in its operating area. To give such an organization the right to divert its revenue to further expansion without any public control whatsoever is to force self-perpetuating socialism down the throats of millions without giving them the right of protest. If this bill passes both Houses of Congress the President should veto it.

National Library of Medicine in Chicago

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SHEEHAN. Mr. Speaker, all 13 Congressmen from the Chicago and Cook County area have introduced or signified their intention of introducing a bill similar to H. R. 11273, which I introduced last week to create a National Library of Medicine in Chicago.

Under date of May 22, I received a letter from the president of the Medical Center Commission in Chicago, which commission was created by an act of the Illinois State Legislature to foster development as a medical center of the district bounded by Ashland Boulevard, Congress Street, Oakley Boulevard, and Roosevelt Road. Dr. Walter H. Theobald, president of the Medical Center Commission, advised me that the commission will donate the land for the location of the proposed National Library of Medicine.

The members of the Medical Center Commission are as follows: Hon. William G. Stratton, Governor of Illinois; Hon. Daniel Ryan, president, Board of Cook County Commissioners; Hon. Richard J. Daley, mayor of Chicago; Hon. James H.

Gately, president, Chicago Park District; Hon. Latham Castle, attorney general, State of Illinois.

The commissioners of the Medical Center Commission are Walter H. Theobald, M. D., president; Karl A. Meyer, M. D., vice president; Thomas J. Downs, treasurer; C. Hilding Anderson, secretary; Otto L. Bettag, M. D.; Charles J. Burg; Park Livingston; George W. McLester, executive director.

The body of Dr. Walter H. Theobald's May 22, 1956, letter, on behalf of the Medical Center Commission, reads as follows:

This is to let you know that we of the Medical Center Commission deeply appreciate your introducing the bill to establish the National Library of Medicine in Chicago.

Since Chicago is the acknowledged distribution and communications center, as well as the medical center of the United States, the library, when located here, will be more useful to doctors, medical teachers, and research personnel throughout the country than it could be at any other site.

You, of course, are familiar with the unique composition of the Medical Center District on Chicago's West Side. The famous hospitals, professional schools, and related institutions concentrated here make this the world's foremost medical center. The important functions of medical research, medical teaching, and medical care, as featured here, emphasize the suitability of the Medical Center District as the location for the library—where it will be available to the thousands of doctors, teachers, and students who come to this mecca of the healing arts. Establishing the library in the Medical Center District will make it easily accessible also to the personnel of the many other professional institutions and medical organizations at various locations in Chicago.

In view of the immeasurable good that will come from having the library as an important facility of this center, we are pleased to tell you that the Medical Center Commission will donate the land for this purpose.

The offer of the Medical Center Commission is most commendable. With all of the advantages offered by a Chicago location and with no cost to the Federal Government for the land involved, the location of the National Library of Medicine in Chicago is a must.

For Cultural Exchange

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks, I include an address entitled "For Cultural Exchange," by Dr. Joseph E. Maddy, professor of the Department of Music at the University of Michigan and the president of the National Music Camp at Interlochen, Mich., at Kiel Auditorium, St. Louis, Mo., April 16, 1956, on the occasion of the Golden Anniversary Concert by the National High School Orchestra, Band and Chorus for the Music Educators' National Conference. The idea expressed by Dr. Maddy in this address presents a refreshing viewpoint in the field of foreign relations. A viewpoint which I believe will be entirely worthy of serious consideration by our State Department. The opportunities here to spread good will are unlimited and I agree with Dr. Maddy that while we are spending our billions for defense, it might be well to consider a few thousand for a project such as he suggests.

The address follows:

The orchestra to which you are listening is the greatest orchestra in the world. Every violinist in this orchestra is a concertmaster of a fine high-school orchestra, while every wind instrument player is a State champion. Player for player, these young musicians (chosen from 46 States) are practically the equal of the players in the greatest symphony orchestras, but these boys and girls play with an enthusiasm and fervor which is lacking among professional players who play for money.

Their conductor, Thor Johnson, is a native-born American, brought up in our American public school tradition. He received his first important musical inspiration when playing third-chair viola in the All Southern High School Orchestra, which I conducted, at Asheville, N. C., in 1929.

Trained in our own schools and colleges, Thor Johnson has reached the top of his profession as conductor of the Cincinnati Symphony Orchestra. He is one conductor of a major symphony orchestra who knows American music and traditions well enough to present adequate performances of American compositions.

When our major symphony orchestras appear in Europe, with European conductors and mostly European-born players, people have good reason to believe that the only thing American about these orchestras is the American dollars that pay for the services of European conductors and performers.

Last year our United States Information Service sent one of our major symphony orchestras on a tour of Europe for the express purpose of showing that we have not only cowpunchers, gangsters, comics, bathing beauties, and athletes, but also art and artists. But this orchestra played not one American composition. Instead, it played major works by the Russian composers (Shostakovitch, Prokofiev, and Kabalewsky) whose compositions were avowedly written to further the cause of communism. Even though we may believe that music cannot have political influence, the mere act of programing music written admittedly for the promotion of communism is a gesture of approval of the ideology which we in America dread most.

There is a fund called the President's fund amounting to $5 million a year, which is earmarked expressly for the purpose of financing international exchange programs in music, drama, and related arts. This fund is administered by the United States Information Service and the State Department. It is our tax money that is now being spent to promote communistic music in Europe. We can do something about it if we will.

Why not send this great National High School Orchestra, with Thor Johnson as conductor, to Europe—yes, around the world—to demonstrate American culture, instead of sending our major symphony orchestras which are made up largely of foreign musicians with foreign conductors who are not capable of giving American music authentic performances? This would prove to be the most effective goodwill mission we Americans could possibly sponsor.

Why not send the three groups which are performing for you tonight—orchestra, band, and chorus—on a goodwill tour around the world—on a battleship with guns spiked? The young musicians could live on the ship and present concerts in port cities throughout the world. Between concerts they could carry on their academic studies and hold daily rehearsals in preparation for their musical programs.

Every concert they gave would be made up of American works, except for one selection which would be a representative work by a composer of the nation being visited. American works would include compositions by Edward McDowell, John Philip Sousa, Victor Herbert, Henry Hadley, George Gershwin, Howard Hanson, Deems Taylor, Roy Harris, Don Gillis, and others who grew up in our own country and who are able to interpret American ideals and traditions in their music.

At each port of call the band could march down the principal streets playing Sousa marches, with two flags (the Stars and Stripes and the flag of the host nation) and majorettes instead of guns ahead of the band. While the band is making friends downtown small ensemble groups could visit schools presenting programs of American music. Whenever possible, arrangements could be made for our young musicians to visit homes of young musicians in all countries visited. Such visits would greatly accelerate our high-school-age student exchange program.

Inasmuch as every member of these national high school groups has ancestral roots in some foreign country, it will be possible to locate distant relatives of our student musicians in every country visited. This reuniting of families, after perhaps hundreds of years, would do more to convince our neighbors that we are all of one world, than any other act or deed.

When you have given this proposal careful thought, you will realize that such a world tour, on a battleship, by these highly gifted young American musicians, can do more for world friendship and international peace than all of the conferences, peace treaties, and diplomatic efforts of centuries. If you believe this, you will help to bring about the proposed trip by the National High School Orchestra, Band, and Chorus.

Pressure Is on for Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Janesville (Wis.) Daily Gazette of May 1 on the subject of foreign aid:

PRESSURE IS ON FOR FOREIGN AID

New billions in foreign aid have been directly asked of Congress as a part of the administration program intimately tied up with its entire foreign-relations planning. Secretary of State Dulles, with the personal backing of President Eisenhower himself, has stressed what he regards as the necessity of almost 5 billions in new funds to be spent abroad.

A program of such magnitude is bound to meet with disagreement. Throughout the Midwest, particularly, there are unanswered questions as to just why the program should be maintained on the scale proposed. The answers which have been given—always related in some manner or other to the cold war with communism—have given no satisfactory explanation as to why we have provided funds for some vast projects in spots where anti-Red influence certainly is of minor consequence.

If there is any constitutional justification for taxing Americans for the benefits of other nations, it ought to be limited certainly to (1) charity aid to relieve suffering on the basis of need; and (2) projects with some reasonably logical connection to American security or defense.

Such a classification leaves out much of the economic aid that is now being extended, and it also tends to eliminate fuzzy thinking about such things as giving away commodities which we cannot use at home. We ought to recognize that we cannot buy foreign friends; that gifts for the purpose of making over other nations into prototypes of America are likely to fail, even conceding that the end sought is a desirable one; and that our chances of winning leadership for our cause are not furthered by charity which violates the pride of other countries or financial meddling which tends to upset their internal and independent economy.

Our record so far provides little optimism toward the new plans of Secretary Dulles to convert NATO from a military to a European political instrument. There is a call for a lot more explanation than has been offered so far as to why the United States should become more deeply involved in the European political situation, especially when such an adventure is to be financed on American tax dollars.

Naturally enough, the State Department becomes engrossed in matters beyond the seas. Perhaps it can be excused if it fails to keep a finger on the pulse at home also. There are spending limits beyond which we cannot go, a fact which often seems obscure to the diplomats. There are also pressing needs for Federal funds at home, many of which cannot be met. We are deeply in debt—much more deeply than many of the nations we are aiding. We are hoping for, but not getting, tax reduction because there is a general realization that a start on debt cutting is necessary.

Finally, there are the facts and the plans which raise suspicions about the whole purpose and future of foreign aid. Why, we have asked again and again, is it necessary to demand new billions when there are billions already appropriated which are unspent? The fact is, foreign aid money is voted faster than it can be given away.

We are equally suspicious about the plans for a sort of perpetual giveaway. Foreign aid used to be on a year-to-year basis, or for a 5-year period. More recently we have been hearing about the need for "assuring" foreign nations continuing American tax dollars for long periods of time. Some spokesmen have mentioned periods up to 50 years or even 100.

If we must have diplomats completely preoccupied with all of the needs of all of the nations of the globe, we are entitled at least to another arm of the administration equally devoted to looking after the needs and interests of Americans here at home. Of the two, the home folks ought to have a little edge on the foreign-aiders, since they are the ones who must foot all the bills, here and abroad.

Our Stake Is Large

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. EDMONDSON. Mr. Speaker, the following timely editorial in the Costa Mesa (Calif.) Globe-Herald of May 13, 1956, is typical of the thinking of millions of Americans today on a vital matter yet to be resolved by this Congress. As I understand it, more than 30 bills are now pending in the House providing for the extension of the GI home-loan program for World War II veterans. The time for action on these bills is getting very short.

The editorial follows:

OUR STAKE IS LARGE

The time is about a year from now—spring of 1957. A Mesa veteran and his wife, after months and maybe years of planning, have selected the house they want to become their home.

They've chosen a home in one of Costa Mesa's medium-priced subdivisions. After careful comparison with other available houses, they've found just the one they want; it's perfect.

The salesman describes fine points of their choice enthusiastically—until they tell him they want to use the husband's veteran status to buy the home on a Veterans' Administration GI loan.

"Sorry," the salesman says disappointingly, "No more GI loans available."

The VA-backed loan program for World War II veterans will, unless Congress extends the deadline, expire July 25, 1957. Even before the deadline, homebuilders will be shutting off home sales backed by the VA program. And the disappointment of the young veteran and his wife will be mirrored in the families of thousands of other veterans who until then just hadn't piled up enough money to buy a home.

For the lusty, booming city of Costa Mesa, the impact may be serious.

Costa Mesa will build more than 1,000 homes during 1956. It's probable that 70 to 80 percent of them will be purchased with VA-guaranteed loans. That upward trend in homebuilding—nearly half again as big as 1955—could be tottering seriously if the stabilizing factor of the GI loan is removed.

Builders say—and back it up with statistics—that the GI-loan program kicked off the tremendous post-World War II building boom. Today, GI loans still are an integral part of the economy in many key spots in the United States. Southern California, Orange County and, more specifically, Costa Mesa are keyed to building. When it lags, our community development seems destined to lag too.

How many veterans are affected?

By December 1955 only 29 percent of World War II veterans had been issued loan guarantees by the Veterans Administration. Only 7 percent of Korean veterans had been able to receive GI loans.

Yet 30 percent of the new housing units in the United States were backed by GI loans. And this 30 percent, say building authorities, is the key portion—the trigger which exploded the building boom and the power factor which kept it going.

It's difficult to call a GI loan a gift—or even a subsidy. Basically, a GI loan is simply a Government underwriting of a home loan. Losses to the Government are all but unheard of and the program has been praised by even the most ardent of the keep-Government-out-of-everything critics.

Why, then, is it ending?

When the GI loan provision was written into the huge GI bill during the closing part of World War II it was felt that 10 years was sufficient time to offer help for the men whose lives were interrupted by duty in the Armed Forces.

And, in most cases, it was. Ten years is enough time to decide for or against a college education. A few years was plenty for the famed 52–20 club unemployment benefits. But buying a home is different; it's a lifetime decision that can't be put into action in a short time.

Gen. Omer Bradley's Commission on Veterans' Benefits has recommended extension of the GI home loan deadline so rights will gradually expire over the following 2 years after July 25, 1957. At least two bills asking the same stretch have been introduced into Congress; both are undergoing the mysteries of committeeing—locked inside a House committee without hint of their future.

What the committee does, and what Congress does, should be watched with interest by Costa Mesa.

Not many communities have a higher stake in the GI home loan program.

Sukarno Speaks for Asians

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MADDEN. Mr. Speaker, all the Members of Congress were very much impressed with the speech before the joint session by President Sukarno of Indonesia.

H. B. Snyder, editor of the Gary Post-Tribune in the issue of Tuesday, May 22, wrote the following editorial which contains a few practical and factual suggestions on our Far East foreign problems:

President Sukarno's frank speech before a joint session of Congress could not have been made at a better time. It came while Congress is in the midst of a debate over foreign aid, and Sukarno's strongest points concerned our aid policy.

Sukarno's homeland of Indonesia is one of the new Asiatic nations developed since World War II. We had much to do with its freedom, in urging the Netherlands to adopt a liberation policy. But Indonesia has been among the neutralist countries; it has shied away from accepting United States military aid.

Indonesia wants technical assistance, rather than arms aid, Sukarno told Congress. He makes out a good case for the Indonesian policy. Military aid is no substitute for Asian stability, he told Congress. And these words deserve attention:

"The main aim should be for the people of Asia, like the western nations, to become economically stable, but also politically stable, and thus be able to defend their freedom against all assaults."

We must be concerned with people, not just governments. "To a famished man, democracy can never be more than a slogan," Sukarno said to Congress. Unless headway is made against famine and disease, there can be no stability in the government and military aid will be of no value. If there is economic and political stability, there will be little need for military aid.

It is sometimes difficult for us to understand the great desire on the part of Indonesians and other newly freed Asian peoples to maintain their independence in every way. Sukarno gave expression to it.

Economic assistance will be of mutual benefit, he said; it will mean "a greater measure of goodwill" and "a greater volume of production." Then he cautioned:

"But from whatever quarter * * * that assistance comes, we are determined that no material advantage will buy from us any part of our hard-won freedom, for that freedom is more dear to us than the products which any country can give or sell.

"We welcome assistance on terms of mutual benefit. We reject the idea of exchanging intellectual and spiritual independence or physical liberty for momentary advantage."

There are other nations that feel the same as the Indonesians, and as strongly so. They will welcome aid and technical guidance on a basis of mutual benefit. They are intensely jealous of their new-won freedom; they resent any suggestions that they barter some of it away.

If we gear our foreign aid program to meet this situation, we can make real friends among the Asians—and friends are much more to be desired than purchased allies. Russia has discovered the fact of this, and is sending its technicians wherever they can get in the door.

We should have no thought of a give-away race with Russia. But we can establish our aid program on a basis which will convince Sukarno and leaders of the other "have-not" nations that we have a sincere desire to help them as full members in the family of nations and not as puppets.

The Panama Canal: Opposing Designs

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, a revealing news story growing out of meetings of the Panama Canal Society of Washington, D. C., and the National Rivers and Harbors Congress in the Nation's Capital on May 12, 1956, was published on Page A7 in the Washington, D. C., Sunday Star, on May 13.

Of special interest are the statements of Hon. Maurice H. Thatcher, who for more than 3 years, 1910–1913, was a member of the Isthmian Canal Commission, serving as Governor of the Canal Zone, and later a Member of Congress for many years, with service throughout on the Committee on Appropriations.

Under leave to extend my remarks, I include the material referred to:

PANAMA CANAL DEBATED ANEW—LEVEL OR LOCKS?

A 50-year-old controversy over whether the Panama Canal should be sea level or its present lock type flared into the open here yesterday.

The closing session of the National Rivers and Harbors Congress convention unanimously urged conversion of the 50-mile-long canal to link the Atlantic and Pacific at ocean level.

The estimated cost of the undertaking, according to the congress, would be $4.8 billion. The canal is now 85 feet at its highest elevation at Gaillard (Culebra) Cut.

At almost the same hour, in another downtown hotel, the Panama Canal Society of Washington was paying tribute to the engineer who 50 years ago finally beat down sea-level proponents and won congressional and executive approval of a lock-type canal.

THATCHER COMMENTS

The society membership nationally consists of about 2,000 surviving engineers, designers and "ditch-diggers" who actually worked on the great project 4 decades ago.

A leader of the local chapter, informed of the Rivers and Harbors convention recommendation, reacted strongly.

Maurice H. Thatcher, former Governor of the Panama Canal Zone, sole living member of the original Isthmian Canal Commission and honorary life president of the local society, said:

"The expense of the proposed conversion would be astronomical—between $5 and $10 billion—with every sort of imponderable to threaten even higher cost.

COULD BE MODIFIED

"Proper modification of the present canal would cost only a fraction of the sea level estimate.

"We should hold fast to that which has been proven good."

In its resolution, the Congress convention contended that a sea level canal is vital to national defense. Damage wrought by a nuclear attack could be more easily cleared away, they contended. This could be of vital importance, it was held, since the big ditch carries about 40 percent of the Nation's coast-to-coast movement.

Representative BROOKS, Democrat of Louisiana, president of the rivers and harbors organization, said he will soon have the report published as a document of the House of Representatives.

Mr. Thatcher, a former Representative from Kentucky, depreciated the proposed alteration as a security measure.

SEES LANDSLIDE DANGER

"If a direct atomic bomb hit should be made, the canal—no matter what type it is—would be wrecked," he asserted.

One of the greatest hazards, moreover, would be the increased danger of landslides, he added.

While the convention report accused the executive and legislative branches of "continued inaction" in the recommended "vital security measure," another official of the Panama Canal Society saw it in another light.

"It would be," he said, "an unmitigated raid on the Treasury of the United States."

At the indicated meeting of the Panama Canal Society, the principal feature was the formal honor paid to John F. Stevens, Chief Engineer of the Isthmian Canal Commission, who was chiefly responsible for the adoption, by President Theodore Roosevelt and the Congress, of the lake-lock plan, under which the Canal was constructed and has since been operated with such splendid success. The guest speaker was Congressman Daniel J. Flood, of Pennsylvania who delivered a brilliant and highly informative address narrating the essential facts of the fateful, historic discussion of 50 years ago in which Stevens played such an outstanding role, which was published in the May 17 and 18, 1956, issues of the Star and Herald, Panama, Republic of Panama. The Speaker paid high tribute to the great engineer and gave certain very interesting and hitherto unnoted incidents concerning the latter's Isthmian service.

In the well-known English-Spanish newspaper, the Americas Daily—Diario las Américas of May 1, 1956, there appeared the following article relative to the described occasion:

THE LOCK AND LAKE SYSTEM OF CANAL IN PANAMA HAS BEEN A GREAT SUCCESS

WASHINGTON, May 14—The Panama Canal Society of Washington held its annual dinner here as a memorial to honor John F. Stevens, chief engineer of the Isthmian Canal Commission from 1905 to 1907.

Occasion for the memorial was the 50th anniversary approval by Congress and President Theodore Roosevelt of a locks canal at Panama rather than a sea-level waterway.

After years of debate, Congress adopted the high-level lake and lock plan recommended by the minority of the International Board of Consulting Engineers and Stevens.

Representative DANIEL J. FLOOD, Democrat, of Pennsylvania, in an address to the society said that this was the great decision in the United States construction of the canal.

"The wisdom of the original determination has long been recognized as completely established," FLOOD said.

"Whatever may have been urged at the time of the decision as to the merits of the so-called sea-level design, it is a matter of history that the existing canal was constructed substantially according to the plan strongly recommended by Chief Engineer Stevens.

"Moreover, it has proved an eminent success, with the transit since 1914 of more than 249,980 vessels of various classes of all nations commercial and military, with toll rates measurably reflecting the costs of construction, maintenance, and operation."

FLOOD said that in historical perspective, facts demonstrate that Stevens was the basic architect of the Panama Canal, and that he has gained stature with the years.

"A man of eminent vision whose great gifts were harnessed to practicality, Stevens made no major mistakes, either of engineering or policy," he said

"His great constructive contributions for the Panama Canal have now emerged into historical perspective."

The Stevens family was represented at the memorial dinner by Earl Harding, a former editor of the New York World.

Toastmaster was Maurice H. Thatcher, former Governor of the Canal Zone, and last living member of the United States Isthmian Canal Commission.

In this connection, I also desire to invite attention to an extension of my remarks appearing in the RECORD of June 1, 1955, giving an account of the annual meeting of the Panama Canal Society of New York on May 7, 1955. This includes the address by Governor Thatcher on "Isthmian Memories and Problems," in which, with temperate and convincing reasons, he set forth major objections to a new Panama Canal of sea-level design, and arguments in favor of increasing the capacity of the existing canal by means of the proposed terminal lake plan.

A brief résumé of the address was published in the English section of the May 8, 1955, edition of the newspaper, the Americas Daily-El Diario Las Americas, which I quote:

PANAMA CANAL EXPERT RECOMMENDS IMPROVEMENT OF PRESENT LOCKS—HE URGES A GENERAL REVIEW OF ECONOMIC, POLITICAL, ENGINEERING AND INTERNATIONAL PROBLEMS OF THE CANAL

NEW YORK.—Maurice H. Thatcher, last surviving member of the Isthmian Canal Commission, in an address yesterday urged improvement of the present Panama locks canal rather than a sea level Atlantic-to-Pacific waterway.

Thatcher was former governor of the Canal Zone and also served five terms from Kentucky in the House of Representatives. He is a recognized authority on the interoceanic communications problem.

He spoke before the Panama Canal Society of New York, at a meeting presided by Maj. Goy W. Hebard.

Thatcher urged the necessity of a general review of economic, political, engineering and international problems related to the canal situation. This would be undertaken by a proposed interoceanic canals commission.

Bills authoribing the interoceanic canals commission have been introduced in the Senate by Senator THOMAS E. MARTIN, Republi-

can of Iowa, and in the House by Representative CLARK W. THOMPSON, Democrat of Texas.

Thatcher said that sooner or later, increased facilities must be provided for transisthmian shipping.

"Congressional debates since 1947 have brought the principal issues into focus, and the canal proposals are now better understood," he said. "These include three principal ideas as follows:

"1. Increase of canal capacity and operational facility by means of the maximum utilization of the existing waterway according to the well-known terminal lake-third locks plan.

"2. Abandonment of the present canal and construction of a new canal at sea level with tidal locks near the Pacific end of the canal.

"3. Construction of a canal at another location, such as Nicaragua.

"The implications of these proposals are tremendous and affect the future welfare of the United States. The problems are not merely engineering and marine in character. In addition they include grave questions of international relations, interoceanic commerce, and economics."

Thatcher said that a sea-level canal at Panama would cost between 5 and 10 billion dollars, and would require higher tolls for transit.

"Any material increase in tolls would inevitably harm our own merchant marine more than that of any other nation, because of higher wage and benefit conditions obtaining in our own shipping systems than in those of other nations," Thatcher said. "The net outcome of such a situation, in my judgment, would be well calculated to drive our ships from the seas."

Based on his experience in Congress, Thatcher said, "I cannot believe that congressional sanction may ever be given to the abandonment of the present Panama Canal and the construction of an entirely new waterway of unknown design and at astronomical cost, unless convinced in the most satisfactory way, that such action is absolute and indispensable solution required.

"Indeed, I believe that, rather than authorize such a source the Congress is more likely to turn to Nicaragua or to some other region if a new canal—to meet the growing need of shipping—is required, meanwhile retaining the Panama Canal in its present general form."

Thatcher said that a sea-level waterway at Panama would be menaced by landslides.

"I cannot believe that Wallace, Stevens, Goethals, Siebert, and Gaillard, and all the host of distinguished engineers who participated in the construction of the Panama Canal—were they alive today—would favor the abandonment of the present design for one that required a deepened excavation of 100 or more feet in Gaillard Cut, with all the slides that would inevitably result," he said.

True Brotherhood: Harmony, But Not Single Race

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. GATHINGS. Mr. Speaker, the people who reside in the San Fernando Valley in California are extremely fortunate in being privileged to read the fine, reasoned articles written by Mr. George H. Todt, which appear in the Valley News. It is my purpose to accord that opportunity to the House with respect to one of the recent features carried in his column.

Mr. Todt's article concerns the problems of integration. Mr. Todt, without rancor and with great sensitiveness, has written this thought-provoking article that should be read by all Members of both Houses of Congress. The article is entitled "True Brotherhood, Harmony But Not Single Race." It is a learned and understanding approach to this issue. Under leave to extend my remarks, I wish to include this article in its entirety in the RECORD:

TRUE BROTHERHOOD: HARMONY, BUT NOT SINGLE RACE

(By George H. Todt)

"When man to man shall be a friend and brother." (Gerald Massey.)

What is it that constitutes "brotherhood" among the races of mankind and how is it measured?

The National Council of Christians and Jews is one organization which proclaims an annual Brotherhood Week. The idea behind it is that, since we are all spiritual children of God, we should consider ourselves a brotherhood within the human race. And it naturally follows that we must subjugate our differences with each other in order to gain increased stature through the application of tolerance and respect to one another in our daily lives.

Such an idea is commendable. However, in attempting to carry it out, some people go overboard in the wrong direction. They think in physical instead of spiritual terms, and their aims become confused. These persons seem to think of world brotherhood in the sense of ultimately mixing—or scrambling—the present races of man into a world omelet, or perhaps a stew.

"Mix the whites, blacks, yellows and reds to the point where they all become an eventual dark green," they tell us. "Then there will be no more racial antagonisms, and we shall have true brotherhood."

I cannot agree with such fallacious reasoning. I believe we can better obtain a righteous measure of brotherhood by retaining our individuality—as people, as nations, and as races within the human family. For true brotherhood is measured more by good will and unselfish service to our fellow man than any outward physical resemblances to each other.

In truth, there may be said to be more real brotherhood between strangers who are men of good will than between two sons born of the same woman where friendship does not exist between them. And that is the test.

To those who advocate forcible mixture of the various races, my reply to them is that it was Almighty God who created our physical differences on this planet—and who is he with the spiritual authority to order the handiwork of God to be undone?

For if He had not loved his children in all the colors of their skins, He would not have created them so.

From the historical standpoint, all the races of man have had their proud moments in the past. First one has been in the ascendancy, then another. It is useless to speculate on superiority and inferiority of the different strains of mankind. Actually we are in a constant state of flux as we move upward in the cosmic scheme. Who can foretell tomorrow?

The point is that we are all human beings entitled to be judged on our individual merits rather than as mere components of any racial package. To obtain a realistic measure of brotherhood in the world of the future, perhaps the qualities of good will and respect for each other should be based upon correct behavior patterns.

But God never intended for us to become a racial mixture which was neither fish nor fowl.

Beyond the Call of Duty

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. WEAVER. Mr. Speaker, I want to commend Mr. Otto Gibson, a fireman with the Missouri Pacific Railroad, who is a fellow citizen of my hometown, Falls City, Nebr.

A courageous and heroic act by Mr. Gibson recently saved the life of a small child. Appropriately Mr. Gibson received the Presidential Medal of Honor—the highest civilian award for courageous action.

An article from the May issue, 1956, Benefit Association of Railway Employees—BARE magazine—entitled "Beyond the Call of Duty" relates the full story and the high honor accorded to Mr. Gibson:

BARE HERO WINS MEDAL OF HONOR—BEYOND THE CALL OF DUTY

Running through the waning light of early evening near South Omaha, Nebr., one June day in 1954, BARE member Otto L. Gibson, Missouri Pacific fireman, and his engineer got the shock of their lives. Moving swiftly toward them out of the dusk on the track ahead they saw the form of a small child.

In the split second it took to slam on the emergency air brakes, Brother Gibson realized that the train could not stop in time. Even as this thought flashed in his mind, he was moving out of the diesel's operating cab toward the front footboard. As the engine slowed, he leaped to the ground and raced ahead of it, scooping the youngster up in his arms and rolling down the embankment to safety.

In recognition of his act of bravery Gibson became the first MOP employee to receive the Presidential Medal of Honor for outstanding heroism above and beyond the call of duty—the Nation's highest civilian award for courageous action.

The presentation of the bronze medal was made on behalf of President Eisenhower by Anthony Arpaia, chairman of the Interstate Commerce Commission in the Nation's Capital recently. The ceremony took place in the hearing room of the ICC. It marked the 69th awarding of the medal for outstanding heroism, and it was the first time an employee of the Missouri Pacific has been so honored.

At the time the incident occurred, Gibson dismissed it as "just one of those things which happen all the time." However, the grandfather of the rescued youngster told the story to the Omaha police and to the newspapers there. The heroic railroader's action was recognized and steps were taken to honor him for saving the youngster's life.

Accompanying Gibson to Washington for the presentation ceremony were Mrs. Gibson and 6 of the couple's 10 children. They were guests of the MOP while on the trip. The children making the trip were Douglas, 20, attending college; LaMarr, 17, Robert, 16,

Constance, 15, and Karen, 13, all attending high school at Falls City, Nebr.; and Yvonne, 19, who is in the Air Force stationed at Hamilton Air Force Base near San Francisco. She was on leave for the ceremonies.

After the ceremonies in Washington, the Gibson family was shown around the Capitol, the Senate and the House, by Nebraska Congressman PHIL WEAVER, and next day enjoyed a sightseeing tour of the Nation's Capital before going home. Missouri Pacific Vice President R. P. Hart, and Gibson's division superintendent, T. E. Fox, accompanied the family to Washington where others of the line's officials in Washington and St. Louis public relations representatives joined them to participate in the impressive ceremonies.

Mr. Gibson, who fires on the Omaha-Northern Kansas division of the Missouri Pacific, has carried BARE insurance for nearly 8 years, having obtained hospital-surgical protection for himself and his family in 1948.

Some Good in Nationalism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial that appeared recently in the Wall Street Journal. Some would have us believe that nationalism is wrong in principle, that it is a narrow selfish attitude. This editorial suggests otherwise:

NATIONALISM

In the common search for the ideal world, the term nationalism has come to be looked on almost as a synonym for selfishness and narrow insularity. But President Sukarno, of Indonesia, equated it with some different things in his speech before the Congress. What he had to say was a reminder of some truths we have perhaps forgot and a warning to us that others haven't.

Asians and Africans haven't, because to them nationalism means a new pride in country, ambition for self-rule, and determination to plan and carry out their own future. There is very little else but nationalism to make a people such as the Indonesians, so recently colonial, stand together. It was Benjamin Franklin who warned, in grim if jocular fashion, that our own early founders would hang separately if they didn't hang together.

Nationalism to Mr. Sukarno is a sound and progressive creed, the mainspring of their efforts. "Understand that, and you have the key to much of postwar history. Fail to understand it, and no amount of thinking, no torrent of words, and no Niagara of dollars will produce anything but bitterness and disillusionment."

What is true of the Indonesians is also true of all the others recently risen from colonial status. They cannot be brought; friendship never could be bought and never will be bought. What they seek is understanding and help to work out their own destinies. They will accept gladly, Mr. Sukarno said, "any assistance that may come to us, from whatever quarter it may come * * *." He thinks ill of our contributions to Asian nations to build their military establishments. He would accept help equally from Russia or the United Sattes, and he does not want any strings of military or ideological alliance attached.

There are many thoughtful people who will think Mr. Sukarno wrong. They will argue that the interests not just of the free world but of the Indonesians are best safeguarded only through an alliance.

Whether he is wrong is beside the point, however. The point is that under his leadership, and unless he changes, Indonesia will be a neutral country. The problem he has placed forthrightly before the Congress is, what should the United States do about neutral countries? Another is whether it is necessary or to our interests to try to change them.

Perhaps we should realize that a neutral country, after all, is not an enemy. Perhaps this means a reassessment of foreign policy and a change from the military emphasis of our foreign aid. It is worse than useless to spend a Niagara of dollars when the return is only disillusionment.

Above all, perhaps we have forgot what must be the views of people so recently a colonial people. A new nation, struggling for its place in the councils and market places of the world, a proud and intelligent people as are the Indonesians, will do nothing to jeopardize that new-won freedom. This includes refusal to choose between two great powers of differing ideologies, a reaction not so strange, or new. Mr. Washington warned this young nation against the dangers of choosing sides.

We should be thankful to Mr. Sukarno for his instruction that nationalism is not always the vice it's said to be. It has great virtues, too, which must be understood and respected by us; the danger is in not doing so.

For if we insist on a neutral nation choosing sides through either our power or our purse, we are likely not to gain a friend but to lose a neutral and make an enemy. And that, indeed, would be bitter for both.

Ezra's Changing Image

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include an article entitled "Ezra's Changing Image" from the editorial page of the St. Louis Post-Dispatch dated April 27:

EZRA'S CHANGING IMAGE

Secretary of Agriculture Benson has now completed the job of putting into force a new schedule of election-year farm-price supports, and it seems clear that the popular image of the Secretary will have to be revised.

Ever since coming into office, Secretary Benson has been known as a perfect lion of a man, brave, flinty, indomitable foe of expediency, embodiment of unyielding principle—in short, just great. When he called the Brannan plan "morally corrupt," his own purity of character shone forth like the new weather beacon on top of the General American Life Insurance Building. Here was a man who, as he himself did not mind suggesting, would always do right, the whole right, and nothing but the right.

Now it does not quite track. Brave and flinty Ezra, etc., etc., turns out to be just about as flexible as the sliding-scale price supports he used to advocate up to a few weeks ago. Basically the farm situation has not undergone any drastic change within the last month. Yet Secretary Benson is now setting all the major price supports well above the levels where he had previously announced they would be set.

How does it happen that brave and flinty Ezra, etc., could consider 75 percent of parity an adequate support level for cotton in March, but in April deems 82½ percent necessary? What considerations impelled him to raise wheat from 76 percent to 84 percent, commercial corn from 81 to 86, rice from 75 to 83, and so on?

The answer is, of course, well known, and it does not have much to do with principle. Secretary Benson changed his mind because the President told him to. And the President told him to because sugar coating was needed—at least enough to last until November—for the pill of the farm bill veto.

Secretary Benson turns out to be quite a generous man. When the new price support levels are applied to estimated 1956 crops, he is offering the farmers $1,611,000,000 more than he had intended to offer them before the veto. He has even told corn growers in the commercial corn States that they can produce all the corn they want to this year, disregarding acreage restrictions, and still receive price support loans at 82 percent of parity. In the old days, they had to restrict their production in order to qualify for price supports.

Of course Secretary Benson is not as openhanded as Congress. Nobody could expect that. Congress, with its 90 percent supports across the board, offered farmers $2,200,000,000 more in prospective crop values for 1956 than they would have received under the old, or flinty, Benson program.

All the same, Ezra, we think, is doing pretty well. Pretty well for Ezra, anyhow.

Farm Legislation, 1956

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. WHARTON. Mr. Speaker, under date of April 11 the CONGRESSIONAL RECORD contained my impression of the farm bill which I characterized as Christmas tree legislation with something hung on it here and there for about every segment of agriculture. Relief for the northeast dairy industry, however, was conspicuous by its absence and the same held true for our fruit and poultry industries.

I sometimes suspect that first impressions of this nature will bear further scrutiny, but in this case my judgment was vindicated by the President's veto of the measure.

On May 3 another farm bill came before the House, practically without notice and certainly without an opportunity for the various farm organizations to examine or comment upon it. Again, the basic commodities seemed to be pretty well provided for with a total disregard for milk, fruit, and poultry. Once more I voted against the proposal under the impression that it was no improvement upon the first attempt.

On even date we have the resulting conference report before the House and I note with considerable interest that the two proposals from the Senate which might tend to give the northeastern farmer a little relief, have been elimi-

nated: First, the sale of 100 million bushels of surplus wheat for low-priced live stock feed; and, second, the growing of wheat to be used on the farm without penalty.

This action on the part of the conferees removes any doubt as to the desirability of the bill and I can claim consistency at least in voting against the conference report.

Reduction of Premium Rates for FHA Insurance on Cooperative Housing

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. HOLTZMAN. Mr. Speaker, during the 1st session of the 84th Congress I introduced H. R. 4443, which provides for the reduction of premium rates for FHA insurance on cooperative housing from one-half of 1 percent to one-fourth of 1 percent.

This morning I had an opportunity to testify before the House Committee on Banking and Currency, to urge that this particular legislation be enacted, and I would like to include herewith my testimony:

Mr. Chairman and members of the committee, first I would like to express my appreciation to you for granting me an opportunity to appear before you to testify in behalf of H. R. 4443, a bill I introduced during the last session, which would reduce the premium rates for FHA insurance on cooperative housing from one-half of 1 percent to one-fourth of 1 percent.

I realize that the Housing and Home Finance Agency has not reported favorably on this legislation, indicating that it is the Agency's view that the amount of mortgage insurance premium should be directly related to the risk involved and the adequacy of the various insurance funds set out in the National Housing Act. The Agency also states that from their experience they have found no evidence which would indicate that the risk involved in the case of cooperative housing is any less than the risk involved in the other insurance programs administered under the National Housing Act, or that the insurance fund for cooperative housing is of such a nature that a reduced premium is warranted.

However, I would like to point out a few facts. Since the end of the war there has been a very critical shortage of housing for the middle-income group, many of whom are veterans. Section 213 of the Housing Act was designed to fill the gap between public housing for the low-income groups and private homes and luxury apartments for the high-income groups. Unfortunately, as we have learned, some builders were able to use section 213 for their own private gain, far in excess of a reasonable profit, to the detriment of the very people for whom section 213 was intended. The net result has been that in every section 213 cooperative which has been built, increases in carrying charges have occurred ranging from 10 to 30 percent and more, forcing many of our citizens, most of them veterans, to vacate their apartments because they were unable to meet these increased charges.

The residents of the 213 cooperatives are deserving of relief. Practically all of them relied upon the representations of the builders that the various cooperatives were under the supervision and guidance of the FHA, which implied that the FHA had carefully scrutinized the proposed carrying charges and verified them. That, in fact, was not done, and it either should have been done, or the FHA should have forced the builders to represent the true picture of the co-op corporations before the tenant-stockholders purchased stock and signed occupancy agreements.

One feasible avenue of relief for the section 213 cooperatives is the reduction of the FHA mortgage insurance premium from one-half to one-fourth of 1 percent per annum of the amount of the principal application of the mortgage outstanding at any time.

Experience has shown that there have been practically no foreclosures of section 213 cooperatives, and thus the fund created by the mortgage insurance premiums has not been touched. It is reasonable and fair to assume that the continued prosperity of section 213 cooperatives and the nonexistence of foreclosures will continue. Moreover, the fund created by the mortgage insurance premiums is not an escrow or separate fund, but is part of the general funds of the FHA, not specifically designated to indemnify the Government in the event it becomes liable, pursuant to Government guaranteed mortgages issued pursuant to section 213.

Reduction of the mortgage insurance premiums as set forth in my proposed bill will enable all cooperatives built under section 213 to resist further carrying charge increases at no expense to the FHA, and without causing any detriment to that agency.

The section 213 cooperatives have proven to be excellent insurance risks in the past, and the reduction in the present mortgage insurance premiums will be a tremendous help to the tenant-stockholders. The cooperatives have shown that with strong and intelligent management they have been able to operate and maintain their properties at a minimum cost.

If the FHA had taken definite steps in the first place to protect the tenant-stockholders who bought into the cooperatives, the terrific increases in carrying charges would not have taken place.

These people are entitled to our consideration and support, and I urge you to study H. R. 4443 carefully with a view toward reporting it favorably to the House of Representatives.

In addition, I might suggest that you permit some of those most closely associated with the operation of these cooperatives to testify before your committee so that they can give you a true and factual picture of the problems faced by these projects under the present system.

The Camp Drum Answer

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Watertown Daily Times, Watertown, N. Y., on the question of naming Camp Drum for a permanent base for year-around use. The editorial states the arguments logically and with good reasoning. I hope the Army will reconsider.

THE CAMP DRUM ANSWER

The Secretary of the Army, Wilber M. Brucker, has tried to explain to Congressman KILBURN why the Army has no interest in operating a year-round program at Camp Drum. The only difference between this explanation and the previous explanation is that it is longer. The principal reason is $1,500,000 expense for which, in the eyes of the Army, there is no military justification.

The military mind at work is truly something to behold. The Army, quoting from a report made several years ago, says that Camp Drum "offers no outstanding or peculiar terrain or weather condition which requires its use for specialized training." Secretary Brucker says that an Army installation board had once considered Camp Drum as a possible suitable site for cold weather training. Its conclusions were that snow conditions at Camp Drum are unreliable.

One of the beauties of modern mechanized warfare is that it requires not only reliable weather for training, but also reliable weather for fighting. In the old days, of course, unreliable weather created unnecessary military problems. In this day of specialization, however, it is much simpler to eliminate the problems by selecting reliable weather. Apparently, somewhere in the Army training manuals the requirements for cold-weather training are specified. The temperature must be such-and-such, and the snow depth will be specifically X number of inches or feet. Anything more or anything less is unreliable and, therefore, not fitted for appropriate training.

Mr. Brucker, in his letter to Congressman KILBURN, further pointed out that the Army reviews Camp Drum's status every year, and the last review of the status was in the 3-month period ending March 31. There was an evaluation, he said, of the Army's requirement versus budgetary and manpower limitations, and the concluding recommendation was that Camp Drum not be reactivated. It is very clear as of now that the Army's mind will not be changed.

It becomes increasingly clear that somewhere in the upper ranks of the Army there are several officers who are particularly stubborn with respect to using this military reservation on a round-the-year basis. Who they are and where they are located to date has not been revealed. They are not included in the ranks of the military leaders who come to Camp Drum each year. All of them on many occasions have committed themselves to the desirability of the camp for year-round use. Some have gone into retirement, to be replaced by successors who are every bit as enthusiastic about the camp. They, like Congressman KILBURN and Senator LEHMAN, however, have been unable to penetrate that back room where the antagonism to the camp is located. They will succeed someday. The letter from Secretary Brucker is convincing evidence that greater effort must be made to root out the opponents of Camp Drum.

Questionnaire

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am inserting at this point in the RECORD the results of a poll conducted among my constituents on questions pertinent to present issues. I am sure that the

Members will find the results of this poll quite interesting:

QUESTIONNAIRE RESULTS FROM CONGRESSMAN LAWRENCE H. SMITH, SUPPLEMENT TO ISSUE NO. 191 IN THE MILL AT WASHINGTON, MAY 22, 1956

1. President Eisenhower is asking for $4.9 billion in foreign aid:

(a) Do you favor continued military aid? Yes, 976; no, 1,242.

(b) Do you favor continued economic aid in dollars? Yes, 574; no, 1,564.

(c) Do you favor continued technical aid as self-help? Yes, 1,475; no, 668.

(d) Do you favor a 10-year aid program. Yes, 642; no, 1,589.

2. Should our immigration laws be liberalized to permit increased immigration? Yes, 679; no, 1,595.

3. Should the free-world nations supply Communist countries with strategic materials: copper, machine tools, etc.? Yes, 44; no, 2,205.

4. Do you think East-West trade should be permitted? Yes, 983; no, 966.

5. Do you think the free world can coexist with the Communist world, under existing conditions? Yes, 796; no, 1,338.

6. Do you think Red China should be admitted to the United Nations? Yes, 112; no, 2,101.

7. Should the United States vote against Red China's admission to the United Nations? Yes, 1,834; no, 302.

8. Do you think the new Russian attitude indicates a desire to live at peace with the free world? Yes, 86; no, 2,024.

9. Do you think United States aid is stopping the spread of communism? Yes, 737; no, 1,333.

10. Should the United States share its knowledge of atomic energy with other countries? Yes, 688; no, 1,439.

11. Do you favor the soil-bank plan for agriculture? Yes, 1,028; no, 987.

12. Do you approve of the flexible price-support idea? Yes, 1,201; no, 807.

13. Do you approve of 90 percent of parity for all agricultural commodities: milk, corn, cotton, wheat, tobacco, peanuts, etc.? Yes, 151; no, 1,936.

14. Do you think a self-help program is advisable for the dairy farmer, with some aid from the Federal Government? Yes, 2,295; no, 291.

15. Do you believe that Congress can solve the farm problem? Yes, 692; no, 1,364.

16. The Federal Government proposes aid to education:

(a) Do you favor the Federal Government providing school-construction funds to States on a matching basis, but under strict State control? Yes, 964; no, 1,128.

(b) Do you approve the Federal Government making long-term, low-interest loans for school construction? Yes, 1,138; no, 673.

(c) Are you against Federal aid to schools in any form? Yes, 965; no, 1,129.

17. Do you approve Federal funds for local library purposes? Yes, 562; no, 1,635.

18. The Federal Goverment proposes a long-range highway program:

(a) Do you think we should pay for it as we go by a gas-tax increase? Yes, 1,162; no, 799.

(b) Should we finance it by bonds? Yes, 858; no, 913.

(c) Should we delay this program to a later date, in view of existing deficits? Yes, 869; no, 1,040.

19. Do you favor a right-to-work law? Yes, 1,921; no, 163.

20. Do you think labor unions should enter political contests, as such? Yes, 96; no, 2,107.

21. Do you think that union funds should be used for political purposes without consent of members? Yes, 21; no, 2,195.

(a) Or with the consent of members? Yes, 281; no, 1,785.

22. Do you favor requiring registration of pension and welfare funds collected by unions? Yes, 2,138; no, 82.

23. Do you favor reduction of taxes before balancing the budget? Yes, 592; no, 1,645.

24. Do you favor an increase in postal rates to meet postal deficits? Yes, 1,474; no, 670.

25. Do you favor lowering the social-security age limit for women from 65 to 62 years? Yes, 1,241; no, 961.

26. Do you approve extending social security to all groups of workers not presently covered by this plan? Yes, 1,316; no, 820.

27. Do you approve Federal funds for research in the field of health? Yes, 1,396; no, 770.

28. Do you favor appropriations for public housing? Yes, 401; no, 1,715.

29. Do you favor appropriations for housing for elderly people on a modest basis? Yes, 1,183; no, 982.

30. Do you favor granting pensions to war veterans 65 years of age or older, on the basis of need? Yes, 1,318; no, 878.

31. Please check the 6 issues you think most important today:

Government spending, 1,649.
Maintaining peace, 1,512.
Control of communism in America, 1,460.
Balancing the budget, 1,416.
Taxation, 1,387.
Communists or fifth amendment people in Government, 1,372.
Reduction of debt of Federal Government, 1,330.
Farm prices and policies, 1,254.
American foreign policy, 1,240.
United States foreign-trade policies, 1,205.
Defense and war preparedness, 1,190.
Labor policies, 1,176.

Mary McLeod Bethune

EXTENSION OF REMARKS
OF
HON. WILLIAM L. DAWSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. DAWSON of Illinois. Mr. Speaker, under leave granted to extend my remarks, I am including in the Appendix of the RECORD an article concerning the late Mary McLeod Bethune:

MARY MCLEOD BETHUNE COMMEMORATION WEEK, MAY 18 TO 26, 1956—THE NATIONAL COUNCIL OF NEGRO WOMEN, MRS. WILLIAM THOMAS MASON, PRESIDENT

It was along journey from a crude cabin in the middle of a cotton field in the country beyond Mayesville, S. C., to the White House as an adviser to the President of the United States, but that is the almost incredible saga of Mary McLeod Bethune, who passed a year ago, May 18, 1955, and whose creative life and influence generated power that affected thousands of people.

Born of parents who had been slaves, her early childhood years were spent working in the fields. She was 9 years of age before she had the opportunity of attending a Presbyterian mission school for at that time there were no schools for Negroes in her community. She trudged back and forth down dusty country roads—happy in the knowledge that she was learning to read and write for she perceived at an early age that the key to life was education and she was determined to grasp that key for herself and others.

Through the kindness and generosity of Miss Mary Crissman of Denver, Colo., this young girl whose promise and intellect were superior, secured scholarships to Scotia Seminary in Concord, N. C., and Moody Bible Institute in Chicago. Here a word of tribute must be paid to that faithful devoted band of Christian men and women from the north who directly after the Civil War, left family, home, and familiar surroundings to teach academic subjects and implant the idea of service, freedom, and truth in the hearts and minds of the freed men. The youthful protege learned that lesson well for in the nearly 80 years of her life, she exemplified the teachings of her rugged parents and dedicated tutors.

This intrepid pioneer became one of the country's great educators for she built Bethune-Cookman College from a one-room school with orange crates as desks, to a million dollar college, located amidst the Florida pines at Daytona Beach. She built a college on faith and hard work, instilling these twin qualities in thousands of young men and women who flocked to the college and were trained in trades and professions; in character and citizenship responsibilities. "Enter To Learn—Depart To Serve," the motto engraved at the portals of White Hall was one of the cornerstones of the institution. A love of music was ingrained in the students for the poignancy and immortal tragedy of Negro spirituals were understood and sung with the same rapture as the immortal works of the masters. Singing groups of students traveled across the Nation telling the story of this woman's great dream and its fulfillment.

Mrs. Bethune was a born organizer for she set in motion many groups for teachers, organized women on national levels, parents, business enterprises, religious institutes, and conferences. She was a militant crusader for civil and human rights. She never avoided meeting a situation that might have resulted in unpleasantness or even danger, but held fast to the principles of human rights and dignity. When the Ku Klux Klan invaded the campus of her college, riding through the grounds hidden by concealing sheets, she never faltered but continued to invoke her students to understand and struggle for their rights as American citizens and to accept responsibility for securing and discharging those rights.

She was a great humanitarian and administrator. Her love for young people, her sympathetic understanding of their hopes and fears of the inequalities that beset them and her eagerness to give them a lift on the ladder of life, brought her into governmental service during the depression years, for she was called by the President, the late Franklin D. Roosevelt, to head up the Office of Negro Affairs of the National Youth Administration. She brought into this organization scores of gifted young leaders who bolstered and restored the faith of discouraged youngsters in the dark days of the thirties, helping them learn useful trades and professions and to secure employment, enabling them to remain in school or support themselves or their families. She was a consultant to the Women's Interest Section of the Defense Department during World War II and was an invaluable mediator in the adjustment of women in the armed services.

She founded the Southeastern Federation of the National Association of Colored Women; was the 8th national president of that organization and remained a consultant to the group until her death.

On December 5, 1935, she founded the National Council of Negro Women, uniting national organizations of Negro women of the widest possible range of interests, who united their corporate strength to give broad leadership to Negro women as they increasingly integrated into the spiritual, social, economic, cultural, and political life of America. Mrs. Bethune served as its first president for 14 years and gave distinguished leadership to these program objectives.

This dynamic leader gave prodigiously of her talents and influence to many organizations concerned with the betterment of people. She served on the boards of the NAACP, the United Church Women, the National Council of Women of the United

States, and others. During her lifetime she was showered with honorary degrees and citations for distinguished services to mankind. Among the most coveted awards bestowed were the Spingarn medal and an honorary degree of doctor of humanities from Rollins College in Florida.

Mrs. Bethune was known and beloved in other countries. She visited the Republic of Haiti at the invitation of the President of that country and he invested her with the Medal of Haiti. She was President Truman's special representative to the inauguration of President Tubman in 1952, who conferred the Star of Africa upon this brilliant American, for all that she had accomplished for humanity. Mrs. Bethune represented thousands at the birth of the United Nations and under her tutelage the National Council of Negro Women became a member of the National Council of Women of the United States and the International Council of Women of the World, thus linking the membership with the women of the universe.

This great woman had a hard and difficult road to travel all the days of her life for there were few guideports and landmarks to which she could repair. To most people the goals she set were out of reach but to her they were always possible, first because she had faith in God that all things are possible, and secondly because she believed that once American people knew and understood what she was striving for they would give support. She was justified in those beliefs, her prayers were answered and people all over America contributed to the building and maintenance of Bethune-Cookman College and to the Mary McLeod Bethune Foundation.

She had the miraculous faculty of turning every impediment into a light that deflected any course that was not essentially good. She conquered by love; she lifted by compassion; she built by faith. Like the sturdy pioneers of old she took the raw earth and brick by brick, building by building, built an institution that will withstand the ravages of time. She molded untrained human substance into self-confident, persevering people and they caught the beauty and passion of her dream of a nation and a world where all men would be up and no man down. Like the founders of our country she understood the meaning of opportunity and privilege; of civil and human rights and worked without ceasing to maintain and extend these so that they would be common to all men.

Mrs. Bethune possessed a keen and discerning mind and her wisdom was incalculable. Her unforgettable eloquence when she spoke, the unalterable strength of her convictions, the vast spiritual fortifications of every enterprise she undertook, the full measure of her achievements in helping to propel her race toward its destiny is a chronical of human endeavor, moving and proud, and will live in the hearts of a grateful nation and be recorded in the annals of American history, forever.

The Mozart Piano Concertos

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks I am happy to present an article by Mr. Herschell C. Gregory, of Lebanon, Ind., on the form of the piano concerto as established by Mozart. The article follows:

THE MOZART PIANO CONCERTOS

(By Herschell C. Gregory)

The form of the piano concerto as we hear it today was established by Mozart, and while many modifications have been introduced over the past century or more, its general outline of construction remains the same. Representing as they do, the purest and most ideal beauty, the playing of them must inevitably lead to greater delicacy, finish, and loveliness of tone. He raised the concerto to a pitch of perfection which has seldom been surpassed by later composers, while their flexibility of structure, astonishing variety of idea, and the harmonious balance betwen the orchestra and piano makes them above all others typical of their form.

Most of the concerts are embellished with the mastery and grace that lend such charm and variety to all Mozart's melody, for he believed melody to be the essence of music, "I compare a good melodist to a fine racer, and contrapuntists to hack post-horses."

Many of his early concertos belong to the domain of chamber music. They employ the full orchestra but they do not take the term "grand," which in the modern sense means suitable for brilliant public performances. Because of their lovely qualities, not all pianists can present them with the necessary refinement and strength. They are not symphonic in style and their spirit is not the high poetic or the intensely dramatic.

For one reason the concerto as we know it today had no existence in 1775. For another they could not have been played in the modern way, because the modern technique of the piano was not yet devised. For a third reason the people to whom he played, and for whom he wrote the concertos, did not want portico-symphonic music.

The Mozart concertos are exquisite art; they live in beauty but the art is light, and the beauty is simple. Everything connected with these concertos has a fascination for the imaginative musician. They are unique in the history of piano music, forming the sole link between one age and another. In respect to style and character they relate to the immediate past rather than to the immediate present; that is to say, their forms and moods make them less modern than the symphonies Mozart composed at that time.

During his short lifetime Mozart desired nothing so much as to have a good time and write music. Composing for him was an economic necessity, and he was the first composer for whom piano playing was a means of earning a livelihood. In fact, he was the first artist to travel and give concerts and was also among the first to reveal the qualities of the new pianoforte. Some of the concertos were composed for pupils, some for his own use at concerts, and conceived with a view to more or less brilliant display, and there were a few that were intended to appeal to a smaller circle of music lovers and connoisseurs.

In the concertos of Bach and Handel the need for distinguishing between soloist and orchestra is not very apparent, but with Mozart the difference is strong and fundamental, giving the soloist an opportunity to set one thematic content against the other.

The concerto as conceived by Mozart in its final form consists of a three-movement composition. The first movement, an adaptation of the sonata form, begins with a tutti passage for the orchestra in which the principal subjects are announced. With the exception of the concerto in E flat (K. 271) the first appearance of the piano is delayed until the orchestra has completely stated the exposition. Sometimes the second subject is omitted at this point, but it is usually introduced. The first tutti always ends in the original key, and not in the dominant or the relative major (if the concerto be in a minor key), as would be the case in a sonata. The piano then enter with a brilliant introductory passage, but usually with the principal subject. The first tutti with considerable modification now follows divided between the piano and the orchestra. The second subject is introduced and ends in the key of the dominant (or relative major as the case may be). These subjects undergo considerable modifications in the succeeding section called the development, and there is a return to the original key.

The first subject returns in a compressed form in the orchestra and is continued by the soloist, and after a final tutti the movement comes to a close. In most of the concertos a pause is made near the end of the movement upon the 6–4 chord on the dominant for a cadenza for the performer. It was the custom to end the cadenza with a long trill over the chord of the dominant seventh, and after a short passage for the orchestra alone the movement came to a close.

The second movement instead of being fast and powerful was slow and melodic, forming a distinct contrast to the opening movement. In some of his concertos Mozart substitutes the minuet instead of the usual andante, or adagio, while in the two concertos in B flat (K. 450 and K. 456) he employs the variation form. The solo part of this movement is of a quiet, florid nature, with many passages of ornamentation. In his concertos in A (K. 414), in C (K. 415), and G (K. 453), he introduced short cadenzas at the close of the movements.

The final movement was always fast and gay and usually in the rondo form, although in the concerto in C minor (K. 491), and the concerto in G (K. 453) Mozart returned to the variation form. Since he was always unhampered enough to try many formal experiments, his rondos were sometimes interrupted by a complete change of tempo. The concerto in E flat (K. 271) has a minuet as the middle portion of the finale; the C major (K. 415) in 6–8 time contains two interruptions by an adagio in 2–4 time; and an andantino cantabile is introduced in the middle of the rondo of the concerto in E flat (K. 482). Short cadenzas are found in the finales of the concertos, some of which are to be improvised by the performer, while others are written out in full.

One of the distinguishing features of the concertos is the fact that except in the tuttis, the orchestra has little to do beyond a simple accompaniment of the soloist. The orchestration of the earlier concertos consists of relatively few instruments, but this limited number of color combinations becomes larger and more sonorous as he adds flutes, oboes, clarinets, horns, and trumpets.

During the spring months of 1767 when Mozart was 11 years of age he decided to write music to play with the orchestra. Between April and July he completed his first four piano concertos, but evidently he was in such a hurry to play these works with orchestra, that he used a great amount of thematic material, or sonata movements from other composers, or Germans who were living in Paris. He retained the original parts and added light accompaniments to them, as well as inserting orchestral tutti.

In the first Concerto in F (K. 37) the first movement is by Herman Friedrich Raupach, and the third movement by Leontzi Honnauer. Some historians believe that the second movement was by Johann Schobert, but the original movement was never found among his extant works. In the second Concerto in B flat (K. 39) the first and third movements consist of material by Raupach, and the second movement by Schobert. In the third Concerto in D (K. 40) he used material by Honnauer in the first movement, and material by Johann Gottfried Eckhardt in the second. In the fourth Concerto in G. (K. 41) Honnauer's material is found in the first movement, while in the remaining two he returned to Raupach. Notwithstand-

ing the circumstances that the music was not by Mozart the manner in which it was arranged, and the understanding of the orchestra were remarkable for a boy of 11.

Mozart now turned his attention to other forms of composition and it was not until the fall of 1773 that he composed his fifth Concerto in D (K. 175), in which the opening theme foreshadows an opera, "The Elopement" composed 9 years later, while the finale starts with a canon. A change in style is noted in this concerto as his music up to this time had been influenced by Italian models but which now was—for a brief period at least—to be dominated by the seriousness and depth of German art.

After a trip to Munich, the entire year of 1776 was passed quietly in composing numerous compositions testifying to his industry and revealing music which far surpassed those of his contemporaries, and finding a place by the side of the music by Hayden. He began to take pupils and among them were several belonging to the aristocratic families of Salzburg. One of the families was that of Countess Lodron, whose two daughters Aloysia and Josepha studied the clavier with him. In February he wrote his seventh Concerto in F (K. 242) for three claviers and orchestra, and the manuscript bears the following dedication to them in the hand of Mozart's father, "Dedicato al incomparabile mento di Sua Excellenza la Sgra Contessa Lodron, nata Contessa d'Arco, e delle sue figlie le Segre Contesse Aloysia e Giuseppa * * * in F dal loro devotissimo servo Wolfgango Mozart."

It is clear that one of the performers of this work was less advanced as a harpsichordist; for the third clavier part was written much easier than the other two. Mozart probably felt that the third part was an ineffective adjunct, for soon afterward he rewrote the composition for two claviers, and on the title page of the new manuscript he wrote in his own hand, "I Soli del Concerto a tre Cembali, accomodati a due." (The soli of the concerto for three harpsichords arranged for two).

The sixth Concerto in B flat (K. 238), and eighth Concerto in C (K. 246), were also composed in 1776. In both works the composer indicated that the soloist was to fill in the figured bass during the tuttis. The latter is dedicated to Countess Lutzow who made secret trips to the Mozart home in Salzburg to be coached by Nanneri, Mozart's sister, the secrecy being so that her regular teacher Spitzeder would not be offended.

In January of the following year he wrote his ninth Concerto in E flat (K. 271), the first of his truly outstanding works in this form. In all his concertos with this exception, he delays the appearance of the piano until the orchestra has completely stated the exposition. In the slow movement the tricks of the Italian operatic recitative are adopted to an instrumental form, while the difficult rondo has a minuet incorporated in it. This concerto shows an immense advance over the preceding works. He had not yet emancipated himself from French influences, but the treatment of the tutti is bolder, and the dialogues between soloist and orchestra are more frequent, the melodic line of the solos being more dramatic and extended.

Two years later he wrote his 10th Concerto in E flat (K. 365) for two pianos, which was probably composed with a desire to play a work of this nature with his sister, but its first performance was given by the composer and Josepha Aurnhammer, a young Vienna girl who studied with Mozart. This girl was one of the best pianists then living in Vienna, and the composer wrote an interesting account of her countenance, and the impression she made upon him to his father.

Early in 1782 he sent home a copy of his Concert Rondo in D (K. 382) (listed as Concerto No. 23) composed for his piano Concerto in D (K. 175) a rondo which he had composed expecially for himself, and which no one except his darling sister must play. On March 3 he gave a concert presenting the new work that made a great noise from the audience.

In December he composed his Concerto No. 11 in F (K. 413); the Concerto No. 12 in A (K. 414); and the Concerto No. 13 in C (K. 415). These works were written for his own concerts, and he wrote concerning them: "They are very brilliant, pleasing to the ear, and natural without being vapid. Here and there are spots which connoisseurs will best appreciate, yet such as another class of hearers will like without knowing why." The three works were published in the following April by subscription.

On February 9, 1784, he completed his Concerto No. 14 in E flat (K. 449). His time was taken up with concerts and compositions for the piano. He was expected to write a new concerto, or set of variations for each appearance and often he would put off the writing until the last possible moment. Mozart played the new work for the first time on March 17, and wrote to his father: "The first concert went off very well. The hall was full to overflowing; and the new concerto won extraordinary praise. Everywhere I go I hear praises of that concert."

The Concerto No. 15 in B flat (K. 450) was completed on March 15, and probably played in public by the composer without having been rehearsed as was frequently the case. In a letter to his father he refers to this and the following two concertos as, "concertos to make one sweat."

Seven days later he completed his Concerto No. 16 in D (K. 451) a less difficult work than the one in B flat; and on April 12 he finished his Concerto No. 17 in G (K. 453), a work composed for his pupil Barbara Ployer. On May 27 he heard a starling pipe a phrase not unlike the first theme of the finale of this concerto. The tune which the starling had been taught to sing was so curious, and it so delighted him that he bought the bird paying 34 kreutzers for it. He entered the transaction in the account book, jotted down the theme roughly in the form piped by the bird and then wrote: "That was beautiful."

On May 24 he wrote his father concerning the new works: "I am unable to tell you which of the two concertos (in B flat and D) I prefer. I take them both to be concertos (die schwitzer machem) "that will make the player sweat"; but in regard to their difficulty, the one in B flat has certainly the advantage. However, I am very anxious to know which of the three concertos in B flat, D, and G major most pleases you and sister. As the talk at present concerns nothing but these three concertos I am anxious to know whether your opinion coincides with the general one and mine also. It is necessary that they be well performed and arranged with all the parts. I can spare them until you examine them, but take care not to let them out of yours hands, for I might have sold one for 24 ducats today; but I think it more to my advantage to keep them in my possession for a couple of years or more, and then publish them."

In October he wrote his Concerto No. 18 in B flat (K. 456) for the blind pianist Marie Therese von Paradies. This work belongs to the period at which his treatment of the concerto form had reached its most masterly development. On December 11 he completed his Concerto No. 19 in F (K. 459) a work intended to appeal to the smaller circle of music lovers and connoisseurs. Each concerto has its own beauty and the F major concerto with its haunting first subject has a delightful freshness. It is evident that Mozart thought well of this work, for 6 years later he player it at the coronation of Leopold in Frankfort.

On February 10 of the following year his father arrived from Salzburg for a visit and it was on this day that he completed his Concerto No. 20 in D minor (K. 466). For the first time in a piano concerto he chose a minor key and the work transcends its period as it agrees in value with the Symphony in G minor. This concerto confirms the oft repeated observation that Mozart's compositions in the minor keys are his deepest and most important, for its last movement is distinguished above all others by its fire and intensity of expression. This as well as the Concerto in C minor are passionately agitated. It is a well known fact that it was carefully studied by Beethoven, in whose early compositions its influence can clearly be traced.

This concerto was completed only a few hours before the concert at which it was played by the composer. His father attended its premiere and wrote home to his daughter: "Wolfgang played a new and admirable piano concerto on which the copyist was copying yesterday when we called, and your brother did not have time to play through the Rondo once, because he was obliged to look over the copying."

If it is surpirsing that a concerto could be played without a single rehearsal, often with the ink scarcely dry upon the pages, one must consider that Mozart would have exhausted more of his time and money than he could spare. No doubt many of his private concerts were given without rehearsals as he knew the abilities of his orchestra which consisted of able sight readers, he always examined the separate parts for the orchestra and usually left the most important part of the performance technically speaking to his own nimble fingers.

On March 9 Mozart completed his Concerto No. 21 in C (K. 467) and performed the work for the first time 3 days later in Vienna. His father was present and again wrote to Nannerl regarding the beauty of the concerto and the remarkable success that it achieved. The orchestra was amplified to include flute, 2 oboes, 2 bassoons, 2 horns, 2 trumpets, and 2 kettledrums besides the strings. Only a few days before Joseph Haydn came to the home and declared to the elder Mozart: "I declare to you before God, as a man of honor, that your son is the greatest composer I know, either personally or by reputation. He has taste and beyond that the most consummate knowledge of the art of composition."

On December 16 his Concerto No. 22 in E flat (K. 482) was completed. This was one of the works he was composing for the Lenten subscription concerts of 1786, for which he secures 120 subscribers. This is one of the longer works, and 1 of the 7 arranged by his pupil Hummel for a piano of more extended compass, for which he also wrote two cadenzas. In this concerto Mozart replaces the more usual oboes by clarinets, which gave it quite a new color, and when it was performed the Andante was acclaimed and had to be repeated, which his father reported was "a rather unusual occurrence."

In March of 1786 Mozart completed his Concerto No. 23 in A (K. 488) and Concerto No. 24 in C minor (K. 491), works for his subscription concerts in Lent. The former is notable for a good many things, but especially for the element of pathos in its extraordinary Andante. Trumpets and kettledrums are absent from the score and it makes things happen that had not happened before in music written for piano and orchestra. The C minor work follows a different course in its arrangement of themes, instrumentation, and unity of atmosphere. Beethoven admired it and once told his pupil Ries: "Oh, my dear fellow, we shall never get any idea like this."

On December 4 he finished his Concerto No. 25 in C (K. 503), another work for the Lenten season of subscription concerts. It was published by Mozart's widow in 1798 at her own expense, and it is as perfect in style, melody, and balance as any music can be.

The charm of the piano concertos lies not at all in their technical intricacies but rather in their striking simplicity. Nor are Mozart's commentators prone to ascribe this quality to any point of early training. A feeling for beauty of tone and of form seem, indeed, to be the hallmarks of his compositions, but more particularly is this true of his concertos.

The Concerto No. 26 in D (K. 537), known as the Coronation, was completed on February 24, 1788, and takes its name from the fact that Mozart played it in 1790 during the festivities for the coronation of Leopold II. Ludwig the doublebass player was one of the members of the orchestra at this concert, and he has narrated how at the rehearsal Mozart would frequently leap up from the piano, spring in lively fashion onto the stage (jumping over the prompter's box) and, after exchanging animated remarks with this or that member of the orchestra, leap as lightly back to his instrument. As usual the concert yielded him considerable honor but little monetary returns. Upon his return home he could not understand why the public could applaud the performances of the wonder child, but could not appreciate the masterworks of the mature genius. The thoughts of this filled his soul with bitterness, and he sat down to study his condition.

On January 5, 1791, he completed his last Concerto for Piano in B flat (K. 595), which was performed 2 months later on March 4. Mozart trusted his concertos would secure sufficient fame and enable him to sell his music in order to bring him a fixed income. While his earlier concertos possess a delicacy in their melodic line, the later works reveal great force and virility. If he had not been a pianist he would not have written concertos in the way he did, and the movement of music toward the 19th century would have been seriously deflected. While his contemporaries wrote for the piano and their works influenced the future, Mozart's concerto music flowered to perfection in itself, and fertilized the art for the future.

Nine months after the premiere of the B flat concerto, a hearse containing his remains went creaking through the rain on its way to the cemetery of St. Marx. The weather was too severe for the mourners and his body was accompanied only by the driver of the hearse. There had already been two pauper funerals that day and Mozart was to be the third and uppermost in the grave. When his wife went to the cemetery later the gravedigger had been replaced by another who could not point out the spot of his grave. While no monuments mark his resting place, his operas, symphonies, the requiem, the concertos, and a host of other works, mark his memory until the end of eternity.

Results of Annual Questionnaire

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted I would like to include in the RECORD the result of my annual questionnaire. About 12,700 of these questionnaires went out to the persons who are on my mailing list to receive my semimonthly newsletter. In addition, I sent my questionnaire to every newspaper which is published in Maricopa County and asked that it be printed in such a manner that it could be cut and mailed to me. I received many questionnaires from this source. A total of 1,868 questionnaires were returned to my office; 95 percent of the answers came from persons residing in Maricopa County, Ariz. I do not claim that my poll is a scientific sampling of the opinion of voters in Maricopa County. It does reflect, however, as broad a cross section of the voters as it was possible for me to obtain.

	Percent		
	Yes	No	No opinion
1. Do you approve of President Eisenhower's foreign policy?	75	15	10
2. Should we continue military aid to friendly foreign nations?	71	18	11
3. Do you favor amending the Walter-McCarran Act to allow a greater number of immigrants to enter the United States?	24	64	12
4. Do you favor Secretary Benson's farm program?	68	15	17
5. Should defense spending continue at the present level?	68	17	15
6. Do you favor a tax reduction prior to the attainment of a balanced budget?	20	75	5
7. Do you believe that the Eisenhower administration has done a good job in governing the country in the past 3 years?	89	8	3
8. Do you favor Federal aid to school construction?	53	38	9
9. Should the United States postal service be self-supporting	79	14	7
10. Do you favor a national right-to-work law, outlawing compulsory membership in any labor organization?	86	11	3

Nineteen Hundred and Fifty-five: One of the Worst Disaster Years in the 75 Years of American Red Cross Experience

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. GATHINGS. Mr. Speaker, 1955 was one of the worst disaster years in the whole existence of the American Red Cross. In that year the American radio broadcast industry achieved its highest order of public service to the stricken sections of the Nation. This story is well told in a letter written to the National Association of Radio & Television Broadcasters by the president of the American Red Cross, Mr. E. Roland Harriman. The letter, together with another written to the same organization by the Chief of the United States Weather Bureau, Mr. F. W. Reichelderfer, constitute a glowing and timely tribute to the station managers, the announcers, and the technical employees. Under leave to extend my remarks in the RECORD, I would like to include these two letters and to add my own praise and commendation to all the members of the radio industry for the superb work done by them. My own personal experience with the station operators in Arkansas reflects the highest type of real service to the areas served by them:

THE AMERICAN NATIONAL RED CROSS,
NATIONAL HEADQUARTERS,
Washington, D. C., April 6, 1956.

Mr. HAROLD E. FELLOWS,
President, National Association of Radio and Television Broadcasters, Washington, D. C.

DEAR MR. FELLOWS: The year 1955 was the worst disaster year in the 75 years of American Red Cross experience. The severe eastern States floods which followed in the wakes of hurricanes Connie and Diane and the unprecedented floods of the west brought widespread hardship to both coasts. During the emergency period the homeless were sheltered, the hungry were fed, the sick and injured were given medical care.

After the emergency, the Red Cross provided assistance in restoring more than 24,000 families to normal living; nearly 9,000 homes had to be repaired, 866 had to be rebuilt, and 1,500 small businesses required assistance. The Red Cross has spent over $29 million for disaster relief operations during this past year and our disaster relief funds at this time are practically exhausted.

Fortunately, with the spontaneous and wholehearted support of radio broadcasters and other mass media, we were able to conduct a disaster fund campaign last fall which provided over $16 million in disaster emergency funds.

The role of the broadcasting industry, not alone in aiding with disaster fund appeals of this type but in interpreting to the Nation the enormous task faced by Red Cross in these disaster situations is of the greatest importance. Without their help this job could not have been adequately fulfilled. Therefore it is my great privilege to extend to the National Association of Radio and Television Broadcasters our deepest thanks for a job well done.

Faithfully,

S. ROLAND HARRIMAN.

UNITED STATES
DEPARTMENT OF COMMERCE,
WEATHER BUREAU,
Washington, April 6, 1956.

Mr. HAROLD E. FELLOWS,
President and Chairman of the Board, National Association of Radio and Television Broadcasters, Washington, D. C.

DEAR MR. FELLOWS: The year 1955 goes down in Weather Bureau storm records as the most costly one in United States history. Property losses of more than $1 billion resulted from hurricanes along the Atlantic coast, floods in New England and California, and tornadoes in the Middle West. Hundreds of our citizens lost their lives and thousands were injured as a result of the many severe storms in 1955.

Great as these losses were, they nevertheless would have been far greater without the services and splendid cooperation of the commercial radio broadcasting stations of the United States.

Our weather forecasters in all parts of the United States are told dozens and dozens of times after each major storm how Weather Bureau advisories "heard over the radio" helped in saving life, in avoiding damage and hardship, in protecting property, in reduc-

ing widespread apprehension, and in the planning of daily activities.

We in the Weather Bureau are grateful for the constant help offered by commercial radio stations throughout America in providing the public with up-to-the-minute weather information. Our natural concern that there be complete and immediate distribution of storm warnings makes us especially conscious of the valuable services provided by radio stations at all times of the day and night, in all areas, however remote, and for all segments of society.

We also deeply appreciate the continuous efforts of commercial radio stations in making certain that storm information announcements and news stories are told in a manner that merits public confidence at all times and reduces apprehension during tense storm periods.

All of the above, plus the daily dissemination of the usual weather forecasts over the past 3 decades, make it a pleasure to congratulate the radio stations of the United States for their valuable contribution to the convenience and safety of our citizens everywhere.

Sincerely yours,

F. W. REICHELDERFER,
Chief of Bureau.

The Rock From Which You Were Hewn

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. FISHER. Mr. Speaker, on May 13, 1956, ceremonies in connection with the celebration of the centennial of the founding of Uvalde County, Tex., were held in the Honey Bowl High School stadium at Uvalde. The 4-day celebration was attended by thousands. Uvalde being the hometown of former Vice President John Nance Garner, his presence was very much in evidence during the ceremonies. That, of course, added to the dignity and the significance of the occasion.

A sermon was delivered at the Honey Bowl Stadium on that eventful Sunday evening, by Rev. Dow H. Heard, D. D., Washington, D. C. Reverend Heard, a native of Uvalde County and a distinguished minister, is now chaplain of the Veterans' Administration. His address was published in the Uvalde Leader-News, edited by Harry Hornby, Jr., on May 17. I think the sermon, so eloquent and inspiring, should be made available for everyone to read. I therefore include it as a part of my remarks:

THE ROCK FROM WHICH YOU WERE HEWN

As a preacher I am expected to take a text from the Bible. That I will now do. In the Bible, Book of Isaiah, the old prophet is urging the people to live right. In ringing words he tells them where to start. He said: "Look to the rock from which you were hewn, and to the quarry from which you were digged." Isaiah 51: 1 (RSV). In the next sentence he said: "Look to Abraham your father and to Sarah who bore you."

What is the prophet saying? In a bit of vivid and understandable analogy:

He is reminding them of their ancestry.

He is calling attention to their history.

He is pointing out their heritage as a people.

He is asking them to examine their foundations.

I cannot think of a better thought for a county centennial sermon—"The Rock From Which You Were Hewn."

I want us to take three looks:

1. Retrospection—a look back.
2. Introspection—a look within.
3. Prospection—a look forward.

I. RETROSPECTION—LOOKING BACK

It would be delightful to dwell on my memoirs. It would be pleasant to recall and eulogize my grandparents, my father, mother, brothers, sisters, kinspeople, friends, schoolteachers, pastors, and many others. But I will resist that enticing temptation because it is too personal.

I am interested in a larger picture, comprehensive and composite. I want us to take a look at the quarry from which we were dug. I am thinking now of the pioneers who came from the old countries to settle the new land of North America. And about their descendants, with many of the same ideals and methods who came on to settle Texas and Uvalde County. Particularly I am thinking of the houses they built, four little houses. These houses symbolized their aspirations, ideals, dreams, and philosophy of life for themselves and their posterity. The houses were:

1. The house called home.
2. The schoolhouse.
3. The church house.
4. The courthouse.

These houses are basic. They are bedrock. And the pioneers built them in about that order. The early settlers of America, of Texas, of Uvalde County, cut the timbers and hewed the stones with their own hands. And most of this has been within the lifetime of our parents and grandparents.

Henry Van Dyke in his great poem on Texas put it grandly when he said:

"Men of mark from old Missouri,
Men of daring from Kentucky, Tennessee, Louisiana,
Men of many States and races,
Bringing wives and children with them,
Following up the wooded valleys,
Spread across the rolling prairies
Raising homes and reaping harvests.
Rude the toil that tried their patience,
Fierce the fights that proved their courage,
Rough the stone and tough the timber
Out of which they built their order!
Yet they never failed nor faltered
And the instinct of their swarming
Made them one and kept them working,
Till their toil was crowned with triumph,
And the country of the Tejas
Was the fertile land of Texas."

I come back to those little houses. Out of them came our American heritage.

Out of the little house called home came the continuing family tradition—husband, wife, and children.

Out of the little schoolhouse came learning, enlightment.

Out of the little church house, with its big open Bible, came the teachings of our religion.

In the little courthouse they filed their deeds, their marriage licenses, their public records. It was here they held court. The courthouse became the symbol of governmental authority. I know it stimulated county, State, and national pride and patriotism.

Out of all these houses working together grew, in a good climate, the precious heritages of our freedoms. Freedom of speech. Freedom of the press. Freedom of religion. Freedom of education. Trial by jury, etc.

The enemies of any or all of these houses—the home, school, church, court—are my enemies and I will be fighting them 'till the cows come home, and after that, too.

II. INTROSPECTION—LOOKING WITHIN

An old Chinese proverb says there are five important points on the compass—north, south, east, and west, and the place where you are. The most important place and time in the world to you is here and now. Near the Roman forum in the center of Rome was placed by Caesar Augustus a golden milestone. It was the "zero" monument. All distance was measured from this marker.

Let us take a look at where we now stand. We have just taken a look through a big picture window toward the past. Today we live in a fine house of achievements. It was built on the foundations laid by our fathers. We of our generation have proudly added to it. And our children will add other rooms to it.

We now live in comfortable houses with all the modern conveniences—water, lights, heat, furniture, radio, and, lately, television.

Look at your stately and commodious churches.

Look at your public-school buildings—grade school, high school, and junior college—all staffed with well-educated and competently trained teachers.

Have you taken a good look at your town library lately? It was made possible by the generous gift of Uvalde's No. 1 citizen, the Honorable John N. Garner.

Have you really taken a good look at your courthouse lately? It is probably manned by an efficient group of public servants—the ones you elected. Think of all the services to all the people of the county emanating from that courthouse—and also from the city hall.

What about the new public hospital?

Take note of your chamber of commerce, your lively service clubs, your lodges, your women's organizations, and your splendid newspaper—the Uvalde Leader News.

This catalog is of such absorbing interest. Taking an inventory of all our gadgets, equipment, and assets proves a fascinating experience.

III. PROSPECTION—LOOKING FORWARD

Now let us turn and look through another large picture window toward the future. Of course it is enthralling to look back—and around us. That is some quarry from which we were dug. That is some rock from whence we were hewn. And we shall be proud of it forever. We should be. The English historian, Lord MacCaulay, in his story of the siege of Londonderry ends with these thoughtful words:

"A people that take no pride in the noble achievements of remote ancestors will never achieve anything worthy to be remembered with pride by remote descendants."

However, our most compelling and rewarding challenge is in the forward look. The past is gone. The particles of sand are running fast through the hourglass of the present. Only in the future can we make any worthwhile contributions.

Lincoln, in his second annual message to Congress, December 1, 1862, said to his generation: "We shall nobly save or meanly lose the last best hope on earth." They saved it. We have a vast responsibility to the future. This is no place to stop and put our judgment curse on all the fast-moving scenes of life that we do not fully understand or do not approve. Remember the wise old adage:

"Judge not the play before the play is done;
Her plot hath many changes; every day speaks a new scene;
The last act crowns the play."

Many tugging thoughts crowd my tongue for utterance. I can proclaim only a few.

1. Maintain a strong attachment to the land. We need to love the good earth. Texans, like so many other Americans, have been such wastrels of this rich heritage. There are recent evidences of a more adequate concern for the conservation of the

soil and the water. This love for the land also involves a needed reverence for the homes built on that land. We should always be ready and anxious to assume full responsibility to love and maintain our own homes. We have too many cuckoo birds. Cuckoo birds make no nests of their own. They lay their eggs in the nests of other fowls. Other birds have to foster and feed the cuckoo's young. Cuckoos steadfastly refuse to assume any responsibility in such matters.

Grace Noll Crowell said:

"So long as there are homes to which men turn
At close of day,
So long as there are homes where children are—
Where women stay,
If love and loyalty and faith be found
Across those sills,
A stricken nation can recover from
Its gravest ills.

"So long as there are homes where fires burn
And there is bread,
So long as there are homes where lamps are lit
And prayers are said;
Although people falter through the dark
And nations grope,
With God himself back of these little homes
We still can hope."

2. Maintain a continuing concern and support for your free public schools.

Mirabeau B. Lamar, distinguished cavalry colonel at San Jacinto, while serving as the President of the Republic of Texas, said:

"The cultivated mind is the guardian genius of democracy and, while guided by virtue, is the noblest attribute of man. It is the only dictator that free men acknowledge and the only security free men desire."

The free public school is the seed corn of American democracy. As the basic institution in our democracy, it needs and deserves our full and dedicated support. Keep it a publicly owned and operated institution. Let us never sell, lease, contract or grant to any special group—however good that group appears to be—the right or authority to take over the education of our youth. I am unalterably opposed to any action that would transfer this education responsibility to others. Think of what it would be like for the American Legion to run one of the schools, the Baptists one, the Masons one, the AFL–CIO one, the Chamber of Commerce one, the Cattlemen's Association one—ad infinitum. To do that would destroy the genus—democracy as we know it and love it.

You do not appear surprised to hear me say this. Why should you? After all I learned it 30 to 40 years ago right here in Uvalde County schools.

Please permit me to say a word to the young people present. Contrary to the plaintive pleading of a recent popular song—I say, let the stars get in your eyes—let the moon break your heart. This has been going on for a thousand years. It happened to your parents and grandparents. They turned out pretty good. Who are you to be sheltered and shielded from the normal reactions, emotions, and romances of life? Don't permit yourselves to be boxed in—to a hothouse where they grow plants free from the natural world of wind and rain and sunshine. Contrary to the occasional concerned opinions of those of us who are your elders, I think you will turn out all right. I cannot think of a single reason why you young people should not do better than your forbears. I hear somebody ask: "What about this 'rock and roll" craze?" I believe this, too, shall pass.

I can hear the tramp, tramp, tramp, of a marching army—an army of invasion. A conquering army. That army will take over Texas. It will install a new governor in Austin. That army will take over Uvalde County and fill every position of authority, responsibility, and leadership. Those people will put in a new county judge and a new sheriff. They will give you a new school superintendent. They will even put new pastors in all your churches. I am talking about that marching army of youth—composed of your children and grandchildren. They will take over like you and I have taken over from our grandparents.

3. Now a word about the churches. My primary concern is with your religious institutions. On purpose I mention the school and the church together. I think a poet was right when he said:

"Fear not the skeptic's puny hands
While near the school, the church spire stands;
Fear not the blinded bigots rule
While near the church spire, stands the school."

The Bible says: "Blessed is the nation whose God is Jehovah." Do we really believe and practice that? Or do we just pay lipservice to the theory that our country rests on a godly foundation? "In God we trust" should mean more than just four words on our silver coins. It should be basic in our philosophy that the only permanent security is in the Eternal God. The Psalmist David said: "Lead me to the rock that is higher than I," Psalms 61: 2. Jesus commended the "wise man which built his house upon a rock: and the rain descended, and the floods came, and the winds blew and beat upon that house; and it fell not; for it was founded upon a rock." Then he added the solemn word of warning about the foolish man, who built his house upon the sand: "and the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it." Matthew 8. Jesus said: "I build my church upon a rock." And the Apostle Paul said: "The church of the living God, the pillar and bulwark of the truth," I Timothy 3: 15.

Why support and attend your church:

Your church brings law, habit, and discipline to life. It gives you wise rules to regulate your impulses. Otherwise you are left without vision, direction or goal—to idle drifting.

Your church gives you standards. Without standards you can have no stability, and chaos is not far away. From rugged, vital standards iron men are made.

At church you hear the teachings of Jesus—the incomparable man.

In the atmosphere of the church wrongs die.

It is poor taste to belabor or low rate the church. The churches may not be ideal but they save the race from rot and ruin.

The churches of America are growing. They are making a stronger impact on this Nation than ever before. Recent census figures show that 1956 church membership stands at 97.5 million. That is 60 percent of the total population. One hundred years ago only 16 percent of the then population of the Nation was enrolled in the churches.

4. Now a word about freedom and democracy. The Poet Wordsworth said:

"We must be free or die who speak the tongue that Shakespeare spoke; the faith and morals hold which Milton held."

Freedom is both an inheritance and an achievement. We get it from the past. We can strengthen and enrich it for ourselves and for the future. Freedom must be re-won in each generation and in some measure reborn in each citizen. It is never finished. It is never static. It must march or die. Gen. Omar N. Bradley said:

"Freedom—no word was ever spoken that has held out greater hope, demanded greater sacrifice, needed more to be nurtured, blessed more the giver, damned more its destroyer, or came closer to being God's will on earth. May Americans ever be its protector."

We live in troubled, perilous times. There seems to have been many such times—one or more in each generation—that have appeared as dark and dangerous. But wisdom has fled from us if we permit disillusionment, skepticism, cynicism and despair to lead us by the hand into the graveyard of nations.

Sir Francis Drake, most famous of all sailors, on a dark and stormy night, was bringing his ship up the Thames River to dock in peaceful London Harbor. The ship was caught in a squall and the swirling waters wrenched his big sailboat off its course and turned it completely around. The gale almost capsized it. In the maddening darkness and danger the great sea captain—in anger more than fear—above the storm was ehard to shout: "Is it possible that I, Francis Drake, who am master of the seven seas, am now going to flounder here and be lost in this muddy ditch?"

Too often we confuse a troublesome ditch for a stormy ocean that is threatening us with immediate destruction. Shame on us. Sons of the Alamo, where is our faith in God and in ourselves? You ask, what will it cost us in sacrifice? My answer is that it may cost us more than we have been doing. Some may answer back surely you do not mean that we might have to give as much as the pioneers gave. My reply is that I do not know. But what of it? The poet was right when he said:

"Though love repine and reason chafe,
There comes a voice without reply
'Tis man's perdition to be safe,
When for the truth he ought to die."

Let us not flinch now. Let us not break stride. Let us not even hesitate. For "on the plains of hesitation lie the bleached bones of countless millions who at the dawn of victory sat down to rest and then awoke to die."

To Uvalde County I would say:

"Give us men to match our mountains
Give us men to match our plains
Men with empires in their purpose,
Men with eras in their brains."

Ponder the words of eloquent, post-Civil War Senator Ben Hill, of Georgia, who said:

"Who saves his country saves himself, saves all things, and all things saved I do bless him. Who lets his country, die, lets all things die, dies himself ignobly, and all things dying, curse him."

During this centennial celebration there has been much reminiscing about people, places and achievements of the past. That was good. But I challenge you to start now on plans and projects for the second 100 years. Hats off to the past. Coats off to the future.

Excerpts From Remarks Made by Consul General Herve J. L'Heureux Before Export Study Club of Montreal

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MERROW. Mr. Speaker, in view of the vital importance in the continuation of the excellent relations which have existed between Canada and the United States for considerably more than a century, and the imperative need in resolving quickly any apparent misunderstanding, I am pleased to include

in the RECORD excerpts from the remarks made by Consul General Herve J. L'Heureux before the Export Study Club of Montreal, at its tenth annual dinner meeting, on April 5, 1956.

A delegation of the Canadian Exporters' Association was in Washington on February 23, 1956, for the purpose of discussing Canada-United States trade relations. One of the major problems raised was the fact that the United States last year sold Canada $850 million more goods than Canada sold to the United States.

In his address to the Export Study Club of Montreal, Mr. L'Heureux gave a clear explanation of the reasons for such an adverse trade balance in favor of the United States; and he pointed out that the result may be that of a "healthy expanding economy demanding large amounts of investment capital" on the part of Canada.

I am happy to state that Mr. L'Heureux is a native of Manchester, N. H. He has been an able and distinguished member of the Foreign Service since 1927. He is one of New Hampshire's outstanding citizens, and one in whom we feel great pride. He is well known on Capitol Hill, where he worked his way through school from 1919 to 1927. While Chief of the Visa Division from 1947 to 1951, his work was so effective and his relations with the Members of Congress were so excellent that a special law was enacted unanimously authorizing the Secretary of State to retain him in that assignment for an additional year.

On November 1, 1955, Mr. L'Heureux assumed his present duties as consul general at Montreal with the personal rank of Minister. His appointment has been widely acclaimed by the Canadian press and by Canadians in every walk of life. Because of his wit, his great facility of expression, his keen sense of humor and his bilingual ability, he is increasingly being sought as a speaker by various groups. He has given 28 talks during the past 3 months, including several radio and television appearances. Mr. L'Heureux is doing an outstanding public-relations job in Montreal; and the administration is to be commended for having given him this delicate and important assignment.

Aside from his official duties, Mr. L'Heureux initiated a prayers-for-peace movement at Manchester, N. H., in October 1948, which has spread all over the world. The movement, very simply, calls upon all persons who believe in God to offer a silent prayer at 12 o'clock noon each day in order that a just and equitable peace might be established. Its adherents are called minute men of prayer. They number in the millions. Reference is made to this movement, daily at noon, by two of the leading radio stations in Montreal.

Many leading officials, industrialists, and businessmen have commented that the United States is well represented in Montreal. One prominent banker has proclaimed: "L'Heureux is the greatest import Montreal has received from the United States in many years."

Excerpts from the speech follow:

It is with a sense of high privilege and deep gratitude that I accepted your invitation to participate in your 10th annual dinner meeting today. The study and exchange of information on problems pertaining to foreign trade, which is the primary object of the Export Study Club of Montreal, together with other similar groups sponsored by the Canadian Manufacturers' Association, Inc., contribute very substantially to the economic well-being and better understanding in our respective country.

Canada, like the United States, is being called upon increasingly to play a leading role in world affairs. She has accepted this challenge with courage and determination. The counsels of her astute statesmen have been sought and listened to in the United Nations and in other international deliberations. Her ascendency in the political sphere of the world has been increasingly evident.

Moreover, Canada's economic development has shown signs of great expansion. With this growth, increasing competition in world markets must be expected which, in turn, may reasonably give rise to more vital and tenacious differences of opinion between Canada and the United States.

In view of the common heritage, the many years of close friendship that has existed, and the complete candor that has characterized the political and commercial relations between our countries, I have no doubt that the people of Canada and the United States will be able to continue to endure sincere differences of opinion with entire equanimity.

But friendship, however long it may have existed, or mutual may be its foundations, must never be taken for granted and neglected. It must continually be cultivated; and one of the most effective means of cultivation is through study and understanding of mutual—or the other's—problems. Your study group is dedicated to this very purpose; and that is why I am so glad that you have given me the opportunity of being with you today to present, for your study and consideration, a comment on United States-Canadian trade.

In a speech last autumn, your distinguished Secretary of State for External Affairs, Mr. Pearson, commented that the day-to-day problems between Canada and the United States are now more numerous and more complicated than with any other single country. Most of these problems are perhaps to be found in the economic field.

You recall that on February 23, 1956, a delegation from the board of directors of the Canadian Exporters' Association met with United States Administration officials in Washington for the purpose of discussing Canada-United States trade relations. One of the major problems, among several others, discussed at that meeting was the fact that the United States last year sold Canada $850 million more goods than Canada sold to the United States. The discussions, which were held on a very high governmental level, were exceedingly frank, positive, and helpful. Both sides became familiar with and appreciative of the other's problems and point of view. The discussions will be continued and solutions will be sought through the existent, normal channels.

Considering the character of your study group, and the widespread interest and apparent concern in this problem of seemingly unbalanced trade, I raise and will comment upon the question: "Why is it that 16 million Canadians purchase more from the United States than 160 million Americans buy from Canada?"

The answer to this question can be found in large part by an examination of the structure of the foreign trade of the two countries and the relationship of this trade to the organization of their national economies. But it might perhaps be wise at first to dispel the concept that bilateralism and bilateral balance of trade are particularly desirable goals in themselves. After all, the most important advantage of the free-trade economy is the opportunity it offers to buy goods in any market without restrictions at the lowest possible price and, conversely, to sell in the market offering the highest return. This is obviously as sound business practice in domestic trade as it is in international trade. Why should Canada, for example, sell all its lumber to the United States to obtain a balance when it can get a higher return by offering at least some of these planks and boards to the United Kingdom or to Australia? Furthermore by such sales Canada to a certain extent can cancel its adverse balance with the United States.

In fact, lack of balance in a bilateral trade account can be considered as the rule rather than the exception and is, of course, not restricted to the United States and Canada. The United Kingdom traditionally purchases more from Canadians than it sells to them. To balance the account with the United Kingdom by buying more of their goods would mean that Canada would have to pay higher prices for merchandise than it at present obtains elsewhere. Selling and buying in those markets offering the most favorable returns gives the free-trade economy its multilateral (rather than bilateral) character and is of economic benefit to all the nations involved not only because of its greater profit but also because it induces and encourages a greater volume of trade.

That an adverse trade balance is implicitly wrong or dangerous is an old mercantilist doctrine. Actually an adverse balance, as it is in Canada, may only be a result of a healthy expanding economy demanding large amounts of investment capital. In the postwar years Canadian economic growth has been phenomenal. To make such growth possible heavy capitalist investments are necessary. A sizable proportion of this capital has been provided from sources outside Canada, largely the United States. When a country borrows capital abroad for investment, it is a natural phenomenon for that capital to be transferred in the form of goods. By importing more goods than it exports, the capital transfer is made effective by the borrower. The Canadian adverse trade balance then is a result of a healthy and rapidly growing economy, whose expansion is aided by large amounts of foreign capital. Conversely, the United States as a capital-exporting country will export more goods than it imports.

With these thoughts in mind, we can examine United States and Canadian trade figures with a more judicious eye. More important than the balance of trade are the significant facts that Canada and the United States are each other's best customer and that no two other countries in the world exchange so great a volume of merchandise.

Canadian exports and imports to all countries and to the United States, 1953–55

[Millions of dollars]

	Exports (all countries)	United States	Imports (all countries)	United States
1953	4,173	2,463	4,383	3,221
1954	3,947	2,367	4,093	2,961
1955	4,351	2,612	4,712	3,452

To pinpoint the data relating to our question more directly, it should be noted that approximately 60 percent of all Canadian exports from 1953–55 have gone to the United States and about 73 percent of imports have come from the United States. While capital inflow, as noted above, offers an explanation for the adverse balance phenomenon, it is necessary to examine the structure of the

trade and economy of the two countries to discover not only why the trade is adverse but how it can be that Canada, with a population approximately one-tenth that of the United States, buys more from the United States than the 160 million Americans buy from Canada.

From an international trade viewpoint, the structure of the economies of the United States and of Canada differ markedly. The contrast has largely arisen not as a result of deliberate policy but from basic differences in resources, in climate, and in stage of development.

Canada's exports to the world, for example, are concentrated upon a relatively limited number of commodities in which it has certain natural or competitive advantages. These articles enter international trade channels because they can be offered at prices equal to or lower than those prevailing in consuming countries. With extensive softwood forest resources readily accessible Canada has long been known for its forest products, notably newsprint and lumber. Intensive exploration and development of mineral resources has placed Canada into the forefront in the production and processing of such nonferrous metals as nickel and aluminum. In wheat and other grains harvested from its rich prairie soils Canada has a well-recognized quality product. Products from such resources comprise the bulk of goods shipped into markets abroad. In the last 3 years, 1953 to 1955, approximately three-fourths of all Canadian exports have been products of agriculture (largely grains) wood, and nonferrous metals.

From many of the leading commodities that Canada has to offer in trade, the United States buys an extremely large share, in the case of wood, wood products, and paper an average of close to 80 percent for the past 3 years.

Exports from Canada of wood, wood products, and paper to all countries and to the United States

[Millions of dollars]

	All countries	United States
1953	1,295.4	1,091.5
1954	1,377.8	1,107.4
1955	1,520.0	1,221.0

In some individual items of great importance, such as newsprint, the United States may buy as much as 85 percent to 90 percent of what Canada offers abroad.

This story can be repeated in nonferrous metals, of which fine nickel is an outstanding item. With total exports of $108 million in 1954, the United States purchased $101 million, or about 95 percent.

The Canadian and United States economies are not completely complementary but are in many instances competitive—in wheat, for example. Since the United States produces far more wheat than it can use domestically, the United States is not a consumer of the Canadian products but a competitor in the world market. However, volume of trade indicates that the two economies are far more complementary than they are competitive.

Canada, then, is able to maintain its high standard of living by concentrating upon the production of those items in which it has a comparative and competitive advantage and by exchanging these goods for a wide variety of items that cannot be produced in Canada, i. e., cotton, rubber, tin, or that can be manufactured abroad comparatively more cheaply than it can be made in Canada.

In sharp contrast to this orientation of Canada, a country which satisfies so many of its basic needs by foreign trade, stands the United States, also a power of continental proportions. With a tremendous variety of resources, a large population, and a highly ramified industrial and agricultural structure, the United States is easily able to find within its own borders so many of the items that Canada must seek abroad. The total amount of goods and services produced, the gross national product, compared to the total value of foreign trade—exports plus imports—highlights the contrast between the two countries.

In 1954, for example, the gross national product in the United States was about $357 billion, while the total foreign trade was $25 billion, or only about 7 percent. For that same year in Canada, the gross national product was estimated at $24 billion, but total foreign commerce was $8 billion, 33⅓ percent of the gross national product. If these billions in trade are brought down to an individual basis—total foreign trade divided by total population for per capita figure—perhaps, then, differences may become even more meaningful. While the volume of United States trade is so much greater than that of Canada, the per capita data emphasizes the differing degrees of dependence on foreign trade. Again, in 1954, per capita foreign trade amounted to approximately $536 in Canada but only $156 in the United States.

In essence, then, the expanding Canadian economy creates a demand for foreign capital that results in an adverse trade balance, that is, more imports than exports. To gain a high standard of living, Canada has developed an economy that is greatly dependent upon foreign commerce for its health and prosperity. Specializing in the production of a rather limited number of commodities in which it has certain natural advantages, Canada exchanges these products on the world market for the consumer and industrial goods that it cannot produce as cheaply at home. Sixteen million Canadians purchase more from the United States than 160 million Americans buy from Canada because those 16 million Canadians are far more directly dependent for their prosperity upon foreign trade than are 160 million Americans. Canada must buy abroad the many items the American can find so easily within his own borders. Because the United States is the cheapest and most readily available source of supply, Canadians purchase so much more from the United States than from other countries. In iron and its products, by far the largest class of Canadian imports—comprising about 30 percent of total imports in the past few years—the United States was the source for more than 85 percent of the goods; being so highly industrialized, the United States can so easily provide the many thousands of items that comprise an iron and steel schedule and that are so necessary to the expanding and wealthy economy of Canada.

Imports into Canada 1953 and 1954

[Millions of dollars]

	1953	1954
Total (all merchandise)	4,383	4,093
Iron and steel products:		
All countries	1,532	1,322
United States only	1,325	1,144

Conversely for those products in which Canada specializes and in which it complements the United States economy, that is, wood products and nonferrous metals, the United States is by far Canada's most important customer. As the Canadian economy expands and offers a greater variety of products, the United States will continue to purchase enormous amounts of goods. A number of outstanding examples of these changes in trade can be mentioned. With the development of extensive iron-ore beds in the north, Canada has reversed its position from a net importer of United States iron ore to that of a net exporter to the United States. The discovery and exploration of oil beds in the west has made Canada less dependent upon other countries for its needs and has also provided another important product exported to the United States.

It might be submitted, therefore, that this seeming imbalance in United States-Canadian trade is a perfectly healthy, normal situation; and yet, as a simultaneous occurrence, the very existence of this gap is a challenge to those in the export field. The delegation of the Canadian Exporters' Association to Washington last February spoke to the White House representatives of a fear complex which some Canadian exporters have in approaching the United States market, a psychological bloc set up by, among other things, unfortunate or discouraging experiences with United States customs authorities which, I hope, were due more to misunderstandings than intent. Let me suggest that this $850 million we have been discussing ought to have a tremendous counterbalancing effect, psychologically. As far as the simple exchange of consumer goods is concerned, those dollars are there in United States pockets, and it is up to the Canadian producer and the Canadian exporter to lure them back with quality, price, and service that will make purchase on the Canadian market more attractive than purchase farther afield, or more attractive than spending those dollars for investments.

With reference to that fear of entry into the American market, which the delegation of the Canadian Exporters' Association brought to the attention of the United States, it is my understanding that it was agreed at the meeting in Washington on February 23, 1956, that if Canadian exporters should run into specific difficulties, such as what might appear as customs inequities, they should bring such problems to the attention of appropriate authorities in Ottawa and Washington. This can be done through Canadian business associations, such as the Canadian Manufacturers' Association, which can inform the Canadian Ministry of Trade and Commerce and thus gain the assistance of Canadian Trade Commissioners in the United States. It can also be done by directing inquiries to the United States consulate general here in Montreal, to our Embassy in Ottawa, or to the other United States consular offices situated in major cities across Canada.

In conclusion, I again emphasize what I have repeatedly stated in talks to other groups: While representing the interests of the United States in your midst, I would consider my job less than well done if I did not also act as aid and interpreter of your country, and of Canadian businessmen in the Montreal district, in dealing with the United States. Whenever problems arise in your business in which you believe my office can assist, I hope you will remember this; and every effort will be made to help you as quickly and as efficiently as possible. That spirit of cooperation and mutual understanding to which I referred in opening these remarks can best be continued by frank and open discussions of our differences. If the minor irritations which might be solved by early attention are brought forth as they arise, then there should be no accumulation of petty annoyances growing out of all proportion into serious misunderstandings. The strength of the free world today depends so much upon the continued cooperation of Canada and the United States that misunderstandings must be kept at an absolute minimum, not only for our own benefit, but for that of other nations who looks to us as leaders and outstanding examples of harmonious existence.

The affinity which has endured for so many years between our respective people must not be permitted to become impaired by useless misunderstandings in the field of trade and

commerce. You enjoy the respect, admiration, and affection of the overwhelming mass of the people of the United States. We rejoice in the fact that our Nation is blessed in having you as our partners to the north. Let it ever be thus.

Address of Former President Harry S. Truman

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mrs. KELLY of New York. Mr. Speaker, it is a privilege for me to bring to the attention of the many readers of the CONGRESSIONAL RECORD the speech of former President Harry S. Truman, one who will be reported in the annals of history as one of the great Presidents of the United States. It is significant that he spoke at a dinner honoring the Honorable Averell Harriman, Governor of the State of New York, on the occasion of the presentation of the four freedoms award to Governor Harriman. Governor Harriman as our Ambassador to Russia will be remembered as one of the first to alert the United States and the free world of the insincerity and true objectives of the leaders of the Kremlin.

The address follows:

ADDRESS GIVEN BY FORMER PRESIDENT OF THE UNITED STATES HARRY S. TRUMAN AT THE FOUR FREEDOMS AWARD DINNER HELD IN HONOR OF THE 1956 AWARD RECIPIENT, THE HONORABLE AVERELL HARRIMAN, GOVERNOR OF THE STATE OF NEW YORK, IN THE GRAND BALLROOM OF THE SHERATON-ASTOR HOTEL, NEW YORK CITY, ON MAY 9, 1956

It is quite an honor and a privilege for me to be with you tonight to make the presentation to my good friend Averell Harriman. * * * I'm very glad you invited me to make this presentation of the four freedoms award because I don't think there is a man in the United States whom I think more highly of than I do of that one sitting right here—Averell Harriman.

I know Governor Harriman very well and I cannot think of anyone who is more worthy of this award.

Few men have done more to protect and expand the four freedoms throughout the world.

For many years—and through some of the most critical episodes in history—Averell Harriman has been a tireless worker in the cause of the four freedoms. Today, he is cultivating them, strengthening them, and stimulating their growth in the soil of his home State of New York—and the great State of New York doesn't need that any worse than the other 47 do.

His work for the four freedoms began under President Franklin D. Roosevelt—the man who formulated them and placed them before the world as the goal of all free people, all the free peoples in the whole world.

Time passes and events lose their freshness in our minds. Now it is important to remember that President Roosevelt launched his conception of the four freedoms not in a time of peace—not in an atmosphere of optimism—but at a time of the greatest national peril. The four freedoms were the climax of his state of the Union message on January 6, 1941, and I sat right down in front of him when he read that message—when he came before the Congress and said that "at no previous time has American security been as seriously threatened from without as it is today."

That was the time, you remember, when three powerful dictatorships—the German, the Russian, and the Japanese—had banded together in an onslaught upon the divided and unarmed nations of the free world. That was the time when Britain stood alone under a rain of Nazi bombs, and if you remember that great speech of Winston Churchill in which he said that all we can do is to give our sweat, blood, and tears, we will come out of this. And we did. That was the time when the whole world trembled before the prospect that the dictatorships would violently overwhelm human liberty all over the globe. President Roosevelt's annual message to the Congress called for stepping up our defense program and for the launching of a lend-lease program. The outlook was dark and grim, but at the end of that speech the President looked forward into the future and envisioned a world founded upon four essential human freedoms—freedom of speech, freedom of worship, freedom from want, and freedom from fear.

That was more than a battle cry. It was a vision of hope placed before the peoples of the world.

President Roosevelt himself said that a world based on the four freedoms was not a vision "of a distant millenium." "It is," he said, "a definite basis for a kind of world attainable in our own time and generation, and I am here to say to you that we are still trying to attain it and we shall eventually—I am sure of that as I am that we stand here."

In that spirit, this Nation went forward, first as the arsenal of democracy, and then as a belligerent in the dreadful war that was forced upon us. In that spirit, this Nation led the free peoples out of the darkness and peril which seemed about to engulf them, toward peace and a world organization to guarantee the peace, and that organization is working concretely today, thank God.

That is the spirit which we need today if we are to overcome the perils that again beset us. That is the glowing faith we need if we are to continue to lead the free nations toward a world based on the principles of the four freedoms.

Averell Harriman is a man who understands this vision. He has worked with a wisdom and a skill that few others possess to make that vision a reality.

Shortly after I became President, he returned from his post in Moscow to tell me that the Russians were threatening to block and sabotage the peace that was almost within our grasp. Averell Harriman was right then, and he has been right since about the Russian threat to peace and freedom. He was not taken in, as so many other political leaders were at that time, by Russian avowals of peaceful intent. He is not taken in today, as so many of our leaders seem to be, by the smile on the face of the Kremlin.

Freedom cannot be preserved just by wishful thinking. We need leaders who recognize threats to freedom—no matter how cleverly disguised—and who take vigorous and clearheaded action to meet them.

The Soviet Government is the enemy of freedom today as it was in 1941 and 1945. But the danger at this moment lies not so much in Russian threats of force—serious and ominous as these still are—as in Russian intrigues and in their fake promises to help the cause of freedom. The present rulers of Russia are spreading a trap before the free peoples of the world. They are baiting this trap not only with smiles and bogus joviality, but with lavish promises of economic aid.

This is a dangerous trap. But for poverty-stricken peoples in the underdeveloped countries of the world, it has a powerful attraction.

The first and greatest demand of millions of people all over the world today is freedom from want. This demand is impatient and irresistible. It is voiced with increasing intensity by millions of people from Latin America through Africa and across the continent and the islands of Asia.

Russia says: "We will satisfy these demands. Listen to us, adopt our ways, accept our aid, tie your economic system to ours and you can have freedom from want."

The Russians do not tell the millions of Asia and Africa the rest of the story. They don't tell them that Russian aid will be accompanied by subjugation to the Communist dictatorship—that this means the loss of freedom of speech, that it means the destruction of freedom of worship, that it means enslavement to the tyranny of fear. Actually, this is what their offer does mean. But all too many people are willing to overlook the devil's side of the bargain if they can get help in their struggle against poverty.

There is only one answer to this new and insidious Soviet offensive. And that is to show by word and deed that our way—and not the Russian way—can alone offer freedom from want together with freedom from fear, freedom of worship, and freedom of speech.

We must rise to this challenge and make this answer. Every year the cry of humanity for a better economic life becomes more and more insistent. Looking forward to 1941 through doubtful years of war, President Roosevelt knew that this would be the great problem of the future. When I was inaugurated, in 1949, after the 1948 election that couldn't be won, the problem had become much clearer. I sought to meet it, at least in part, with the point 4 program.

Those were years, during my administration, when some of the best talent in the United States was harnessed to the task of economic rehabilitation and economic progress for the world.

These men worked hard and came up with practical plans. They were not interested in contriving homilies or compiling a dictionary of platitudes. They came up with plans for action, plans that worked—the Marshall plan for example, the mutual-aid program, the point 4 program—and other measures of this kind. And a nation united in its foreign policy helped to put these practical measures into effect.

I do not remember that we tried to pin a partisan label on those measures. We called on men, regardless of party, in the executive branch of the Government and in the legislative branch to formulate these measures and make them work. And we called on men, regardless of party, to administer them in Washington and in our missions abroad. The names of many eminent Republicans are on the honor roll of those years, and I am proud and happy that a Democratic administration put them there.

I might add that it is no credit to the present Republican administration that it has excluded most of these Republican names and all the Democratic ones from the list of those whom they have called to work on the Nation's foreign policy.

One of the men who carried the heaviest burdens in those creative years in American foreign economic policy was Averell Harriman. We miss his wisdom and energy and sure touch in our foreign policy today.

Averell Harriman had a leading part in formulating the Marshall plan. Then I sent him to Paris to carry it out, and after it had become a living reality and had lifted Europe to a new level of economic activity I called him back to the White House to help plan new measures for the economic strengthening of the free world. I then put him in charge of planning for the North Atlantic Treaty Organization, and finally he became the Director of Mutual Security, in charge of the national effort to bolster the free world.

These were vital tasks in building the four freedoms, especially freedom from want and

freedom from fear. We had to build a military shield to protect the free peoples from the fear of aggression. Behind that shield we had to build up their economic life.

Today, Russian strategy has changed on the surface. But the Russian threat remains. Behind the Russian smiles and the Russian promises for better things, there is still that weapon of fear. In an outburst in England the other day, one of the present leaders of Russia told his audience that the Soviet Union will soon have the absolute weapon, a guided missile with the hydrogen warhead. And he added: "Never shake your fist at a Russian." And I want to tell you that the best thing you can do is shake a fist at them.

That is the same old bullying to which the free world has been subjected since the end of World War II. And I have no doubt that if and when the Russians get that absolute weapon, the element of fear will move to the forefront of their strategy and their threats will become more violent and more frightening.

To meet the Soviet threat to freedom we must maintain and improve our defenses. We must keep our lead, whatever the cost, in airpower and atomic weapons. You know there has been a lot of weeping and wailing and shedding of tears over the fact that we had to use an atomic weapon to bring World War II to an end in Japan. It was necessary—it saved a half million lives—a quarter million Japanese and a quarter million Americans and accomplished its purpose in war. Now our objective is to harness the terrific power of released atomic energy for peace. Nobel, the Swedish scientist who discovered nitroglycerin, the most destructive power of his day, thought that it would cause the destruction of his world. He set up a foundation to give prizes for work toward peace, for scientific advances, and for distinguished work in art. Nobel's foundation was one of the greatest things ever done in the world, but he set it up because he thought that dynamite would bring the world to destruction. Now, I'll say to you that when we finally discover proper means of using atomic fission for the welfare and benefit of the peoples of the world, we will have made a contribution which will make nitroglycerin look like a glass of water in comparison. And our contribution will be for the benefit of the world, don't let anybody tell you anything different. But in all this we must be true to ourselves. We must stand before the world as we really are—powerful, yes, but generous, peace-loving and honest—that word "honest" is not in the Russian dictionary.

We are not true to ourselves if we threaten to use the atomic weapons unilaterally. We are not true to ourselves when we talk about massive retaliation, or when we try to coerce small nations into military pacts.

Today, in some parts of the world, the people believe that we, the United States of America, are a threat to world peace. These misguided people fear us. They think of us as an imperialistic Nation run by greedy capitalists—cruel to the poor and heedless of the rights of the weak. They do not understand that we truly desire independence for subjugated peoples. They do not understand that our capitalism is based on a system of social insurance and social benefits for the common man, and on a sense of government responsibility for the general welfare. You know it took us 150 years to find out that the preamble to the Constitution provided for the general welfare and along with the Roosevelt administration we began to put it to work. These people do not understand that we are creating an economic and social system which, far from being cruel to the poor, offers employment and opportunity for everybody.

Of course, these misconceptions are due in part to Communist propaganda. But they are also the result of the foolish statements and reckless conduct of some of our own leaders in foreign affairs. In recent years, our Government has not helped us to stand before the world as we really are.

The real American self—our true self—is in a sense epitomized by the career of the man to whom you have voted your award this year. Here you have a capitalist who has long been engaged in the war on poverty throughout the world. Here you have a businessman who is working to expand social security, to support the income of farmers, and to expand and protect civil rights and civil liberties of all our citizens. Here you have a believer in private enterprise, once active in investing American dollars abroad, who—far from being an imperialist—has given his best efforts to secure and protect the freedom of other countries. Averell Harriman is a man who combines the practical commonsense and creative ingenuity of American business with the democratic and humanitarian impulses that make our country great.

I want to congratulate you, Judge, and all the members of this Four Freedoms Organization for choosing Averell Harriman as recipient of this award. And it is with great pleasure, Averell, that I bestow this award on you.

The Displaced Shopkeeper

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the New York Times of May 10, 1956. It deals with an important problem, which is receiving the continuous attention of the House Small Business Committee:

THE DISPLACED SHOPKEEPER

A frequent casualty of slum clearance for public housing, both low rent and middle income, is the displaced shopkeeper. The displaced housing tenant is also a problem, and opinions differ on how well he is handled, but some attention at least is given to him. But the shopkeeper is likely to be a forgotten man when a site is cleared.

New York City Housing Authority current policy, with certain exceptions, is to build store space only if it has to. The theory is that subsidized public housing should not go into a competing business, of renting store space or providing competition with merchants across the street from housing projects. Ordinarily when a block is cleared, or several blocks, and new, modern housing goes up, the surrounding area is rejuvenated, old stores are refurbished and new ones built.

But it has been recognized at the Housing Authority that such a policy, even if generally sound, leaves highly regrettable consequences in some projects. On March 21 Warren Moscow, executive director of the authority, announced that East Harlem shopkeepers displaced by several new projects would get priority to return to the site's new housing similar to that granted residential tenants. This policy, applying to East Harlem only, was prompted by the fact that slum clearance had displaced 1,500 to 1,600 stores since 1940. Stores are being put into two East Harlem sites. But on these 2 sites there were originally 186 stores, as against 44 new spaces to be built. On five other projects elsewhere in the city the authority is now studying the store question. In clearance for title I work the setting aside of some land to be privately acquired for shopping sites is a solution.

Hardship to storekeepers previously on a site to be cleared is, of course, one major consideration, and the man worst hurt is usually the "little fellow," a marginal operator, whose fixtures bring little at condemnation, and who finds it hard to start in business again elsewhere.

Another consideration, pertinent to some larger projects but not necessarily all, would seem to be the convenience of new residential tenants, who would benefit if the projects installed store space on the outer fringes. Certainly the whole question deserves review and the illumination of debate, sure to follow, over Government versus private enterprise. The small, independent shopkeeper is a neighborhood feature of New York City. We wouldn't want to lose him.

New Horizons for Banking Leadership

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. REES of Kansas. Mr. Speaker, under consent approved by the House, I am including an interesting and informative address by the distinguished educator and administrator Deane W. Malott, president, Cornell University. Dean Malott was reared in Abilene, Kans. He is former chancellor of the Kansas State University:

To be with you today is for me a high honor indeed. As the black sheep in a Kansas banking family, I have personally known three generations of KBA executives, and those Kansas bankers whom I feel I know through your friendship over the years for my father, who was president of this association 43 years ago, are legion.

As your 69th annual convention draws to a close, I shall draw you away entirely from your professional problems of loans and discount rates, of service charges and time deposits, of credit files, and banking policies. I shall not even discuss the wheat outlook or the weather, for there are still enough optimists among you, I know, to unfurl your umbrellas whenever a cloud is reported over Western Kansas.

Rather, would I talk to you briefly about your community leadership, that personal responsibility devolving upon you by virtue of the prestige which is yours and from which you cannot escape. The future life of America, some segment of it, lies at your disposal, and the account of your stewardship will be indelibly written on the history books down the long years of the future.

This responsible leadership is not met by the successful record of your loans, by the skillful manipulation of your investment portfolios, or by your dividend rate, but by what you are doing in your community, be it large or small, to channel the people's thinking into sound solutions for the great national and international problems upon which you must be both informed and articulate, effective leaders at the grassroots of America.

I shall discuss with you some of these great problems as they present themselves today; I shall conclude with some of the problems of education which have, I believe, a bearing on the kind of America our grandchildren will inherit, and in the solution of which your help is needed.

I am concerned first of all by what appears to be a growing divergence between our stated national aims and our specific actions—a divergence sufficient to jeopardize our moral leadership. We talk about the equality of men under our Constitution, and, when this great concept is defended by the United States Supreme Court, we go through such antics of irrational behavior as to demonstrate to all and sundry that we do not mean what we say.

We have supported the United Nations as a federation of sovereign states; but we have negated this policy, by allowing Russia to bring in some of her constituent units under a false guise of sovereignty. Yet I have heard nothing about giving Texas or New York separate and additional membership in that important deliberative body.

We have been hazy and indecisive about our policies in Asia, a renascent focal point of political and economic power. We deplore Communist China; we rightfully criticize her but, by our refusal to consider her for United Nations membership, we give her no opportunity for those "face-saving" rituals so vital to Oriental diplomacy. In the meantime, she joins Russia in an ever-tightening mutual embrace, as we slowly lose any bargaining power with her, against the inevitable day when she will most certainly be admitted alongside Nationalist China into the United Nations framework.

In Burma, Prime Minister U Nu seeks American help but proudly rejects a dole and wants some quid pro quo. The only "quid" in this case is her exportable rice crop, but we are stocked long on rice, and while we chew our fingers in the dilemma, Russia buys the rice in exchange for manufactured goods and technical advice, possible first step in Communist infiltration. Ten million dollars for rice or teak wood may have been saved by our ineptness; the price may be at the expense of freedom for all Southeast Asia.

It should be clear by this time to every American that the Communist-free world struggle is more than competition for intercontinental missiles and atomic weapons, but rather will be fought on the economic level. With the change from Stalin to Khrushchev and Bulganin, the battering-ram has given way to the termite, the latter a far more subtle and insidious weapon. America's lack of affirmative policy, as our State Department officials fly nervously over the globe from conclave to conclave, gives evidence of unreadiness for wars of erosion. The American people must help to determine upon and to back an imaginative, bold, and sensitive policy in Asia. Is it too much to expect that incomparably strong and rich America might somehow find a genuine program of help to these economically and politically weak nations of the East, who have the same desire to be independent, free, and self-sufficient democracies that we so successfully aspired for in 1775?

In the Near East lies perhaps the world's tinder-box of the moment. Few Americans seem aware of the peril. Militant Zionism, created largely out of the revolt from the pogroms and peregrinations of Adolph Hitler, cut a new nation out the ancient pattern of the Arab world. There is justice on both sides of the dispute; our every effort should be to calm the troubled desert sands, to create the necessary give and take to preserve stability. For remember, on the borders of these restless countries lie the greatest oil resources in all the world. And just beyond stretch the limitless miles of the Iron Curtain. A blazing war might screen a raid by the oil-hungry Russian bear—a raid which if successful in cutting off this oil supply from the free world, would, in the short space of days, stifle and bring to complete stagnation the economic life, first of Europe, and then of America. These are shattering realities to which Americans are somehow blinded in this great era of prosperity—a prosperity more and more resting on the unstable foundation of all kinds of expanding credit.

Internally, the Nation is dazzled to the point of blindness by the radiance of our somewhat lopsided industrial prosperity. Installment borrowing is growing apace, the Federal budget expands and with it a Federal deficit which in volume staggers our conception; how, or when, or whether this deficit will ever be paid or even its growth halted, is scarcely ever discussed. It was, once upon a time, a subject of vigorous debate; it is now complacently accepted with all too little thought, even in recent weeks, of its eventual impact on the next generation or the next.

America seems committed to a slow inflation, a concept as difficult to envisage as Einstein's postulate of a mushrooming universe.

The fact that Government has assumed responsibility for, and will in the future exert a direct and energetic leadership in, the Nation's economic destinies, is one of the little recognized changes which have come over our national life. Geoffrey Crowther, writing in a recent issue of the Economist, points out how the same thing happened in England. In the last 20 years, he says, "by far the most far-reaching change has been the assumption by the state of responsibility for the condition of the national economy."

In our own country, national policies over the economy were invoked during the depression of the thirties. First, there were experimental and emergency attempts, largely invoked by the Chief Executive, to correct the disastrous trend of the economy, through his responsibilities for the natinal welfare. By slow decay, both of our personal freedoms and of our very desire to be self-respecting and self-sustaining individuals, we have now, as a major and permanent concept of Government, a Federal program of protection from the cradle to the grave; social security for ever-widening segments of the population; sickness and hospitalization protection; unemployment insurance; labor unions exempt from the restrictions designed to keep business enterprises competitive; and Federal grants for everything from lunches for school children (a large proportion of whom do not need them), to practically every segment of the population who can band together into a group of special pleading. Even educators—who ought to know better—are stampeding to get their feet into the Federal trough through all kinds of proposals for direct aid to education.

I have only to hear of a special grant to Ringling Brothers and Barnum and Bailey to know we are approaching, full circle, those trends which caused the fall of the Roman civilization, where the emperor was finally expected to provide food and entertainment for all the populace, with not enough producing power left to pay the bills or to furnish the taxes. Parenthetically, Rome, of course, might have lasted a bit longer with the credit machinery of Treasury bills and the powerful controls of the Federal Reserve System.

Macaulay, recently quoted by a leading business executive, sounded a warning, back in 1857: "Either some Caesar or Napoleon," he wrote, "will seize the reins of Government with a strong hand; or your Republic will be as fearfully plundered and laid waste by barbarians in the 20th century as the Roman empire was in the 5th—with this difference, that the Huns and Vandals who ravaged the Roman empire came from without, and that your Huns and Vandals will have been engendered within your own country by your own institutions."

For further and later reference and corroboration, look under the "M's" for Mussolini, under the "S's" for Stalin, and under the "H's" for Hitler. But, on the other hand, while you are looking cast your eye down under the "A's" to the American people, whom somehow we must count upon, as we have always been able to before, to come to their senses in time, and we may hope in this instance, to realize before it is too late, that government produces nothing; and that what it bestows upon one it must take away from another. And we cannot always be on the receiving end. We must somehow be made eternally and everlastingly aware that: "There is always free cheese in a mousetrap."

Now, of course, there is no sure and known specific for all the economic and political ills of these sensitive times. But there are points of view, attitudes of mind, to which I should like to call your attention. I am talking to you, not to the Kansas Bankers Association, but to each individual "you" who in your own community, in your own orbit of activity and contact, can help to establish these attitudes which to me seem so important as America makes up its collective mind on these grave issues.

The first attitude I call upon you to adopt is to be willing to take some time each week for serious reading and discussion of the great issues of the day, that you may form a hard core of personal opinion, and exert an influence upon others in your community, consistent with the banker's prestige and leadership.

The second attitude is to try to look in terms of decades, not of years. Only in that way can you avoid the excursions and alarms that constitute the daily grist of rumor, recrimination, exhibitionism, complacency, fear, gossip, and braggadocio which so fills our lives. On the 20-year look, we can more easily evaluate the $50 billion which the United States has given away abroad since the Second World War; we can look with some assurance over into the year perhaps some two decades hence when it is expected one-half of all our energy and power will be produced by nuclear fission; we can look upon the probable effects on world peace, of a balance of military power so nearly equal between the free and slave states as to constitute a new and protective element never before present in modern history—the defending powers as ready and as mighty as the potential aggressor nations. Over the long view, too, we can look with equanimity at the dislocating changes which automation is inevitably creating in industrial America. While the Joint Congressional Committee on the Economic Report traces a drop in the work week from 70 hours in 1850 to an averages of just over 40 in the 1950's, a mere century later, it also predicts that automation will create 15 million more jobs by the mid-1960's. More work to do; more workers to do it; more people with more leisure to enjoy.

And this new freedom of leisure and the rising population, brings me to my third point, so essential to the long look as we face the future. Here I become the schoolmaster incarnate, the special pleader of the chosen profession of this black sheep of a banking family, and speak in the role of a university president. I represent the merchandiser of ideas and ideals, the operator of the type of enterprise by which the storms and stresses of today may be forged into the civilization of tomorrow.

Kansas has always supported education. The growth and distinction of our State institutions of higher learning, and the stature of our endowed colleges attest to Kansas people's interest decade after decade.

It has been over 90 years since a bridge keeper in central Kansas recounted the passage of 4,472 wagons, 5,197 men, 7,669 horses and mules, and 38,281 oxen whose combined efforts transported in a 6-month period in 1865 more than 26 million pounds of freight over the old Santa Fe Trail.

The pioneer spirit was then in full flower. It has gone on to carve out of Kansas the heartland of a great agricultural and industrial empire. I like to speculate on the part which the devotion of Kansas people to education has played in this development since the first school was established in Kansas Territory on January 16, 1855, in Lawrence, under the determined leadership of the New England Emigrant Aid Society.

The population of Kansas in the college age group is simply bound to grow in the decades ahead and if the immediate past is any criterion, the proportion in that age group which will seek a college and university education is growing also.

Statistics are too difficult to handle in an address of this sort. Suffice it to say that Kansas must inevitably provide more resources—more and more—for its colleges and universities in the years ahead. This money can come from only three major sources—the Legislature of Kansas; gifts, aids, and bequests from eleemosynary foundations, from corporations, and business, and from individuals; or the burden can be further shifted to the Federal Government.

The legislature has wisely and forthrightly backed the State colleges and the University of Kansas, but it acts always and properly in reflecting the sentiment and desires of the Kansas people. Again, I say, you are leaders of Kansas thought; is your shoulder to the wheel, are you exercising the foresight, are you helping to prepare our institutions in advance for the burden that is coming? It is no theoretical forecast we face; these youngsters are here now, alive, growing up in the elementary and junior high schools of the State. It takes time to prepare, even to adjust our minds to the exercise of the necessary future planning.

Other States have large programs already under way. Slowly, too, under the pressures of numbers, the gates are closing in State university after State university, to out-of-State applicants. Kansas must be prepared either to care for its own, or to reciprocate exchange of students on some stringent basis. Municipal universities face much the same problems.

Now a word in behalf of the privately endowed colleges which have played a vital part in Kansas education. I am sure the present chancellor of the university and the presidents of the State colleges would agree with me that it would be a calmity to have only publicly supported higher education in Kansas. The private colleges, small, selective, with the opportunity to be experimental, with emphasis on the vital field of the liberal arts, should and must survive. If they are to do so, it must not be up to the "other fellow," but up to you, too.

Corporate giving on the part of the large corporations has had a phenomenal growth in the past decade; indeed in the past 5 years. It is estimated by Keith Funston of the New York Stock Exchange that the corporations of America gave close to $100 million to education during 1955. Those that gave at all, either through their own charitable foundations or directly for charitable purposes, gave somewhere between .36 percent and .66 percent of net income before taxes, far below the 5-percent maximum deductible by corporations under Federal income-tax law. The present minimum needs of the endowed colleges and universities of the country, so it is estimated, are for gifts from these sources of around $300 million or roughly three times the present rate of support. To prepare adequately for the future will require even larger sums.

The Council for Financial Aid to Education, composed of a group of far-seeing business and professional men and women, is working toward that day when businesses will give perhaps 1 percent of net income for educational support.

But this means all business, not merely the great industrial corporations, or the great banks of New York City, but your institutions, too. Your stockholders must be as ready to contribute their fair share as the stockholders of General Motors or the Standard Oil of New Jersey. Here again your individual leadership is needed, so badly needed, to help pattern the future of America.

If you and the other business leaders fail, the Federal Government will take on the task, another and desperate step along that road of ancient Rome, with all of the drawbacks and dangers of a burgeoning bureaucracy. I make no apology for my plea to you. You need college and university men and women in your banks and in your customers' organizations, on the farms, and in the mills, and in the homes of Kansas.

Thomas Paine said many years ago that "those who expect to reap the blessings of freedom must, like men, undergo the fatigue of supporting it."

We started out with the problems of America. I return to that starting point, in final defense of education and in quest of your support for it.

The statement attributed to the late Justice Robert Jackson, of course is true. He said, "one of the paradoxes of our time is that modern society needs to fear only the educated man. The primitive peoples of the earth constitute no menace. The most serious crimes against civilization can be committed only by educated and technically competent people."

But if education has given to the world diabolical power if placed in unscrupulous hands, it is equally true that only the educated man has at his command the sweep of history, the broad tolerance and understanding, the appreciation of values, the patience and the courage, to form policies and to implement decisions.

The great victories of tomorrow will not come from the guided missiles of the stratosphere, they will not come from bombarding miliary targets at supersonic speeds with nuclear warheads. Tomorrow, we must win, with its deep and hidden obscurities, the battle for the minds of men. Our military might, let us hope, has given us the time and the strength for this more important battle. May the bankers of Kansas ever be in the front line in such a clarion challenge to freedom's survival.

H. R. 11366, a Bill To Provide a National Veterans Cemetery in the First District of Florida

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. CRAMER. Mr. Speaker, I have recently introduced a bill that would provide for an additional national cemetery on the central west coast of Florida. This is known as H. R. 11366.

Florida at the present time has had four cemetery sites recommended by the United States Army. These would include the present location in west Florida, reactivation of the St. Augustine site, a centrally located cemetery, and one in southeast Florida. My bill would provide location, provision for the site, and activation of the project in central Florida that has been recommended.

The veterans population of the State of Florida is increasing at such a tremendous pace that it is imperative we adequately provide for the final resting place of these men who qualify who have served our Nation. In the concentration of veterans on the central west coast of Florida we find that this need is particularly felt. The State is conservatively estimated to be the home of 650,000 veterans by 1960. The trend to the west coast will be particularly noticeable in the next few years and the facilities of Bay Pines Veterans Hospital attracts many of these men.

The many veterans associations of the State and particularly in the First District have urged this action after careful and thorough study of the problem as presented by the present influx of veterans. It is the unqualified opinion of the many communities in the area that this need is urgent.

Under the survey conducted by the Quartermaster General, as requested by the Committee on Military Affairs in 1945, it was proposed that a cemetery be established with a 250-mile radius of planned use. In the State of Florida a centrally located cemetery such as requested in my bill would fully meet this recommendation.

The importance and need of such a cemetery in view of the general requirements of 12,394,522 veterans of World War II, 134,415 Spanish War veterans, and 3,897,483 World War I veterans, is clear.

I urge favorable consideration and an early provision by the House of this needed supplement to the care of our veterans and their families.

Labor Against the Workers

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. HIESTAND. Mr. Speaker, one of the most clearly stated articles in behalf of the labor union worker, that I have seen, is that from the pen of Suzanne La Follette, in the National Review, of April 11, 1956. Under unanimous consent, I include this article in the RECORD:

LABOR AGAINST THE WORKERS
(By Suzanne La Follette)

On the pretext that only compulsory unionism can protect it from union busting, organized labor is demanding control over every American worker.

On February 7, a superior court judge in Indianapolis regretfully told 84 employees of the Baltimore & Ohio Railroad that he lacked jurisdiction to protect them in their jobs. These men had resigned from various railway unions in protest against compulsory

unionism, and had joined the independent United Railroad Operating Crafts. Failing to get this union elected as their bargaining agent, they applied for readmission to their former unions, which refused to accept them and demanded their discharge under the terms of the B. & O.'s union-shop agreements. This act of vengeance—with which the B. & O. had no choice but to comply—deprived the road of the services of 84 experienced employees, and the men not only of their livelihood but of seniority and pension rights accruing to them from their years of service.

This case is one of several before the courts, brought by workers who object to being forced, as the price of employment, to join a private organization and pay taxes to its directors. One such case, *Hanson* v. *Union Pacific*, is expected to come before the Supreme Court this month. In this case the Nebraska supreme court has ruled that the union-shop provision of the Railway Labor Act violates the first and fifth amendments to the Federal Constitution, and the 15 railway labor unions against which the decision was directed are appealing. If the Supreme Court does not evade the constitutional issue, its decision will affect the future of every American worker. It will determine whether or not Congress has the right to permit forced unionization and to delegate the taxing power to organized labor in the form of union dues and assessments.

American workers with the courage to petition the courts for protection of their constitutional rights have arrayed against them the economic and political power of an organized labor movement which annually collects some half-billion dollars in union dues alone; a movement which has pressured Congress into granting it privileges and immunities that in 20 years have made it the most powerful labor organization in the world.

PROTECTION THEN PRIVILEGE

The National Industrial Recovery Act of 1933 (known as Labor's Magna Carta) recognized and protected the right of workers to organize. In 1935 a rubber stamp New Deal Congress passed the Wagner Act, which greatly extended the scope and power of unionism. Among other privileges, it permitted the closed and union shops. It also set up the National Labor Relations Board to supervise labor-management disputes in industries engaged in interstate commerce.[1] In the thirties the CIO formed the left wing of the New Deal Party, and its Communist secretary, Lee Pressman, was not only influential in determining labor policy but exercised an effective veto on all Government hiring; which probably accounts for the fact that the NLRB was provided with one Communist member, a Communist secretary, and a plethora of Communist attorneys, regional directors and examiners whose policy it became never to give the employer a break.

During World War II, the War Labor Board, in a rather startling departure in public policy, imposed one form or another of compulsory unionism on industry. That is, assuming that patriotism wasn't enough to keep the unions from striking in wartime, the Board offered up the liberty of the individual worker as a bribe to organized labor. Even the bribe wasn't enough, as the Smith-Connally Act attests. The sacrifice of the individual not only failed to insure labor peace, but by turning workers over to the unions as a matter of Federal policy, it encouraged the arrogant expectations of organized labor.

By 1947 Labor had succeeded in alienating enough friends that it was unable to prevent the passage of the Taft-Hartley Act, even over President Truman's veto. The act removed the most flagrant inequities of the previous law, in an attempt to give some protection to the rank-and-file worker, the employer, and the public. It outlawed closed-shop contracts (under which no worker may be hired who is not a member of the contracting union) but it continued to permit the union-shop contract (under which workers employed by the contracting employer must join the union within a specified time or forfeit their jobs, and of course the seniority and pension rights accruing from them). But it also (sec. 14b) excluded the union shop in those States where it would come into conflict with laws protecting the worker's right to join or not to join a union.

The benefits reaped by organized labor from Federal protection are evident, among other ways, in the increase of union membership from less than 4 million in 1935 to more than 16 million by 1952. Not all this increase represented voluntary membership. But neither was it entirely due to the closed or union shop; for by 1951, when Congress amended the Railway Labor Act to permit the union shop, the nonoperating railway unions had already organized 80 percent of the workers in their crafts.

The increase resulted, rather, from another privilege, known as "majority rule." As Dr. Leo Wolman has written, the labor leaders, encouraged by their phenomenal success, "conceived unions to be a species of government. As such it was to be expected that unions would rightfully and by law be made the sole and universal representative of all labor."

So labor demanded, and obtained from Congress, the provision that a union chosen as bargaining agent by a majority of those voting in an NLRB representation election becomes the exclusive bargaining agent of all employees, whether union or nonunion. This provision effectively excludes nonunion workers from dealing with their employers. Their legal disability and its implications are correctly described in a union brief presented in the famous Santa Fe case:

"With this vesting in the collective representative of the bargaining rights of all of the employees in a craft or class of service, the so-called liberty or right of each individual employee to contract privately for his own terms and conditions of employment has been greatly curtailed if not totally destroyed."

In other words, the nonunion worker has been absorbed involuntarily into the bargaining unit and has therefore no will or choice of his own. From this loss of liberty the brief drawns an ingenious inference:

"Modification of the collective-bargaining contract by the statutory collective bargaining representative [the union] is in effect, or comparable to, modification of an individual contract of employment by the employee himself, and, of course, one is not unlawfully deprived of a vested right when he agrees to a modification of his own contract."

This sounds like a pretty clear definition of a union privilege. But the unions shrewdly construe majority rule as a privilege enjoyed by nonunion workers. They call their nonunion captives free riders and use their legal disability as one of the main arguments for compulsory unionism—the argument that since they enjoy the benefits of union bargaining they should be forced to join up and pay union dues and assessments.

Armed with all this power, the unions, you might think, hardly need the union shop to protect them from union busting. Yet the newly united AFL–CIO has announced a campaign to bring all unorganized workers into the unions; and an important target of this campaign will be the State right-to-work laws. When the Railway Labor Act was amended in 1951 to permit the union shop, labor was able to persuade Congress to declare that the amendment superseded these State laws. It is now out to erase section 14 (b) of the Taft-Hartley Act; which may help to explain Mr. George Meany's recent announcement to 60 labor tycoons assembled at Miami that the AFL–CIO plans to collect a voluntary contribution of $1 from each of its 18 million members, to be used for political activity this year.

OBJECT: MONOPOLY POWER

The object, then, of the union oligarchies is monopolistic control of the whole American labor market. They intend to make it impossible for any American worker to earn a living unless he joins a union and remains "in good standing"—that is, unless he pays union dues and assessments and obeys the orders of union officials. And they intend to enforce this monopoly by electing—at the expense of their captive members—State legislators, Congressmen and Senators, and even Presidents who can be depended upon to do their bidding. They are conducting a perfectly open conspiracy against the liberty of every American who has to earn his living. Their euphemism for this monopolistic power is "union security."

Union officials are surprisingly frank about what they are after. When Mr. George M. Harrison, grand president of the Brotherhood of Railway and Steamship Clerks, appeared on behalf of 21 railway unions to argue for the union-shop amendment to the Railway Labor Act, he made some significant admissions. Asked whether he thought the union shop would strengthen the unions in industrywide bargaining, he answered:

"No; I do not think it would affect the power of bargaining one way or another. * * * If I get a majority of the employees to vote for my union as the bargaining agent, I have got as much economic power * * * as I will ever have."

Further questioning elicited from Mr. Harrison the fact that what the unions wanted was to be able to collect dues and assessments from those who were not union members, and to obtain "disciplinary power" over them. Just what this meant he made clear to the Senate committee:

"Senator DONNELL. * * * you want to have the disciplinary power over these, at least 280,000 or 350,000 people, whatever that figure may be, who are not now members of the union? * * *

"Mr. HARRISON. Not only over those people but over all of our members.

"Senator DONNELL. * * * you want to have disciplinary power over your present membership which you already have?

"Mr. HARRISON. But not able to exercise because of the voluntary character of the membership."

The appetite for power seems to impair the capacity for logical thought: President George Meany of the AFL–CIO is one of the most eloquent enemies of Communist totalitarianism.)

This sinister ambition is a new development in the history of the American labor movement, fostered by labor's heady triumphs under the New Deal. The revered patriarch of the movement, Samuel Gompers, speaking in El Paso, Tex., in 1924, warned a trade union audience:

"I want to urge devotion to the fundamentals of human liberty—the principles of voluntarism. No lasting gain has ever come

[1] Federal labor laws are based on the constitutional power of Congress to regulate commerce between the States. There is great confusion, however, over Federal and State jurisdiction, since it is often hard to draw the line between intrastate and interstate commerce. This may lead to arbitrary rulings e. g., and NLRB ruling that a small Idaho firm selling and repairing farm machinery was engaged in interstate commerce.

from compulsion. If we seek to force, we but tear apart that which, united, is invincible."

There are labor leaders today who echo this thought. Warren S. Stone, a past grand chief engineer of the Brotherhood of Locomotive Engineers, has said:

"I do not believe in forcing a man to join a union. * * * It is contrary to the principles of free government and the Constitution of the United States to try to make him join. We of the engineers work willingly side by side with other engineers every day who do not belong to our union, though they enjoy without any objection on our part the advantages we have obtained. Some of them we would not have in the union; others we cannot get."

And the present grand chief of the Brotherhood, asked in an interview with U. S. News & World Report whether his organization had sought the union shop, answered:

"Not only did we not ask for it, the BLE was the only labor organization I know of which opposed it as a matter of policy * * *. Engineers just simply resent being told that they must join something. We still think that labor in the long run has a good enough product that you won't have to force men to join."

These views have become rare in the American labor movement. They may also be rare in the British labor movement, but they are backed by no less an authority than Charles Geddes, chairman of the British Trade Union Congress (and our ambitious labor tycoons might do worse than heed him):

"I do not believe the trade union movement in Great Britain can live for very much longer on the basis of compulsion * * *. Most people belong to us or starve whether they like our policies or not * * *. I believe the trade union card is an honor to be conferred, not a badge which signifies that you have got to do something whether you like it or not."

If American labor is to win its fight for compulsory unionism, our constitutional safeguards of liberty and property will have to be nullified by Supreme Court decision. Will the Court, under pressure from labor and its liberal supporters in and out of Government, disregard these constitutional guaranties? To do so, it must reverse its previous pronouncements on the right to work—for example, this one:

"There cannot be wrung from a constitutional right of workers to assemble to discuss improvement of their own working standards, a further constitutional right to drive from remunerative employment all other persons who will not or cannot participate in union assemblies."

And this:

"Insofar as a man is deprived of the right to labor his liberty is restricted, his capacity to earn wages and acquire property is lessened, and he is denied the protection which the law affords those who are permitted to work. Liberty means more than freedom from servitude, and the constitutional guaranty (14th amendment) is an assurance that the citizen shall be protected in the right to use his powers of mind and body in any lawful calling."

These and similar pronouncements place the Court far ahead of Congress in its recognition of the meaning of individual liberty and its constitutional safeguards. There is reason, therefore, to hope that when the Court is faced with deciding whether or not Congress acted unconstitutionally in permitting the union shop, it will uphold liberty instead of labor.

THE DANGER OF COMPULSION

One often hears the argument from union sympathizers that since Congress has made the union shop merely permissive, the Federal laws involve no compulsion. The answer is that for a powerful labor oligarchy armed with congressional sanction of compulsory unionism and operating through industrywise unions, the sanction is sufficient. The rest can be accomplished through threats of stoppage, and through the tactics of discrimination and violence with which certain unions—most conspicuously the Teamsters and the International Longshoremen's Association—have made the American public familiar.

These tactics are employed equally against recalcitrant workers and reluctant employers. The unions have the resources to finance long and ruinous strikes—vide the recent strike at Westinghouse—and the union bosses have shown a callous indifference to the losses and hardships suffered by their striking members. The employers, on the other hand, especially the great industrial corporations, have to consider not only the loss to their stockholders from long industrywide stoppages, frequently attended by violence, but also the inconvenience to the public—toward whose interest organized labor appears indifferent. It is significant that after the amendment of the Railway Labor Act the railways, almost without exception, accepted the union shop, even though it involved forcing employees with long records of loyal service to choose between joining the unions and losing their jobs, with the seniority and pension rights gained over the years.

As for the worker who resists union demands, he must be prepared for such delicate attentions as harassment of his family, bombing of his home, mauling of his person—even the loss of his life. The records of congressional hearings are full of appalling instances of this kind of union persuasion. And it is by no means used only against nonunion workers. The union man, for example, who attempts to replace his union officials, however peacefully, lays himself open to expulsion and even mayhem.

Violence aside, workers who resist the union shop by forming independent organizations risk permanent exclusion from their jobs if they fail to win NLRB elections against the established unions.

The fight for compulsory unionism is an object lesson in the behavior of pressure groups whose appetite for power grows by what it feeds on. A weak labor movement, fighting for its life against hostile employers and yellow dog contracts, wins congressional recognition of the workers' right to organize and bargain collectively through representatives of their own choosing. But as it gains strength it demands, and obtains, not rights but privileges, until at last it comes to regard itself as a government within a government, and stretches out its hand to control the whole economic and political life of a great nation.

But the more arrogant it becomes, the more numerous and determined become the forces which resist its ambition. Other pressure groups are coming to the fore against union aggression—e. g., the Farm Bureau Federation. And the States—18 so far—are adopting laws to protect labor from a discipline which cannot be exercised against a voluntary membership. Above all, union members such as the 84 B. & O. workers are leaving their unions in disgust and risking vengeance in attempts to bargain through voluntarily chosen representatives. This is significant; for it proves that in the decision whether a great society is to continue to permit an organized pressure group to disrupt its economy and mulct its industries at will, the group's officials cannot be sure of keeping its own members in line. In the end Samuel Gompers may have the last word: "No lasting gain has ever come from compulsion. If we seek to force, we but tear apart that which, united, is invincible."

Spring: Cleaning the Inner Man

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include at this time a most refreshing editorial which appeared in the April 13, 1956, issue of the Worcester (Mass.) Evening Gazette on the subject of spring house and heart cleaning. The editorial points out that our mental furnishings as well as our house furnishings can be revitalized by conscious reflection upon and appreciation of the spring seasonal change that can bring a sparkle to the spirit as well as to the hearth. We should make this wholesome spring cleaning objective an annual objective.

The article follows:

SPRING: CLEANING THE INNER MAN

As most men know, April is apt to bring with it an annual flurry of spring cleaning. Doors and windows are opened, rugs are shaken vigorously, dust is agitated and pursued with great energy, and furniture is moved about with sound and fury that varies inversely as to purpose and design. Most men are not enamoured of the spring-cleaning ritual.

But there is another kind of spring cleaning that might well be explored by even the most slothful male, and female, too. That is the spring cleaning of the mind, heart, and spirit.

There are dusty closets in the mind, just as there are in houses. There are dank recesses of the spirit which sadly need a rubbing and a scrubbing. There is mental carpetry to be hung out, to be aired by the clean breezes of April, and there is intellectual furniture and baggage that is beyond further patching and should have been thrown on the junk heap years ago.

April is a good time to replace musty convictions with newer, brighter ideas. Linen should fly from every window of the spirit. Dust should be attacked and banished from the innermost corners of the soul. A fine way to start this therapeutic process is to walk abroad on a fine April day, letting the clean winds of the outdoors blow through the clogged and dusty passages of the brain. Far above, the blue, blue sky stretches upward to the reaches of infinity. The sun, burning brightly down, puts an almost forgotten sparkle on the face of the world.

Down in the meadow a springtime brook gurgles through the bending grasses, flushing them with the first hint of green. The man who follows it along its winding, half-hidden course into the woods beyond can see how it scours and cleans its bed of debris. And so, as he sits on a mossy stone and contemplates its bright splash and murmur, he can gradually feel it begin to flow through the waste reaches of his mind. There, too, is debris to be carried away. There, too, are places to be polished bright and clean.

Most important, there is the clean, pure air of April and springtide, and this has a purifying effect upon the inner man. This balmy air, entering into the lungs, brings with it spaciousness, and imagination, and elevated thoughts. Let it blow into musty and dusty places. Let the newness and wonder and beauty of April enter the inner man as well as his house. And let there be a furious cleaning, arranging, and reassorting of mental furnishings during this the most important part of the spring-cleaning ritual.

Special Diploma of Honor Awarded to Max Abelman

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. ROONEY. Mr. Speaker, on Sunday afternoon, March 4, 1956, the Jewish Hospital of Brooklyn held a reception and tea in honor of Brooklyn's distinguished citizen, Max Abelman, in the Nurses Residence Hall, where he was presented with a special diploma of honor by the University of Manila for his humanitarian activities. The presentation was made by His Excellency Gen. Carlos P. Romulo, Philippine Ambassador to the United States and Past President of the United Nations General Assembly. Surrogate Maximilian Moss, chairman of the executive committee of the Jewish Hospital, presided.

Mr. Abelman has devoted his lifetime to the service of his fellow man and has been the recipient of many great honors. He has long been identified with philanthropic and hospital work in Brooklyn and his host of friends speak of him affectionately as "Brooklyn's ambassador of good will."

He was formerly secretary to the president of the Jewish Hospital in Brooklyn, and also director of public relations. Only recently he was appointed an honorary sovereign grand inspector general, 33d and last degree of the Ancient and Accepted Scottish Rite for Italy and its dependencies.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the special diploma of honor; also several letters of congratulations and commendation in connection with this occasion:

SPECIAL DIPLOMA OF HONOR

THE UNIVERSITY OF MANILA,
Manila, Philippines.

Know all ye by these presents the board of trustees of the University of Manila hereby awards to Max Abelman this special diploma of honor, with all the rights and privileges thereunto appertaining, in recognition of his outstanding activities as a great humanitarian charity worker, family reconciliator, hospital fund raiser; for exemplary demonstration of human understanding beyond the bounds of religion, race, and color; for being a beloved citizen and benefactor of Brooklyn; for his unstinted efforts in helping and encouraging Filipinos who need his advice in the United States; and for being a good brother to many fellowmen who are in distress.

In witness whereof, this special diploma of honor is signed by the president and the secretary of the university, this 8th day of December 1955.

M. V. DE LOS SANTOS,
President.
LETICIA S. DOMINGO,
Secretary.

KANSAS CITY, Mo., *February 18, 1956.*
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I appreciated your letter of the 10th, and I am very pleased that you are to be recognized in this manner.

From my acquaintance with General Romulo, I know that such an honor would not be offered you if he did not believe it to be highly deserved.

I am very sorry that my calendar will not permit my making a trip to New York next month, for it would have been a pleasure to join you on this occasion. I shall be there in spirit, however.

Sincerely yours,

HARRY TRUMAN.

NEW YORK, *February 29, 1956.*
Mr. MAXIMILIAN MOSS,
The Jewish Hospital of Brooklyn,
Brooklyn, N. Y.

DEAR MAX: I am in receipt of your most kind invitation to be present at the reception and tea in honor of our good mutual friend, Max Abelman, who will be presented by the University of Manila with a special diploma of honor for his humanitarian activities, by His Excellency Gen. Carlos P. Romulo, Philippine Ambassador to the United States, on Sunday afternoon, March 4, at 3 p. m.

Nothing would give me greater pleasure than to be among those present on Sunday afternoon when Max will be so honored, but unfortunately for me, I shall be en route to Atlanta on business at that time.

There is no one I know who has made a greater contribution to the welfare of his fellow man than has Max Abelman; he is indeed nature's nobleman and I have for him esteem and affection which know no bounds.

Regretting my inability to be with you on Sunday afternoon and offering my congratulations to the guest of honor, and my personal regards to you and Mr. Leviton, and the guests assembled.

Sincerely yours,

JAMES A. FARLEY.

NEW YORK, N. Y., *February 28, 1956.*
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Thank you for your letter advising me of the honor to be bestowed on you by the University of Manila. I am very happy for you. However, I regret that because that afternoon I have a personal engagement with Mrs. Wagner and the boys, I cannot be present at the ceremony.

My kind regards and congratulations to you.

Sincerely yours,

BOB WAGNER, *Mayor.*

NEW YORK, N. Y., *March 1, 1956.*
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: As I have mentioned to you before, I have another speaking engagement for this afternoon, but I shall make every effort to be present at the presentation by General Romulo of a special diploma of honor for your humanitarian activities.

Better than anyone else, I know of your wonderful work and that you well deserve this tribute.

It reminds me of the time dating back to 1944, when you and I worked day and night to obtain recognition for the Middlesex Medical College in Waltham, Mass., so that 600 deserving students, regardless of race, creed, or color, could attend. Our efforts can be attested to by such prominent men as former Governor Dewey, Jim Farley, Henry Wallace, the Honorable Nathaniel L. Goldstein, Judge David Benjamin, Victor Ridder, Matthew Woll, Henry Turner, and the late and beloved Franklin Delano Roosevelt.

Fortunately, through our efforts the board of regents made it possible for these young doctors to receive their licenses and to take their rightful places in the medical profession.

A great deal of this success was due to your arduous and untiring efforts in behalf of this worthy cause. This is the first opportunity to personally express my thanks to you—for only through you was this dream made a living reality.

May good luck and good health, which is most important, be with you and yours for many years to come.

With warmest personal regards, I am,

Sincerely yours,

ABE STARK,
President, City Council.

FEBRUARY 14, 1956.
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I am delighted you are going to receive this fine recognition from the Philippine Government and it is grand to know that General Romulo will present it personally.

I wish so much that I could be with you to join in paying tribute to your lifetime of generous service for your fellowman and only the fact that I will be in Florida at that time prevents my being present.

With warmest regards and heartiest congratulations.

Sincerely yours,

THOMAS E. DEWEY.

SOUTH SALEM, N. Y., *February 21, 1956.*

DEAR MAX: It is a great honor which the University of Manila is conferring upon you on March 16. And you are especially honored to have the presentation made by such a distinguished citizen of the Philippines, Gen. Carlos P. Romulo. He has endeared himself to many millions of Americans. He has fought for our joint cause in southeast in a most remarkable way.

I am leaving for scientific and business work with our company out in Iowa next Sunday and fear I shall not be able to be present on this unique occasion.

With warmest personal regards,

HENRY A. WALLACE.

BROOKLYN, N. Y., *March 1, 1956.*
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I am sure I needn't tell you how sorry I am that prior commitments prevent me from attending the reception in your honor on Sunday afternoon, March 4, when you will be presented with a special diploma of honor at the hands of His Excellency General Carlos P. Romulo from the University of Manila.

It is most fitting that a man who has spent so many years as you have on behalf of humanity should receive it at the hands of another great humanitarian, General Romulo.

If all the people you have helped could attend the function, you would have to hire Madison Square Garden and it would be crowded at that.

I send to you my heartfelt prayer for your continued well-being.

Please extend to the general my heartfelt greetings too.

With warm regards,

Cordially,

EDWARD S. SILVER,
District Attorney.

FRANKFORT, KY., *March 1, 1956.*
Mr. MAX ABELMAN,
Brooklyn, N. Y.

MY DEAR MAX: Thank you very much for your kindness in inviting me to the presentation ceremonies. You know how much I would like to be with you, but I am sure you will understand that during our legislative session I cannot be away from Frankfort any more than is absolutely necessary.

It warms my heart to learn that you are receiving the recognition which you so richly deserve. Please add my heartfelt congratulations and best wishes to the thousands which will come to you.

Be assured of my warm regards always.

Cordially,

A. B. CHANDLER,
Governor.

UNION TEMPLE OF BROOKLYN,
Brooklyn, N. Y., March 21, 1956.
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: Permit me to extend to you my belated, but sincere, congratulations for the recognition which you have received from the University of Manila for your humanitarian activities. We of Union Temple bask in your reflected glory.

May God bless you with many more years of continued service that all mankind may benefit from your concern for the dispossessed of the world.

With best wishes for a happy and healthy Passover, I am,

Sincerely yours,
ALFRED L. FRIEDMAN, *Rabbi.*

FEDERATION OF JEWISH PHILANTHROPIES OF NEW YORK,
New York, N. Y., March 2, 1956.
Hon. MAXIMILIAN MOSS,
Jewish Hospital of Brooklyn,
Brooklyn, N. Y.

DEAR JUDGE MOSS: It would have given me a great deal of personal pleasure to be with you on the occasion of the presentation of a special diploma of honor to our mutual friend Max Abelman by Gen. Carlos P. Romulo, in behalf of the University of Manila. I regret that commitments which cannot be changed will keep me from joining you and the many friends of Max to mark this further recognition of a lifetime of service to the community.

With kindest regards, I am,

Sincerely yours,
M. HINENBURG, M. D.

Expiration of GI Home Loan Guaranty Program July 25, 1957

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. CRAMER. Mr. Speaker, of utmost importance to the veterans of this Nation is the anticipated expiration of the GI home loan guaranty program on July 25, 1957. Unless there is legislation to the contrary this expiration would be effective January 1, 1957, under plans of the Veterans' Administration.

I have introduced a bill, H. R. 11367, which would provide a maximum additional period of 36 months for World War II veterans to obtain guaranteed loans. This bill would amend section 500 of the Servicemen's Readjustment Act of 1944.

This portion of the act has been a prime factor in the readjustment from a war economy and in the continued prosperity of the Nation. This has been accomplished with no burden upon the taxpayer and has provided benefits to the veteran which would be normal in a period without wars.

This act since its enactment has been used by millions of veterans to establish their right to a home in our free land. At the present time, however, some 11 million veterans have not had the opportunity to take advantage of this entitlement. Many of these young men are just now reaching the age and acquiring the income in which they will establish a family and a home and we should in no way cut off their rights and privileges when they are extended to other veterans of the same wars. This large percentage of the men who have qualified for this present privilege but who at an average of 35 years of age will be denied participation unless this legislation passed should receive every consideration at this time.

The bill that I have introduced provides for the termination of the program over a period of 3 years from the present date of finalization through provision of a 1 month—not in excess of 36 months—credit for each 2 full months served on active duty in World War II and also provides a full 3-year extension for disabled veterans. In further assistance to the veteran I have provided that the veterans sworn oath may serve as satisfactory evidence of his period of service to alleviate the many problems of and delay resulting from lost records.

I sincerely hope that this bill or similar legislation will be approved before the adjournment of this Congress, and I strongly urge such action.

Polio Vaccine for Every American Child

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DONOHUE. Mr. Speaker, I am pleased to include a very fine article which appeared in the Worcester (Mass.) Evening Gazette issue of April 12, 1956, written by Mr. R. C. Achorn, of the editorial staff, tracing the progress that has been made this past year in the use of Salk vaccine in combating polio.

It is true that substantial progress has been made, but nevertheless, there is still a deplorable lack of the vaccine for use by both public and private medical units and practitioners. Since we have the vaccine formula, nothing should be permitted to stand in the way of the production of sufficient allotments to take care of all American children at the earliest possible moment, and the legislative and executive branches of our Government should cooperate in this objective that is unquestionably in the best and widest national interest.

The article follows:

A YEAR OF PROGRESS AGAINST POLIO

Some of the Worcester children who received polio shots this morning cried a little.

But this is a happy anniversary, nonetheless.

On April 12, 1955, the University of Michigan polio evaluation center announced that the Salk vaccine had proved 69 to 90 percent effective in national tests.

Later that same day, Mrs. Oveta Culp Hobby, Secretary of Health, Education, and Welfare, signed licenses authorizing six drug companies to manufacture Salk vaccine and distribute it nationally.

That was the beginning.

IMPRESSIVE FIGURES

What has that year brought? The figures are impressive.

Some 1,300 persons were spared paralytic polio in 1955, the National Foundation for Infantile Paralysis estimated.

Enough vaccine has been made to give 2 shots each to almost 20 million persons—most of them children.

The incidence of acute paralytic polio dropped 52 percent among 8-year-olds and 40 percent among 7-year-olds. And those were the youngsters who had the shots.

But cold figures don't tell the whole story. There is no real measure of how much suffering has been spared American families. Nor of how bright the future is in this regard.

ON THE RUN

"Polio isn't licked let," the National Foundation says.

But it is certainly on the run.

Take Massachusetts, where there was an epidemic last year.

Among the unvaccinated children between 6 and 10, the polio rate was 157 cases per 100,000.

Among those who had received only a single shot, the rate was only 63 cases per 100,000 children.

There are still problems. The demand for vaccine far exceeds the supply.

In Worcester, the health department has announced that it has free vaccine to meet only one-third of the requests for physicians. In other words, 2 children out of 3 still cannot obtain shots in this manner.

CONTINUING SHORTAGE

Why the continuing shortage?

One reason is the difficulty of producing the vaccine developed by Dr. Jonas Salk.

It takes about 4 months to produce a batch of vaccine. Complicated testing methods are involved. In its final stages the vaccine is tested on monkeys. And a minimum of 20 monkeys is required for a thorough test of each lot of vaccine.

The shortage has another fact behind it.

Only 3 of the 6 companies licensed by Mrs. Hobby have produced vaccine for public release steadily since last April.

STIFFER TESTS

Cutter Laboratories stopped releasing vaccine after the United States Public Health Service reported it found live polio virus in some lots of Cutter vaccine. Test requirements were stiffened after that.

Sharp & Dohme, Inc., and Parke, Davis & Co. also stopped issuing vaccine. Parke, Davis & Co. recently returned to large-scale production.

Those in steady production have been Eli Lilly & Co., Pitman-Moore Co., and Wyeth Laboratories.

The Public Health Service has estimated enough vaccine will be released this year to give two shots each to about 80 million persons.

That would be cut to about 55 million if it is decided to return to a 3-shot program.

AGE LIMIT

There is also the question of age. Last October the Public Health Service began allocating vaccine to the States for all children through 14 and expectant mothers. Some States have raised the upper limit to 19.

But polio cannot be regarded as simply a children's disease.

During last year's polio epidemic in this State, 3,819 persons fell victim to the disease. Of these 989 were 20 or older. Some 133 of them were 35 or older.

So the next step, as production permits, will unquestionably be to raise the upper age limit.

Massachusetts, however, still has to catch up on shots for children.

For many months, the State department of public health opposed use of the vaccine. Not until January did it agree to permit resumption of a large-scale public program.

The distinguished doctors on whom the State relied for advice considered that delay medically wise. Wise or not, it cost us some vaccine.

TO OTHER STATES

Use fell off so much during the period of delay that some of the Massachusetts allotment was reallocated to other States. In only four other States did the demand lag.

Now the demand is brisk again, so great that it temporarily cannot be met in full.

But progress is being made. And from the long-range view of history, it will certainly appear to be spectacular progress.

There are unanswered questions. A big one is: How long will these shots protect those who receive them?

The scientists simply don't know yet. They are keeping close watch on children who were given experimental shots even before the 1954 field tests.

PROTECTION RETAINED

At last report, they retained some protection against the disease 2½ years after the first injection.

When and if this protection declines below what is considered a safe level, the scientists will know when to give more booster shots.

Dr. Salk has hinted that protection may remain even when it is beyond measurement by available means. That has yet to be determined.

In another year of progress, some of these answers may well fall into place.

Judge-Made Law

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. CRAMER. Mr. Speaker, an editorial appearing in the Buffalo Evening News was recently brought to my attention and at request I ask its inclusion in the RECORD. I am heartily in accord with the sentiment of this editorial and with the proposed legislation to restate the intent of Congress in regard to the recent action of the Court in overthrowing the sedition laws of 42 States of the Union. I believe it to be the clear intent of Congress that this body at no time seeks to usurp the rights of the States to provide for the national security as the action of the Court would indicate.

I commend the editor of this paper and hope through inclusion in the RECORD of these remarks that the distinct threat to the rights of the States and their courts will be brought sharply into focus and immediate action taken to correct the interpretation as given in the ruling.

The editorial follows:

JUDGE-MADE LAW

"Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof." (Sec. 3231, title 18, United States Code.)

In view of the above general provision of the Federal criminal code, which includes the Smith Act and most of the other antisubversive legislation in the Federal statutes, the Supreme Court had to reach pretty far last month when it outlawed the sedition laws of 42 States and territories on the theory that Congress intended to take exclusive jurisdiction over national security when it passed the Smith Act.

But this is one case where the Supreme Court may not have the last word after all. Since it handed down its 6-to-3 ruling, overthrowing the Pensylvania statute under which Steve Nelson was convicted of sedition, a movement to "repeal" the decision has been gathering momentum in Congress. And it has now received the solid support of the Justice Department, and in fact the official top-level blessing of the Eisenhower administration.

In outlawing the State sedition laws, the Supreme Court made no claim that they were unconstitutional, but held rather that the intent of Congress was to "preempt" the field. The three dissenters found no such intent expressed or implied in any law, and the majority even conceded that Congress had not specifically asserted exclusive Federal jurisdiction. Rather, it seemed to be saying that, because many State sedition laws are obpectionably vague or arbitrary, it would be better to leave the subject to Uncle Sam.

But the Supreme Court's function is to apply the law as Congress has written it, not to declare what the law should be—and it was this clear intrusion on the legislative function, reading into the mind of Congress something that plainly wasn't there, that has spurred the move in Congress to tell the Court in effect to tend to its own business.

Actually, the bill which the Justice Department has now endorsed would simply restate the intent of Congress—exactly as Congress thought it had already stated it—"that the States may exercise concurrent power" to punish acts of sedition within their border. Passage of this legislation is not only necessary to restore the validity of the various State sedition laws, but under the circumstances it would be a timely and deserved reminder to the Supreme Court that its job is to interpret and apply the laws, not to rewrite them.

Swiss Watches

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, the Cotton Trade Journal, published in the city of Memphis, has wide circulation and its editorial comment is greatly respected. Recently there appeared an editorial on Swiss watches. It is so provocative that I have asked permission to include it in the RECORD.

The editorial follows:

SWISS WATCHES

The concept of free trade, once a seething issue which divided Americans into opposing political camps, has largely ceased to be controversial. In a shrinking world both political parties accept progressively freer trade as a desirable economic goal. The only area of disagreement lies in the consideration of claims of individual industries for special protection.

It is recognized by all countries that certain exceptions to the general freeing of trade are justified. No one today seriously advocates the lifting of all restrictions—except in a limited geographical area and embracing specific commodities, such as was accomplished by the European Coal and Steel Community.

While cottongrowers have traditionally been in the free-trade camp because of the important export volume of American cotton—and they still are in that camp, as are the merchants—not many growers would agree, for example, to let Mexican cotton be sold freely in this country.

Because of such necessary restrictions, it is doubly important that where possible trade barriers be eased as much as possible. This is why we deplored the boosting of the tariff against Swiss watches by 50 percent at the time this action was taken, and why we now urge the hike be rescinded.

There are the valid reasons that the Swiss are good customers for American products—including cotton—and that they pay off promptly in dollars. But the central issue to us is this: is the higher tariff necessary in order to maintain in this country an adequate number of skilled precision instrument makers necessary in time of war? This is the reason the President recommended the tariff boost.

Studies made subsequent to the President's statement indicate it was not based on fact. Washington defense officials are now considering removing the "war necessity" veil from this issue and letting the economic facts speak for themselves.

Let Swiss watches enter our country on a competitive basis. We believe cotton men generally feel the same way—and will lend their aid to see that the unfair restrictions are lifted.

Bureau of Reclamation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SAYLOR. Mr. Speaker, I am astounded to read in the official publication of the Bureau of Reclamation, United States Department of the Interior, The Reclamation Era, published at the taxpayers' expense, a report on the recent authorization of the Colorado River storage project that completely omits what, in the minds of many Members of Congress, was a most important—in fact, an essential provision of that act. I refer, of course, to the provision that no dam or reservoir authorized by this act shall be built within a national park or monument.

Before this provision was put in the bill, all polls indicated that the Members of this House would reject the proposal by a majority of some 70 to 100 votes. When the Managers on the part of the House made their report after the conference with the Senators, the first matter that they discussed had to do with this threat to the national parks. This report said, and I quote:

The matter of retaining intact our national park system was an important issue in the consideration by Congress of this legislation.

It went on to point out that the House-approved bill "makes clear the intention of the House that there be no invasion or impairment of the national park system by the works authorized to be constructed under this legislation."

Yet the Bureau of Reclamation's own official report completely ignores this—it is a very pointed omission.

This park provision occurs in section 3 of the bill and there are only two sentences in this section. The first one states that it is not the intention of Congress to preclude consideration of other projects, and the Bureau of Reclamation takes pains to emphasize this sentence.

However, they say not a word about the sentence that immediately follows and makes plain that Congress does not want any dam built by the Bureau of Reclamation or anybody else in our national parks or monuments.

How does the Bureau expect to have support for the appropriations of these projects if it is going to ignore so flagrantly one of the essential requirements of Congress in carrying out the authorization of this project?

The statement which appeared in the May 1956 issue of The Reclamation Era follows:

COLORADO RIVER STORAGE PROJECT HEADS NEW RECLAMATION AUTHORIZATIONS

"Signing into law by President Eisenhower of the Colorado River storage project authorizing legislation is an historic milestone in the annals of the upper Colorado River Basin States and of the Nation," Secretary of the Interior Douglas McKay said on April 11, 1956.

"It is gratifying to see the way cleared for construction of this great project. Future generations will owe a debt of gratitude to the President and the Congress for their conservation foresight in enacting this legislation," said Secretary McKay.

Reclamation Commissioner W. A. Dexheimer said, "Even though we proposed to start construction immediately, it will not be completed and fully operative in our time."

Comprehensive development of the water resources of the uper Colorado River Basin has been initiated by authorization of the Colorado River storage project and participating projects.

A full or supplemental irrigation water supply of more than 366,000 acres of land, installed hydroelectric power capacity of about 1,100,000 kilowatts and other multiple benefits are contemplated by the authorized construction. Several decades will be required to bring the comprehensive basin development to fruition.

The construction of 4 major multipurpose reservoir storage units and 11 participating reclamation projects in the States of Colorado, New Mexico, Utah, and Wyoming is authorized. The Secretary of the Interior is also instructed to give priority to investigations and preparation of planning reports for an additional 25 irrigation projects. This initial authorization of projects and priority in planning, however, is without intent of the Congress to interfere with or preclude consideration and authorization of other additional projects in the comprehensive plan of development.

The upper Colorado development is the largest reclamation project in point of dollar authorization ever to be approved by the Congress in a single, specific piece of legislation.

The act authorizes appropriation of not more than $760,000,000 for construction of the initially authorized development of the upper Colorado River storage project. A separate fund in the United States Treasury, known as the upper Colorado River Basin fund, is established for construction, operation, and maintenance of the units and projects.

Funds appropriated by the Congress will be credited to the basin fund as advances from the Treasury. Project revenues also will be credited to the fund and those in excess of operating needs will be paid annually to the United States Treasury to return construction costs allocated to power and municipal water supply, both with interest, and costs of the storage units allocated to irrigation without interest within 50 years after completion.

Project revenues in excess of those required for the foregoing needs will be apportioned among the States of the upper division as follows: Colorado, 46 percent; Utah, 21.5 percent; Wyoming, 15.5 percent; and New Mexico, 17 percent, except that revenues in the fund from any participating project are apportioned to the State in which the project is located. Such apportioned revenue is to be used only to assist in repaying irrigation construction costs of participating projects in the State to which apportioned. The Secretary will submit business-type budgets annually to the Congress covering the basin fund operations.

Construction, operation, and maintenance of the units and participating projects will be governed by Federal Reclamation laws, and operation of these facilities will be in accordance with the Mexican Water Treaty, the Colorado Basin compact, the upper Colorado River Basin compact, and other documents which are commonly referred to as the law of the Colorado River.

Contracts to provide for repayment of irrigation water users' obligations, within 50 years exclusive of a development period and for irrigation distribution systems, are required prior to construction of the participating projects.

For a period of 10 years following enactment of the legislation, no water from any participating projects authorized by this legislation is to be delivered to new lands for production of any basic commodity as defined by the 1949 Agricultural Act which is in excess of normal supply unless the Secretary of Agriculture calls for such production in the interest of national security.

Public recreation facilities and facilities to mitigate losses and propagate fish and wildlife are also authorized by the legislation.

More Scientists Are a National Necessity for Survival in an Atomic Age

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely editorial entitled "Important Fair for Young Scientists," which appeared in the April 17, 1956, issue of the Worcester (Mass.) Evening Gazette.

The article follows:

IMPORTANT FAIR FOR YOUNG SCIENTISTS

Don't let anyone tell you the days of pioneering are over. There are plenty of challenges ahead—but in different fields.

The pioneer of old was a man of courage, a hewer of timber, and a crack shot.

Today's pioneer is the scientist. And instead of fighting Indians and hacking his living out of a wilderness, he wrestles with the problems of aviation electronics and elaborate office machinery.

American industry is practically begging for competent physicists, mathematicians, metallurgists, chemists, and mechanical or electrical engineers. Many firms want to build atomic powerplants for fleets of ships, new operational instruments for military aircraft, reliable scientific instruments to permit increased use of radioisotopes in medicine for diagnostic and therapeutic purposes.

The possibilities are almost endless. But one reason industry is begging for qualified help is that scientific subjects are not being taught in secondary schools as they used to be nor as they must be in this new scientific age. There is a serious shortage of science teachers. And students often turn to easier subjects.

The Worcester County Regional Science Fair to be held April 19–21 at Worcester Polytechnic Institute's Gymnasium is a splendid effort to whet the interest of secondary school youngsters in scientific pursuits.

The Worcester and Greendale Kiwanis Clubs, which sponsor it, have done a fine thing for the youth of this area. A total of 2,872 students in grades 10, 11, and 12 in the public, private, and parochial schools entered the competition. Sixty winners will enter their exhibits in the regional fair at WPI. From these, two will be picked as top winners. They and their science teachers and their exhibits will be sent (expenses paid) to the National Science Fair to be held in May 1956 in Oklahoma City.

This fair is something young and old alike should see. In addition to the students' exhibits, there will be adult exhibits. These include a replica of the 50,000-ton press for aircraft forgings at Wyman-Gordon Co., and a sample Westinghouse atomic reactor in color.

The adult displays are to show the students what can result from devoting their lives to science.

This fair should prove a healthy stimulant to creative thinking, which is so important to science. It should also dramatize the importance of the role of the science teacher in the pioneering days of the second half of the 20th century.

Youth Likes Ike

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MINSHALL. Mr. Speaker, our colleague JOHN ROBSION recently called our attention to a survey conducted among 433,253 high-school students from 12,140 classrooms throughout the country by Wesleyan University which showed that an astonishing 62 percent of these students preferred a Republican over a Democrat as President of the United States.

There can be no doubt that President Eisenhower has captured the confidence of our young people everywhere with his successful efforts to provide honest, sound, efficient Government for all people, young and old.

Further indication that young people like Ike has been dramatically shown in mock political conventions and primaries held on university and college campuses in each of the 48 States.

Not long ago, I had the opportunity to address the student body of Case Institute of Technology. The students then proceeded to nominate Dwight D. Eisenhower for a second term as President of the United States.

Today, my good friend Prof. Donald A. Koch sent a clipping from the Baldwin-Wallace Exponent to my office which tells of another college campus victory for our great President, not only among the students, but also among the members of the Baldwin-Wallace faculty.

The results of the Baldwin-Wallace College mock primary are extremely revealing, and I commend this article from the Exponent to your attention:

IKE IS LIKED BY B-WITES VOTE SHOWS

Dwight David Eisenhower is well liked by Baldwin-Wallace students if the mock primary held on campus May 8 is any indication. The man from Kansas tallied 218 votes, 72 percent of the 302 votes cast.

Eisenhower drew 207 of his votes from students who marked Republican as their party preference. Eleven Democrats supported him.

Of the 302 votes cast, 212 were Republican while 90 were Democrat. Adlai Stevenson led the Democratic voting with 52 supporters. ESTES KEFAUVER, the coonskin cap Senator from Tennessee, was runner-up with 20.

In the Republican vice president race, RICHARD NIXON led the pack with 132 votes while, surprisingly enough, Gov. Frank Lausche, of Ohio, an independent Democrat, was second with 33. George Humphrey, Eisenhower's Secretary of Treasury, finished third with 20.

Averell Harriman, Tammany Hall's New York Governor, won the Democratic Vice President contest with 30 votes. KEFAUVER was runner-up with 19, and LYNDON JOHNSON, majority Senate floor leader from Texas, placed third with 14.

C. William O'Neill, Ohio attorney general, won the GOP gubernatorial nod with 131 votes, a goodly margin over second place John Brown who tallied 53.

Mike DiSalle, Office of Price Stabilization chief when Harry Truman occupied the White House, had little trouble snaring the Democratic bid for the governor's mansion. He copped 50 votes; runner-up Charles Sweeney, Cleveland municipal judge, tallied 23 votes.

The faculty showed a GOP preference, but not to the same extent the students did. Of the 26 votes cast, 16 were Republican and 10 Democratic.

All 16 Republicans indicated Eisenhower as their presidential choice. Stevenson took 9 ballots and Harriman grabbed 1 on the Democratic ledger.

Other faculty GOP results were: Vice President, Nixon, 10; Humphrey, 4; Lausche, 2. Governor, O'Neill, 12; Brown, 3.

Other faculty Democratic results were: Vice President, Harriman, 4; Kefauver, 3; Johnson, 1. Governor, DiSalle, 9.

The B-W Young Republican and Young Democrat Clubs sponsored the primary in cooperation with the Citizenship Clearing House of Northern Ohio, Mr. Reed Smith, B-W representative.

For President: Republican, Eisenhower, 207; Knowland, 3; Humphrey, 1; Nixon, 1.

Democratic: Stevenson, 52; Kefauver, 20; Eisenhower, 11; Harriman, 4; L. Johnson, 1; Lausche, 1.

For Vice President: Republican, Nixon, 132; Lausche, 33; Humphrey, 20; Knowland, 14; C. Herter, 2; Stevenson, 3; Kefauver, 3; William Fortner, 1.

Democrat: Harriman, 30; Kefauver, 19; L. Johnson, 14; Stevenson, 9; Lausche, 7; Clements, 3; Nixon, 3; Knowland, 1; G. Humphrey, 1.

For Governor: Republican, O'Neill, 131; Brown, 53; DiSalle, 4; Sweeney, 1.

Democratic: DiSalle, 50; Sweeney, 23; O'Neil, 7; Brown, 3.

The Dairy Farmer and Falling Prices

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a letter which I have received from a farmer and his wife on the dairy situation in my congressional district. My constituents make out a very good case to show that they are getting shortchanged in their farm operations. Under leave to extend, I am including this challenging letter:

DELAVAN, WIS., *May 2, 1956.*

Congressman LAWRENCE H. SMITH,
Washington, D. C.

DEAR CONGRESSMAN SMITH: We are in agreement with your views on recent farm legislation, per the bulletin.

There is one gross injustice practiced on Wisconsin dairymen that should be rectified. As you know, a base is set for the Chicago market during the fall months and we are penalized for anything shipped over that amount. For several years past the months, when the base is now figured, has been a time of drought and poor pasture—just in between barn feeding and fall pasture and consequently short milk production. Dairymen voted against such a plan, but it was forced on them anyway.

Like most dairymen, we try to maintain an even flow of milk throughout the year in order to meet monthly expenses. Nature just will not permit all the cows freshening in the fall without a loss connected with feeding, delayed freshening, etc., as you know.

I would like to list below just how this affects dairymen like ourselves. We had a 3.6 test for the month of February (paid March 18) which makes the prices paid somewhat higher than dairymen with a lower test receive.

We shipped 14,004 pounds of milk from our farm.

We were paid $3.51 per hundredweight for 10,757 pounds.

We were paid $3.11 per hundredweight for 3,247 pounds.

Our regular deductions (nearly the same each month) were:

Hauling	$21.64
ADA deducted	2.80
Disinfectant	2.70
Cleaner	2.30
	29.44

We ended up with a milk check for $457.37 for 14,004 pounds[1] of milk. This means we received $3.26 per hundredweight for 3.6 grade A milk after Borden deductions. This figure certainly does not compare with what we are supposed to receive and Government prices set should consider hauling, etc., in figuring prices paid. Who got the extra profit from our milk during February?

Dairymen are rightfully disgusted when they read the newspaper figures that we are paid and then see what we get. If it is legal for the Government to set the price that we receive why isn't it legal to put a ceiling on the selling price during this period of farm depression? Cheaper prices to the consumer would move the surplus.

There is never a reference to parity by the Agricultural Department that does not say "high rigid support prices to farmers," which is misrepresentation to the public and poor publicity.

The stockpile of dairy products which depresses the market was first built, as we remember, during the Democratic administration as a stockpile for war emergency and the reason it accumulated was that because of rationing it was not for sale and the public had to deny themselves to build it.

Ammunition, machinery, clothing and many other materials were stockpiled in the same way. After the war was over the material no longer needed was scrapped and the worker who produced these goods has not had to exist on starvation wages since.

The surplus food should have been disposed of to the hungry and indigent at that time and there was a great need that was worldwide. Just one segment of the American people should not still be penalized for doing their patriotic duty.

The fabulous sums paid for storing surplus farm products should be discontinued immediately. Let the goods seek the market level during the emergency and pay the subsidy to the farmer who is the party supposed to benefit. Also, limit the amount paid by way of subsidy and the "hobby" farmers will soon get out of the farming business and the Government can collect the income tax they are using to build up farm surpluses.

It seems to farmers I know, after reading about cheese maker and butter manufacturer "windfalls"; that 75 percent of parity has saved the dairy industry, etc. that the Republicans would be wise to replace the sheep and wheat man before November.

We wish you success in your own campaign.

Sincerely,

Mr. and Mrs. L. J. TOTTEN.

[1] Same milk would sell for over $1,600 as we ship to Chicago fluid market. Butterfat content would be reduced to 4.2 also, for which producer would be penalized about 28 cents per hundredweight more. Extra fat makes butter.

Industrial Health and Safety at Atomic Installations

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, the recent radiation exposure of a group of workmen employed on a nuclear reactor project at Fort Belvoir, Va., has focused attention on the need for a comprehensive study of the problem of industrial health and safety of those engaged in this important work in the atomic-energy field. Our laws affecting workmen's compensation, disability insurance, medical care, and unemployment insurance should be reviewed as they apply to workers who risk their lives through exposure to atomic radiation.

Under leave to extend my remarks, I call attention to the recent statement of Mr. Andrew J. Biemiller, legislative representative of the American Federation of Labor and the Congress of Industrial Organizations, before the Joint Commit-

tee on Atomic Energy, in which this problem of industrial health and safety in atomic installations is thoroughly discussed. Mr. Biemiller's statement follows:

STATEMENT OF ANDREW J. BIEMILLER, LEGISLATIVE REPRESENTATIVE AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, BEFORE THE JOINT COMMITTEE ON ATOMIC ENERGY, MAY 21, 1956

Mr. Chairman, my name is Andrew J. Biemiller. I am a legislative representative for the American Federation of Labor and Congress of Industrial Organizations, with offices at 815 16th Street NW., Washington, D. C. I am accompanied by Mr. Leo Goodman, of our research department.

The subject of today's hearing is one of utmost importance to organized labor. Just last week many representatives of our organization participated here in Washington in the President's Conference on Occupational Safety. At this conference the AFL–CIO's position was stated by Secretary-Treasurer William Schnitzler. He stressed the important role labor unions could play in a campaign to reduce industrial accidents and improve the record of occupational accidents and industrial safety. He noted that unions are frequently ignored in these campaigns. The fact is that we are here today primarily because of the annual toll of 14,000 dead and nearly 2 million injured as the result of industrial accidents. Admiral Straus also addressed that conference and in his comments, in our judgment, painted too rosy a picture of the safety precautions and the comparatively low level of accidents associated with the nuclear science industries.

Mr. Chairman, we in organized labor have had some experience with the actual developments in this industry and we do not feel the picture is as good as has been portrayed here and elsewhere, nor are the remedies proposed here adequate to meet the realities of the situation.

In this field of protection from hazard, organized labor has an obligation not only to its own membership in atomic installations but also to the general public in the community, who are the families of the workers in the plants, their relatives and friends. Insofar as we are able, we shall insist upon the kind of protection which will minimize the possibility of harmful effects resulting from the application of nuclear science to industrial uses.

In the background materials submitted with the McKinney panel report, on page 503, the members of the labor seminar stated the criteria which they recommended to the McKinney panel in regard to health and safety. Mr. Chairman, I request that that section be inserted in my remarks at this point. The McKinney panel adopted some of labor's recommendations. On page 128 of the McKinney panel report they urged the Commission to step up its program of research into "the causes, effects, and control of atomic hazards * * * in order that both those concerned with protection against harmful levels of radiation and those concerned with providing insurance to cover such damage."

Mr. Chairman, we of organized labor find ourselves vitally concerned in both aspects. The various proposals pending before this committee make us apprehensive, that insufficient consideration has been given to the problems which lie ahead. A number of witnesses have appeared here before the committee including some who participated in an executive advisory seminar back in March, advocating adoption of Federal residual insurance as a condition for progress by private enterprise in the atomic power field.

Shortly after that meeting, the members of Local 301, IUE–AFL–CIO, the Knolls Laboratory in Schenectady, N. Y., held a fifth memorial to the first worker who died in the atomic power industry. I would like to introduce into the record a circular issued by Local 301 at the time of Joe Stevens' death. The circular is headed "Joe Stevens Did Not Have To Die." The circular ends with the appeal that Joe Stevens' fellow workers contribute to a fund to help meet the expenses for Joe Stevens' then unborn child, which was born during the summer of 1951.

Mr. Chairman, the problem that is new in regard to workmen's compensation, disability insurance, medical care, and unemployment insurance in this new industry is that exposure to physically harmful radiation can take place and the individual worker or workers, or the whole community which has been affected, may not even know it. We were surprised, therefore, when we noted the establishment of a committee of lawyers, whose purpose it was to formulate a statute of limitations for claims to be filed subsequent to exposure.

Chairman ANDERSEN pointed out in his remarks to the northeastern regional meeting of the American Bar Association, in April, that the Supreme Court ruling in *MacPherson* v. *Buick Co.* prevails today. So the lawyers for the insurance industry come before this committee and recommend a Federal assumption of residual risk on a limited basis, with the recommendation that there be a limitation of amount with human life valued at $25,000 to, and I quote: "Serve as a brake on runaway juries which might sometimes be as great a threat to the new industry as the runaway reactor."

I can understand the necessity of trying to limit by Federal statute the amount of awards for injury because only last month the Aetna Casualty and Surety Co. settled out of court 7 of a series of 8 personal injury claims at the Y–12 plant in Oak Ridge. Mr. John W. Henderson of Chesnee, S. C., who suffered permanent blindness and a fractured collarbone, received a settlement of $75,000. This settlement resulted from an explosion which the AEC has hushed up.

The local newspaper in Oak Ridge has editorially called for more information regarding accidents so that they could be avoided rather than the application of the security clamp which leaves doubt, fear, and ignorance as to how to avoid their recurrence prevalent in the community. Last week the Y–12 plant had another explosion; this time the facts were admitted and it is revealed that zirconium oxide stored in the scrap pile "just went boom." William Stooksbury of Andersonville was killed and two other workers seriously injured.

Mr. Chairman, while the Cole bill and the Price bill propose Federal assumption of residual risk, the AEC has sponsored a series of meetings with State officials which have brought some thinking regarding health and safety around to the point where there is pending before this committee H. R. 8676, which states, and I quote (line 11): "Whenever the Commission receives from the governor of any State a certificate to the effect that the State has an agency competent to exercise jurisdiction in any portion of the health and safety aspects of the Atomic Energy Commission, then the Commission is directed on the day 6 months after the date of the receipt of that certificate, to relinquish the jurisdiction of health and safety in the area specified in the certificate."

It seems to us, Mr. Chairman, that it is highly inconsistent to have the Federal Government assume the risk while consideration is being given to handing over control of the standards to the States on the say-so of the governor. Mr. Chairman, this question should not be acted on too hastily. We are dealing here in the future with many unknowns. New diseases formerly unheard of are being created by this industry. New legal problems, as the chairman has pointed out, face us in the future. Many developments will occur which we cannot possibly imagine in this room.

One of our affiliated organizations, the International Association of Machinists, is still trying to get redress for a member.

Arthur L. Cardwell, employed at Oak Ridge in 1945 and required to handle beryllium with his bare hands, became infected with what was later diagnosed as beryllium poisoning. No precautionary measures were taken by the contractor until April 1948. The gradual course of the disease has brought Mr. Cardwell to a continually deteriorating condition in the hospital, without funds, and his savings completely exhausted. Because he accepted a $4,000 payment from the employer's insurance carrier, the AEC wipes its hands of the case, and on January 25 of this year advised President Hayes of the Machinists, "It does not appear that Mr. Cardwell's situation is one which would warrant further study or action by this office."

The AEC always minimizes the impact of any accident but the workers in Oak Ridge know that the Arco reactor blew up, and I quote from the Oak Ridger of April 10, 1956, "Rather than a wrong button or a misunderstanding he (the Argonee spokesman) describes what happened as split-second indecision or underestimation of the necessary shutdown time." Nearby at Fort Belvoir where the most penetrating type of emission from radiation, gamma rays, were "left unshielded for about 3 hours * * * contrary to standard practice * * * the AEC says the men who were exposed are unharmed." Today's paper carries the story that one person who was exposed has died. There may or may not be some connection.

Mr. Chairman, there is a great deal of controversy regarding the level of safe exposure. I am sure this committee is familiar with the point of view of Prof. G. Hoyt Whipple of the University of Rochester, that the present exposure standard of 0.3 roentgen per week be reduced to "a figure no greater than one-tenth of this as the criterion for nuclear powerplants."

Organized labor has sought the facts regarding hazards in this industry. Five years ago my colleague, Mr. Goodman, asked the AEC to establish a training course on safety and hazard problems. The request was refused. But the papers released at Geneva, particularly that of the ILO entitled "Protection of Workers Against Ionizing Radiation," pointed up the seriousness of the high permissive level of exposure which has been permitted in the United States. As we pointed out in the labor seminar report, exposure is cumulative and the level of exposure may be exceeded by excessive X-rays following accident or other medical treatment procedures. We recommended, therefore, for the protection of the human race itself as well as the individual workers involved, the establishment of the highest standards of protection—a shorter workweek, longer vacations, and rotation of workers from jobs where high levels of exposure are likely. In addition, each worker should have a copy of his own tally sheet regarding his total exposure for life.

Existing compensation legislation and restrictive statutes of limitations not designed to deal with this atomic problem should be reviewed. A comprehensive study should be made with adequate representation of the affected unions involved so that we are given an opportunity to participate and help formulate the new standards which are needed.

I do not pose at length the even greater problems which are raised by such presentations as that of Senator WELKER on the floor of the Senate March 20 in regard to the whole problem of location of atomic installations in relation to their proximities to centers of population, nor the equally serious problem being studied in connection with the investigation of civilian defense of what happened

when an industrial power reactor becomes a potential military target.

In summary, Mr. Chairman, we renew two pleas:

1. It is high time the AEC stops hiding behind the cloak of "security" in its refusal to give information in accident cases. We trust the committee will look into this question.

2. The need for thorough conference with labor representatives on safety questions and many other aspects of manpower and labor relation questions grows greater day by day. We urge the committee to initiate the necessary legislation to establish a satutory labor-management advisory committee to the AEC.

Statement on H. R. 9424, Antimerger Bill Before Senate Judiciary Antitrust Subcommittee

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith my statement made before the Senate Judiciary Antitrust Subcommittee, in favor of H. R. 9424, on May 24, 1956:

The hearings being held by this distinguished committee on H. R. 9424 are most timely and important indeed. I appreciate the opportunity of appearing before you to present my views and to urge prompt and favorable consideration of this bill which is essential to enable the Federal enforcement agencies to deal more effectively with the merger threat to the competitive economy.

To determine how serious this threat is, our House Judiciary Antitrust Subcommittee made an extensive study and report on the entire corporate and bank merger problem.[1] It found that the present rate of corporate and bank mergers is not only alarming but constitutes one of the most ominous clouds on the economic horizon, since it is drastically reducing competition in many areas and accelerating the trend toward greater and greater concentration of economic power.[2]

To cite a few statistics, in 1955 the number of corporate mergers set a 25-year record and proceeded at a rate 4 times that of 1949. What is more, since 1951 over 3,000 independent concerns in the manufacturing, mining, trade and service industries have disappeared in the process.[3]

Our subcommittee found the same merger trend exists in the banking field as well, which is concentrating control of the Nation's financing resources into fewer and fewer hands. In fact, the rapidly accelerating trend of mergers stands out as the major development in the field of banking during the past 5 years. From 1950 through 1955 about 850 of the commercial banks of the Nation have been lost by way of mergers and consolidations. In 1955 alone 250 mergers have occurred, a 22-year record.[4]

It is against this background that the House Judiciary Antitrust Subcommittee after extensive hearings,[5] the House Judiciary Committee, and the House of Representatives, each without dissent, approved the present bill. I would also point out that the bill is supported by the President, the Department of Justice, and the Federal Trade Commission.

Footnotes at end of speech.

Specifically, what does the bill do and why is its passage imperative? First, the bill plugs a loophole in section 7 of the Clayton Act resulting from the fact that the present section covers only bank mergers achieved by stock acquisitions, but fails to cover bank mergers accomplished by means of asset acquisitions. The bill plugs this loophole by providing the Attorney General and the Federal Reserve Board with the same authority to move against asset acquisitions by banks as they now have to move against stock acquisitions.

Second, it further amends section 7 to require prior notification of certain corporate mergers.

Finally, the bill amends section 15 of the Clayton Act to provide the Federal Trade Commission with authority to seek a preliminary court injunction restraining the completion of a merger until adjudication of its legality.

Each of these provisions I should now like to discuss with you.

BANK MERGERS

Bank mergers are circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality is established by proof that the merger has actually resulted in an unreasonable lessening of competition; it is immaterial whether the merger was accomplished by stock or asset acquisitions.

Section 7 of the Clayton Act adopted in 1914 on the other hand, deals specifically with corporate and bank mergers and bans those achieved by stock purchases where there is a reasonable probability of a substantial lessening of competition or a tendency to monopoly. Responsibility for enforcing the section insofar as banks are concerned was vested concurrently in the Attorney General and the Federal Reserve Board.

Section 7 was designed to stop mergers beyond the reach of the Sherman Act but its failure to include mergers accomplished by asset acquisitions resulted in a loophole which so far as nonbanking corporations are concerned was closed by passage of the Antimerger Act of 1950. However, because of revisions made in subsequent versions of antimerger bills, it became impracticable to include within the scope of this act corporations other than those subject to the jurisdiction of the Federal Trade Commission. This left asset acquisitions by banks unaffected by the new law since authority to enforce the provisions of section 7 dealing with banks is vested in the Federal Reserve Board and not in the Federal Trade Commission. This gap in existing law which allows a bank merger accomplished by purchase of assets irrespective of its injurious effect on competition has no logical basis. What is more, many bank mergers in recent years have been accomplished by this device.

There is no doubt that this loophole in section 7 has seriously hampered the efforts of the enforcement agencies and that legislation is urgently needed which would provide the Federal Reserve Board and the Attorney General with the same authority to move against bank mergers accomplished by asset acquisitions as they now have to move against bank mergers achieved by stock acquisitions.

The purpose of the first paragraph of section 1 of the present bill is to provide such authority. That paragraph, it will be noted, is identical with H. R. 5948 which was approved by the House on February 6, 1955, without a dissenting voice. Since the present bill incorporates H. R. 5948 in toto, separate consideration of that bill is, of course, unnecessary.

It is important to note that the bank-merger provisions of the present bill do not extend antitrust jurisdiction to any area not previously covered by the antitrust laws. Authority of State banking supervisors to approve or disapprove mergers under local law would remain unaffected subject, of course, to the right of Federal enforcement agencies to proceed in the event of a possible violation of the Sherman Act or the Clayton Act as amended by the pending bill.

The right of Federal enforcement officials to intervene in such situations is one of long standing. For example, the Attorney General now can proceed under the Sherman Act against bank mergers, regardless of how accomplished, where they restrain competition unreasonably. Furthermore, either the Attorney General or the Federal Reserve Board can move under section 7 of the Clayton Act against bank mergers achieved by stock acquisitions where the effect may be substantially to lessen competition or tend to create monopoly. Thus the bill, in providing the same right of action under the Clayton Act against bank mergers accomplished by asset acquisitions, merely follows the existing Federal statutory pattern insofar as State-Federal division of responsibility is concerned.

Moreover, section 7 as proposed to be amended, would provide a far more effective weapon than the Sherman Act in dealing with bank mergers. This is because the Clayton Act requires proof only of a reasonable probability of a substantial lessening of competition whereas the Sherman Act requires proof that competition has actually been lessened ureasonably. Consequently, the bill would allow Federal enforcement agencies to deal with bank mergers well before they have attained such effects as would justify a Sherman Act proceeding. At the same time it is recognized that in some cases a bank merger would not be contrary to the policy of the antitrust laws or of the present bill even though it may lessen competition. For instance, an acquisition of a bank which otherwise would be faced with the possibility of failure would be permissible. Also permissible would be a situation where the acquisition is the most practicable means of dealing with a problem bank having inadequate capital or unsound assets or where the acquired bank has no adequate provision for management succession. Also, where several banks in a small town are compelled by an over-banked situation to resort to unsound competitive practices which may eventually have an adverse effect upon the condition of the banks, the merger of two or more of the banks may well be in the public interest. The same principle applies where there are not adequate banking facilities.[6]

I would stress that the bank merger provisions of the bill represent no departure whatsoever from the basic principles of section 7 of the Clayton Act. Nor do I believe that the characteristics of the banking industry are so unique as to justify such a departure. I am aware that the Office of Comptroller of the Currency and the Federal Deposit Insurance Corporation take the position that while they are in accord with the general purpose of the bank merger provision of the present bill, they believe that this purpose can best be accomplished by an amendment of the banking statutes rather than by an amendment of the antitrust laws. Their proposal would vest administrative responsibility in the bank supervisory agencies and most important of all, would deprive the Department of Justice of enforcement responsibility in the bank merger field.

The position taken by the Office of the Comptroller of the Currency must be viewed in light of the fact that the Comptroller, Mr. Ray Gidney, has repeatedly assured our Antitrust Subcommittee that he would not in the exercise of his responsibility approve any bank merger which would be contrary to the policy of the Antimerger Act of 1950, which prohibits corporate mergers where the

Footnotes at end of speech.

effect may be substantially to lessen competition or tend to create a monopoly in any section of the country. But, contrary to these assurances, Mr. Gidney in the some 3 years since he has occupied the office has approved over 300 mergers throughout the country, many of which have had extremely damaging competitive consequences. The amazing fact is that in no instance has Mr. Gidney disapproved a bank merger on the basis that it might substantially lessen competition. What this indicates more than anything else is Mr. Gidney's predilection for rubber stamping bank mergers.

Mr. Gidney has not issued anything specific to the examiners in regard to considering anticompetitive factors; he has never notified national bank examiners or given them any specific admonition that it is his policy as Comptroller to disapprove any bank merger violative of the policy of the Antimerger Act. Nor has he required examiners to make findings of fact with regard to competitive considerations in recommending approval or disapproval of proposed bank mergers.

In this context Mr. Gidney's statement that his office will disapprove any bank merger that might jeopardize competition must be taken with a grain of salt. Furthermore, it is doubtful that Comptroller Gidney is even aware of the purposes of antimerger legislation or of the dangers that mergers pose to the competitive banking structure. This conclusion is indicated by Mr. Gidney's testimony before our subcommittee that he "would not say any banks have been eliminated from competition" as a result of the mergers that have occurred in recent years. In his view, even if a merger takes place between the only two banks in a community, "there is still competition in the community." As was pointed out to him, under this theory "that there is still competition where you have mergers * * * that consolidations bring about competition * * * you can never have the application of the Antimerger Act."

It is significant that the position of these two agencies differs sharply from the position taken by the President, the Federal Reserve Board, the Department of Justice, and the Federal Trade Commission, all of whom conclude that legislation limiting bank mergers which have substantial anticompetitive consequences should come through revision of antitrust legislation. The President, for example, in his Economic Report transmitted to the Congress on January 24, 1956, had this to say:

"Mergers have become more numerous of late and an eye, at once vigilant and discriminating must be kept on such developments. Many mergers have a solid economic justification and serve the general interest by increasing competition; others have neutral effects; while still others place obstacles in the path of eeffctive competition. Over the years Americans have wisely viewed excessive business concentration, or any other undue concentration of economic power, with uneasiness. To serve the basic American desire for an economy in which business opportunities are increasing and in which economic control is widely diffused, it is desirable to strengthen our antitrust laws and provide larger appropriations for their enforcement.

"Toward this end, the following revisions of antitrust legislation are recommended. * * *. Federal regulation should be extended to all mergers of banking institutions." [7]

The approach suggested by the Comptroller of the Currency and the Federal Deposit Insurance Corporation fails to recognize that monopolistic tendencies in the banking field have since the passage of the Sherman Act in 1890 been dealt with under the antitrust laws and not under the banking statutes. It also fails to recognize that since passage of the Sherman Act bank mergers whether accomplished by stock or asset acquisitions were banned if they resulted in an unreasonable restraint of trade. The Clayton Antitrust Act passed in 1914 to supplement the Sherman Act by arresting monopolies in their incipiency dealt with mergers and prohibited any corporation (including banks, banking associations, and trust companies) from acquiring the stock of another where the effect might be to substantially lessen competition or to tend to create a monopoly. Beyond that section 8 of the Clayton Act deals specifically with banks and prohibited interlocking directorates, thus presenting another instance where antitrust problems in the banking field have been covered under the antitrust laws.

On this question Assistant Attorney General Barnes, head of the Antitrust Division, testified before our subcommittee that—

"This committee should weigh carefully the wisdom of tailoring section 7's strictures to the assertedly unique needs of the banking industry. In the more than 60 years since the Sherman Act's passage no one has suggested its provisions did not apply to banks as well as to all other sectors of American business. Similarly, in the Transamerica case, never was it urged that unamended section 7 did not apply with equal force to both banks and nonbanking corporations. And finally, in its 1950 amendment to section 7, Congress reiterated prohibitions on stock acquisitions to fit banks the same as all other corporations. Against this background, * * * this committee should move slowly in creating or encouraging special antitrust treatment for banks." [8]

Furthermore, the proposal of the Comptroller of the Currency and the Federal Deposit Insurance Corporation to oust the Attorney General of enforcement responsibility in connection with bank mergers would alter the established statutory scheme in a manner which is most inappropriate. As Judge Barnes testified:

"This congressional decision to give the Department of Justice some say in enforcement of bank merger prohibitions is firmly rooted in enforcement realities. Without the Department's right to intervene, there might be as many different views of section 7's standards and scope as there were agencies charged with its enforcement. The result could well be disparities in view which in turn spell real enforcement inequities. Enforcement effectiveness as well requires some procedure for this Department's intervention. Otherwise, in its overall responsibility for section 7's enforcement the Department would be bound by bank merger precedents it had no voice in picking or shaping." [9]

In gaging the necessity for bank merger legislation of the kind here proposed, I am sure that this committee will be particularly mindful of the fact that competition is one of the strongest single factors which safeguards a sound banking system. In this context the rash of recent bank merger activity has had serious competitive implications to the extent where the merger trend is considered by the Federal Reserve Board "a matter of deep concern." [10]

In New York City alone, in the last 7 years, there have been 17 bank mergers. Since the first of this year the New York City area has experienced, in terms of total deposits, the three largest bank mergers in the history of the country. First in March 1955, the Chase National Bank with total assets of $5,669 million merged with the Bank of Manhattan Co. with assets of $1,629 million and the Bronx County Trust Co. with assets of $76 million. This merger provided the new entity, the Chase Manhattan Bank, with total assets of $7,374 million or 21.7 percent of total assets of all banks in New York City and jumped it to first place in New York City and second place in the Nation.

Also, in March 1955, the National City Bank of New York with total assets of $5,767 million merged with the First National Bank of New York with total assets of $713 million. Less than a month later the Bankers Trust Co. with assets of $2,207 million acquired the Public National Bank & Trust Co. of New York with assets of $562 million. This was only the last of a series of acquisitions by Bankers Trust Co. which had absorbed since 1940 the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

These mergers have resulted in a steadily increasing bank deposit concentration in New York City. In 1900 that city's four largest banks had 21 percent of the total deposits; now the 4 largest banks have about 61 percent of all deposits.

This wave of bank mergers is not peculiar to New York City. In Philadelphia, for example, the Pennsylvania Co. for Trusts and Banking, which is now the second largest bank in the area with total assets of approximately $305 million, proposes to merge with the First National Bank which is fifth in size with total assets of $218 million. The consolidated bank would have total assets of about $1,023 million which would make it the largest banking institution in the area with control of 25.3 percent of total banking assets.

This is just the most recent of a series of bank mergers that has occurred in Philadelphia. In 1953 the Tradesman's National Bank & Trust Co. with total assets of $139,801,596 merged with the Land Title Bank & Trust Co. which had assets of $96,378,000. Also in 1953 the Girard Trust Corn Exchange Bank with assets of $579,978,000 acquired the National Bank of Germantown with assets of $39,833,432. The Girard Trust Corn Exchange Bank itself resulted from a merger in 1951 between the Girard Trust Co., one of the hundred largest banks in the Nation, with the Corn Exchange National Bank & Trust Co., another leading bank.

In Pittsburgh the Mellon National Bank & Trust Co. now controls 61 percent of the total bank assets in that area. This has been accomplished by a long process of absorbing a number of smaller institutions.

In Providence, R. I., the Industrial Trust Co., with assets of $312 million, merged with the Providence Union National Bank with assets of $168 million. The resultant Industrial National Bank now owns 57.7 percent of all assets while the first two banks in that city own 93.3 percent of all assets.

In California during 1954 the First Western Bank & Trust Co. of San Francisco, itself a subsidiary of Transamerica Corp., acquired 14 other California banks and increased its assets in the process from $333,537,000 to $798,645,000.

These are only a few examples of the bank merger activity going on throughout the Nation which is wiping out competition of strong independent banks and strengthening the position of the giant banking institutions. In fact, considering national banks alone, some 494 banks have been absorbed between 1950 and May 1, 1955, involving in excess of $13,478 million.

The fact is that due in large part to merger activity the 100 largest banks today control approximately 46 percent of the total assets of all the commercial banks in the country and more than 48 percent of the Nation's bank deposits. In 10 of the Nation's 16 leading financial centers, 4 banks own more than 80 percent of all commercial-bank assets. In 9 of these financial centers, 2 banks own more than 60 percent of all commercial-bank assets. In each of the 16 leading finan-

Footnotes at end of speech.

Footnotes at end of speech.

cial centers the first 2 banks own more than 40 percent of all commercial-bank assets; the first 4 banks more than 60 percent.[11]

In light of these considerations additional legislative precautions of the nature that are contained in the present bill are vital to preserve that competition which still exists and to guard against the very real possibility that banking credit, which is the lifeblood of our entire economic system, be dominated to an ever-increasing degree by a small, tightly knit group.

PREMERGER NOTIFICATION

H. R. 9424 would amend section 7 of the Clayton Act in a second respect and require that where the combined capital structure of parties to a proposed merger exceeds $10 million, the acquiring corporation must notify the Attorney General and the Federal Trade Commission (or the appropriate commission or board vested with jurisdiction) 90 days in advance of the transaction. Together with the notice, the acquiring corporation must also supply the Attorney General and the appropriate agency with specifically enumerated information which would enable them to assess the merger's probable impact on competition. During this 90-day period the merger could not take place, although in appropriate cases this prohibition could be waived. It must be observed that the waiting period requirement would not operate to bar an agency from instituting proceedings at a later date and would not expressly or impliedly serve as a statute of limitations against the Government.

The merging corporations would also be required to furnish the appropriate agencies with such additional relevant information as may be requested, within 30 days. Willful failure to submit the notification or furnish the required information is subject to a civil penalty or from $5,000 to $50,000.

Premerger notification would not be necessary in all transactions. It would not be necessary (1) where stock is acquired solely for investment and does not exceed 5 percent of the outstanding share capital of the corporation in which the investment is made; (2) where the assets acquired do not exceed $5 million or 5 percent of the capital structure of either the acquiring or acquired corporation, whichever is less; and (3) where the assets acquired are stock in trade sold or held for sale by the corporation in its ordinary course of business.

Experience over a period of 5 years in administering the 1950 Antimerger Act has demonstrated the basic need for advance notification legislation. At the present time, the staff of the antitrust enforcement agencies must rely upon newspapers, financial periodicals, trade journals, and other publications for information regarding proposed mergers which the companies themselves could without difficulty supply. Present procedures are quite unsatisfactory, especially since many significant mergers are not even publicized in advance of consummation.

The enforcement agencies also are confronted with the problem of collecting elementary information about the companies involved in a proposed merger in order to determine the merger's impact upon competition and whether a full investigation should be made. This information includes the nature of the business of the merging companies, the products and services sold or distributed, the total sales, the total assets, net sales, and trading areas of both the acquiring and acquired corporations. While this type of information is ordinarily requested from the companies, they neither have a legal obligation to furnish such information let alone make it available expeditiously.

The bill therefore would obviate the considerable time, effort, and investigative expense required to determine whether mergers are about to occur and make unnecessary the haphazard methods of scanning newspapers and trade publications to ascertain where merger threats to competition are arising. It would also enable the antitrust agencies to be informed of mergers not publicly announced before consummation.

Particularly important, the advance notice requirement would afford the enforcement officials a reasonable period of time in which to study the competitive implications of a merger before deciding whether to seek a preliminary injunction restraining its consummation pending a determination of legality.

An additional consideration is that advance notification is necessary in the interest of even-handed enforcement. With that requirement incorporated in the statute, the company that tries to obey the law and seek advance clearance from the Department of Justice or the Federal Trade Commission will no longer stand by and watch its competitor who chooses to remain silent, complete a merger and thereafter rely on the natural indisposition of the enforcement agency to bring a suit to unscrable the commingled assets at some later time.

The force of these considerations was recognized by the President, who, in recommending enactment of a premerger notification requirement, stated:

"All firms of significant size that are engaging in interstate commerce and plan to merge should be required to give advance notice of the proposed merger to the antitrust agencies, and to supply the information needed to assess its probable impact on competition." [12]

The committee is undoubtedly aware that no burden is imposed upon small-business mergers by this bill, since premerger notification is required only where the combined capital, surplus, and undivided profits of the acquiring and acquired corporation are in excess of $10 million. This figure was recommended by the Department of Justice and the Federal Trade Commission and would probably cover most mergers that have a significant economic effect. Of course, there may be mergers which have a substantial effect on competition, where the aggregate capital structure is less than $10 million. It is clear, however, that the possibility of such transactions having a substantial competitive effect does not justify burdening all corporations with notification and reporting requirements, especially since the antitrust authorities would not, in any event, be foreclosed against taking action against an indicated violation.

Further minimizing the possibility of hardship, the bill authorizes the enforcement agencies to waive the 90-day period in appropriate cases. For example, if a corporation is in bankruptcy and a quick sale of the aassets is proposed no good purpose would be served by requiring a waiting period of 90 days, assuming the transaction will have no competitive significance. Undoubtedly, there will be a wide variety of other transactions where no possible antitrust implication is involved and where a waiver of the waiting period would be entirely appropriate.

FTC AUTHORITY TO SEEK PRELIMINARY INJUNCTION

Equally as necessary as premerger notification is the provision giving the Federal Trade Commission authority to seek a preliminary court injunction to prevent consummation of mergers, or after consummation, to preserve the status quo until completion of administrative proceedings before the Commission.

The authority so provided is similar to that which the Federal Trade Commission now has in certain cases under section 13 of the Federal Trade Commission Act. It is also similar to the authority of the Department of Justice under section 15 of the Clayton Act, which authorizes the Attorney General to seek injunctive relief in the Federal courts to prevent and restrain violations of the Clayton Act, section 7 (the Antimerger Act).

Since the Federal Trade Commission has concurrent responsibility with the Attorney General to enforce that act, logic and policy dictate that the Commission have coextensive authority to invoke the injunctive powers of a district court upon an appropriate showing of necessity. The anomalous situation existing now is that the Commission lacks authority which even private parties have to petition a Federal district court to enjoin the consummation of a reasonably probable illegal merger in order to avert irreparable injury.[13]

Lack of such a provision enabling the Commission to prevent mergers prior to consummation or after consummation, to take action to preserve the status quo until completion of proceedings, has created a serious loophole indeed in the Antimerger Act. It has allowed companies to obtain the benefits of a completed merger even though the legality of the transaction has been challenged by the Federal Trade Commission and notwithstanding the fact that pending final disposition of the complaint, the merger may have caused the very damage to the competitive structure of the industry which the Antimerger Act was intended to safeguard. Furthermore, in many mergers the acquired competitor is completely swallowed up and disappears as an identifiable entity. This makes it practically impossible thereafter to restore completely the preexisting competitive situation.

Consequently while premerger notification is a necessary preliminary step, it is just as important to provide the corollary power to seek an injunction preventing the commingling of assets, management, and productive facilities to a point where they cannot be effectively unscrambled.

I would make it clear the preliminary injunction provision may well benefit the business community itself. Representatives of numerous merging companies believe, in fact, that disruption of business plans is lessened by agency action before merger consummation; some companies point out that if the agencies are to proceed at all they should sue before completion of the merger itself.

Address of Robert Kingsley, Dean of the School of Law, University of Southern California

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. HILLINGS. Mr. Speaker, the school of law at the University of Southern California recently celebrated its 50th anniversary. Dean Robert Kingsley delivered an address on this occasion in which he outlined the great contribution in the field of legal education made by the University of Southern California.

The address follows:

FIFTY YEARS OF LEGAL EDUCATION

(By Robert Kingsley)

We meet this evening to celebrate a half century of existence of the law school as an integral part of the University of Southern California.

As some of those present on this occasion will remember, we started, in 1896, as the Los Angeles Law School, with James Brown Scott—later to become one of the world's greatest authorities on international law—as dean and with a roster of lecturers famous in the tradition of our bar. One of them, who first appears on the lists in 1900, was our own beloved Judge Hartley Shaw.

After 8 years of separate status, the school became part of the university in June of 1904. Frank Porter—well remembered by many of you—was dean. The faculty included such names as Claire Tappan, Gavin Craig, John Works, Curtis Wilbur, E. V. Camp, and Earl Rogers.

The history from that date on parallels the story of legal education in America. For 20 years the quarters were in the vicinity of the courthouse on Broadway, on Hill, and, after 1912, in the Tajo Building at First and Broadway—a location still full of tradition for many of you. The faculty was largely practicing lawyers giving of their time to train young men and women for their profession. Instruction was mainly by lecture with textbooks for outside reading.

As one scans the annual bulletins, he sees the changes appear. An entrance requirement of 18 years of age with an education deemed adequate by the faculty gradually increased to 2, then 3, and finally 4 years of college. More and more full-time personnel appear on the teaching rolls, and the shift to the case method is also reflected in the listings.

In 1925 came a major event. The school moved from downtown to its present quarters on the campus and, in 1927, Dean Porter laid down the burdens of administration and they were taken up by a younger man, Dean Miller. In 1930, he left us for Duke University and its challenge of the creation of a modern law school there, and Dean Hale came to us from Washington University in St. Louis. There followed 17 years of growth and consolidation, including the period of a world war and its aftermath. Then in 1947 Dean Hale turned over the duties to Shelden Elliott. In 1952 Shelden also felt the call of a challenge, as director of the institute of judicial administration, to perform a vital task for the bar of the country, and I was chosen to be the school's sixth dean.

I have spoken of the gradual changes in the educational service of the school. Over the years it has made such changes to keep step with the changes in the world about it, so that it might always fulfill its single function, to train and develop men and women adequately to serve their community at the bar and on the bench. As new and better methods of teaching were developed, the school moved to make use of them. As the subjects of importance in practice changed, so did the curriculum. The past few years have seen much activity on our part to maintain this tradition of service.

The postwar years found the members of the bar anxious for opportunities to continue their legal education after admission. In 1947, under Professor Ervin's guidance, we started the tax institute, now with its published volumes of annual proceedings nationally recognized as a major contribution to education in that field. In 1951 we began to offer the evening graduate professional program—regular classroom courses, of full semester length, designed to afford a chance to explore new fields of law, to bring old fields up to date, and to broaden the lawyer's view of the law as a whole. Almost 200 of you take advantage of these offerings each semester.

In 1952 we took two other steps in connection with preadmission training. For many years, the school had offered courses in the evening, for the advantage of students whose needs compelled them to earn a living. In the late twenties, for many reasons, that form of education was abandoned. But after the war we became increasingly conscious that there existed a need in this community for more opportunity for such young men and women to secure a legal education of high quality. So, beginning in the fall of 1952, we reinstituted the evening division—staffed by the same faculty and with the same requirements for admission and the same standards of instruction and performance.

For many years, our faculty—and legal educators the country over—had been concerned about the pressure for adding more and more courses to the curriculum. At the same time, we began to wonder whether the time spent in the last 2 years of college was being spent to its greatest benefit. Accordingly, also in 1952, we instituted a program, still experimental, whereby we take a carefully screened group after their first 2 years of college and train them ourselves for 4 (instead of the normal 3) years. It is still too early to give a final judgment, but we think it is working out well.

One aspect of this so-called 2–4 program deserves special mention. We felt that these students peculiarly needed special training in the humanities and, more specifically, in knowledge of good literature. And we also wanted them to gain, as early as possible, some feel of the profession for which they were training. Associate Dean Evans and our curriculum committee therefore designed a course—manned by a brilliant teacher borrowed from the English department—called legal literature. (Most of you, I am sure, read about it in Time magazine a year ago and again in the American Bar Association Journal last month.) By selecting fine examples of good literature, written by or about lawyers, we have made, we think, a real contribution to education. The students get a much needed introduction to good and effective writing (surely a vital lawyer's tool) along with an acquaintanceship with famous (and infamous) lawyers and their ways.

We are conscious that many rules of law find their rationale in theories of psychology, frequently in theories in vogue a century or more ago. This next spring we shall borrow a distinguished scholar from the university's department of psychology to explore, with the senior students in this 2–4 program, some of those traditional rules in the light of modern knowledge.

We have moved in another direction also. We think that a great metropolitan law school owes a duty to its community beyond formal education. Hence, under the direction of Professor Holbrook and with funds provided by the Haynes Foundation, we are cooperating with the American Bar Association in a 3-year study of judicial administration in this county. In cooperation with the ABA and the traffic institute we have for 7 years held annual conferences for traffic-court judges and prosecutors looking to more effective administration of the law in the field. In cooperation with the American Arbitration Association, we have held a successful conference on labor arbitration and with the Food Law Institute, and the women's division of the Los Angeles Chamber of Commerce a significant conference on the food and drug laws. We plan other similar conferences in these and like areas.

I cannot close without referring to what I regard as our most important contribution to legal education. More vital than anything else is our duty to turn out young men and women with a real sense of professional responsibility. In 1952, under the direction of Judge Philbrick McCoy and with the dedicated help of a panel of lawyers and judges, we started our course on the legal profession. Its details were so recently presented in an article in the ABA Journal for April 1954, that I will not repeat them here. Suffice it to say that we have already had imitators in other schools and national recognition for a contribution toward solution of this part of the education process.

This, then, was and is your law school. One-half of the lawyers and over half of the udges of this county are our graduates. You know them and their quality. As proof of our stewardship in administration of your school, then, I give you the bench and bar of Los Angeles.

Religion in War

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an article that appeared in the Phoenix Gazette written by the Reverend Oliver Kehrlein, S. J., of Brophy College Preparatory, in Phoenix, Ariz. I recommend this article to the attention of all Americans during this period between Armed Forces Day and Memorial Day. It would be well for us to ponder the meanings of the words of Father Kehrlein.

The article follows:

RELIGION IN WAR

To the EDITOR OF THE GAZETTE:

Considerations for Armed Forces Day today.

Recently the Communist army newspaper, Red Star, attacked military chaplains in these words: "A great role is given to the church in the ideology of American military men. Reactionary churchmen of all creeds and faiths act in the role of active support of the Pentagon. Officers in cassocks are considered to be official representatives of the churches in the armed service. They try to

inject religious fatalism in the soldier. They also give them so-called patriotic lectures and talks which glorify the United States, the American way of life, and American democracy."

To that charge military chaplains gladly plead guilty. There is no chaplain who has never spoken these words: "We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

There is no mystery in communism. The whole is explained clearly in Stalin's little book, "Historical and Dialectical Materialism." The world is divided. The hammer and the sickle with its subjugated peoples against the cross and the flags of free nations. On one side a small group of men dedicated to forcing the whole of humanity into the forms of a fictitious society of collective man; on the other side, some 800 million who have succumbed to the Red terror, together with the rest of humanity whom they are determined to make its victims.

Our only hope of survival is to face these facts, and act accordingly.

With the Communist, coexistence is meaningless. Peace is impossible, and peaceful coexistence is a contradiction in terms. You cannot coexist peacefully with one who is dedicated to your utter and complete destruction to make room for the new collective man who will displace you. Peace, therefore, between the free world and the slave world of Communist materialism could never be anything but a mirage of spurious peace.

Military power, then, is essential—power, not to commit aggression, but to be always ready to defeat it. But spiritual power is more essential—power based on respect and liberty of men. This power will be the rock against which the aggressive materialism of the Soviets will smash itself.

President Eisenhower gave us this stern but just code for Americans of the Armed Forces. It begins: "I am an American fighting man. I serve in the forces which guard my country and our way of life. I am prepared to give my life in their defense." The code concludes: "I will never forget that I am responsible for my actions, and dedicated to the principles which made my country free. I will trust in my God and in the United States of America."

Is loyalty to this code only for the membership of the Armed Forces? Or is it a sacred privilege for all Americans?

OLIVER KEHELEIN, S. J.,
Brophy College Preparatory.

Horning-Cooper, Inc., Develops High-Speed Rocket

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. HILLINGS. Mr. Speaker, two companies in southern California have recently developed a high-speed rocket designed to give our country the best possible defense against an attack by an aggressor nation. The Horning-Cooper Co. and the Grand Central Rocket Co. of southern California are playing a vital role in our national-defense program.

I wish to call the attention of my colleagues to a recent press release by the Department of Defense discussing this new rocket which is also described in an article of the May 17, 1956, issue of the Los Angeles Times.

The press release and article follow:

ASP RESEARCH ROCKET DEVELOPED BY THE NAVY

A high-speed rocket, Asp, especially designed for studies of the upper atmosphere, has been successfully field tested, the Navy announced today.

The rocket, named from the initials Asp—atmosphere sounding projectile—will be used to gather weather information, study cosmic ray emanations and other geophysical data.

The Asp was constructed under a program involving research, development, and production that brought it to a successful test flight stage in less than 5 months' time. It was developed and built by Horning-Cooper, Inc., Monrovia, Calif., under contract with the Bureau of Ships. The contract also included the development of a system for receiving and recording the scientific data on the ground.

Scientists of the United States Naval Radiological Defense Laboratory, San Francisco, Calif., a field activity of the Bureau of Ships, prepared the specifications for the transducer. Asp will be used by the laboratory in its studies of the upper atmosphere.

The Asp rockets are small, with a diameter of 6½ inches and length of 12 feet, and are launched from simplified portable launching racks. They may be directed vertically to attain high altitudes, or horizontally to achieve long range. Asp is equipped with specially instrumented heads from which the observed data are transmitted to earth by tiny, high-frequency radio transmitters.

Asp is powered by a new high-performance solid-propellant rocket motor. This propulsion system enables the rocket to reach speeds of more than five times the speed of sound within a few seconds of launching.

Asp has been successfully tested at full-scale field firing at the naval air missile test center, Point Mugu, Calif., and the White Sands proving grounds in New Mexico.

[From the Los Angeles Times of May 17, 1956]

NEW ROCKET WILL PROBE SECRETS OF IONOSPHERE — MISSILE DESIGNED TO DART STRAIGHT UP AT MILE A SECOND PRODUCED BY MONROVIA FIRM

(By Robert T. Hartmann)

WASHINGTON, May 16.—The Asp, a new rocket missile designed to dart straight up at mile-a-second speeds and probe the secrets of the ionosphere, has been successfully tested and will be produced by the Southern California firm of Horning-Cooper, Inc., the Times learned today.

Unlike Cleopatra's deadly viper, this supersonic Asp has no sting and serves a peaceful purpose. Its name is derived from "atmospheric sounding projectile" and it will sample and report by radio what it finds in the little-known regions 30 miles or more above the earth.

The Asp can get up there in 30 seconds at 5 times the speed of sound.

BUILT IN 5 MONTHS

Even more remarkable than the 3,500 mile per hour speed of the missile, however, is the record speed in which it was designed and produced by Horning-Cooper's plant at 2626 South Peck Road, Monrovia.

Research, development and production of the Asp, a brandnew type of rocket missile, was completed less than 5 months after the contract was awarded by the Navy last July 8. The first test firing was conducted December 27 at Point Mugu.

Since then eight further firings have been made without failure. The principle difficulty encountered, it was learned, was that photographic tracking equipment proved too slow to follow the missile.

TWELVE FEET LONG

The Asp is a slim steel pencil 12 feet long and only 6½ inches in diameter, with 4 delta fins and a needle nose that doubles as a radio antenna. Its warhead houses compact radio telemetering transmitters to flash back data on weather, cosmic rays or other radiation at altitudes far beyond the reach of piloted aircraft or even radiosonde meteorological balloons.

Weather balloons, which have reached heights of 100,000 feet, take some time to get there and cannot be controlled after they are loosed—as evidenced by the ruckus raised last February by the Russians over some United States balloons that rode the jet streams across the Iron Curtain.

TEST HURRICANES

Besides being able to reach altitudes above 150,000 feet the Asp rocket will enable almost instantaneous investigations of hurricanes and other atmospheric disturbances. As the specifications were prepared by the Navy's Radiological Defense Laboratory at San Francisco, a division of the Bureau of Ships, it can be assumed that the Asp also will be able to sample drifting radioactive particles from nuclear explosions anywhere in the world.

The new missile uses a high-performance solid propellant and can be launched from a single-track portable launcher either on land or shipboard. It is not a guided missile but its firing angle and trajectory can be regulated so that it may be recovered.

Asp missiles probable will be used extensively in the upper atmospheric studies of the International Geophysical Year starting in mid-1957. While not a weapon itself, its findings could be of immense value to the United States guided missiles program.

Address by Albert W. Highsmith Before Arlington Optimist Club

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. BROYHILL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Albert W. Highsmith, organizational director, Citizens Committee for the Hoover Report, Washington, D. C., before Arlington Optimist Club, on May 9, 1956:

Thank you, Mr. Chairman. It is indeed a pleasure to meet with the Arlington Optimist Club to discuss a very serious subject.

It is so serious a subject that I would like to compare it, if I may, to a very personal experience.

I rather suspect that as each of you walked in here today, with the exception of my good friend, Lee Bean, you gave little thought to the process of walking. Walking is something that we all enjoy and that we take for granted.

But for me, like Lee, it is different. To me walking is a very wonderful experience. The reason that it has special meaning for me is that I came so close to losing the ability to walk.

It was only a few years ago that what "couldn't happen to me" did happen. I had polio.

But I did walk in here today. The doctors gave much of the credit for my rapid and

complete recovery to the fact that the disease was diagnosed quickly and corrective treatment was immediately applied.

Something else that we take for granted—our way of life—is also in danger. It is in danger of being paralyzed by the disease of big government.

Big government is sapping away the strength of the Nation in taxation. Yet it is leaving staggering financial obligations for the future.

While imprisoned at Landsberg after his abortive attempt to take over Germany in 1923, Adolph Hitler spelled out for all mankind to see his plot to bring the world quaking to its knees before him.

The world paid little heed to Hitler's threats as blueprinted by him in Mein Kampf until he had already touched the torch to Europe and ignited the conflagration of the Second World War that threatened to consume civilization.

The godless masters of the Kremlin have been more subtle than was the madman of Munich, but they, too, have boasted of their long-range aim of world domination.

Lenin, a lasting hero of communism, spelled out part of their plan for domination of our own Nation. He said: "We will force the United States to spend itself into destruction."

Senator HARRY BYRD, of Virginia, told the United States Chamber of Commerce in Washington last year: "Our debt is equivalent to the full value of all the land, all the buildings, all the mines, all the machinery, all the livestock—everything of tangible value in the United States."

"I think no one can deny we are mortgaged to the hilt."

How rapidly is Lenin's diabolical dream being fulfilled.

But a financial stranglehold is not the only paralyzing effect of big government.

It is sapping the rights of the individual and the State by extending its powers more and more.

It is sapping the vital strength of free enterprise by placing itself in unfair competition with private business.

Former President Hoover has said that it goes with the instinct of the vegetable.

After a 2-year consultation, the doctors have diagnosed the disease and have prescribed treatment. The prescription is called the second Hoover Report.

James A. Farley has called it "one of the most exciting and encouraging governmental developments of our time." Mr. Farley, the former Postmaster General, is one of the outstanding Democrats who teamed with former President Herbert Hoover and other Republicans to form the Hoover Commission.

I think that therein can be found one major reason that the Hoover Report is exciting and encouraging. It is a bipartisan product.

The idea of Government reorganization is not new. The Republic was still very young when a congressional committee made its first study with an eye toward Government reorganization. There have been no less than nine commissions established during this century to study the problem.

Before 1947, they could boast very little success. In that year something new was introduced to the idea of Government reorganization—a bipartisan approach.

In that year, by a unanimous vote of the Congress, there was established the Commission on Organization of the Executive Branch. In September of that year, the 6 Democrats and 6 Republicans appointed to membership on the Commission met at the White House with President Truman presiding until they elected former President Hoover as their chairman.

Thus began an intensive study of the Government with an eye toward greater efficiency and economy. It was conducted by task forces made up of more than 300 experts, most of them volunteers, who submitted their recommendations to the 12-man Commission.

The Commission in 1949, submitted to Congress 24 reports including 273 recommendations.

The spirit of bipartisanship that had marked the establishment and operation of the Commission, manifested itself after the reports were submitted. They met with greater success than any similar attempt at Government reorganization ever made in this country.

Seventy-two percent of the recommendations were adopted with a saving of billions of dollars.

I am afraid that I sometimes miss the point when the discussion turns to terms of billions of dollars. I just don't know what a billion dollars is. It is too huge a sum for me to fully grasp its meaning.

We are told that if in the year 1, a man with a billion dollars had started burning a thousand dollars a day and had continued at that rate to this day in 1956, his descendants would have to continue it another 510 years before that original billion dollars would all be gone.

Probably of even greater importance than the monetary savings, was that the discussions resulting from the Commission's reports sparked a vigorous reawakening of popular interest in the governmental process.

Mr. Hoover called it the "widest spread education in civil government" that the Nation has had "since the Constitution was under debate."

It was in this atmosphere that, in July of 1953, the second Commission on Organization of the Executive Branch was created.

Like the first, it was created by unanimous vote of both Houses of the Congress.

Like the first, its membership was bipartisan.

And, like the first, Mr. Hoover was elected as its chairman.

Unlike the first, its instructions from the Congress went beyond just recommending ways to increase efficiency and economy in the operations of the Government. It was instructed to make recommendations for "eliminating nonessential services, functions and activities which are competitive with private enterprise."

This put the second Hoover Commission, by a unanimous vote of both parties in both Houses of Congress, squarely in the field of policy.

While the first Hoover Commission had been concerned only with the question of whether or not the Navy was manufacturing rope efficiently, the second Commission was charged with considering whether the Navy should be manufacturing rope at all or should be buying its rope like anyone else.

The second Hoover Commission like the first used the task force approach in making its study, but with one major difference. The task forces of the first Commission had conducted their study on a departmental basis. This time they made their study on a functional basis. That is, one task force made a survey of all aspects of Federal lending agencies going into each of the 104 agencies concerned with the problem, while another studied 26 agencies involved in the Federal medical program.

There was no inquiry made into the party affiliation of the task force members, Mr. Hoover reported in an article he wrote for the November, 1955, issue of "The Democratic Digest," that the 325 task force members were about evenly divided in party affiliation.

In addition to many outstanding Republicans, the task forces included three former Democratic Cabinet members and six former subcabinet members.

"First get the facts * * * both sides. No preconceptions. When you get all the facts, come up with whatever conclusions they induce."

With these instructions from Mr. Hoover, the task forces embarked on the most intensive study of government ever attempted in modern times.

At the end of 2 years, they submitted their findings to the 12-man Commission.

The Commissioners and their staff drew from the more than 3 million words of the task force reports their own reports to the Congress. The Commission's reports were contained in 19 volumes and included 314 specific recommendations. The last one was submitted to the Congress last July.

The Commissioners were not always in complete agreement on the reports. Even Mr. Hoover registered some dissents. But always in its deliberations, the Commission remained resolutely above partisan politics and the reports of the Commission were the product of majority decision.

Let us look at some of the dimensions of the Hoover Report.

Something of its volume is reflected in the fact that with its supplemental task force reports, it includes 3½ million words.

Something of its importance is reflected in the fact that adoption of the 314 recommendations made in the report could result in an annual savings in the cost of government of $1,500 for each of its 3½ million words. That is a total savings of more than $5½ billion a year, or another way to say it is a savings of more than $10,000 a minute in the cost of operating our Government.

Here are a few of the things the task forces found:

The task forces found that because the Government keeps more records than it needs, a file drawer 5,000 miles long would be necessary to hold them all. They found that Federal paperwork now costs more than the entire Government cost during the Taft administration.

The Commission recommended more efficient methods that could reduce Federal paperwork expenses by $255 million a year.

The task forces reported that some Government agencies lend money at less interest than they pay to borrow it, and that some borrow money from the Government at low interest and reinvest it in Government bonds that pay a higher interest so the Government is paying itself interest.

The Commission recommended that the Government lending program be reorganized on a financially sound basis.

The task forces discovered frightful waste of much-needed medical and technical manpower as well as millions of dollars as the Government rushed from blueprint to reality additional Government hospitals destined to stand half empty beside existing Government hospitals that are only partly utilized.

The Commission recommended that the Federal medical program, now involving dozens of agencies, be coordinated so as to offer the best medical service possible at the most economical cost.

The task forces brought to light instances of the Army shipping 800,000 pounds of tomatoes eastward, coast-to-coast, while the Navy was sending 775,000 pounds of tomatoes in the opposite direction, coast-to-coast; of the Navy storing enough canned hamburger to last 60 years although, by the Navy's own specifications, it would keep only 2 years; and of enough ketchup in Navy warehouses to float each pound of that hamburger in a gallon.

The Commission recommended coordinated purchasing and handling procedures for the Armed Forces. Savings resulting from this one report would be approximately equal to the personal Federal income tax paid by Virginians last year.

I could go on. The list of waste and inefficiencies pointed out by the task forces, and for which the Commission recommended corrections, is almost endless.

In that important matter of Government competition with private business, they found more than 3,000 such enterprises.

There were more than 2,500 in the Defense Department alone. They included 3 ice cream freezing plants, 2 paint manufacturing plants, 2 steamship lines, 244 eye glass manufacturing establishments, 4 coffee roasting plants, and 68 garden nurseries, among others.

In civilian agencies they found such businesses operated by the Government as 75 banks, 110 electric power projects, a fertilizer plant, and 5 insurance agencies.

They found that although some of these enterprises showed a profit on the books, in many cases the goods or services being produced by them could be obtained more inexpensively from private business when all of the facts were taken into consideration.

Take as an example the Military Sea Transport Service. In 1953, it reported a profit of $4 million in its operations. That profit, closer study revealed, was very much akin to the profit a child's lemonade stand makes when the child fails to take into account the cost of the lemons, ice, water, and sugar that came from his mother's kitchen. MSTS, like the youthful lemonade salesman had failed to include legitimate costs such as the pay of its military employees, depreciation of vessels, interest on invested capital and Panama Canal tolls. These four items alone cost $101 million in 1953, leaving an actual operating loss of $97 million for the year.

The Commission recommended that the Government get out of all business enterprises that were not essential to the national security. That was what the Congress had instructed it to recommend.

This is the theme of the second Hoover report. To cite all of the recommendations it made, would be to repeat the report.

I can only suggest that you make it your business, individually or through a committee of your club, to study the Hoover Report. To see just what it does say, and to decide which of its recommendations you can support and then do just that vigorously.

Just as the prescription by my doctors to treat my polio in 1950 would have been useless if the treatment had not been administered, all the work of the task forces, all the work of the Commission will go for naught, if the Commission's recommendations are not acted upon.

If they are to be acted upon, the bipartisanship that has marked the Hoover Commission and its work since its inception must continue. It will require the active support of both parties.

There are some who would block action on the report.

Among the less informed and more vocal of the opponents of the Hoover Report are those who contend that it is a monument to the past. They charge that it would sacrifice the pleasures of today to glorify the past.

As a young men who looks forward to living many years under the economic and governmental systems we are molding now, I take exception to this view. To me, the Hoover report, far from being a monument to the past, is a blueprint for a better tomorrow, and where it suggests that we tighten our belts today, and it does in some cases, it does so because what we are wasting is not ours but belongs to our children.

Future generations will judge us harshly if we fail them now. What more appropriate audience could I have than this club dedicated to boys. In almost every case, opponents of the Hoover report have been found to have vested interest in the status quo and more often than not they have been found to be misinformed on the true nature of the report to which they object.

Some would put political party against political party or faction against faction, knowing that if they succeed in drawing the Hoover report into partisan politics, it will fail of adoption.

In spite of their attempts, some progress can already be reported in implementing the report.

Approximately 45 percent of the recommendations can be put into effect by administrative action within the executive branch.

President Eisenhower has appointed a special assistant to coordinate this effort in the executive branch, and Secretary Wilson has appointed a special assistant to do a similar job in the Defense Department.

A number of the recommendations of the Commission have been implemented, at least in part, in the executive branch.

In the Congress more than 200 bills have been introduced by members of both parties to implement various recommendations. Although few of the bills have been passed, early hearings on many of them have been scheduled.

But where do we go from here?

Mr. Farley summed up the entire problem very neatly. He said:

"Make no mistake: The Hoover report tells us plainly that we have been a foolish people in our use of our resources, both human and material; that our citizens have been neglectful of their responsibilities; and that we must now, or never, adopt some of the simple self-disciplines which free, self-governing people must practice if they hope to remain free.

"This brings us to the big questions: What is the outlook for implementation of the Commission's 314 recommendations? Where does responsibility lie? What are the obstacles to action? And what can we, as citizens, do to make sure that the national benefits of this document are not lost and forgotten in the dusty pigeonholes of Washington?

"The answer to the last question is the key to all the rest. There must be teamwork on a bipartisan basis between the administration and Congress—between any administration and any Congress. But first and foremost there must be strong, bipartisan citizens' support. If we as citizens want maximum action, demand maximum action, and work for maximum action, there will be maximum action. If we are indifferent or neglectful, the results of the Commission's work will be negligible. It is just as simple as that."

The disease has been diagnosed. A prescription has been written. If the treatment is to be administered, it is up to you.

The Small Get Smaller

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, I think we will all agree that the backbone of the American economic system is without question the small-business segment of our economy. Destroy that segment and surely it will result in a controlled economy, or, as has happened more recently in certain European countries—dictatorship.

Mr. Speaker, recently I have observed the operations of a powerful organization, namely, the National Federation of Independent Business. I believe many of my colleagues will agree as to the all-out efforts of that organization in behalf of small business. It is fortunate that we have in our economy a sincere group of leaders such as is typified in the leadership of the National Federation of Independent Business.

Recently they took it upon themselves, in view of the importance of my proposed bill, H. R. 9514, to establish corporate income-tax rates of 22 percent normal tax and 31 percent surtax, to poll their nationwide membership, comprised exclusively of independent business and professional men—all voting members. The National Federation took this action without any prompting on my part, Mr. Speaker. In presenting the question to their members they gave both sides of the proposition, the arguments for and the arguments against, and I think it is well, Mr. Speaker, to note these arguments for and against.

Argument for: To help our Nation stiffen its small-business backbone—that is the aim of these bills. Ability to keep a greater share of gross earnings would help in many ways; supply funds for expansion and modernization, higher salaries to hold key employees. Further, there would be less incentive to merge with larger units. This bill would not cost the United States Treasury a red cent. Surely Congress, which has just given farmers a $60-million tax cut by exempting them from Federal gasoline excises, can spare as much consideration for small-business men who need assistance equally.

Argument against: With many demands being made on Government for spending, we just cannot afford any business tax reduction or any other tax cuts. Our big job is to keep Federal income in line with outgo. Otherwise we promote inflation which cheapens our dollars. This bill does not offer independents much of a saving—just $2,000 yearly at the outside. Are small firms desirous of selling their birthright of a stabilized value currency for this mess of pottage? Why not stop this move for tax cuts until the Federal finances are brought into order, until spending cuts can be made.

I have been advised by the Washington office of the federation through its vice president, Mr. George J. Burger, that the poll, reaching in excess of 100,000, has been completed, the results of which appear in their current Mandate, the official publication of the federation, and the result is as follows: 84 percent for the bill, 12 percent against, and 4 percent no vote.

This poll, Mr. Speaker, should be noted by my colleagues that small business of this Nation, both at the production and distribution level, must have the necessary reserves built up so they can carry on their businesses not alone in the war periods but, more important, under business conditions when they are normal or below normal. A more important aspect of this poll coming from the grassroots is that small business expects this long overdue relief from the Congress.

Finally, Mr. Speaker, a still more important aspect of keeping small business an important segment of our economy is that it will open up the door of op-

portunity for the youth of this Nation, if they have the efficiency and ability, to enter into their own respective businesses.

It is my hope that the respective committee will take appropriate action on my bill.

I include here the following excerpt from a broadcast over CBS radio by Eric Sevareid:

THE SMALL GET SMALLER

(By Eric Sevareid)

All who read as they run are by now aware that one deep fissure, or fault, endangers the American prosperity structure, which looks so solid on the surface; they know that farmers generally are suffering a recession. But it is not yet widely recognized that there is a second fissure in the structural foundation. That is the condition of American small business, defined as those concerns with less than a quarter of a million dollars in assets. In net figures, they are not disappearing as small farms are disappearing, but neither are they growing in number as the economy grows, and the number of small-business failures has risen to levels that alarm some observers.

While the press gives page 1 spreads to the profit margins of the giant concerns and their expanison plans, little is said about the present or the future where small business is concerned. But the information is there for anybody willing to look trouble in the face in these days of mass hypnotic belief that there is no trouble.

One so willing is the director of the Public Affairs Institute, who bases his argument on the uncontroverted figures of Dun & Bradstreet, the Federal Trade Commission, and the Securities and Exchange Commission. For one thing, net growth in the number of business firms stopped in 1953, after growing by 200,000 new concerns in the previous 4-year period. Furthermore, the profit margin of small businesses has not only stopped growing, it has sharply dropped, while that of big business has continued to grow. For example, the smallest size group of manufacturers last year suffered a tremendous 66 percent drop in profit after taxes, compared with 3 years before; funds available for reinvestment or expansion tell the same kind of story—a 40 percent drop.

The story on small-business failures is quite a tale; the chapter on firms that handle wearing apparel, for example. The number of retail failures there increased last year by 7 percent over the year before; the number of wholesale failures increased by 36 percent.

In a report earlier this month, the Senate Small Business Committee reached essentially the same troubled conclusions—unanimously. What deeply troubles them, they said, is that there simply is no evidence that the American small-business man is going to be able to hold his ground, shaky as it is, in the future. They find a direct ratio not only between size and success but between size and survival.

There seems much agreement that what chiefly is choking small business is heavy taxation plus lack of credit. Big business can arrange big, long-term loans; any workingman can buy a house, car, furniture, or what not for about 10 percent down and 3 years to pay. But a small-business man in Los Angeles writes me, what about the modest retailer, jobber, wholesaler, or service man? He has to pay more for rent, labor, supplies, insurance, and taxes, yet his credit situation hasn't changed at all; he still has to pay for his goods in 30 to 60 days. If he applies for extra help to the Federal Small Business Administration, what happens? Well, as the Public Affairs Institute points out, the SBA has received about 11,000 inquiries a month and has granted fewer than 400 direct loans in 2 long years.

So far, hardly a whisper of concern has been voiced by the administration over the profound social fact that the big get bigger while the small get smaller—a fact, concludes the Senate committee, that will ultimately change the fundamental character of the American economy, perhaps beyond easy recognition by the present generation.

Statement of Omar B. Ketchum, Director, National Legislative Service Veterans of Foreign Wars of the United States, Before the House Committee on Veterans Affairs, With Respect to Report of President's Commission on Veterans' Pensions, May 11, 1956

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Mr. Chairman and members of the committee, my name is Omar B. Ketchum and I am the national legislative director of the Veterans of Foreign Wars of the United States. I appear before your committee today to express the current viewpoint of the Veterans of Foreign Wars with respect to the report of the President's Commission on Veterans' Pensions, more frequently referred to as the Bradley Commission. The viewpoints herein expressed are based upon longstanding policy, current National Encampment resolutions and consultation between national officers and the national staff.

Accompanying me this morning are other national staff members of the Veterans of Foreign Wars who have had many years of experience in dealing with many of the problems discussed in the Bradley Commission report. They are Mr. H. A. Calkins, director of the VFW National Rehabilitation Service, whose hair has turned white during long years of service to veterans; Dr. Robert A. Bell, USN (retired), medical consultant for the Veterans of Foreign Wars and who, in addition to a long career of medical practice, has served the Defense Department as an expert on disability determinations; and Mr. Elmer P. Richter, technical consultant to the VFW rehabilitation service, and an amputee from World War I who has devoted over 30 years to the problems of veterans, first with the Veterans' Administration and then with the Veterans of Foreign Wars. I suggest to your committee that these men, through their training and years of experience, have accumulated some knowledge on the subject under consideration by your committee.

One of Shakespeare's plays dealt with, "much ado about nothing." I hope that insofar as the Congress is concerned the Bradley Commission report will also turn out to be much ado about nothing. It is our understanding the Commission report was submitted to the President and that it will not officially be before the Congress unless and until some or all of the recommendations have been submitted by the President. The Bradley report, in our opinion, is closely akin to the Hoover report on veterans and is entitled to about the same congressional consideration.

We shall not attempt to analyze and comment on each of the 70 specific recommendations contained in the Bradley Commission report. We will discuss some of the recommendations in the hope that we can prove to this committee that the report as a whole is impractical, contrary to national tradition, and replete with distortions and exaggerations. Before taking up any specific recommendations we should like to discuss the underlying philosophy of the report and our interpretation of what it means now and for the future.

We charge the underlying philosophy of the Bradley Commission report is an attempt to reverse the traditional national policy of the United States with respect to those who have served in the Armed Forces. The heart and soul of the report clearly infers that veterans are entitled to no more consideration than nonveterans and seeks to repudiate the hardships, dislocations, and hazards of service in the Armed Forces.

We are at a loss to understand the attitude of the Commission toward veterans which gave birth to this new philosophy. It has been suggested that perhaps the Commission has been seeing too many television shows and has been overly influenced by the weekly poking fun at the Army and starring comedian Phil Silvers in the role of Sergeant Bilko. May we express the hope that the great body of men and women who have served in the Armed Forces are not being measured by the platoon of "characters" commanded by Sergeant Bilko in the television show.

The report attempts, with one hand, to deal generously with the service disabled, but with the other hand, to withdraw benefits to many who are badly disabled. In paying lip service to the service disabled the report attempts to deceive both the disabled and the American people by making fish of one group of veterans and fowl of another.

Let me suggest to this committee the existence of a hidden time bomb in the Bradley report and a warning of what is inevitable in the future. The report states that "ordinary or non-service-connected veteran needs should be met through general welfare programs which cover all the people but that service-connected benefits should be accorded the highest priority and should be liberal, even generous." Herein lies the delayed fuse of the report which seeks to make fish of some and fowl of the others and should be tagged with a warning flag.

If the philosophy and recommendation of the Commission to the effect that, in the absence of proven service-connected disabilities, veterans in need should be dealt with out of the same pot with nonveterans is sound, would it not also be valid to insist that veterans with service-connected disabilities, combat or otherwise, be dealt with out of the same pot wtih nonveterans who suffer industrial disabilities? It needs only a slight nudge for the Commission to go the whole way and insist that a leg lost in combat is deserving of no different consideration than a leg lost in an industrial accident. If the first premise is sound and accepted it is not difficult to anticipate the next target.

There is a current popular song which says "Love and marriage go together like a horse and carriage and you can't have one without the other." Would it be unreasonable to suggest at this point that non-service-connected disabled and aged war veterans and service-connected disabled war veterans go together and that you can't ignore the one and honor the other?

The value and validity of the Bradley Commission report and recommendations, in general, depends upon the viewpoint of those who read and study it. If you agree with the proposed new philosophy and reversal of tradition where consideration of veterans is concerned, the report makes sense. If you disagree with this strange new philosophy and reversal of tradition, the report makes little or no sense. We, of the Veterans of

Foreign Wars, do not agree with the underlying philosophy in the report and, consequently, recognize it for what it is—some warmed-over thinking cribbed from various sources, including the Budget Bureau, the Pentagon, and a 1953 report by the old Phillips Subcommittee of the House Committee on Appropriations.

The Veterans of Foreign Wars has long been concerned over the repeated surveys and task-force investigations, outside the Congress, of the veterans' benefit program and the Veterans' Administration. The Bradley Commission study and report is further evidence of a determination in not too well defined quarters to create public suspicion against expenditures for veterans. We strongly suspect the principal value of the Bradley Commission report is to provide a Roman holiday for that portion of the daily press which is either cynical or openly hostile toward veteran benefits. Editorials are blooming in all parts of the United States applauding the wisdom and courage of the Bradley Commission and a large segment of the public, including many pensioners and disabled veterans, has jumped to the conclusion that the recommendations have the force of law and are being put into effect.

Contrary to the Bradley Commission report there is and has been a national policy with respect to veterans. The Congress, with the approval of Washington and Lincoln among others, established the pattern and tradition of special consideration for veterans which has been followed over the years. The Congress has determined, largely by its own initiative, what benefits and special consideration should be extended to veterans. The Congress, from time to time, through standing or special committees, has instituted studies and investigations affecting or involving veteran benefits and has enacted legislation to adjust or liberalize the benefits in accordance with its findings. The Veterans of Foreign Wars supports the principle of congressional studies and determination with respect to special consideration and benefits for veterans. We strongly suggest that any future studies or investigations of the veteran benefit program or the operation of the Veterans' Administration be left to the House Committee on Veterans Affairs or an appropriate committee designated by the Congress.

In the highlights of the Commission's findings and recommendations the report proudly observes that "veterans today are better off economically than nonveterans in comparable age groups." Some fancy charts are served up to illustrate this disclosure. The Veterans of Foreign Wars is not yet ready to accept the conclusion but in the absence of factual evidence to the contrary we would like to offer the following observations: In comparing the income of veterans with nonveterans in the same age groups let's keep the following point in mind. In World War I, World War II, and the Korean conflict, of all the millions of men who were examined for military service approximately 30 percent were rejected. It can, therefore, be safely assumed that those who were accepted for military service represented the cream of the crop both physically and mentally.

Now, the Bradley Commission researchers no doubt run a cross section test of the incomes of a group of both veterans and nonveterans in comparable age groups. Considering the fact that the veterans in this group were the cream of the crop, physically and mentally, and that among the nonveterans were the 30 percent of rejects, should it be surprising and astounding that the veterans' income is at least equal to, if not higher than, nonveterans? If the law of supply and demand and the traditional reward for intelligence and ability are still factors in our national economy, one could assume that the veterans should have a substantially higher income.

However, the ratio of income between veterans and nonveterans in comparable age groups is not necessarily a true index to economic security. Other factors, such as liquid assets, unencumbered property, paid-up insurance, and home and business mortgages, should also be taken into consideration. It is possible the veteran with the same or slightly higher income than the nonveteran may not be as far along the road to security through liquid assets and unencumbered property.

In addition to painting a rosy picture with respect to the economic status of veterans in comparison with nonveterans in the same age group the Bradley Commission, in recommending a gradual elimination of special consideration for veterans and benefits for the non-service-connected disabled, places great stress upon what it calls "changing conditions in military service, warfare, readjustment benefits and general welfare programs." The Commission insists that pension levels—if paid at all—should be based on public assistance standards and should be consistent with old-age and survivors insurance. The Commission further contends that the present income limitations of $1,400 and $2,700 are too high and should be geared to the average needs test applying to public assistance rolls.

The Veterans of Foreign Wars vigorously disagrees with the foregoing findings and recommendations of the Commission. We have repeatedly pointed out to the Congress and to the Bradley Commission itself that the only effect that these changing conditions might require insofar as pensions are concerned would be the imposition of a reasonable income limitation. Need is need and must be met wherever it exists regardless of changing conditions. The VFW has accepted the reasonableness of a modest income limitation affecting eligibility of veterans to receive pensions, but we utterly repudiate the theory that pensions should only be paid to veterans on a public assistance or "bare-bones" existence level. We believe that, if veterans are worthy of special consideration by reason of their special service, such consideration should be based on more than the lowest levels.

As recent as last February 7 the Veterans of Foreign Wars, through Commander in Chief Timothy J. Murphy, stated its position to this committee on veterans pensions. In asking for the enactment of a separate pension program for the aging group of World War I veterans, Commander Murphy acknowledged that improving social and economic conditions along with social security and the growth of retirement and pension programs in Government and industry would sharply lessen the need for veterans' pensions in the future. Commander Murphy predicted that, with a continued expanding economy and the absence of another war, it was quite possible that the aging group of World War I veterans might be the last to require liberal group-pension assistance.

Murphy pointed out that, as long as a modest income limitation is attached as a condition to the payment of veterans' pensions, it was quite possible that in the years to come the only veterans who could meet the income and unemployability tests for the pension rolls would be those who became disabled before attaining security under some retirement or pension program sponsored by Government or private industry. May we repeat today that the need for pension assistance for veterans will diminish and eventually disappear; (a) when economic factors, such as retirement programs and social security maintain disabled and aged veterans at an economic level not below semiskilled workers; or (b) when there are no more veterans. Consequently, it is not changing conditions which are paramount but rather whether those changing conditions have alleviated need below the level of earnings of semiskilled workers.

It is significant to note throughout the Bradley Commission report emphasis has been placed upon past, present, and future costs of the veterans' benefit program. A series of charts, together with the body of the report, has attempted to paint a frightening picture of what United States taxpayers will be confronted with in the future. We charge exaggeration and distortion in the presentation of both the text and the charts.

One of the most glaring distortions in the projection of estimated cost of veteran benefits for the future is the constant repetition both in charts and text, "assuming the enactment of a general service pension for all veterans." Why does the report continuously assume the enactment of a general service pension when no responsible veterans' organization is asking or advocating such a program? The only pension bills of any consequence before your committee are bills which incorporate disability, age and income limitations, or where only an age requirement is incorporated, the bills are limited to one group of veterans.

The Veterans of Foreign Wars has made two pension recommendations. One would set up a separate pension program for World War I veterans and incorporates age, disability, and income limitations. The other recommends a modest liberalization in the existing part III pension program which, as you know, incorporates not only age, disability and income limitations but also an unemployability requirement. It is my understanding the American Legion is advocating legislation which would liberalize the part III pension program, but would retain most of the limitations, including the income limitations. The World War I Veterans Association is supporting a general service pension bill, but it is confined to World War I veterans. Under these circumstances, where did the Bradley Commission get the inspiration to "assume the enactment of a general service pension for all veterans?"

Another distortion in the Bradley Commission report on projected estimated cost is the use of some charts labeled "Income Maintenance Payments Under Public Programs." One of these charts, on page 121, is identified as general Federal, State, and local programs plus VA compensation and pensions in selected years 1940 to 1985. This chart lumps together pensions and compensation costs, assuming a general service pension, plus social security, plus all other general or public assistance programs participated in by the Federal Government. No doubt railroad retirement is also included. With all of these programs, the Bradley researchers were able to present a startling projected estimate of cost for the year 1985 which reached a possible $40.7 billions. Again we ask why does the Bradley Commission add together the cost of veterans' pensions and compensation with social security and all other general Federal programs including public assistance? The clear inference contained in the chart is to the effect that United States taxpayers will be confronted with a staggering bill on handouts by the year 1985.

It may not be generally understood that most of the cost of social security and railroad retirement is borne by contributions made by employers and employees. When social security and railroad retirement are included with gratuity programs to create a taller column in a chart, without regard to the nature of the expenditures, it constitutes distortion and borders on deception.

It is significant that in dishing up all these charts purporting to show projected estimated costs for the future, very little consideration has been given to the relation between the cost of pensions and compensation and the amount of United States national income. A casual study of these projected costs might lead one to believe that the cost of pensions and compensation will continue to climb to dizzy heights, but the United

States national income will remain at the present level. A study of the relation between the cost of pensions and compensation to United States national income over a long period of years reveals that notwithstanding the increase in the number of veterans and the increase in the number of dollars paid out, the percentage of national income necessary to support this program has varied little and, if anything, is smaller.

As previously pointed out, the Bradley Commission report professes great sympathy and concern for the service disabled. Let's examine more closely some aspects of the report to determine whether this sympathy is real or merely lip service. The Commission among other things has proposed three specific changes in compensation payments to the service disabled: (1) Monthly compensation payments to those whose service-connected disabilities are rated 10 and 20 percent would be dropped from the compensation rolls and some vague form of lump sum payment would be substituted; (2) statutory awards for certain obvious loss or loss of use of parts of the body would be eliminated; and (3) presumption of service-connection for certain chronic, tropical and other diseases would be withdrawn. A careful study and evaluation of these recommendations by the VFW rehabilitation service reveals that the savings which would result if these recommendations were put into effect would amount to at least $400 million annually, on the service-disabled.

Mr. Chairman, the members of your committee and others in this room who recall the 1953 report of the former Phillips Subcommittee on Appropriations will find a striking similarity in that report and the recommendations and the amount of money which would be saved under the Bradley Commission report. It could be a coincidence but when the amount of savings and the methods proposed by the subcommittee report so closely parallel the Bradley Report it is difficult to believe that it was only a coincidence. Reducing compensation payments to the service disabled by not less than $400 million annually with some vague proposals as a substitute does not appeal to the Veterans of Foreign Wars as expressing real sympathy and concern for veterans suffering from service-connected disabilities.

REVISION OF RATING SCHEDULE

The Bradley Commission complains that the schedule for rating disabilities has not been revised since 1945. They fail to acknowledge, however, that the rating schedule is under constant study and there have been a number of revisions in recent years. The VFW agrees that further study and revisions are in order and from time to time we have submitted suggestions concerning revision. The VFW further recommends that all studies and revisions should be made by experts in rating practice and there would be no point in taking this function away from the Veterans' Administration.

The Bradley Commission states it obtained an up-to-date view on medical aspects on disability compensation from the views of 155 medical specialists. The qualifications of these medical specialists as rating experts are not set forth. The report claims that an overwhelming proportion believed that neither the 10 nor 20 percent ratings constituted an actual impairment of earning capacity. Now the Bradley Commission recognizes and knows that earning capacity is not the basis for according percentage disability ratings. Ratings are designed to compensate average impairment of the average man to function in daily life, including employment. If the principle of rating on degree of impairment is sound, the veteran with only a 10 or 20 percent impairment is equally entitled to his proportionate compensation.

STATUTORY PRESUMPTION FOR CHRONIC DISEASES

The Bradley Commission recommends withdrawal of statutory presumption of service connection for certain chronic and tropical diseases on the basis that the physicians surveyed were in general agreement that service connection should be determined in accordance with sound medical principles and not by fiat. This naive view overlooks the experience of the Congress and of veterans' organizations in arriving at the need for statutory presumptions in order to protect the best interests of worthy war veterans.

The determination of service connection for disability is a theoretically desirable objective. Can it work in practice? The everyday spectacle of fundamental differences between equally qualified specialists testifying (on medical principles) in our law courts hardly indicates any unanimity of opinion in this field. Where are the accepted medical principles published? In what way are they taught in our medical schools? In the particular area covered by statutory presumptions the veterans' organizations and the Congress have, over the years, found no satisfactory basis for according justice and equity in disability awards other than through such presumptions, accorded as a matter of law, and with the decision removed from the realm of opinion, judgment, narrow experience, prejudice, or colloquial views.

ELIMINATION OF STATUTORY AWARDS

The Bradley Commission would eliminate statutory awards and substitute some new procedure in the rating schedule which presumably would more equitably dispense justice to those veterans who have suffered the loss or loss of use of some part or organ of the body. The VFW suggests the Commission failed to consider the facts behind congressional decision to authorize statutory awards. Over the years the Veterans' Administration, in applying an average rating schedule to determine percentages of disabilities, were unable to place monetary emphasis upon the obvious loss or loss of use of certain parts of the body. The Congress, aware of this problem and recognizing the difficulty of properly evaluating the loss of a hand or foot on an average impairment basis, reached the decision that there was a handicap above and beyond the rating schedule which could only be recompensed by a special monetary award. This decision resulted in the establishment of what is known as statutory awards which the Bradley Commission would eliminate. The VFW believes the statutory award to be reasonable and sound approach to a most difficult problem and that withdrawal of the statutory awards would be neither acceptable to the veterans nor to the public.

The Bradley Commission report, in addition to the many recommendations with which we have disagreed, would join with the Hoover Commission in taking away from the Veterans' Administration and placing with another Government agency the administration of a veteran benefit. The Commission, in recommendation 45, on pages 312 and 313, states that the home-loan programs for veterans of World War II and the Korean conflict be transferred from the Veterans' Administration to the Federal Housing Administration and that the terms for said loans which are now favorable to veterans be gradually changed until they are identical to the terms available to the general population. We vigorously disagree with this recommendation and make the observation that under the conditions recommended by the Bradley Commission we cannot understand how such a program then could be identified as a veterans' benefit program. If such a benefit as insured home loans are no longer advisable for veterans, the Commission should have the courage to recommend outright repeal and veterans would then be limited to the same loan programs as nonveterans.

In recommendation 46 (b), on page 319, the Commission proposes to sharply curtail existing preferences for veterans in the Federal classified civil service. Under this proposal veterans would be limited to a 5-year period after discharge in which they could take advantage of special appeals procedure and in receiving preference in appointments and retention. However, the Commission would make an exception where veterans with service-connected disabilities rated 30 percent or more are concerned. Here again is a renewal of the effort to sharply distinguish between and divide veterans. Does the Commission agree that a service disabled veteran with a disability of 30 percent or more should be entitled to preference over a nonveteran who has suffered an industrial disability of 30 percent or more? The VFW agrees that the service-disabled should have added preferences but we emphatically disagree that the so-called nonservice disabled veterans should be denied preferences longer than 5 years after discharge from active service. This is a further example of the new philosophy which insists that veterans are entitled to no more consideration than nonveterans.

We are in agreement with recommendation 61 (a), on page 390, which states that survivors' pensions should be made available to the widow and/or children of any deceased eligible war veteran who are in need because their total family income falls below an amount fixed by the Government. This should apply equally to the widows of World War I, World War II and the Korean conflict. We do not agree with certain other items under recommendation 61 which impose additional restrictions and/or limitations beyond those presently existing in the payment of widows pensions. We favor continuation of the so-called non-service-connected widows and orphans pensions on the basis of a reasonable income limitation.

We agree with that part of recommendation 67 (a), on page 404, which would give serious consideration to making the Administrator of Veterans' Affairs a member of the Cabinet. We disagree with the suggestion the President should establish a Cabinet Subcommittee on Veterans' Affairs. The responsibility and authority of the Administrator of Veterans' Affairs as a Cabinet member should not be limited more than any other Cabinet member. We recognize the possibility of the Administrator as a Cabinet member becoming involved in political matters. However, there has been a trend toward keeping the Secretary of State and the Secretary of Defense out of partisan political discussions and we believe that a precedent and condition could be established in keeping a Secretary of Veterans' Affairs from engaging in partisan political discussions and campaigns. We can visualize many advantages and a better understanding of the veteran benefit program with a Secretary of Veterans' Affairs who is a part of high level policymaking and decisions.

We can find little justification for recommendation 68 (a) and (b), on page 406. It seems to us that the Administrator of Veterans' Affairs, if anything, needs more freedom to operate within the framework of existing laws, and less domination by the Bureau of the Budget. It is unlikely that any changes in the rules by the Administrator in large matters affecting eligibility of veterans for benefits or involving changes in program objectives have ever been made without consultation with the President and/or the Bureau of the Budget.

Recommendation 69, on page 408, would maintain the finality of decisions by the Administrator of Veterans' Affairs but would make provision for a central administrative review of all decisions by field boards be-

fore final appeal to the Board of Veterans' Appeals. It is doubtful if any substantial benefit would accrue from such an additional review. It would incur additional expense. It would seem to the VFW that the present Board of Veterans' Appeals could continue to handle this work without any undue hardship upon either the claimants or the Government.

Mr. Chairman, this concludes the general viewpoint and observations of the Veterans of Foreign Wars with respect to the report of the Bradley Commission. If your committee so desires we can, at a later date, furnish an itemized list of VFW reaction to the 70 specific recommendations made in the Bradley report. Some of the recommendations are not objectionable and we are not concerned with others. However, if it would be of any interest or value to your committee we will furnish you, in the near future, an item by item comment on the entire 70 recommendations.

We should like to say to you, Mr. Chairman, and to members of this committee, that we have the utmost confidence in the committee. We have no doubt that if and when the President should send up any of the recommendations of the Bradley Commission report you will exercise sound, commonsense in reaching your conclusions. We are confident this committee will not report any bill which does violence to the longstanding policies of your committee and the Congress with respect to our Government's responsibility toward veterans and their dependents as a special class of citizens.

We regret the necessity of taking issue with General Bradley and his associates on the President's Commission. We have admired and respected General Bradley as an able soldier and general and the Veterans of Foreign Wars has named one of its highest medals in his honor. We believe General Bradley was given an assignment and, like the good soldier he is, accepted the assignment and carried on. We do not agree with many of the conclusions in the Bradley Commission report but we bear no animosity or ill will toward the general or his associates.

In conclusion, Mr. Chairman, we are hopeful this committee will give favorable consideration to bills liberalizing benefits for the service disabled, for the widows and orphans, and for the pensioners. We respectfully recommend that careful consideration be given to the pension bill identified as H. R. 9121 which would establish a separate and liberalized pension program for the aging group of World War I veterans. Nothwithstanding some of the optimistic conclusions in the Bradley Commission report, it is our considered opinion that it is the group of World War I veterans who are on the borderline between the old era of pension necessity and the new era which promises a more assured security for old age and lessens pension need in the future. Let me assure you that the Veterans of Foreign Wars will appreciate any liberalization of veteran benefits, regardless of whether it is a bill now pending before your committee or a new one that might be drafted.

Thank you for this opportunity to appear and your courtesy in hearing us out.

Hon. James P. Richards

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. KEOGH. Mr. Speaker, much has been said in private and undoubtedly much more will be said publicly concerning the retirement from the Congress of our very distinguished colleague, Representative JAMES P. RICHARDS, of South Carolina. It is generally conceded to be lamentable that the Congress and the country should lose the services of one who has earned for himself the universal admiration and respect of all his colleagues and who has served with credit and distinction as the chairman of the House Foreign Affairs Committee during these difficult and dangerous times and who has in such service earned an enviable reputation for fairness and capacity. It was my intention to include in these remarks the article which appeared in the New York Times of Friday, May 18, 1956, on Mr. RICHARDS, but a Member of the other body has set forth that article in the RECORD. It is an interesting but by no means complete word picture of a great American and a distinguished legislator.

In Texas: A New Bronc Rider

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MAHON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Lubbock, Tex., Morning Avalanche of May 8, 1956, in regard to Senator LYNDON JOHNSON, the distinguished majority leader of the Senate, who has recently won additional honors in the field of State and national leadership:

IN TEXAS: A NEW BRONC RIDER

Senator LYNDON JOHNSON'S overwhelming victory over Gov. Allan Shivers for control of Democratic precinct conventions on Saturday is, as we forecast last Friday, that it would be, the one big hope of the party in Texas and, further, offers opportunity for Texas to raise a louder, clearer voice in national party affairs.

To be sure, the JOHNSON victory of Saturday was only round 1 in the battle; round 2 will come in the county conventions today and the final round 3 on May 22, at the State convention in Dallas. But the results of Saturday's melees, from the big cities to the crossroads, put the handwriting on the wall. It reads: "In for JOHNSON, out for Shivers."

The move to the JOHNSON camp in such great numbers proves the Senator's appeal to those who are sick and tired of constant bickering; sick and tired of the blatant extremists on both sides of the party split in Texas. The middle-of-the-roaders are the ones who chose the senior Senator as their outspoken champion. With JOHNSON in the saddle, Texans may hope for relegation to the back seats of the radical and ultra-conservative elements and the ascendancy of the more reasonable. That's what we need in the Democratic Party in this State—and the Nation over.

As a result of his victory in Texas, Senator JOHNSON will return to Washington and his post as majority leader in the upper House as a stronger and more powerful figure than ever before—one with whom the national party leaders must cope and to whom they will be forced to pay more than passing attention. His position today is not only that af twice-elected Senator and majority leader but also it is that of unchallenged spokesman for a State whose Presidential electors pack a potent wallop.

LYNDON JOHNSON can tell the national party bosses, from Paul Butler to Carman di Sappio, about political thinking in Texas and their memories are not so short that they have forgotten that Texans will, whenever they choose, cross party lines in a national election. The Senator knows, as well as anybody, what Texans will take and what they won't take. And he knows as well as anyone, too, that neither he, nor Speaker RAYBURN, or anybody else can force a radical Presidential candidate on the majority of the voters of this State. Furthermore, he is the sort of fellow who will tell 'em—and without stuttering.

It is entirely possible that what happens in Texas Democratic circles this spring will have an important bearing on the action of the national convention in Chicago in August. At least there is room for hoping that this is so.

Senator JOHNSON'S leadership of the Democratic organization in Texas will not be a bed of roses—at least until he welds that organization firmly, and just as firmly explains to all facets of support that his is and shall continue to be a middle-of-the-road program.

The Senator's leadership, in fact, depends upon his ability to exercise it to the satisfaction of the middle-of-the-roaders who put him where he is and who can jerk the rug out from under him should they ever so desire.

But, fortunately, the senior Senator is an amazing man—persuasive, intelligent, fair—and, when needs to be, tough as a boot, three times as high and twice as hard to make. He is quicker to bring about compromise than he is to kick out the teeth of those who do not wholly agree with him and that talent should serve him well in the first months to come.

It may be asking too much of any man to bring complete peace and accord to the divergent wings of the Democratic Party in Texas and it certainly is too much to expect any man to do that overnight. But as we noted last Friday, Senator JOHNSON is the only Texan currently on the political horizon who might, conceivably, turn the trick.

We hope he can do it.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Niagara River Power Legislation

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, May 25, 1956

Mr. LEHMAN. Mr. President, on Sunday, May 20, it was my privilege to address the concluding session of the Electric Consumers Conference, the chairman of which was the Honorable Clyde Ellis.

I ask unanimous consent that the remarks I prepared for delivery on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HERBERT H. LEHMAN AT ELECTRIC CONSUMERS CONFERENCE, HELD AT THE STATLER HOTEL, WASHINGTON, D. C., ON SUNDAY, MAY 20, 1956

This is a most satisfying occasion. Last Wednesday we tasted together the fruits of victory. As deeply gratifying as that victory was to me, I am sure that it was no less gratifying to you.

But while we claim it as our victory, climaxing not only months, but years of effort—it was in a real sense a victory for the people of the United States.

This I deeply believe. With this, I think you wholly agree.

This organization, encompassing as it does many of the public-interest groups in our country which are interested not only in public power but in the public welfare, contributed much to the successful outcome of the Senate vote on the Niagara bill.

But that was not your sole contribution. You contributed much also to the formulation of the bill. Your representatives in Washington spent long hours in consultation with members of my staff and with me, in working over the provisions of the bill, not only this year and last year, but during all the years that the Niagara bill passed through its many forms and changes.

From the beginning I wanted a bill that served not only the immediate interests of New York State, but also the interests of the Nation. The formulation of legislative provisions that would serve the interests of the people of New York and simultaneously advance the interests of the country as a whole, was the result of these long studies, deliberations, and consultations.

That is one of the reasons, I said, a moment ago, that the passage of S. 1823 was not only our victory, but a victory for the people. It was, of course, a great victory for New York State, and a long step forward in a direction desired and needed by New York State. But it was more, very much more.

It was a resounding reaffirmation of principles which have been fought for by farsighted men, and men of good will generally, since the turn of this century—basically the principle that our water resources belong to all the people and should be developed in a manner to provide the maximum possible benefits to the maximum number of people.

One of the leading opponents of the Niagara bill said, in the course of the debate, that he did not see the difference between our water resources and our resources of coal, oil, and farmland. Senator KERR, I believe, in his own picturesque manner, effectively answered that argument.

But the most convincing answer was given by the Senate itself in voting, by a substantial majority, the approval of a bill which asserts the inalienable right of the people of New York State to develop the great waters of the Niagara River primarily for the benefit of the people, and not—I repeat, not—for the benefit of private, profit-seeking monopolistic utility corporations.

This victory was not an isolated one, although it has been some time since we have had such a satisfying and resounding one. This victory was built upon other victories of the distant and recent past—victories against the same kind of selfish and self-serving forces as those which sought, and still seek, to oppose our Niagara power development legislation.

In recent years, in the years during which I have been in the Senate, we well recall the strenuous efforts which were made to defend the public's right to another public resource—the offshore oil deposits; and more recently still, the public's interest in the peacetime uses of atomic power. All those efforts, those which succeeded and those which failed, contributed in good measure to the victory on the Niagara bill.

And, my friends, the victory on Niagara will contribute, I trust and believe, to victory sooner or later, and I hope sooner, in the fight for a Federal high dam at Hells Canyon.

I pledge my efforts to supplement yours toward this end.

Sometimes in our concentration on the battle, we foget that low-cost power is not the final object of our efforts. Electric power, high cost or low, means nothing in and of itself. It is with the use of electric power that we are ultimately concerned. We see the real consequences of low-cost hydroelectric power in terms of happier lives, relief from needless drudgery in the home and on the farm, and a vast expansion in industrial development. It is in this context that I see the benefits from public development of our publicly owned water resources.

It is for this reason that it is necessary for the Congress to be ever-vigilant to protect this precious public resource and prevent its alienation to private monopoly.

The victory in the Senate means we have won the initial battle in this Congress. Yet we know that final victory is not won until the bill is safely through the House and is signed into law by the President.

So even while we join in mutual congratulations over success in the Senate, we must waste no time in girding for the fight ahead.

Make no mistake about it, there is a real fight ahead—a tough and uphill fight all the way.

Remember that the private utilities' lobby has historically considered the House of Representatives its own particular hunting ground—and their hunting license seems to cover all sorts of weapons.

So we should be sure our own ammunition supply is adequate. I would like to review with you briefly the strategy and tactics involved in this grueling fight ahead.

In the House, there will be many more than in the Senate openly opposed to any form of public power development, and openly favoring a naked giveaway of Niagara to private monopoly interests.

But, of course, there will also be the busbar boys—those who pay lipservice to public development and then demand that the power produced be immediately turned over to private utility interests right at the project site.

We must, therefore, be sure that the Members of the House thoroughly understand the basic issues so familiar to all of us.

We will have to explain again and again why public development is necessary to preserve the public interest in resources belonging to all the people.

We will need to say over and over again that not one cent of Federal money is involved in paying for the Niagara development since the New York Power Authority is ready, willing, and able to finance the construction.

Then we will need to reeducate the House—and the general public, too—on the difficult but vital subject of preference and transmission lines.

Referring to the preference provision, we must make sure that we get over to Members of Congress, and the general public, exactly what "preference" means. In the course of the Senate debate, it was evident that there still lingers in the minds of some the mistaken impression that preference means discrimination in favor of a few selected customers.

You, of course, know that the preference clause is really an antimonopoly clause. Perhaps it should be called an equal-opportunity clause in that it insures a supply of low-cost publicly developed power to rural consumer cooperatives and to municipally owned utilities—in other words, to nonprofit and public groups—to the people themselves.

That is what the preference clause is: a device for marketing the people's power to the people, and at the same time establishing a rate yardstick for the benefit of those people who are served by private utilities—so that all the people benefit.

Nor is it enough to show that private utility companies tend to reduce their rates to their own customers when there are municipal utilities and rural electric cooperatives in the area. It should also be brought home that the private power companies are not only not driven out of business by the rate reductions resulting from the yardstick, but actually, to their own surprise, sell more power and reap greater profits.

We must anticipate that the private monopoly interests will step up their propaganda efforts. We must recognize and explode their phoney arguments about the taxes they pay—and want to pay. A person hearing these arguments might be led to believe that the highest aspiration and most urgent desire of the private utilities is to pay more taxes. A moment's sober reflection should convince anyone that this is not their goal. The fact is that the private utilities do everything they can to escape paying taxes. And as soon as they pay them, or even before, these taxes are passed directly on to the consumers. We know that. But do the Members of the House know it? Does the general public realize it? We must make sure that they do know it, and that they understand further that even greater revenues come to the Federal, State, and local

governments when there is, in any area, an abundant supply of low-cost power.

Well, there is much more I can say. But it isn't necessary. I am sure we all realize what must be done in this fight and in others which we face on this whole issue of public power.

If we can get the Niagara bill through the House, it will help break trail for a Federal high dam in Hells Canyon. It is, in essence, all one fight. But let us not forget for a moment that the fight ahead will be rough and tough. The private utility lobby will see to that.

But let us take heart and look at the larger picture. Our efforts on behalf of a public-power policy are but a part of our larger concern for the cause of conservation and for the proper use of all of our natural resources for the benefit of all our people.

And this, in turn, is but an integral part of our struggle for the general welfare. Each success adds that much to the ultimate living for all of our people. Each success is one degree of fulfillment.

Our fight on this front—public power—is part of a great fight for the public good. Let us get on with it, and spare no efforts.

The Highway Program and How It Affects the State of New Hampshire

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the very able junior Senator from New Hampshire [Mr. COTTON] on the highway program and how it affects the State of New Hampshire.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR SENATOR REPORTS

(By Hon. NORRIS COTTON, of New Hampshire)

The President's highway program, which has been batted back and forth for the last 2 years like a bird caught in a badminton game, went through another bout in our Committee on Public Works this week.

The committee rejected the new House bill and resurrected last year's Senate bill, expanding it to a complete 13-year program so that it conforms more nearly to the President's plan. The House bill was acceptable in the main to the administration, and had the blessing of the Federal Bureau of Public Roads and the State highway commissioners. Yet I voted for the Senate version. Why?

Because the apportionment of Federal funds under the House bill is monstrously unfair and New Hampshire is about the worst victim.

A few facts and figures will demonstrate this clearly. Two years ago each State was invited to furnish the Bureau of Public Roads an estimate of the cost of completing its interstate highways. Apparently no standards were set, and each State was allowed to use its own judgment and imagination as to how much it would spend and how elaborately it would build. New Hampshire, with typical Yankee thrift and frugality, estimated about $300,000 a mile. Vermont's estimate was $500,000. Delaware a million and a half, and New Jersey nearly $4 million per mile. Result: Under the House bill, New Hampshire's share of Federal funds is second lowest in the Nation. Delaware, with only 42 miles to be built, gets only slightly less than New Hampshire, with 214 miles. Little District of Columbia, with 28 miles of road, gets twice as much as our State. Both our neighbors, Maine and Vermont, far outstrip us, and New Jersey, with only 354 miles, gets 19 times as much Federal money. Figuring it another way, we would get back only 83 percent of what we pay the Federal Government in gasoline taxes. Maine would get 111 percent; New Jersey, 173 percent; Vermont, 317 percent.

Now you are asking, "Why would the administration and the highway commissioners agree to such a bill?" The answer is that, on the face of it, the discrimination is corrected later in the bill. It provides that at the end of 2 years the Bureau of Public Roads shall review the requirements of each State, standardize them, and recommend a fair reapportionment for subsequent years, taking into consideration overpayments already made. The fly in this ointment is that the new schedule must be approved by the Public Works Committees of the Congress. I wouldn't worry about my own Senate committee. Eight out of the thirteen members come from the poorer States which have made modest estimates, and no State has more than one member. The House committee, however, is a horse of a different color. It has 34 members. Eight of the larger, richer States have two members or more, and these dominate the committee. New England has one lone member. The Bureau and the administration may press for a complete and fair reapportionment, but don't think that the more powerful States will give up the frosting on their cake without a fight. Everyone who has ever served in a legislature knows what would then happen—a compromise. That means that a portion, at least, of the discrimination would be frozen into the law permanently and the loss to the less fortunate States over the whole 13-year period would run into many millions.

The method of apportionment in the Senate bill is based on population, area, and highway mileage as reflected in mail routes. It is not perfect, but it is at least a definite formula, not a haphazard group of independent estimates. Under it, the same yardstick would be applied to every State. For the first 2-year period the Senate bill gives New Hampshire's interstate highways $17 million; under the House bill, we would get less than $8 million. The House bill dishes out $160 million to New Jersey in those 2 years; the Senate bill reduces it to $60 million.

Many other provisions of the highway bill are controversial and must be ironed out in the Senate and in committee of conference. On these I shall report to you later. Whichever of the highway bills is finally enacted into law, we shall fight to include in it a definite formula for a just division of Federal aid among the States.

Above all, our first and main objective must be to secure the passage of an adequate national highway program this year. Otherwise the 40,000 deaths and a million and a half injuries occurring annually on our highways will continue undiminished.

Division of Powers

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Shreveport Times, Shreveport, La., of Tuesday, May 15, 1956, entitled "Dictation to Congress by a Federal Judge." The editorial follows:

DICTATION TO CONGRESS BY A FEDERAL JUDGE

Alexander Hamilton, the ardent advocate of a Federal Government of supreme centralized power, insisted during the writing of the Constitution that the judiciary branch of the Government would and should be the weakest of the three branches. He held that the power of the executive branch to make appointments, and of the legislative branch to impeach judges after appointment, would keep the judicial branch from any intrusion into either the legislative or executive branches.

In his Federalist papers, Hamilton declared that there never could be serious "controvention of the will of the legislature (Congress) by the courts because the judges would never "hazard the united resentment" of a Congress holding the power of impeachment.

Such reasoning now seems quaint, indeed, in view of the number of intrusions by not only the United States Supreme Court but the lower Federal courts into fields presumably reserved to Congress.

The latest attempt from the Federal judiciary to dictate to Congress came a few days ago when the Methodist Federation for Social Action, a leftist organization disavowed by the Methodist Church itself, persuaded Federal District Judge Wilkin in Washington, D. C., to order a delay in publication of a committee report authorized by the Congress of the United States. This individual district judge granted an injunction forbidding the Congress of the United States from publishing a report by one of its own committees because the report characterized the Methodist Federation for Social Action as a religious Communist front.

The Assistant Attorney General handling the case for the Federal Government declared the judge's action unprecedented in the entire history of this country. Later that day he went before another Federal judge, who countermanded the delay order.

The Methodist Federation's attorney then asked the United States Court of Appeals to reinstate the first judge's order and the appellate judges took the matter under advisement. This, in legal circles, means that the appellate judges decided that the issue of judicial control over the Congress of the United States was something for them to consider and probably act upon.

The mere fact that they were willing to accept such a case shows how far the Federal judiciary has traveled from being the weakest of the three branches of Government or from the accepted designation as coequal with the legislative and executive branches.

The Senate Internal Security Subcommittee, which issued the report in question, naturally has ignored the original order of the Federal district judge and is printing and distributing 75,000 more copies of the pamphlet, which is entitled "Handbook for Americans." This book exposes Communists and Communist-dominated organizations, the labeling of the Methodist Federation for Social Action as a religious Communist front being purely incidental in its content.

Senator CARL HAYDEN, Democrat, of Arizona, chairman of the Committee on Printing, cracked down on what he called the impudent invasion of congressional rights by the judiciary and ordered the Public Printer to proceed with the printing of the publication and disregard as unconstitutional the processes of any court.

"If a court can enjoin Congress from issuing a report," said HAYDEN, "it will only be a matter of time before our remarks on the floor of the Senate or House of Representatives would be subject to judicial review, and a complete breakdown of the constitutional principle of separation of powers would ensue."

Under the Constitution, Congress alone has the power to legislate. Congress created the Internal Security Committee and its subcommittees and instructed that complete investigation be made of Communist activities and Communist fronts in all phases of American life so that Congress might have information on which to act legislatively. A subcommittee made the investigation and made its report, which the Government Printing Office was instructed to print under authority of Congress itself.

Nowhere along the line is there any point at which the judicial branch of the Government has any authority or any reason to intrude. If the judiciary can prevent Congress from publishing official documents recording investigations by its official committees, there is no reason why the judicial branch should not also determine when and where Congress may investigate and whether it may legislate on the basis of its investigations.

In other words, if the judicial branch can control the activities of Congress in its own constitutional functioning, then the judicial branch can control all activity by the legislative branch and in time probably would seek to control all executive branch activity, too.

The result would be an oligarchical dictatorship in no way related to the American form of government.

Soviet Education: A Challenge to America

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, May 25, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address delivered by the Honorable Joseph D. Cavallaro, chairman of the Board of Higher Education of the City of New York, at the meeting of the National Council of Business and Professional Men on May 16, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOVIET EDUCATION: A CHALLENGE TO AMERICA

(Address of the Honorable Joseph D. Cavallaro, chairman of the Board of Higher Education of the City of New York, before the National Council of Business and Professional Men, New York Times Service Dining Room, 229 West 43d Street, New York City, Wednesday, May 16, 1956)

Mr. Bayern, Mr. Levy, Reverend Clergy, distinguished guests, officers and members of the National Council of Busines and Professional men, at the outset I want to thank you for your most cordial invitation to address you this evening. I consider it an honor and a privilege to have been selected as one of your speakers this year. The subject assigned to me, Education With a Purpose, involves many things. I selected one aspect of it: Soviet Education: A Challenge to America. I selected this because it drives home the point about education with a purpose. Its phraseology is not meant to imply my admiration for Soviet education or any suggestion that I think it is something for us to emulate. Education, however, is such an important factor in the strength of a nation in this age of science and technology, that it is of immediate concern to each one of us.

Since the close of the last war, our Nation has emerged as the leader of free peoples throughout the world. It is a position which carries with it a tremendous responsibility. We must be prepared to meet whatever challenge the future may bring forth. Our age requires greater knowledge, skill, and understanding of a greater number of things than ever before. We have constructed a society which calls for a more educated leadership for its successful operation and to make the necessary adjustments if we are to preserve the blessings of our way of life. This is true in every field—business, industry, the professions, the arts, and the crafts. We need more doctors, more engineers, more teachers, more scientists merely to hold our own among the great world powers. There is a very real danger that unless we can continue to build leadership and trained minds, we shall court disaster at home and abroad.

During the past year the American people became increasingly aware of the fact that the Nation's supply of scientists and engineers shows signs of diminishing. Just when the requirements of national defense and the increasing needs of modern technology are placing the greatest demands upon us for a steady flow of scientists and engineers, we find the supply endangered. This was brought home to us in a striking fashion by Lewis L. Strauss, Chairman of the United States Atomic Energy Commission, in an address before the Thomas Alva Edison Foundation in November of last year. Speaking on the subject, "Freedom's need for the Trained Man," Mr. Strauss said: "If there is to be another war among the great nations of the world before the human race discovers a method of abolishing recourse to combat, that war may be survived by the country with the greatest stockpile of nuclear weapons and instruments of their delivery. But such a war will almost certainly be lost by the country with the fewest resources in trained manpower." He pointed out that of the three essentials to meet our defense needs—resources, money, and skill—the real shortage is in the last. We have not enough trained minds, trained for the exacting requirements of modern science and technology.

This shortage would be less serious were it not for the fact that our principal enemy—Soviet Russia—is forging ahead. Today the Russian technical schools and universities are turning out scientists and engineers who are well trained and highly competent. While the number of scientists and engineers in the two countries is about equal at the moment, the Russians are actually outstripping us. We need about 50,000 new trained engineers every year and are getting half that number. Last year Russia produced 53,000 new engineers and is expected to increase that number this year and each year hereafter. In 1955 Russia graduated 120,000 new scientists and engineers of all types, compared with our total of 70,000 graduates. Between 1960 and 1970 she is expected to produce 1,200,000 trained engineers and scientists against our 900,000.

Some of you may have read the article which appeared about a year ago in the magazine section of the New York Times by former Senator William Benton, entitled "Now the Cold War of the Classrooms." In this article Mr. Benton gives an interesting description of Russian education based on his observations and study. He points out that 4 million new specialists are to be trained before the current 5-year plan ends in 1960. That Russia is educating for export scores of thousands of indoctrinated and capable engineers, scientists, schoolmasters, and technicians of all kinds. These are being trained to help develop the resources outside the Soviet Union and to help convert the world to communism. The Russian plan is to keep all children in school from 7 to 17 years of age. These youngsters go to school 6 days a week and more hours per day and more weeks per year than ours do. The discipline is strict, study hours are long, the curriculum demanding, and the examinations severe. During the last 6 years (covering the years from 12 to 17 years of age) more than 40 percent of their time goes to science and mathematics. They must take algebra, geometry, trigonometry. Also compulsory are 4 or 5 years of physics, 4 years of chemistry, 2 years of biology, a year of astronomy and a year of psychology. In addition, each student is supposed to take 6 years of a foreign language. There are now 4,300,000 students enrolled in institutions of higher learning as compared to our 2,700,000. Of the 800 institutions of higher education, 33 are universities, the remainder being specialized institutes for doctors, engineers, lawyers, electrical experts, agricultural experts, etc. The universities concentrate largely on the training of teachers, scientists, scholars, and professors. In addition there are 3,500 institutions known as tekhnikums giving 2½- to 4-year courses in various vocational fields. And here is a point to bear in mind: Russian higher education is free, open to men and women who can make the grade.

One must admit that these statistics are significant. For a number of years we have taken for granted our superiority over other nations in the fields of engineering and science. We have assumed that the Russians with their slave methods could never match us in scientific initiative and progress. Now we are brought face to face with the disturbing fact that our greatest enemy, perhaps the most dangerous this Nation has ever confronted, is forging ahead in an area of vital importance to our security.

Convinced that the future belongs to them, that opposition to their triumph must be eliminated by one means or another, the Soviet masters have carefully blueprinted the requirements of their country in 5-year plans. Whatever they deem important for strength is given emphasis and support. In this planning education plays a major role. The attention given to scientific and technological education is in keeping with the overall goal of world victory.

One may be quite certain that whatever is taught in the Russian schools and colleges, whether it be in history, economics, science, engineering, literature, philosophy, or politics, is intended to serve the cause of world communism. Viewed from the standpoint of the goal, there is a certain advantage in the Russian type of education. It is based upon one philosophy, the philosophy of dialectical materialism, and no other is tolerated. Stalin and Stalinism may be eliminated, but this means no change in the basic elements of Communist thought. Its ideals of humanity, of the mass man, of the worker, must be accepted without debate and without questioning. Students in all Communist countries are taught that there is only one cause to serve. They are imbued with a sense of destiny, of greatness, and of future victory. This single-minded devotion to a common faith, however much we may criticize its moral aspects, means power and strength rather than weakness in the struggle for world domination.

In mentioning this advantage of the Russian system, I do not mean to suggest that we emulate it. This would be contrary to my way of thinking. It does, however, point up some of the weaknesses in our own educational process. It raises the question as to what we are doing to meet the challenge.

I would like to discuss what I consider to be some of these weaknesses and what might be done about them. I must admit that my premise is that communism constitutes a real danger to this country and that our very survival as a free people is at stake. In other words, I view with alarm the present situation. I contend that we are now engaged in the struggle for survival—that this has been going on for the past decade and does not merely represent a future possibility. To my way of thinking, the idea of coexistence is absurd, because it can be achieved only on Communist terms.

One of the weaknesses in American education has been the failure to attain within the framework of our democratic system a stronger appreciation of what is meant by the American heritage and American ideals. The ideals which have come to us from the past, which link us to the great events in our history, to the foundation of this Nation and its struggles, have suffered from the process of debunking which began about 30 years ago. While we should be intelligent enough to avoid the excesses of nationalism, we have no moral right to sacrifice patriotism or love for our country. Devotion to one's country is an element of its strength. We must know what it is we are struggling for—what we have to offer that is worth fighting for. Sober reflection should lead us to understand that debunking serves no useful purposes today, that it subtracts rather than adds to our strength as a nation. I would suggest that we study ways and means of creating in the minds of our schoolchildren a richer appreciation of our heritage and of our ideals. The least we can do is to require courses in American history in all tax-supported schools and colleges.

More difficult than the problem of understanding our past is the task of planning for the future. Here the advantage of the Communist system is apparent. Whereas it has a clear-cut philosophy, we have conflicting philosophies. Just what are we planning for, what ideals do we aim to attain and how? You will admit that here we are faced with a real difficulty. Our people are divided between those who favor greater concentration of power in the state and those who oppose it, between those who support collectivism of economic forces and those who prefer greater freedom for individual enterprise, between those who think in terms of a world state and those who think in terms of the power and greatness of America and do not wish to sacrifice its sovereignty. Even more confusing is the manner in which our citizens interpret the concepts of democracy and freedom. Such differences would be relatively unimportant were it not for the fact that we are facing in communism a determined and relentless enemy bent upon the destruction of our constitutional Government, our freedoms, and our ideals. While we pride ourselves upon the free exchange of ideals in the market place, we must give heed to the dangers in store for us. At the very least we must know that while we indulge in this free exchange of ideas, we can count upon the loyalty of our citizens to the end that America will not be sold short. We must not allow ourselves to become victimized by the Communist softening-up process of capturing the minds of our people and of obtaining their cooperations for the destruction of our way of life and of our freedoms. While complete agreement about the future may be impossible to attain, we have the moral right to protect ourselves against ideas which tend to undermine or destroy what has been built up at such sacrifice during the past 167 years of our history as a nation. I am here suggesting a problem rather than the means of dealing with it. But it does concern our schools and colleges.

Our failure to provide only half as many engineers as Soviet Russia annually and half as many as our industries require, is also a problem for our schools. If we are to be realistic about the danger which threatens us, we must give greater thought to the curriculum in our schools. The plain fact is that too much attention is given to planning the brave, New World of the future and not enough to such basic subjects as mathematics, chemistry, and physics. Only about 16 percent of the high-school graduates entering college enroll in engineering courses—or about 66,000 of them. More than half flunk out or switch to other, easier courses. The reason for this, according to the deans of our engineering schools, is "poor high-school preparation in science and mathematics." A recent survey indicates that from 250,000 to 400,000 high-school students in our country are learning mathematics from teachers not trained to teach it, and the same situation prevails in science teaching. Less than 25 percent of high-school students study algebra. Only 1 out of 22 studies physics. Chemistry has fallen off 30 percent. Many of our high schools no longer offer courses in mathematics or physics. With fewer and fewer high-school courses in mathematics and science, there are fewer and fewer college students of science and engineering and fewer graduates and fewer trained teachers. Compare this with schools in Soviet Russia, where every student by the time he completes high school has 2 years of biology, 5 years of physics, 4 years of chemistry, and 4 years of mathematics. No public high school in our country gives so thorough a preparation in science and mathematics. In Soviet Russia first things come first and the basic sciences are given special emphasis. We must decide if it is more important for the high-school student to study mathematics, chemistry, and physics or to indulge in planning future utopias.

As it is my belief that education in Soviet Russia is designed to serve the Communist masters in their aim of world domination, so I am convinced that we cannot afford to overlook or neglect our shortcomings. Nothing, I believe, could be more unrealistic than to allow ourselves to be lulled into a false sense of security by the idea of coexistence. Our attention should be riveted to one thing and that is our strength as a nation. Whatever contributes to that strength in the full sense of the word should be encouraged and supported and any weaknesses should be eliminated without sacrificing our freedom. Here then is the challenge of Soviet education to America—the challenge to our survival as a free people.

Thank you.

Social Security

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. LEHMAN. Mr. President, on Thursday morning, May 24, I addressed one of the sessions of the convention of the Amalgamated Clothing Workers of America, a fine organization with a very large representation among the people of my State.

I spoke, for the most part, on the subject of social security, a subject which will be before the Senate very soon.

I ask unanimous consent that the remarks I made at the Amalgamated Clothing Workers' convention be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HERBERT H. LEHMAN BEFORE THE 20TH BIENNIAL CONVENTION OF THE AMALGAMATED CLOTHING WORKERS OF AMERICA, SHERATON-PARK HOTEL, WASHINGTON, D. C.

It is good to be here with you today. It is always deeply satisfying for me to attend an Amalgamated convention. It is like old home week. I know that here I am not only with friends, but with tried and true, first-line friends.

The Amalgamated is like a familiar landmark to me. It has been part of the economic and political scene in which I have moved as long as I can remember. The great names in the history of this union were friends and associates of mine from the earliest days of my mature life. It was a privilege then, and a source of satisfaction still, to have had the friendship of the late great pioneer leader and president of this union, the late and deeply beloved Sidney Hillman.

I remember the early days of struggle of your union—when one of the main objects of struggle was mere existence and bare recognition. Those days are long gone now. But it is well to think of them once in a while, in order to realize how far we have come.

One of the highest tributes I can pay this union, however, is to say that you do not look backward into the past, but forward into the future. You continue to struggle toward the goals which lie ahead.

It is good to be with a group which sees and clearly realizes that great challenges confront us, and great efforts are needed to meet those challenges. Indeed, one of the greatest dangers our entire Nation faces today is the false, but widely spread impression that all is well with us, at home and abroad, and that those in charge of our Government have found the keys to lasting peace and permanent prosperity.

The hards facts indicate quite a different situation. In my judgment, the economic situation is far from sound. Great segments of our economy, including farmers and small-business men, are experiencing distress to a greater or lesser degree. There are many for whom this is a time of real hardship.

And over and above this, is the fact of the deepest internal crisis this country has experienced in many years—the crisis resulting from the Supreme Court decision and decree in the school segregation cases. Tensions rise steadily in some parts of the South. The Constitution is openly defied and flouted. Tides of hate and fear roll through the delta lands and canebreaks of the Deep South.

Abroad, the new masters of Soviet Russia move in triumphal procession from one country to another, not with armies, but with false words of peace. They speak in new terms which fall on willing ears, and the initiative of leadership has been taken from us.

What are the leaders of our Government doing or saying about all these things? Very little. They say as little as possible about the danger spots in our economy. They maintain what amounts almost to a conspiracy of silence about the segregation crisis. They move with slow and timid steps to counter the bold Russian moves on the world front.

In such troubled areas as the Middle East, where the existence of the democratic Republic of Israel is at stake, our Government exhibits a hesitant policy of part appeasement and part aloofness, trying to be all things to all men, and succeeding only in passing the buck—and the leadership—to others.

I do not wish to be harsh in my judgment, or criticize for the safe of criticism. But I am deeply disturbed and alarmed, at the present situation at home, and the trend of events abroad. Most of all, I am concerned over the lack of concern over the dangers and problems of the day exhibited by the leaders of our Government, and over the climate of complacency which has been so assiduously cultivated and so widely disseminated throughout our land.

These are the real dangers.

But I do not think I need to convince the leaders and delegates of the Amalgamated Clothing Workers that what I have said is so. Your union is one of the organizations which is trying, I know, to dispel the fog, to point out the dangers, and mobilize the American people for action on all the troubled fronts we face.

You see the dangers of Soviet initiative in the world abroad.

You understand the menace of the Middle East.

You favor and support, as I do, all necessary measures to bolster up the sagging sectors of our economy, and to restore to it an expanding and dynamic momentum, designed to bring an ever-higher standard of living to more and more people.

You favor and support, as I do, a comprehensive program of action to assure to all Americans the full enjoyment of all basic rights, including the right to vote, the right to be secure in one's person, and the right of equal opportunity, without segregation, in employment, in access to public and semi-public facilities, and in education.

But these are not the only challenges that face us. There are others, many others. One which I want to discuss briefly today is the need for vast improvement in our provision for the aged, the disabled, and the disadvantaged members of our society.

A great man once said, "The test of our progress is not whether we add more to the abundance of those who have much; it is whether we provide enough for those who have too little."

The man who said this was a historic apostle of the creed of practical humanitarianism, a man who led our country out of darkness into light, and out of the shadow of defeat into victory, a hero to all of us, Franklin Delano Roosevelt.

He spoke wise words, and we may well examine our present condition in the light of them.

We have a system of social security, an old-age and survivors insurance, enacted under the leadership of Franklin Delano Roosevelt in 1935.

But there are still millions of employed persons who are not covered by that system. And there is a growing number in our country who, for reason of age or disability, can no longer work, and who live today, in this land of plenty, on the barest level of subsistence, and dependent for even that on public or private charity or on relatives.

The question is one of revising our social-security laws. We must extend coverage to classes of workers and self-employed individuals who are not now covered. We must lower the age at which women, for instance, can become eligible—it is now 65—for social-security benefits. And we must provide for payment of social-security benefits to men and women whose working years are suddenly cut short by permanent and total physical disability.

As most of you know, there is legislation pending in the Senate—it has already been approved by the House—to make desirable changes in our social-security laws.

The changes approved by the House do not go far enough to suit me. But apparently they went too far to suit a majority of the members of the Finance Committee in the Senate. And so the bill reported out by the Senate Finance Committee eliminated the provision for payments to the permanently disabled, and struck out the provision reducing the retirement age of women from 65 to 62.

There will be a fight on the floor of the Senate on these two major provisions. It will be a sharp fight, pitting against each other two distinct philosophies of government—those who think of government in terms of promoting the general happiness and welfare of all, and especially of those least able to care for themselves, and those who think of government in terms of promoting the special interests of the few—and especially of the already strong and the already powerful.

The case for the lowering of the retirement age of women from 65 to 62 is obvious. I would prefer to see it lowered to 60, but I will support the House-approved provision for 62.

Not so obvious, but even more appealing, is the case for making benefits available to the permanently disabled.

Here are men and women who, in the prime of life, while engaged in gainful employment covered by social security, are suddenly rendered physically incapable of continuing work. Struck down by crippling disease or totally maimed by accident, they are thrown upon the mercy of society.

While our society recognize them as part and parcel of present company, and entitled them to receive at least the minimum benefits of our social-securiey system, or will we continue to say, as we do today: Shift for yourself, live on charity, starve to death if you must, but you will not get social-security benefits until you are 65.

The House approved a provision making the physically disabled—those who were working in jobs covered by social security before they were disabled—eligible for social-security benefits when they reach the age of 50. The Senate committee eliminated even this improvement.

I strongly favor striking out the age limit entirely. But the majority of the Senate Finance Committee does not wish to make these unfortunate people eligible for social-security benefits until they reach the statutory age of 65—if they ever do. What happens to these people betwen the time of their disability and the time they reach the age of 65 is not a matter of Government concern, under the terms of the bill reported by the Finanec Committee.

Two major arguments were made against the disability amendment by the powerful lobby which worked against this provision. And I regret to say that the Eisenhower administration joined in the opposition to this humane provision and worked with the lobby of the National Manufacturers Association, the American Medical Association, and other like-minded organizations.

First it was maintained that this provision was adrhinistratively impractical—which is just gobbledygook—and second, that it would lead to socialized medicine, which is even worse gobbledygook.

They said further that making these disabled people eligible for social security will discourage their rehabilitation and return to productive life.

This argument, too, is sham and humbug. The fact is that only a percentage of those who become totally disabled can be rehabilitated under any conditions. And it is a further fact that the facilities which are available in this country for rehabilitation of the physically handicapped is so pitifully inadequate that only a fraction of those who could be rehabilitated are actually rehabilitated.

There are already more than 2 million physically handicapped persons in this country. A total of 250,000 people are added to the list of totally disabled every year, by disease and accident. Of these, only 50,000 annually are being restored to productive life. I have fought for many years for an expansion of Government assistance for the training of experts and the increase of facilities for the rehabilitation of the physically handicapped. Some of the very same lobbyists who are now fighting the disability provision in the social security bill, using this argument, opposed me in my efforts to get more money for vocational rehabilitation.

No, the disability provision must be included in the social-security legislation we shall enact this year. The people must insist upon it. Organizations like yours must insist upon it. The Congress must know that the people want this provision.

In every session of Congress since 1950, I have introduced a social security bill which included a provision for benefit payments to the permanently disabled, at whatever age. I now have an amendment pending which proposes the same thing. So has Senator GEORGE, of Georgia, the ranking Democratic member of the Finance Committee. Once this was considered a visionary proposal. Now it is within reach.

We must join the battle on the ground of principle. Are these disabled people, growing in number year by year, and the aged women who can no longer work past 60 or 62, to be thrown on the scrap heap of our society, with no more consideration than is given to a broken or wornout machine?

Are these unfortunate people to continue to be one of the abandoned, forgotten, and neglected elements in our society? No social order imbued with a philosophy of human dignity can continue to tolerate the present situation.

But the issue is even deeper. The issue is whether the motive of fear is to continue to be used as the impelling force in our society—fear of want, fear of old age, and fear of physical disability. The reactionaries believe and profess that with these fears, people must be driven to work, to save and to provide for their own security.

I do not agree with this philosophy. I believe that the driving force of life is and should be fulfillment, contentment, and happiness for all individuals everywhere.

I believe that material comforts are a means, not an end, and if our social and economic order cannot provide for the weak, the aged, and the infirm—those who can no longer themselves carry their share of the load—there is something drastically wrong with the social and economic order.

Life expectancy is being extended. People are living longer. Our social and economic order must be so managed as to keep pace with this advance. This is one of the most arresting problems we face today. I have just touched on one aspect of it. There are many others of equal urgency, and even greater complexity.

My friends, there are horizons of challenge beyond even the horizons we see today. We must adavnce. We must have a leadership which calls constantly for advance. The explosion of the H-bomb out in the Pacific a few days ago was not only a warning to the Russians. In a sense, it was even more of a warning to us.

Can we master the arts of building and living as well, or even nearly as well, as we are mastering the arts of destruction and killing?

Will that blinding flash and shocking roar that came out of the far Pacific usher in a new day, or does it herald the coming of a total darkness?

We do not know the answers, but we must find the answers. We must hasten our advance in the area of the heart and the mind. The greatest achievements and victories in that area remain to be won.

Rivalry Among Military Forces

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, May 25, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rivalry Among Military Forces," published in the Manchester Union Leader, Manchester, N. H., on May 24, 1956. I feel that the editorial warrants the attention of the Senate, as well as that of the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIVALRY AMONG MILITARY FORCES

It is not unexpected that there should be rivalry between the three divisions of our military defense. Agencies cooperating in the same task are likely to face doctrinal differences and to trample occasionally on each other's toes. The Air Force was part of the Army up to only a few years ago, and it is not surprising that its rapidly growing prominence in defense should arouse some Army jealousy.

The part that the Army, Navy, and Air Force are to play in our defense strategy is an important matter. This gives ground for reasonable discussion to see that these parts are played efficiently. But for the Army, Navy, and Air Force to be dominated by jealousy of each other and to try to belittle each other's prestige is something that can do serious harm. Our national defense must be a program of cooperation in which these three branches of our military forces fill their part and together guarantee our security.

Each branch of our defense has its work to perform. The threat of nuclear destruction has given the Air Force a dominant role. But this does not mean that either the Army or the Navy no longer has a vital role to perform. Rivalry in nuclear weapons may deter their military use and lead to dependence on conventional weapons and forces for national safety. In that case, we must not allow ourselves to be outclassed in this field. We cannot rely solely on nuclear power.

It is dangerous for the Army or the Air Force to contend that it will be the decisive defense in the future, while the other amounts to nothing. Both have a mission to fill. Cool judgment requires that they study their relation carefully and fulfill the function required of them.

Otherwise, the international position of the United States will disintegrate to a point where we shall face a total war and probable subjugation. So it is hoped Secretary Wilson will cool things down. If he can't, some other measures should be taken.

Pope Pius XII Praises Fulbright Program

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Pope Pius Praises Fulbright Program," published in the Washington Star of May 18, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POPE PIUS PRAISES FULBRIGHT PROGRAM

VATICAN CITY, May 18.—Pope Pius XII praised America's Fulbright program today, saying it maintained the proper balance between the spiritual and the material.

The Roman Catholic leader received 86 American professors, researchers, students, and their families in a special audience.

Under the program devised by Senator FULBRIGHT, Democrat, of Arkansas, the United States uses foreign funds acquired through the sale of surplus war material to send American scholars to study abroad.

Among those attending the audience were William Graham, voice student; John T. Dugan, associate professor of speech and drama, Catholic University of America; John Scali, diplomatic reporter, the Associated Press, all of Washington, D. C.; and Alexander Weinstein, research professor of applied mathematics, University of Maryland, College Park.

The Use of Television in Political Campaigns

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio broadcast by Edward P. Morgan on Tuesday, May 22, 1956.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

How often do you get a chance to look a political candidate in the eye and take his measure? What opportunity do you have to ask him one question or hear him answer another?

I am wondering if one of the weaknesses of this American political system of ours is not the fact that a gap separates the politicians from the people, a gap bridged in election years only by a swaying catwalk of campaign flapdoodle. The candidate edges his way across it like an acrobat on a tightrope balancing gaudy promises in his hands.

There may be a certain excitement to his act but your impression of him is likely to be a blur, as he moves frantically on to the next ring of spectators or swings to the next channel.

Which brings up the question, more than by the way, of television's role in politics. We are told, particularly by the Republican National Committee, that this is going to be an electronic election year—that President Eisenhower, while he won't whistle-stop or barnstorm, will make history by conducting what might be called a television screenporch campaign, lighting up the country's forty-million-odd TV sets with periodic messages from the White House.

This will be a fascinating spectacle to watch but, personalities quite aside, there are dangers in a televised campaign. The candidate's contact with the people may be even more remote; worse yet the impressions created may be all the more superficial and artificial. It is difficult enough to try to judge a politician when he is making a speech in the flesh, as it were. When he is delivering it on television, not only (as in the other case) is he likely to be reading something that somebody else has written but he may appear not to be reading it, thanks to a gimmick called a teleprompter which rolls out his speech on a kind of mechanical scroll concealed in the lectern in front of him.

And yet, with all the deceptive dangers it holds, with all the capacity it has for making political histrionics more synthetic and less sincere, television may well hold the magic key to a new and priceless dimension in political campaigning: a clear, candid picture of the candidate. Unknowingly perhaps, Adlai Stevenson and ESTES KEFAUVER had their fingers on this key, I think, last night in their joint appearance on ABC from Miami.

The program left much to be desired. Ballyhooed as a debate, it may have caused a certain audience letdown when it turned out to be almost entirely a discussion of issues. Yet there was something quite genuine in what happened. The two leading contenders for the Democratic nomination for the Presidency said things that were not previously rehearsed, or drawn from canned speeches or read or recited from a prompting machine. Although both men were plainly tired from the brutally demanding schedules of barnstorming, there was a certain freshness, a certain soberness of thought and reflection, a certain serious sincerity to their remarks which somehow most candidates, these two included, fail to get across in a formal speech. Although KEFAUVER and Stevenson earned some bravos, I think, for guinea pigging this campaign experiment, there is no one-party monopoly on the idea, and, for this voter's money, it ought to be encouraged. Properly handled, this television format of confronting candidates with searching questions and with each other can serve as your own personal political microscope under which you scrutinize a politician and his characteristics in the privacy of your living room laboratory.

We voters have an enormous stake in the men and women we elect to office, from the President down. They make decisions that will affect your taxes, your son's draft call, your daughter's education, your whole family's future. It's always struck me as a little monstrous and more than a little frightening that in choosing candidates we seem to insist on a show that is a combination bingo game and revival meeting. Properly focused, our newly found eyes of television ought to give us a more penetrating view of the participants without spoiling the fun.

This is Edward Morgan, saying good night from Washington.

Fulbright Scholarships

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. IVES. Mr. President, a few weeks ago I received a very moving letter from Arthur Mizener, a teacher, and the author of an interesting biography of the late F. Scott Fitzgerald. Since the letter is, in a sense, addressed to the entire Senate as well as to me, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LONDON, N. W. 8, ENGLAND,
March 29, 1956.

DEAR SENATOR IVES: As one of your constituents, I want to say thank you, through you to the United States Senate, for the year I am now spending in London on a Fulbright. I am a professor of English at Cornell University, and the Fulbright Commission is giving me this wonderful year in London to lecture at King's College and Bedford College of the University of London, where I teach American literature.

I think you will be able to imagine something of what it means to a person who has spent his life teaching English and American literature to live here for a year. Yesterday my wife and I went out to Keats Grove in Hampstead and stood in the room where Keats was introduced to Fanny Brawn; not long before we had stood in the church in Lower Thames Street (St. Magnus Martyr) which Mr. Eliot evokes in The Waste Land. It is like this everywhere and all the time. Little America—as the Londoners call it—around Grosvenor Square always stirs your patriotism: there is President Roosevelt, and there are the marines in their magnificent dress uniforms (a splendor the Londoners especially admire), and there is the flag.

But the house John and Abigail Adams lived in still stands there, too, and the ghost of Anthony Trollope is with you also.

The job of teaching American literature to English students is a revelation; they are pathetically ignorant of America. When we did Whitman's When Lilacs Last in the Dooryard Bloom'd, none of them knew what Lincoln looked like (though there is a fine statue of him in Parliament Square next to Westminster Abbey); when we did Huckleberry Finn, the geography of the Mississippi Valley was a complete mystery to them. On general subjects you run into the same thing: Are all American children undisciplined savages? Do we spend the misery of winter in Ithaca, N. Y., huddled around our coal fires? Do any American Negroes have plumbing? Of course, many English adults know better than this, but many of the young do not; they are eager to know, and I think the Fulbright program does more to reach them than anything else we do. That program is, as a whole, magnificently organized here in England. It has, of course, the immense advantage of not being what the English deeply distrust, a public-relations program; it is an educational organization. It has the further advantage of having been run with great intelligence, so that the best educators here trust it and work with it.

Pardon my going on at this length. All I have really wanted to do is to thank, from the bottom of my heart, someone in the United States Senate which has made this year possible for me, and to tell someone there how deeply impressed I have been by what the Fulbright program is doing for America's relations with England.

Sincerely yours,

ARTHUR MIZENER.

Rejection by Jewish Labor Committee of Unity With Communists on Civil Rights and Liberties Issues

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 25, 1956

Mr. HUMPHREY. Mr. President, the Jewish Labor Committee has recently issued a declaration rejecting unity with Communists on civil rights and liberities issues. I ask unanimous consent that the text of this declaration be printed in the Appendix of the RECORD.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

DECLARATION REJECTING UNITY WITH COMMUNISTS ON CIVIL RIGHTS AND LIBERTIES ISSUES ISSUED BY JEWISH LABOR COMMITTEE, SECOND NATIONAL TRADE UNION CONFERENCE ON CIVIL RIGHTS, MAY 6, 1956

Following the Soviet policy of seeking unity with pro-democratic organizations, the Communist Party in this country has embarked on a vigorous and concerted campaign to infiltrate and capture pro-democratic organizations. Especially earmarked for such infiltration and domination by the Communists have been community organizations concerned with problems of civil rights and liberties.

It is unthinkable that there can be unity with those who condoned and defended Soviet anti-Semitism, who remain mute now while Khrushchev refuses to make known the fate of imprisoned democratic leaders, and who condone the slave-labor system of the Soviet Union. Until freedom and dignity are reestablished within the Soviet Union, until all those in slave-labor camps are freed, until a system of democracy is established in that nation and the satellites are liberated and permitted to become genuine democracies, there can be no unity with those who condone practices of enslavement, of murder, of human indignities.

We reject the beguiling tactics of the Soviet Union through their agents and dupes in this country to win us over into programs of unity.

Open or clandestine flirtation with Communists or their collaborators in civil rights activities is a negation of the high principles involved.

We shall, through the free and united labor movement of this country, fight every attempt by the Communists to infiltrate or dominate community organizations.

We shall continue to warn civil rights and liberties organizations whenever Communist attempts of infiltration are made and will aid these organizations with material and moral support in combating any Communist encroachments when attempted.

Ideals and Purposes of the Democratic Party

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, May 25, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine and eloquent statement about the ideals and purposes of the Democratic Party, which was written by Mrs. Marshall Swearingen, of Bend, Oreg., as published in the May 17, 1956, issue of the central Oregon newspaper, the Midstatesman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY YOU SHOULD VOTE, DEMOCRATS

(By Mrs. Marshall Swearingen)

The Democratic Party has faith in America and the American people. We believe that if we help people when they need help they will stand on their own feet as soon as they are able. We do not think help to the individual citizen undermines his morale any more than subsidies to big business undermine its morale. We do not fear the Federal Government because we know that our Government is, after all, only the American people at work.

The Democratic Party has hope for the future. We are the party of imagination and youthful ideas. Alben Barkley, our beloved Democratic veep who died at 79, was younger in his ideas than many young Republicans. We welcome new ways to make democracy real for all our people. We would rather try and fail than not to try at all.

The Democratic Party has the love of people that recognize the worth and dignity and needs of each American.

"By their fruits ye shall know them." The Democratic Party has had control of our National Congress for 20 of the last 24 years. during this time they have given us unemployment compensation, old-age pensions, guaranteed bank deposits, laws to protect small business from monopoly, legislation to help the farmer in his time of hardship, protection of our productivity through soil conservation, the great Federal dams at Bonneville and Grand Coulee that have brought industry to the Northwest, REA that has brought light to our farms and made it possible for farm women to share in our great labor-saving inventions.

The Republican Party has controlled Congress 4 years out of the 24. During this time they passed the Taft-Hartley Act, gave the tideland oil revenues needed by the schools of 48 States to only 4 States, and have worked hard to give our remaining great dam sites to private power companies for private exploitation.

In Oregon the Republicans have controlled our State for over two decades. Their leaders are a cozy close-knit group of the elite—sort of like the royal families of Europe. But like the royal families too much inbreeding produces bad offspring, and we have had some monstrosities of laws and policies. We need new and vigorous blood in Oregon politics, some faith and hope and love in a new approach to Oregon's problems. We need a change.

Public Works Appropriation Bill, 1957

SPEECH

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11319) making appropriations for the Tennessee Valley Authority, certain agencies of the Department of the Interior, and civil functions administered by the Department of the Army, for the fiscal year ending June 30, 1957, and for other purposes.

Mr. HAYS of Arkansas. Mr. Chairman, I should like to express my gratification over the inclusion of items for the Dardanelle and Eufaula Dams in the pending bill. As part of the comprehensive development plan for the Arkansas Basin, the Appropriations Committee has voted $1 million for the sister projects of Dardanelle and Eufaula. This marks the continuation of congressional policy to promote the multipurpose development of the Arkansas River, a program which received initial approval in the 1946 act authorizing construction. Last year the Congress appropriated $450,000 for Dardanelle in fiscal 1956, and with new funds for 1957 I am confident that the Corps of Engineers will be able to proceed with its construction.

It is only just and right that the last major river in the United States to remain undeveloped is at last to receive its fair attention. The Army engineers' plan for multipurpose utilization of this water resource was authorized 10 years ago. In 1950 there was an appropriation of $1 million to start construction of the Dardanelle Dam, but the Korean conflict intervened and all work on the project was suspended. Some of the $450,000 appropriated last year was used to complete planning, and the Army engineers are ready and able to carry forward the construction work. While under the Budget Bureau's old formula the benefit-cost ratio was impressively favorable; the ratio is still favorable even under the rigid new formula A–47. Thus these projects are a real investment for the

United States and will bring the Nation rich dividends in the course of time.

The Dardanelle Reservoir will be located on the Arkansas River about midway between Little Rock and Fort Smith. The project is a major unit of an integrated system to serve navigation, develop hydroelectric power, stabilize river banks, provide flood control, and other related purposes. Hydroelectric power facilities at Dardanelle Dam will consist of 4 units with a total installed capacity of 120,000 kilowatts. The storage capacity would be 495,000 acre-feet, of which 70,000 is for power and 425,000 for navigation. The total estimated cost of the project is $94,600,000. Not only would this money provide these benefits, but it would also contribute to the realization of the vast potentialities of the Arkansas Valley. Such realization will obivously be accelerated by the availability of cheap transportation and electrical energy. Industrial development will be based on utilization of vast quantities of coal, oil, timber, bauxite, and rare minerals in the region. The 4 million people in the Arkansas Valley will then be able to contribute more substantially to the economic prosperity of the Nation.

Address Delivered by the Bolivian Ambassador on Fundamentals in United States-Latin American Relationships

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by the Honorable Victor Andrade, Ambassador of Bolivia, during World Affairs Week at the Rotary Club luncheon in Dallas, Tex., on May 16, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel at home in Texas. Partly it is your generous hospitality and partly the feeling that, because of geography and your Spanish heritage, you understand the importance of Latin America to the United States. Here, one does not have to sell Latin America or spell out the things we have in common. You know them. Your financiers and industrialists and your ambitious young men are looking more and more to the south.

Latin America today is one of the few economic frontiers left in the world. The Latin-American countries are in various stages of development, but almost all are years behind the United States. They have great wealth—timber, minerals, oil, and tropical agricultural products which do not compete with the United States. To a great degree, our common future depends upon the use which is made of this wealth.

The reasons for the economic lag in Latin America are interesting. As you know, North and South America were discovered in approximately the same time period and exploration and settlement paralleled each other. Why then did the United States advance so rapidly by comparison with most of the Latin-American countries?

Some of the factors were geographical: the high Andes Mountains and the tropical jungles, for example. However, a primary factor was the difference in viewpoint between the English colonists and the Spanish and Portuguese colonists. The English settlers came here prepared to make the New World their home. They did not expect to make their fortune here and return to the Old World and enjoy it. This country was their physical and spiritual home.

Most of the Spaniards thought of the mother country as home and always hoped to return there. Even after the revolutions which cut the political ties with Spain, they still looked to the Old World. The wealthy and influential educated their children abroad and they retired there to spend their last days.

All the settlers in the New World, or almost all of them, searched for gold and silver. The Spaniards found the precious metals and, in doing so, intensified their interdependence upon Spain and Europe. They did not develop the land as did the English settlers.

The Indian tribes in North America were relatively few in number; they were mostly hunters and fishermen. The Spaniards found well developed civilizations in Mexico, Peru, and in other areas of South and Central America. The Indians were conquered, but they still comprised the bulk of the population.

The North American Indians were swept away by the advance of the settlers. Most of them died in battle, or from disease and alcohol.

In several Latin-American countries the relatively few conquerors spent a lot of their time and energy in keeping the Indian subordinated. They succeeded so well that the problem today is how to rescue him from second-class citizenship.

One could detail at length other reasons for the failure of Latin America to make the material progress which has characterized the growth of the United States. It is more important to take a look at the situation and relationships of the republics in this hemisphere today in terms of what these may mean to all of us tomorrow.

The United States has preoccupied itself with events in Europe and Asia since the end of World War II. You have given away and loaned more than $50 billion to help economic recovery in Europe and Asia. Obviously, you had a political purpose in so doing; you wanted to stop the spread of communism and hold the free world together.

I do not intend today to try to pass judgment on the success or failure of the United States policies since the end of World War II. Many persons think the danger of another world war has receded. I hope so; we have been very close to another holocaust on several occasions in the past 11 years. But obviously the conflict between capitalism and communism, a conflict symbolized on the one hand by the United States and on the other by Russia, still continues. It will continue in all probability for years to come. If the danger of an all-out war has receded, then the necessity for prosperity and stability in the free world becomes all important. The two systems are on trial and will be judged by the masses on the basis of performance.

In making this statement I hope I am not misunderstood. My own personal opposition to communism is well known. I opposed it at a time when some leaders of the Western World thought the two systems could live harmoniously side by side. My Government is on record in opposition to communism and has proved it by its actions. Yet as beneficent as capitalism has been to the masses in the United States, it has been something else in other countries. The opposition to colonialism which is keeping the world upset today is in part opposition to capitalism. The United States has abandoned imperialism. Some other countries have clung to it and have used colonialism as the means of exploiting and victimizing backward countries and peoples.

One may say with a good deal of truth that Communism also is imperialistic and that it also exploits countries. Yet it is possible that the techniques which have resulted in a great increase in heavy industry in some of the Communist countries could result in similar increases in consumer goods. Or to put it another way, the standard of living in the Communist countries may rise sharply; with that rise may come a better feeling on the part of the people under communism. Moreover, communism could become more attractive to people in backward and poor countries, who might see little hope of improvement under the existing system.

Some western leaders already have pointed out the dangers inherent in the new attitude by Communist spokesmen. It could result in making international communism seem rational and logical once more; it could revive its appeal to the intelligentsia and to the youth of many countries.

Therefore, the situation of every country in Latin America becomes of particular concern to the United States. For the prosperity of the United States is becoming increasingly dependent upon Latin America. Likewise, the material prosperity and stability of Latin America is becoming increasingly dependent upon the United States.

The trade between the hemispheres averages around $7 billion annually, being pretty evenly divided. The United States has more than $6 billion invested today in Latin America, and the return is over $750 million a year. Since World War II the United States has loaned and given Latin America less than $1 billion, and the profits from investments alone in Latin America exceed that in 2 short years. More and more American money is going into Latin America each day, since developments are making it one of the few places where capital can be put with any assurance that it will be safe.

And as important as Latin America is today, it will be much more important tomorrow. The population of Latin America is growing at an amazing rate; someone has termed it a population explosion. The United States today has a population of about 166 million; Canada has approximately 15 million; the combined population of the Latin-American countries exceeds that of the United States by nearly 10 million. If the present rate of increase continues, there will be a half billion people in Latin America before the year 2000.

Along with this rise in population will come, in all probability, a great increase in the living standard in Latin America and a lessening death rate. Together with a corresponding rise in the United States standard, this could mean an era of material prosperity such as the world has never seen. It also could mean the triumph of the free-enterprise system. And finally, the right kind of relationship between the countries in this hemisphere could mean an inter-American system which would assure the peace of the world. Its capacity to retaliate in case of attack could be so great that no aggressor would dare start a war; its geographic sweep would be so great that its defeat even in case of attack would be almost impossible.

There are encouraging factors in the relationship today between the Americas. The United States is not imperialistic; it has taken the lead in trying to outlaw the use of force in the hemisphere. There was a time when the marines landed and punished defiance of the national will of your country. We still hear echoes of the resentment which this policy caused, and it was a long step toward hemisphere solidarity when it was abandoned. I believe that most of Latin America today gives the United States credit for good intentions, and undoubtedly the loans and grants given Latin American nations in recent years have been very helpful.

Since Latin America, generally speaking, produces raw materials and is a purchaser of manufactured products, the two economies complement each other. The clash of interests which attends your trade with Europe and some parts of Asia does not evidence itself to any great extent in the dealing between our continents.

Nor is there any significant ideological conflict. Communism does not attract Latin Americans to any great extent. There are some exceptions, but on the whole communism is only a threat—whatever may come in the future.

I do not mean to say that the Latin American countries have solved their political problems. The reverse is true. Over the years there has been a familiar pattern in Latin America. A strong man rises and, with the help of the army, he rules for a time. He dies, or there is a revolution, and an attempt is made to solve familiar and pressing problems through a democratic and revolutionary program. All too often this effort fails. Once again there is the military dictatorship.

So familiar is this routine that some persons feel it is the solution to the political problems in Latin America. There is a question in the minds of some North Americans about the capacity of the Latin Americans to govern themselves, as you know government in the United States. But let me point out that the unrest and turmoil which forced the military dictatorship continue. The mass of the people in all too many Latin American countries remains poor and discontented. The contrasts between wealth and poverty are too great.

The military dictatorship is an expedient which may have worked for a long time. It will not work indefinitely unless it is accompanied by programs which help the people as a whole and give them something to look forward to and to hope for. This is extremely unlikely. It should not be forgotten that the imperialistic nations held down their colonies for generations. Yet the time came when force availed no longer. The steam within the kettle had too much power.

The danger in Latin America today is that the forces of repression will be followed by radical revolutions. In many countries the United States might find itself unable to work with the leaders of the governments. They could be men who had lost faith in private enterprise and the democratic processes.

The result would be chaos and an end which no one could foresee. All concerned would be injured. Then the United States would be forced to concentrate its attention upon Latin America. The republics to the south could no longer be taken for granted. But surely there is enough wisdom among us that we do not allow affairs to drift and degenerate. Surely we can work together to strengthen the forces of constructive reform in Latin America. Surely we can see that the development of Latin America must proceed in a way that will help the masses. The capitalism of the United States has been dynamic. The average workingman in your country laughs at the idea of becoming a Communist. Why? He feels that he has more opportunity and is doing better under your system that he would do under any other system in the world. He likes the feeling of freedom which he has; the absence of fear because of the religious and political views which he holds. That is the kind of system then which all of us should work for in Latin America.

Let us proceed from the general to the specific. My own country of Bolivia, which is half again as large as your great State of Texas, is backward and poor. It is a country whose masses have been repressed even if the dictators ruled in the name of democracy. The masses of our people are Indians.

The one fully developed industry in Bolivia is tin. The development of this industry made three families rich and kept most of the rest of the country desperately poor. The rich men concentrated upon their own interests. Bolivia has oil, iron, lumber, almost every valuable mineral known, and rich agricultural resources, but these remained almost untouched. The ownership of the tin mines gave the Patinos, Aramayos, and Hochschilds, the tin barons, great political and economic power. They used it to rule the country behind the scenes. They scuttled every attempt at reform. They bribed the politicans who could be bribed; they intimidated those who could be intimidated; they turned the machine guns on the miners when the latter rebelled; they took their money abroad and lived there in a style which attracted the attention of the world. They gave an example of the very worst side of capitalism.

In 1952 a revolution overthrew the power of the tin barons, and that same year the government nationalized the mines. A great hue and cry went up. The United States did not like nationalization. Neither did we. We took the drastic step only because we felt that the only way to make Bolivia a modern and prosperous state was to eliminate the power and influence of the tin mine owners. Otherwise they would bribe and bully their way to power again and the country would be back in the gutter.

Since 1952 Bolivia has systematically tried to develop its great resources. We have great faith in private enterprise, and we want the partnership of United States capital. We have given guarantees against expropriation of private property and assurances that profits mades and the capital invested can be taken out of the country. The government recently issued a new oil code, the most liberal, I believe in this hemisphere. Experts tell me that the Bolivian oil fields which extend diagonally across the country from north to south, probably will be some of the greatest in the world. Private operators are moving in. Glenn McCarthy of Houston, Texas, has held a concession since 1953; one of the world's great companies, the Gulf Oil Co., recently obtained a sizeable concession.

I have mentioned our links with Texas. We have another link, an economic link, the tin smelter at Texas City, which processes ores from Bolivia.

This smelter was built because of the crisis which the United States faced in World War II. Bolivia is the only source of ore in the hemisphere and was the only source available to the Allies after 1942. The mines in Malaya, Indonesia, and Africa were cut off.

The Texas City smelter was hurriedly built to process Bolivian ore, since you had to have tin for many, many uses. The United States wanted to be certain that for the remainder of the war—and the future—it had available the tin in this hemisphere and the means to process it.

Now the proposal has been made to sell the Texas City smelter to private operators, and if that cannot be done to close the plant. If the plant is shut down, it will deteriorate to the point where it will become valueless in a short time.

I only want to point out that the situation which caused the Texas City smelter to be built in the first place is still with us. The Communists hold all China, and their influence is strong in the area where most of the world's tin is produced. Unquestionably, Bolivia would make its tin available to the United States if another war came, but before the tin could be used it would have to be smelted. The statement is made that a new tin smelter could quickly be built in this country if the need arises. I only want to point out that no one knows what the situation will be if another war comes or what demands will be made upon the time, manpower, and materials of the United States. It would seem to me that the Texas City tin smelter is a vital asset for national defense, not only for your country but for the hemisphere. All of us have an interest in preserving our vital assets.

The course which Bolivia has followed since 1953 should please the businessmen of Texas and the United States. Our program could have been written by a member of your own Rotary Club. I am glad to say that we have had the help of the United States and that invaluable aid is continuing. We had to have help. The price of tin fell after the Government took over the mines. The cost of mining Bolivian tin is between $1.10 and $1.25, and the world market price has averaged around 90 cents since 1952. Nevertheless, tin had to be mined. It was the only source of exchange which we simply had to have. Meanwhile, we were forced to spend money trying to develop our agriculture, in building roads, importing blooded livestock—doing all the things which should have been done generations ago. Lots going out; very little coming in. No wonder Bolivia has a bad case of inflation.

We made mistakes. Not long ago the President, Victor Paz Estenssoro criticized some of the workers in the nationalized mines. He said they did not work as they should and showed a lack of discipline. He spoke plainly and frankly, something which political leaders do not often do. The result was an outcry that nationalization had failed. Our enemies implied that everything would be all right if only the tin barons had kept their properties and had continued to machinegun the miners when the latter protested low wages and intolerable working conditions.

One of the reasons for nationalization was to end maltreatment of the workers by the tin barons. From that standpoint, nationalization has succeeded very well indeed. Not a worker in the mines has met his death because of labor strife since 1952.

From the standpoint of the United States, the very worst thing which could happen in Bolivia now would be the fall of the existing regime. The Government has the support of the people and could fall only through revolution, and then only if economic conditions grow so bad that the workers give up in despair.

The tin barons—who never learn—seem to feel they could take over again. They would not. If they did, it would be for a short time, and then there would be a violent rebellion again. The people are through with them. The miners and the farmers—the repressed Indian masses—know there is no hope from the tin barons and their ilk. They will not submit to them again.

What would happen if the regime falls? Inevitably, the swing would be to the left. The leaders who have put their faith in private enterprise would be thoroughly discredited. The leaders who said that friendship with the United States was the way out also would be thoroughly discredited. The blow to the prestige of the United States would be tremendous, for it is well known that your great country has helped us. The assumption has been that if we do our part, aid would continue until we are solvent.

All Latin America is watching the Bolivian experiment and the relationship between our two countries. I have said, and I repeat, that this relationship may refute the Marxist charge that a strong, capitalistic country always exploits a weaker one with which it deals. The help given us by the United States has been generous with no strings attached. It has enabled us to start projects and programs which hold great promise for the future. In 1953 Bolivia was an importer of oil; in 1956 Bolivia is an exporter of oil and within a few short years oil may take the place which tin once held in our economy.

If the Bolivian experiment fails, it will be a blow to the future of private investment in Latin America. For Bolivia has tried to stimulate foreign investment. We have gone out of our way to allay fears caused by

nationalization of the tin mines and the expropriation of the Standard Oil properties in 1937. This latter expropriation grew out of a quarrel between Bolivia and Standard Oil during the disastrous Chaco War between Bolivia and Paraguay. In my opinion, the nationalization of the oil properties was unfortunate. In any event, the existing regime had nothing to do with it, since the MNR, the party now in power in Bolivia, was not formed until 1940. If Bolivia goes ahead to prosperity and stability, it will be with the help of foreign capital and will demonstrate what constructive capitalism can do to help develop a potentially rich country like Bolivia. It will encourage other countries to follow our example. It will show that true democracy and private enterprise will work in Latin America—provided they are given the right kind of chance.

The success of our experiment will increase the friendship of the masses in Latin America for the United States. The liberal forces in the continent know what is going on. They know my Government is really trying to help its people. They know that Bolivia is one of the few countries to attempt genuine land reform. It seems incredible that Indian farmers in some Latin-American countries have had the status of serfs down to the present day, but that is what they have had. We are giving land to the landless farmers and paying the owners for it. The plan has been described as collectivism. It is the opposite of collectivism. It is a program to base our agricultural economy upon the ownership of family-sized farms. It is action to perpetuate private enterprise and capitalism.

Incidentally, Bolivia acknowledges and is grateful for the help given by the United States. Our leaders speak of it openly. What is more important, they have told the people about it. The result is that the average Bolivian looks upon the United States as a friend and, when he has the opportunity, makes his views known. One of the things we cannot be accused of is ingratitude.

Since 1953 the United States has given Bolivia approximately $60 million in loans and grants. As I have said, we are grateful. We are hopeful, however, that your great country will take a close look at our situation and will provide enough aid to really put us on our feet. We do not want to remain, nor does the United States want us to remain, forever on a subsistence basis, always having to come back year after year to ask for more. It would take comparatively little to enable Bolivia to complete same of its programs and to be, as one of your sayings goes, out of the woods. It would be too bad if reactionary pressures caused this aid to be withheld at the very time when it spelled success or failure. The time will come fairly soon, if we work together, when we could be almost as rich as Texas. In that event we will have paid back the United States many times—in one way or another—the aid which you have given us.

I do not want what I have said here today to be interpreted as a threat in any sense. I have found that your people understand plain language and like it. As you say, they want to know the score. Bolivia has come a long way since 1952, and it will not take too much more to put us over the hill. Once we become self-supporting, I can say that every penny we have borrowed will be returned with interest and that Bolivia will be a good place for American business and businessmen.

My only concern is that our situation is not thoroughly understood and that the propaganda of the tin barons will have its effect. They have been busy of late, for they sense that the crisis is approaching. A few more difficulties and we may roll downhill; a little more help and we are in. It would be a tragedy if the help given by the United States should be, to use a familiar expression, too little and too late. It would be a calamity for Bolivia and a hard blow to the United States and the private-enterprise system which is fundamental to the preservation of our economic and political freedoms.

I do not think we will fail. I have never thought so; I do not think so now; and I will do all in my power to prevent its happening. I hope that the good people of Texas will help us succeed. It will be good business for all of us.

A Proposal To Revive Atlantic Solidarity

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a lecture entitled "A Proposal To Revive Atlantic Solidarity," delivered by James P. Warburg to the students of Bard College, at Annandale-on-Hudson, on the evening of May 24, 1956.

I have received from Mr. Warburg a letter in which he says:

Time goes by and still nothing happens with respect to foreign policy. The administration creeps slowly on reluctant feet toward revision, while the Democrats seem more and more inflexibly wedded to our hopelessly outdated policy.

What worries me most is that, while the "wise men" ponder, NATO is disintegrating before our eyes. The enclosed summary of a suggested solution has been sent, in slightly shorter form, to a number of newspapers, including the Washington Post. It has already appeared in the Louisville Courier Journal.

Mr. President, I am pleased to submit the excerpts from the lecture for printing in today's CONGRESSIONAL RECORD.

There being no objection, the excerpts from the lecture were ordered to be printed in the RECORD, as follows:

A PROPOSAL TO REVIVE ATLANTIC SOLIDARITY

The following are the main points of a lecture delivered by James P. Warburg to the students of Bard College, at Annandale-on-Hudson, on the evening of May 24, 1956:

"The question we are to discuss is how to revitalize the rapidly deteriorating solidarity of the Atlantic Community.

"It is now belatedly recognized that something must be done to arrest the disintegration of NATO, but it is not yet recognized that action is required not only with respect to NATO but with respect to the basic organization of the Atlantic Community. If Atlantic solidarity depends solely upon NATO's existence, then that solidarity, so vital to the preservation of human freedom, is already moribund.

"NATO is obsolete, except only for its embodiment of the historic undertaking by the United States and Canada to consider an attack upon Western Europe as an attack upon themselves. In every other respect, NATO is an outmoded instrument of the preatomic age.

"The peoples of Western Europe no longer believe that NATO can protect them, if war comes. Nor do they believe that NATO's sparse and widely scattered forces are now restraining Russia from attack. It is not just the new look in Soviet policy that has dissolved the cement of the NATO alliance but, even more, the delayed comprehension of what war means in the atomic age. The Europeans know that, if war comes, they are finished. They know that it is not NATO but the balance of terror which now holds war in precarious abeyance.

"What is more, the Europeans now suspect that an alliance which involves the rearmament of a partitioned Germany is more likely to provoke than to prevent eventual conflict.

"If the Atlantic Community is to regain its inner solidarity and to recapture the moral leadership of the world, two things are necessary:

"1. The Community must present itself to the world through a vehicle other than a military alliance.

"2. The NATO military alliance must be drastically reorganized.

"As to the first requirement, we rightly think of the Atlantic Community as the cradle and breeding-ground of freedom. We must not forget that it has also been the cradle of colonialism and the breeding ground of many wars. It is neither fitting nor expedient that the vital center of Western civilization should stand embodied solely in a military coalition, particularly when that coalition is dominated by three nations, two of which are the world's greatest colonial powers. Atlantic solidarity must find expression in an organization universally recognized as a forward-looking instrument of progress toward greater freedom, toward human betterment and toward lasting peace.

"The needed transformation cannot be accomplished merely by giving NATO new jobs to do, or by creating, as Mr. Dulles has suggested, a cabinet within NATO charged with the consideration of nonmilitary problems. It can be accomplished only by leaving NATO to one side and creating a wholly new, nonmilitary Atlantic Council.

"This new embodiment of the western heritage would concern itself with three main tasks:

"First of all, the new Council would endeavor to develop and cement the political, social and economic solidarity of the Atlantic Community. In time, it might be expected to absorb or coordinate the existing organizations which already express Europe's will toward integration.

"Second, the new Council would seek to develop a common Atlantic policy with respect to Asia, Africa, and the Middle East.

"Third, the Council would speak for the West in dealings with the Sino-Soviet orbit, instead of leaving such negotiations in the hands of the Big Three foreign ministers. Where NATO has been a mere object in these negotiations, the new Atlantic Council would become a principal.

"One of the new Council's chief aims would be to achieve universal security through peace settlements and disarmament agreements effectively enforced by a strengthened United Nations. If successful in this endeavor, it would thus eventually eliminate the need for military alliances and counter-alliances.

"Meanwhile, NATO must, of course, continue to exist as a still needed defensive alliance, but, even as such, it requires drastic reorganization.

"NATO needs a modernization of its strategic concepts so as to become relevant to the atomic age.

"Above all, NATO needs a long overdue revision of the bankrupt Western policy with respect to Germany. Such a revision would aim at the military neutralization of a reunified Germany and the creation of the widest possible neutralized belt across Central Europe.

"In these circumstances a militarily neutralized Germany would not become a vacuum, cut loose from its Western moorings. Such a Germany, while excluded from NATO, would not be prevented from joining the new Atlantic Council any more than a neutralized Soviet satellite, such as Czechoslovakia, would be prevented from maintaining its close political and economic ties to the Soviet Union.

"The creation of the new Atlantic Council would have this final advantage: Since mem-

bership would entail no military commitment whatever, it is entirely possible that not only a neutralized Germany but even such determined voluntary neutrals as Sweden and Switzerland might wish to join and thus round out the political and economic solidarity of the Atlantic Community.

"You will note that the first half of this proposal—the creation of a new Atlantic Council—is in no way dependent upon Soviet agreement. The reorganization of NATO requires Soviet agreement only as to the neutralization of a reunited Germany. Should such agreement not be obtained, there is nothing to prevent the West from revising its policy as to West Germany so as to release it from NATO but include it in the new Atlantic Council. This would leave the door open for continuing efforts to achieve German unification and would place the onus for Germany's partition squarely upon Moscow, instead of where it now lies—upon the bankrupt western policy.

"The question might be raised whether the nonmilitary Atlantic Council might not undermine or weaken the United Nations. Quite the contrary is the case. The Council's chief long-range aim would be precisely the strengthening of the United Nations and the reduction of conflicts which now impair its usefulness, until the day when the Atlantic Community's separate identity could be merged into the larger whole of a fully functioning world organization."

Itinerant Instructor Building Trades Apprenticeship Training Program

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, May 25, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "Itinerant Instructor Building Trades Apprenticeship Training Program," which appeared in the April 1956 issue of the Bricklayer, Mason, and Plasterer.

This interesting article discloses a superb record of cooperation and public service on the part of our building trades unions, State labor and educational agencies, and our businessmen in Michigan. Their unselfish and unstinting efforts in establishing a highly successful itinerant building trades program have contributed tremendously to the welfare of our people in Michigan. To me, it is a classic example of true Americanism in action.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ITINERANT INSTRUCTOR BUILDING TRADES APPRENTICESHIP TRAINING PROGRAM

Probably one of the most unique and successful building trades apprenticeship related training programs carried on in this country is the Michigan itinerant instructor building trades apprenticeship training program, of which our Michigan State conference of the B. M. & P. I. U. is an active part, and through conference secretary and I. U. Deputy John Lodge has contributed much of the foresight and leadership that has greatly aided in the success of the program.

It is pointed out here that the itinerant program is for out-State Michigan only. Detroit has carried on a successful apprentice program for about 34 consecutive years, with 3 bricklayer instructors employed at the present time.

All of the nine building trades instructors in the itinerant program are supervised by a bricklayer, Brother Andrew Virtue, of local No. 31, Lansing, Mich.

The outstanding feature of apprenticeship in Michigan is that it is established on a sound footing with the cooperation of management and labor and education people working together to care for the manpower needs of the construction industry.

Public relations is an important part of this program. Graduation exercises are held, plus the fact that the Michigan State conference and the Association of General Contractors conduct a full-scale bricklayer apprentice contest every year in different sections of the State at a public function such as a county fair or home show.

This contest is unique inasmuch as apprentices compete with each other in their own training period. The period of indenture is 3 years; therefore, 3 separate contests are conducted, 1 for each year. This contest is honored every year with a visit from the Governor, members of the State legislature, United States Congressmen, and other dignitaries.

Following is a report on the building trades itinerant program as of January 1956, authored by Mr. John Harris, director of trade and industrial education of the Michigan State Department of Vocational Education, and Mr. Henry A. Reniger, of the Reniger Construction Co. Mr. Reniger is also the Associated General Contractors' member of the National Joint Bricklaying Apprenticeship Committee.

Following the depression in the 1930's there was virtually no apprentice training, particularly in the building trades and, consequently, there were very few new people entering those trades.

The craftsmen who had held journeyman status were naturally getting older with the result that the average age of building-trades journeymen in Michigan began to approach the 60-year level.

This alarming condition led, in 1939, to the establishment of an itinerant building trades program outside of the Detroit metropolitan area, where an adequate program was already in operation.

This new program which was established by the coordinator of apprentice training of the State board of control for vocational education, department of public instruction, with the approval of the State apprenticeship committee, was, unfortunately, discontinued after 2 years.

Two factors operated to make its continued operation difficult: (1) Inability of local communities to finance the program under existing reimbursement practices of the State office of vocational education, and (2) the siphoning off of great numbers of Michigan youth by the Armed Forces.

Though the itinerant program for apprentices outside of metropolitan Detroit was discontinued in 1941, its short operation had made a significant contribution; namely, it had established the concept of an itinerant program in which the instructor took instruction to the apprentices who assembled at certain selected centers for their related and technical training.

In the period between 1941 when the out-State itinerant program closed and the close of World War II, practically no apprentices entered the building trades. During this period the average age of journeymen in the building trades continued to rise alarmingly until it passed the 60-year level.

Then, in 1945, the Michigan chapter of Associated General Contractors, the State department of labor, the building-trades groups of the Michigan Federation of Labor, local public schools, and the State office of vocational education set about to explore the possibility of reestablishing the program which had been dormant since 1941.

It should be noted that the Detroit Board of Education had continued the apprentice program in the metropolitan area, one which was intiated in 1922. Though enrollments were small, the principle of cooperative training as a public school responsibility was maintained.

Experience had taught that the apprenticeship shortage and the rapidly rising average age of building trades journeymen must be forever discouraged by some systematic and continued program for the training of apprentices.

The period from 1939 to 1941 had produced no aprentices outside of the Detroit metropolitan area and the resulting shortage of young men entering the building trades was a serious one.

In order to establish a stable apprentice training program, the State legislature was asked to earmark money from the State school aid fund for the employment of itinerant apprentice instructors who would travel to established local centers to provide related and technical training for building trades apprentices.

The legislature acted favorably on the proposal and funds for the employment of several full-time itinerant instructors were allocated to be administered through the trade and industrial division of the State office of vocational education.

Itinerant centers were established in certain desirable locations throughout the State with local school boards furnishing the physical facilities and the instructors were assigned on a regular schedule.

It was understood that these instructors were to be considered as employees of the local schools in which they worked and were to be considered by local school administrators as regular faculty members, although their salaries and travel expense are paid through the State office. They are, in fact, employed through the State civil-service commission by competitive examination and are subject to the commission's salary and travel regulations.

The nature and content of the apprentice instructional program was established in each center by joint apprenticeship committee. These committees cooperated with the Bureau of Apprenticeship of the United States Department of Labor in establishing training standards relating to on-the-job experience, related instruction, rate of pay, probationary periods, seniority privileges.

Administration of the standards rests with the joint apprenticeship committees, of which there are 48 in the State. Each center is in the jurisdictional area of the particular unit involved in bargaining agreements with contractors and labor unions.

In the operation of the program in local communities contractors, labor, building suppliers, public schools, and other interested groups have been involved. Much of the supplies used in the related class instruction has been donated by these groups.

One indication of the effectiveness of the apprenticeship program is the fact that of the apprentices who have once been indentured and started their programs, more than 90 percent attendance is maintained. Some of today's journeymen who hold positions of leadership in the building trades are men who completed the building trades apprenticeship program.

In 1945, when the present program was inaugurated, there were four instructors plus a coordinator of the itinerant building-trades program. The instructors were charged with the responsibility primarily of giving instruction to all apprentices duly indentured through the joint apprenticeship committee and registered with the Bureau of Apprenticeship, United States Department of Labor, and the State board of control for vocational education.

STEADILY EXPANDING PROGRAM

The program has shown a steady expansion until at the present time there are 9 full-

time building-trades instructors and 1 coordinator. There are 3 electrical instructors, 2 bricklaying instructors, 2 plumbing instructors, and 2 carpentry instructors.

As the title would indicate, the coordinator is charged with the responsibility of coordinating the entire building-trades itinerant program and acts as the liaison contact man between the trade and industrial education division of the State board of control for vocational education, the bureau of apprenticeship, associations of general contractors (the Plumbing and Heating Contractors' Association, Electrical Contractors' Association, the various craft unions involved), and the local public schools.

In 1945 the budget for the program amounted to $26,840, which was used to defray all salaries and expenses in connection with the program. For the year 1956–57 it is anticipated the budget will be about $98,000.

The program now being conducted involves 16 cities; 2 cities, St. Joseph and Benton Harbor, operates as 1 unit. The apprentices coming into these centers are from many cities and villages, and the records show these apprentices have come from as many as 193 different locations into the centers nearest them for training, with none having to travel more than 35 to 40 miles. This brings the program within reasonable geographical reach of nearl all apprentices in the State.

The many principles of operation which make this a successful operating training program may be cited as follows: (1) the principles of hiring the instructors on a full-time salary and centralizing the operation of the program in an administrative unit for carrying on such training; (2) the principle of carrying on a program in accordance with approved training standards involving all interested groups; (3) the involvement of all associations, State and Federal agencies, and local schools in the promotion, establishment, and conduct of the program; (4) the carrying on of the program by the local joint committee working closely with the local public schools which maintains our philosophy of education and training, and (5) the indenturing of all apprentices to the joint committee in the various trades in which training will be given.

This, we feel, has been one of the most important contributing factors to the success of the program outside of the actual financing itself. Through this indenture process, the local joint committee is permitted to rotate the boy on jobs which may be conducted by different contractors keeping in mind the broad training which the apprentice needs to be an adequately trained person.

Another aspect of the itinerant building trades program which we feel has contributed much to its success is the teacher training carried on with the instructors to upgrade them in the matter of teaching techniques.

A teacher trainer from the University of Michigan has been assigned each year to work with the instructors to assist them in developing their techniques of teaching and training in accordance with present-day standards.

During the Christmas holiday season each year, the instructors actually go back to school for 2 weeks under the guidance and supervision of the teacher training institution. During the year, the teacher trainers work with the instructors through correspondence and visits to help them develop their many courses of study. Much of this material has been reproduced, and the instructors use it in their daily work.

EXPECT CONSISTENT NUMBER

Projecting our thinking into the future, we expect that the number of apprentices will be consistent with building-trades needs, and all present and future needs appear to indicate the number of apprentices now in training will continue. Among future considerations are additional centers for training and new occupations within the building trades area.

An urgent one being considered at this time is for iron workers in connection with the new Mackinac Straits Bridge. It is also anticipated that during the coming year an overall State advisory committee of the building trades will be formed to work with the State office of vocational education. This advisory committee, it is hoped, will furnish the necessary counsel and advice for a continued successful program.

Prosthetic Rehabilitation and Foreign Aid

SPEECH
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 22, 1956

Mr. CANNON. Mr. Chairman, under leave to extend remarks in the RECORD, I include the statement this week by Dr. Rusk on foreign aid before the Senate Committee on Foreign Relations.

Dr. Rusk is the recognized authority in prosthetic rehabilitation both in this country and abroad. He is not only one of the distinguished physicians of his time but is a writer and author of note and serves on the staff of the New York Times.

FORMAL STATEMENT OF DR. HOWARD A. RUSK BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, MAY 18, 1956

My name is Howard A. Rusk. I am a physician and chairman, department of physical medicine and rehabilitation at New York University-Bellevue Medical Center; director, Institute of Physical Medicine and Rehabilitation, New York University-Bellvue Medical Center; associate editor, the New York Times; consultant in Rehabilitation to the United Nations, and president of the International Society for the Welfare of Cripples. I am appearing before you today as a private citizen whose primary interest is the rehabilitation of the disabled.

It is my belief that rehabilitation of disabled children and adults is one of the sharpest tools and most effective instruments which we in the United States have for making friends—a tool which can penetrate any iron or bamboo curtain to reach the minds and the hearts of men. It is natural for all of us to take improved agriculture industry and utilities for granted but men often regard these developments as somewhat remote from their immediate problems. Rehabilitation, however, makes a personal and significant impact not only upon the disabled person himself and his family but on those with whom he comes in contact. This as well as all international activities in the field of health are one aspect of our foreign assistance program which meets all yardsticks of economic soundness, simple humanitarianism and political expediency.

In his report to the Congress on our mutual security program covering July-December 1955, John Hollister, Director of the International Cooperation Administration, wrote: "The people of the United States recognize the value—economic, social, and moral—of health and the fact that health is a common need. We are also coming to recognize the vital relationship of health programs to any hopes we may have of helping to create conditions of economic progress, political stability, and democratic social development in the many areas of the world outside the United States, where our future national security is deeply involved."

Mr. Hollister then cited estimates from competent authorities that until recently the economic loss from malaria alone in India was $224 million a year, from bilharziasis in Egypt $57 million a year, from malaria and tuberculosis in the Philippines $660 million a year. Also, that we in the United States pay a hidden 5 percent additional cost for our imports from malarious countries because of disease-affection production.

It is, therefore, surprising that our contribution to bilateral health programs was reduced from $43 million in the 1955 fiscal year to $33,767,000 in fiscal year 1956, and that of this amount less than $50,000 was spent on all types of rehabilitation services throughout the world.

From the economic aspects alone, it would seem logical that our investment in international health would be increased rather than decreased. Over and beyond the economic implications, there are great social, moral, and political values in our support of international health activities.

These values are well illustrated by international activities in the field of rehabilitation. In this country and in the other developed parts of the world we have seen a remarkable growth of interest in rehabilitation in the last decade. This interest has not been prompted by humanitarian motives alone. It has resulted from the growing incidence of physical disability resulting from prolongation of the life span, increased public assistance costs because of disability, and our need for manpower in our expanding economy.

But what lies behind the interest of Indonesia, Korea, the Philippines, Mexico, India, Burma, and Thailand in the provision of rehabilitation services for their handicapped? It is not the need for manpower, for these nations have far more manpower than they can profitably utilize in their present stage of industrial development. It is not to reduce public assistance costs, for few of these nations have any social schemes whereby the disabled become a responsibility of the state. It is not to reduce demands for medical, hospitalization, and social services, for the chronically ill and disabled in most of these nations are wards of their families rather than of the state.

The real reason is that many of these nations, particularly those of the Africa-Asia area, have, after years of colonization, recently achieved the long-sought dream of political independence. Now they are desperately looking for ways of proving to the world, and more importantly to themselves, that they have the political and social maturity to justify their political independence.

Long before the Government became concerned with international health projects, the Rockefeller Foundation, W. B. Kellogg Foundation, China Medical Board, and other private groups had years of experience in the administration of such programs. As a result, we have more know-how in the conduct of international health projects than in some other forms of technical assistance and are able to administer such projects more effectively.

Health projects are welcomed by the nations in which they are undertaken, for such projects are initiated only at the request of host countries. They are cooperative projects involving both joint planning and administration.

Host countries furnish a part, frequently the major part, of the funds for such projects. The $6 million contributed in 1955 to joint health projects in Latin America by the United States was expanded by $19 million.

Since our Federal technical cooperation health programs, known popularly as point 4 projects, began more than 13 years ago, they have cost our citizens less than a penny a month a person.

It is reported that last year Russia graduated 27,000 physicians from their medical schools and 20,000 the previous year. At the present time we are graduating slightly more than 7,000 in the United States per year. It is granted that the level of education of these physicians is far below that of our physicians, but, even so, the health services they are providing to the country are so superior to those ever before available to the people to them it is considered a miracle.

It has also been reported that at the present time there are more doctors than can be readily absorbed in the health services of Russia, and the physicians are being used for the kind of job that we would ordinarily assign to nurses and technicians. If the production continues and the excess increases, it is rather obvious what the physicians will do. They will carry the skills they have learned along with the concepts of communism to the backward parts of the world. We must meet this challenge, and we can, for our physicians are better trained. By using total professional personnel, therapists, sanitary engineers, public-health administrators, and educators we can do a better job. But time is running out.

Here is one example of what could be done. The Veterans' Administration has, since 1946, conducted an extensive artificial-limb research program which is carried out by nonprofit contracts with universities. The Army and Navy cooperate by supporting prosthetic-research laboratories within their medical services. Work in the universities and armed services has been coordinated by the Prosthetics Research Board (formerly the Advisory Committee on Artificial Limbs) of the National Academy of Sciences—National Research Council under a contract between the Veterans' Administration and the Academy.

The need for a research program in artificial limbs became apparent early in 1945 when, at the request of the Surgeon General of the Army, the National Research Council brought together a group of scientists, engineers, surgeons, and prosthetists for the purpose of establishing standards for procurement of prostheses. At this meeting it was soon learned that the development of artificial limbs had proceeded through the years without the benefit of a scientific approach, whereupon it was recommended that the Government support a research program in this field.

As the result of this program our own disabled veterans have prosthetic devices far superior to those found anywhere else in the world.

Just as we are interested in sharing the technical advances in nuclear energy for peaceful purposes with the rest of the world, we could make a significant contribution to the effective understanding of American ideals of democracy and the value we place on human worth and dignity, if through an appropriation of one or two million dollars a year we could share our advances in artificial limbs with the world. Through demonstration centers, consultants, mobile clinics, and the training of foreign personnel in the United States, a magnificent program could be established. With the sum of $1 million a year for 2 years both the administrative and professional overhead cost of such a project could be met; highly qualified American consultants could visit all parts of the world and survey what is available and what is needed; 4 completely equipped mobile prosthetic shops, each staffed by a qualified American prosthetic technician and physical therapist, could be sent to southeast Asia, the Near East, north Africa, and South America to spend 4 to 8 weeks in a given community rendering direct patient services in fitting prosthetics and training wearers in their use; permanent demonstration prosthetic shops and training centers could be established in key parts of the world; and the components to provide modern artificial limbs could be made available to over 40,000 amputees; over 100 trainees could be brought to the United States for training in prosthetics; and all of the available technical literature and visual aids in prosthetics here in the United States could be translated and published in various languages for international distribution.

These prosthetic trainees would then join the 400 health workers receiving advanced training in the United States under the auspices of the International Cooperation Administration. They and hundreds of others trained under the auspices of private foundations, their own governments and their own resources, are permanent ambassadors of our democratic ideals. Such persons make particularly effective proponents for democracy because as professional people they work intimately with their handicapped patients and have their confidence and trust.

Somewhere within the spectrum ranging from direct relief to long-range economic projects, there is a need for significant, tangible short-range projects that can be seen and easily understood. The Russians produced such a project when they paved the main street of Kabul in Afghanistan. Our foreign-aid projects there have been of economic importance, but their impact on the daily lives of the people will not be felt for many years. In contrast, several times each day the residents of Kabul have reason to be grateful to Russia.

This is the kind of an imaginative, constructive project which can be easily seen and understood. There are many hundreds and thousands of disabled persons throughout the world, each of whom could also become a living, dynamic example of American democracy. To illustrate their potential contributions, I should like to tell you the story of a little Bolivian boy, age 10. He was born without arms and legs with 4 little, sensitive fingers coming out of each shoulder and 2 normal feet coming from the hip joint but with no bony connection. When he was a year old, he was abandoned by his father, who then deserted the family and has not been heard of since. The boy spent the next 8 years of his life in an American mission in La Paz, where he had love and kindness but could not walk. To get from one place to another, he rolled like a little ball. He was seen there by a young physician from the United States who called me and said he had met this little boy, who was exceedingly bright and who, if he had a chance, he felt, could be a great force in the world. Pictures and case reports were sent and by coincidence seen by the secretary of one of our distinguished citizens. She made possible his trip to the United States.

Two weeks before he arrived, I had the Vice President of Bolivia and the Bolivian Ambassador to the United Nations for luncheon. They knew all about Juanito and were excited about his coming. In the middle of the meal, I said to them, "You know, if we bring Juan here it is going to cost you a very large fee."

In consternation, they said, "How much?" I said, "The fee is this. First, that when he returns, you must promise him the best education your country affords; and second, if we can demonstrate in the most severely disabled child you will ever see what can be done, you will establish a national rehabilitation program in Bolivia."

Without hesitation, the Vice President said, "You take the boy; we pay the fee."

When he arrived, he spoke no English. Within a month, he had a vocabulary of more than 300 words. Special prostheses were designed and he now is walking. He has grown more than twice his height. He is doing well in school and one day soon will be ready to go back and take his place in his own country.

Several months after he was in the United States, the story was published in a national magazine. A few weeks later, a letter came to the editors, which read as follows:

"Congratulations on a brilliant piece of reporting. Am referring to your (February 21) on Juanito Yepez, the congential quadruple amputee from Bolivia. * * * For those of us who are in and out of Central and South America we found your article on Juanito gained us more friends (and respect) than all the millions our government is pouring into these countries. We noted no sudden pro United States of America feeling in Brazil as a result of the $75 million donation (given Brazil by the United States), but we were pleasantly surprised with the many compliments for what the United States of America is doing for Juanito. I do not know what your circulation is in Latin America but can tell you the peons in the backwoods knew all about Juanito within 24 hours after the issue was on the streets. * * *

"E. E. BUTLER, *Master.*

"TAMPICO, MEXICO."

What we need in the United States are friends like Juanito Yepez all over the world, with the recognition that in the United States we believe in the dignity of the individual and because of that belief want to share the things that we have learned in our country. We are not doing this to make friends—we are doing this to give service. If the service and the spirit are there, then we can't help but have their friendship.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Daily Digest

HIGHLIGHTS

Senate passed State-Justice-Judiciary appropriations and Garrison Dam bills.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 8092–8101

Bills Introduced: 13 bills and 1 resolution were introduced, as follows: S. 3924–S. 3936; and S. Res. 272. Pages 8093–8094

Bills Reported: Reports were made as follows:

H. R. 6376, to provide for the hospitalization and care of the mentally ill in Alaska, with amendments (S. Rept. 2053);

H. R. 10660, the Federal Highway and Highway Revenue Acts of 1956, with amendments (S. Rept. 2054);

Report of Committee on the Judiciary on Motion Pictures and Juvenile Delinquency (S. Rept. 2055);

H. R. 7679, transfer of land to city of Muskogee, Okla. (S. Rept. 2056);

H. R. 8490, authorizing transfer of certain U. S. land to city of Bonham, Tex. (S. Rept. 2057);

H. R. 8674, to provide for the return of certain property to the city of Biloxi, Miss. (S. Rept. 2058);

H. R. 9358, land transfer to Cheyenne, Wyo. (S. Rept. 2059);

H. R. 10251, land transfer to Grand Junction, Colo. (S. Rept. 2060);

H. R. 8123, authorizing conveyance of certain land to city of Roseburg, Oreg., with amendments (S. Rept. 2061); and

S. 3857, to clarify section 1103 (d) of title XI (Federal Ship Mortgage Insurance) of the Merchant Marine Act of 1936 (S. Rept. 2062). Page 8093

Bills Referred: Two House-passed bills were referred to appropriate committees. Page 8091

Indian Lands—Arizona: Senate concurred in House amendments to S. 2822, authorizing transfer of certain land in Hualapai Indian Reservation, Ariz., to school district in Mohave County, Ariz. This action clears the bill for the White House. Page 8101

State, Justice, Judiciary Appropriations: Senate passed with committee amendments H. R. 10721, fiscal 1957 appropriations for Departments of State and Justice, the Judiciary and related agencies.

Senate insisted on its amendments, requested conference with House, and appointed as conferees Senators Johnson (Texas), Ellender, McClellan, Magnuson, Hayden, Holland, Clements, Green, Mansfield, Bridges, Saltonstall, McCarthy, Mundt, Smith of Maine, Dirksen, and Hickenlooper. Pages 8101–8116

Garrison Dam: Senate passed with committee amendments S. 746, providing for return to former owners of mineral interests in certain lands acquired in connection with Garrison Dam project. Pages 8116–8117

Authority To Report: Committee on Finance was authorized to file reports during weekend recess of Senate. Page 8096

Narcotics Control: Senate debated S. 3760, to provide a more effective control of narcotic drugs. Pages 8118–8153

Confirmations: Nine nominations to membership on National Science Foundation, and numerous nominations in the PHS and Navy were confirmed. Page 8159

Program for Monday: Senate recessed at 6:21 p. m. until 10 a. m. Monday, May 28, when it will consider H. R. 10660, the Federal Highway and Highway Revenue Acts of 1956, after temporarily putting aside S. 3760, narcotics control.

Committee Meetings

(*Committees not listed did not meet*)

APPROPRIATIONS—DEFENSE

Committee on Appropriations: Subcommittee continued its hearings on Army items in H. R. 10986, fiscal 1957 appropriations for Defense Department, hearing further testimony from Maj. Gen. A. P. O'Meara, Deputy Chief of Research and Development, and Maj. Gen. W. S. Lawton, Chief of the Budget Division, who were accompanied by other representatives of the Army. Hearings continue Tuesday, May 29.

Appendix

The Atomic-Hydrogen Age—A Challenge to Youth

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. VAN ZANDT. Mr. Speaker, on Sunday, May 27, 1956, it was my privilege to deliver the commencement address at the 91st annual commencement exercises of Rider College, Trenton, N. J., at which time I was awarded the honorary degree of doctor of laws.

Mr. address follows:

COMMENCEMENT DAY ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE 91ST ANNUAL COMMENCEMENT EXERCISES, RIDER COLLEGE, TRENTON, N. J., MAY 27, 1956

Dr. Gill, Dr. Moore, Reverend Wismer, members of the board of trustees, members of the faculty, the alumni association, distinguished guests, class of 1956, ladies and gentlemen, it is an honor to be selected by Rider College as the recipient of an honorary degree and to be invited to deliver the commencement address at the 91st annual commencement exercises.

It is gratifying to me that honorary degrees are being awarded Dr. Frederick M. Adams and Mr. George R. Hill.

I congratulate them for the honor conferred upon them. And may I add that I find myself in select company in being honored with such distinguished Americans.

Every commencement speaker feels some emotion as he stands before a graduating class in its hour of triumph.

He knows something of the mixed feelings the students, the faculty, and the families are experiencing.

Parents are pardonably proud and beaming with joy because their sons and daughters, by their scholastic attainments, have justified the confidence they placed in them.

Commencement day is a reminder that an institution is made of people, not of buildings.

Here at Rider College there will be a new freshman class in the fall, and the life of Rider will go on.

It will have a continuity, but not exactly as it was, with the class which is leaving.

To you members of the class of 1956 these have been years of experience, both pleasant and trying, which have belonged to you.

Suddenly in your hearts you feel that Rider College, which you are about to leave, is more precious than it ever was before.

Now there are jobs to think of, whether already waiting or still to be fund.

Because this is a technical age, to some of you this commencement day is another step in your plans to acquire further education in graduate schools.

As your commencement speaker it is not easy to find words that will long be remembered, because there is so much competition for attention in your thoughts.

But my subject, nevertheless, is an important one.

It is a subject which will shape your lives in the years ahead.

This is true whether you take an active role in business, industry, government, politics, or the professions, or whether you think you can escape to a smaller though also important world of homemaking.

The subject of my discourse—the atomic-hydrogen age, a challenge to youth—relates to the importance of my duties as a member of the congressional Joint Committee on Atomic Energy.

This committee is aware that the development of atomic energy carries with it some of the gravest responsibilities in the world today.

It is the manner in which we employ this great source of energy now loose in the world that the fate of mankind will be determined.

The picture which I am about to present is neither wholly dismal nor wholly one of good cheer.

It is, however, exciting in its implications and significant to our lives.

Everyone living in modern-day America has some notion of the effects of atomic weapons and at least an awareness that there are peacetime uses of the atom which will be important to all of us.

In discussing the subject of atomic energy there is a definite feeling of adventure in exploring the nuclear field.

On the one hand we are exploring the unknown in sciences, physics, chemistry, metallurgy, biology, etc., as well as unknown fields in engineering and construction and in the business and industrial life of the Nation.

On the other hand there must be applied sound scientific engineering and business principles to solve unprecedented problems arising from unique and sometimes impossible situations.

The result has been that today as a Nation we are faced with a vast new science that affects the lives of all of us and which has had a marked influence on the business and industrial life of America.

Therefore, everyone of us sooner or later will come to realize that in our midst there are quietly working revolutions in almost every phase of the art of living.

Over a period of years the emphasis in exploring atomic energy has been in the weapon field.

The result has been a mad race for superiority.

Ten years ago the United States alone controlled a supply of fissionable material.

It was, however only enough for a token number of weapons of moderate yield.

Since then the supply of uranium 235 and of plutonium has increased tremendously.

According to the Manchester Guardian, a leading newspaper in Great Britain, it was recently estimated that the United States may have the makings of 35,000 weapons.

It was also estimated that the Soviet Union strength in such material might be the equivalent of 10,000 nuclear weapons.

In addition Great Britain was said to have the capability of producing over a thousand weapons.

Then, too, we know that a large number of other countries are building atomic reactors which will produce the necessary material used in weapons.

According to a recent newspaper article we know that President Eisenhower has offered for peacetime power development a supply of uranium 235, equivalent to more than 4,000 atomic bombs.

This generous action on the part of the American people in furthering the desire for world peace certainly reveals the adequacy of supply of fissionable material in our stockpile.

In recent years the American monopoly of such materials has been broken with profound significance for our position in the world.

Meanwhile the supplies of nuclear explosives have grown tremendously.

Then, too, the efficiency of weapons has increased, the variety of weapons has multiplied, and the means for delivery are in a period of revolutionary change.

It is not difficult to recall that less than 11 years ago the United States took out to the Pacific the bulk primitive weapons which were dropped on Japan.

These "model T" weapons could hardly be lifted by a B–29 bomber, and though we view them as crude today, they represented the culmination of the most complex scientific effort the world had undertaken up to that time.

In their single plane drops they wiped out Hiroshima and much of Nagasaki, which served as the excuse for the Japanese to end the war.

Today through improved design nuclear weapons have been shrunk small enough to be carried by fighter planes.

To fit inside an artillery shell.

To be used for antiaircraft purposes and indeed, perhaps, even a suitcase bomb which a saboteur can plant in a locker in a metropolitan railway station.

There is no reason why, in the near future, one cannot envisage even smaller weapons.

The increase in efficiency toward higher yields of energy has multiplied the destructive effects of the A- and the H-bomb to the extent that today they yield many more millions of tons in destruction.

Let me illustrate what this increased yield could mean.

A high-yield weapon centered on Trenton could wipe out virtually everything from here to Princeton in one direction and to the edge of Philadelphia in the other.

The radioactive rain of debris could drop its lethal fallout depending on the weather and wind in a swath across Greater New York City, Connecticut, and eastern Massachusetts without favor on rich and poor alike.

A Bison jet bomber or Bear turboprop bomber of the Soviet Air Force could fly a one-way mission above the altitude of our typical defending fighters.

It is quite possible these Soviet bombers, without detection of our radar, could drop such a weapon from a vertical distance beyond the range of our Nike batteries.

Or the weapon might arrive without warning as the warhead of a guided missile shot from a submarine suddenly surfaced off the Jersey coast.

Or an agent working from simple blueprints might assemble the components of a suitcase bomb in any basement workshop with only the fissionable core brought across our border by clandestine means.

This is the present-day horror with which we live.

If we become indifferent about it it is only because the world has feared the threat of retaliatory effects which up to now have discouraged Soviet aggression.

The picture is so fluid that it would be extremely dangerous to assume that because we have escaped so far we will continue to do so.

I hope and pray that we will not commit such an error.

Our survival demands that until an effective system of control and inspection has been created for the entire world we must constantly be alert and push our own weapons development to serve as a deterrent.

I wish that good will and peaceful example were enough to make us safe but they are not.

In this atomic-hydrogen age we must be realistic.

If we were to test the theory that we could disarm first or without fool-proof guaranties, the price of any error in the theory would be the destruction of the Nation.

But this does not mean that we must give up living, give up trying to find a solution to the ideological struggle which causes our danger.

It is not the fault of the impersonal fissionable atom that we are in danger—it is the inadequacy of man's social adjustments.

This maladjustment provides a constant challenge for the years ahead.

The solution is not to surrender to those who would enslave us; but, to the contrary, to possess the ability to take fresh looks at old concepts.

The problem is to preserve the freedom and integrity of the United States.

At the same time we should strive to modify international relationships to fit realistically the changing nature of the world.

As a small example, new questions of sovereignty over the space above a country will be raised by the launching of artificial satellites.

How far up can a nation control the air against invasion by observation satellites?

There is no adequate precedent for settling such a problem.

Therefore we must have faith that a solution will be found.

Meanwhile all our problems will not be solved by simply ignoring them.

Just as the passengers on a transoceanic plane have faith that their flight will be successful, so must we have faith that we can solve the problems of human relations before we destroy human life and civilization on this globe.

But even the safest transoceanic airline carries liferafts, gives ditching instructions, and insists on constant safety inspections of all mechanical equipment and pilots.

In like manner we Americans must take precautions in the dangerous world in which we live.

As a Nation we must have military, political, social, and technical information about all the world to a degree never required by this country in the past.

We must maintain an adequate national defense and cheerfully carry a heavy burden of taxation for the indefinite future.

We must have a maturity and grasp of foreign policy that no earlier generation needed to worry about.

We must have a strong industrial base, widely dispersed and decentralized, so that we never find ourselves being caught with "all our eggs in one basket."

We must support education and research by whatever means are necessary to insure our superior strength in an age of rapid scientific change.

Personally, we must be willing to take that inconvenience and trouble when survival requires.

This includes our share of military duty, of service with the civil defense program, or other activities of good citizenship, which can help us survive when the chips are down.

Facing such a grim state of affairs, we must maintain faith in our future and the sense of humor and individuality which have made us a great Nation.

These dangers are very real, but we have managed to live with them ever since the explosion of the first atomic bomb on the desert at Alamogordo, N. Mex., in 1945, which made such danger inevitable.

Yes, we have lived with these dangers ever since the first Soviet atomic bomb explosion in 1949, making the danger immediate.

But let me turn to the other revolution in our life which a clear understanding of nuclear processes will bring to our everyday living.

Very few people carry the illusion that the new age will be one which will immediately transform automobiles into plastic streamline shapes powered with tap water and atomic pills.

Most people understand now that even if atomic fuels become cheap in a powerplant, electricity will have a price.

This is true of hydroelectric power which burns no fuel at all.

The technical problems to be solved before the full benefits of the atomic age can be realized are staggering.

They are appreciated only as each becomes acute in blocking further progress.

It will be many years before present-day predictions will become a full reality.

Despite our accomplishments in the field of atomic energy and the fact that we have spent $15 billion to date—we have scarcely scratched the surface in producing the ultimate benefits to be derived by mankind through the peacetime uses of the atom.

It is possible within the next decade, barring atomic or hydrogen warfare, atomic powerplants will produce electric energy that will join the flow of electricity now generated by coal, gas, oil, and hydropower plants.

It is freely predicted that within 10 or 15 years uranium, which is the source of atomic energy, will be as common as present-day fuels.

Within that period of time it is anticipated that atomic-powered-planes, rocket ships, automobiles, locomotives, and farm tractors will be in everyday use and an accustomed sight on the world scene.

Homes will be lighted, heated, and cooled by the atom.

Food, clothing, medicine, and crops will be improved, and in general, our way of living will be completely revolutionized.

There is one important area of application of atomic power which I have not discussed, namely, atomic propulsion.

In this particular field the success of the U. S. S. *Nautilus*, an atomic-powered submarine, has removed any lingering doubts about the effectiveness of an atomic reactor to propel ships.

As a long-time naval Reserve officer I can assure you that this particular revolution in seapower is wrought with the greatest significance.

Our growing fleet of nuclear-powered submarines may in the years ahead sweep other naval vessels from the seas.

In the interim the same propulsion applied to the next *Forrestal*-type carrier and to a guided-missile cruiser in the program for this year will add tremendously to the fighting effectiveness, the speed, and the radius of action of our Navy's future nuclear-powered task force.

Within 5 years there should be an oil tanker with nuclear power flying the American flag.

In 15 years such power could be commonplace for merchant ships and possibly for new passenger ships.

Within a decade the same results will probably be achieved from the current projects in the United Kingdom, the Soviet Union, Norway, Japan, and West Germany.

Already an atomic reactor has been carried aloft in a B–36 and large sums of money have been, and are to be spent, in the development of an atomic-powered intercontinental bomber.

While the mad race for superiority in exploring the field of atomic energy continues, we cannot ignore the threat to our world leadership because of the lack of trained scientific minds.

In the beginning of our effort to explore the atomic field, not more than 500 scientists were at work.

Today, that number has grown to over 5,000.

In 20 years we will need in the field of atomic power alone 23,000 scientists and engineers, or nearly five times our present number.

When you add to this number the needs of the military program our requirements for the future will be in excess of 30,000 scientific minds.

At the present time we are training fewer than 500 a year, as compared with the 1,500 needed annually.

If the United States is to meet the competition of Soviet Russia and maintain its leadership in the field of atomic energy we must increase the reservoir of scientists and engineers.

Over a 10-year period Russia will graduate 1,200,000 engineers alone, against 900,000 to be graduated in the United States, or a deficit of 300,000.

This deficit is a serious menace to our problem of retaining our supremacy in the field of atomic energy.

It brings us face to face with the terrifying question: Can the world afford to permit Russia to gain supremacy in the atomic energy field, and employ it as a decisive force in her efforts to conquer the world for communism?

It is not sufficient to answer this question in a negative manner.

We must reinforce our answer by a positive program of action.

In this connection, as a member of the congressional Joint Committee on Atomic Energy, I can assure you that the subject is receiving serious consideration by our committee.

From what I have told you it is evident that these are exciting years which lie ahead of us.

As I suggested earlier in my presentation it is not the atom which is evil.

We can make it do useful things for us, or we can allow it to destroy the world.

What will happen not alone depends upon us as Americans, but upon our neighbors in other countries of the world.

The development of the necessary long-range policies will demand the highest efforts of every segment of our population.

It is your responsibility, to understand at least, the basic facts of this new technology if you are to influence public opinion and Government in the right direction.

Not only the lives of you and your loved ones are involved, but the very survival of mankind and the present-day civilization which has taken centuries to develop.

More than this, it is hard to prescribe for the individual.

The new atomic-hydrogen age will be a challenge to our ingenuity and, likewise, our resourcefulness.

Endless frontiers are being opened to human intellect which gives new emphasis to the age-old expression, "knowledge is power."

Some of us, of the older generation, may find it difficult to accept some of the changes that will demand that we alter our manner of thinking.

These changes, as they come, will give real meaning to the graduation day exhortation that atomic energy poses a challenge to you graduates as you embark upon your careers in life.

I wish you all the success in the world.

It will be a world with many uncertainties, truly an exciting one, yet one well worth living and fashioning.

It is my fervent prayer that God may grant you the courage and strength to meet life's responsibilities and may He continue to shower you with his choicest blessings.

Good luck and Godspeed.

Old Textile Center Stages a Comeback

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, May 28, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of yesterday, May 27, 1956, entitled "Old Textile Center Stages a Comeback." The article shows what has been done in the city of Lawrence, Mass., where so many textile plants ceased operations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD TEXTILE CENTER STAGES A COMEBACK

(By John H. Fenton)

LAWRENCE, MASS., May 26—This former textile city appeared this week to have reached a new plateau in its climb toward diversified economic stability.

The exercising of an option to lease the Shawsheen Mill property in neighboring Andover by the Raytheon Manufacturing Co., meant the probability of 1,000 new electronics jobs within a year, and the possibility of 6,000 in 5 years.

In the last 2 weeks, the idle Wood and Ayer Mills in Lawrence were purchased by two Boston men with an idea of leasing or selling space for diversified industries. At one time these two mills employed 11,000.

For a city that lost 18,000 jobs when the bottom fell out of the textile industry in New England, the road back has been long and rocky. And even now, the greater Lawrence citizens committee for industrial development is not letting up on the accelerator. There still remain the older unemployed and much empty factory space.

Estimated unemployment in Lawrence in 1949 was around 21,000. Although the staggering of jobs in the textile mills and multiple family employment helped keep food on the tables, the situation was critical. That figure represented about 37 percent of the labor force.

Former Mayor John J. Buckley asked all groups seeking to attract new industries to merge into the central citizens committee. The Eagle-Tribune, a combined morning and evening newspaper; bankers, retailers, labor leaders, public utilities, manufacturing, wholesaling, real estate, education and the clergy all contributed manpower or ideas.

Within 2 years, 30 new manufacturing enterprises moved into the greater Lawrence area. The city itself lost some population, from workers moving elsewhere looking for employment. Others remained in the area, but commuted 40 to 50 miles daily to other jobs. Many still do, but would welcome a chance to work nearer home.

Despite the progress, the slide downward did not halt at once. The Wood and Ayer mills, which turned out 1 million yards of cloth a month, finally were abandoned in 1952. The Shawsheen spindles ceased whirring a year later.

Today the estimated unemployment stands at 6,300. But this is a misleading figure, in some respects, according to State and city sources. Many of the older men have withdrawn from the labor market. They are too old to learn new skills. Their children are supporting them.

At the same time, there is a readily available pool of women workers. Many of these are women who worked for a few years during the war, then withdrew to raise families. They are ready now to take up such jobs as skilled work in electronics or in plastics. Some of these women are taking home up to $125 a week from electronics concerns that already have moved into the area.

Other young women are preparing to leave clerical and similar desk jobs at $45 or $50 a week to make $65 as parts assemblers when the Western Electric operation starts. The United States Internal Revenue Bureau's big new regional processing plant also has attracted clerical help in the area.

The Shawsheen property takes in five buildings and a power plant just off route 28 between Boston and Lawrence. There are more than 1 million square feet of manufacturing, office and warehouse space. Raytheon will start converting the property to its uses within 2 weeks. The lease includes an option to buy the property if defense contracts warrant. The company is developing military equipment for Army Ordnance.

The Wood and the Ayer mills have combined manufacturing and office space of 3,525,833 square feet. Already there have been inquiries about leasing space. This development will take time.

The new Western Electric plant has 900,000 square feet of space in its North Andover facility. The company also has working space in nearby Haverhill and in Lawrence. It may need all the space. Some 60 Western Electric and Bell Laboratories executives and their families have moved into the area, chiefly from New Jersey, in the last 2 years. Another 100 or so families are expected this year.

All of this has created a building and general housing boom all across Essex County, between Lowell, to the west, and Newbury to the seast.

The Massachusetts Development Commission, an agency for augmenting bank loans, and the Massachusetts Department of Commerce have played important parts in the growing boom. One concern, Balta products division of the General Tire & Rubber Co., for example, is completing a $2 million addition to its facilities for processing plastic products for the home. Balta is one of the past-recession newcomers.

All of the surrounding communities, including Methuen, Andover, and North Andover, are talking of industrial parks to be erected adjacent to new highways that are on the planning boards of the State Department of Public Works.

Department of Defense Appropriation Bill, 1956

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10986) making appropriations for the Department of Defense for the fiscal year ending June 30, 1957, and for other purposes.

Mr. SIKES. Mr. Chairman, section 633 which was carried in the last defense appropriation bill as section 638 is quite well known to the House by this time. The best test of any piece of legislation is in its operation. Objectives, operation, and results are what you measure legislation by; not by the telegrams which attempt to influence your stand. The language of section 633 has been in operation for a year and we know how it works. I assure you that Congress has not created a monster in this section. Congress has created a safeguard, a simple and workable safeguard to protect the tax money of the people of the United States and to protect needed activities in the national defense establishment. I state categorically that section 633 has not resulted in any additional costs to the Government. Certainly it is reasonable to assume that before the Department of Defense decides to contract out to private industry an activity previously carried on within the Department, it would determine the economics of such a step. It would not be in the public interest to make such decisions blindly, without prior investigation.

Having determined the economy of such an action, it is only one step more for the Department of Defense to send to the Congress the figures showing why it is advisable to terminate that activity or dispose of it through private contract. It has worked no hardship whatsoever.

Now let us look at the actual operation of this section. The Department has sent to the Congress a list of 112 activities that it wanted to discontinue or contract out to private industry. What happened? The Congress gave its assent in all but nine cases. In only 9 cases out of 112 did the Congress say "We think you should not terminate or contract this activity." In most of those nine cases there was disagrement within the Department as to whether the work could be done more economically within the Department than it could under contract. In some of them there was important research aspects which would have been lost.

In 1 or 2 there simply was no private facility capable of doing the work, construction of facilities by private industry for such an operation at considerable cost—to be deducted from taxes of course—simply does not sound like good economy to me. In one operation it would have been necessary for the contractor to subcontract back to the Government for the operation to be carried on. There was nothing to indicate a saving.

Perhaps there were some more flagrant examples of activities scheduled for contracting to industry that the Government did not bother to send to the Congress because it was known there was no justification for a change.

Big business objects to this simple language which obviously is intended to protect the taxpayer. Why? It has shown by actual operation that there is nothing wrong with the section. It

gives the people who appropriate the money for the operation of a specific activity an opportunity to look before the activity is contracted or given away and closed down, with possible injury to the Defense Establishment.

Do not forget there is a human side to this problem. There is know-how and skill accumulated through faithful service to the Government by the workers who carry on these activities. Are they to be turned out without a word and without consideration because big business smells a profit in what they are doing? The skill of these workers will be invaluable in time of emergency. Where will you turn for know-how or facilities at that time?

Let me say this: Some of the drive to eliminate this section seems to have come from recommendations of the Hoover Commission. I remember many instances when the recommendations of the Hoover Commission have not been considered sacrosanct. As a matter of fact, I think most of them have had to be tempered down quite a little bit before we found them practical, workable, or acceptable. Secretary Wilson said that this is working no hardship. He showed no disposition, on being questioned by me, to have this section eliminated. I submit it is a good section.

If you want the final measure on this, the House Committee on Armed Services has prepared a bill, and will present it shortly, which carries on this same operation. It is in different language, yes, but it will carry on the same activity that we proposed a year ago and which was adopted a year ago, and which has proved itself in operation.

The CHAIRMAN. The time of the gentleman from Florida [Mr. SIKES] has expired.

Refund of Federal Tax on Gasoline Used for Farm Purposes

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ADAIR. Mr. Speaker, many of the farmers of my district have indicated an interest in the question of how they should apply for gasoline tax refund under recently approved Federal legislation. Upon inquiry, the Internal Revenue Service furnished the following information which I thought might be of general interest:

Farmers will be able to obtain a refund of the Federal excise tax on gasoline which is used on a farm for farming purposes under the law approved by President Eisenhower on April 2, 1956. The present Federal tax rate is 2 cents a gallon. Commissioner of Internal Revenue Russell C. Harrington announced that under the new law the first refund payments will be made after June 30 with respect to gasoline purchased and used during the first 6 months of 1956. Thereafter, refunds will be made for a 1-year period from July 1 to June 30.

To get his refund, a farmer will have to file his claim after June 30 and before October 1. Claims are to be made on form 2240 and are to be filed with the United States District Director of Internal Revenue for the farmer's district. The form will be available after June 1 at Internal Revenue offices, county agricultural agents, and many banks and post offices.

Refunds will be limited to the Federal tax on gasoline which is used by a farmer for farming purposes, in carrying on a trade or business, on a farm located in the United States. A farmer may also request a refund of the tax on any gasoline which is used on his farm by a custom operator or a neighbor in connection with cultivating the soil, or raising or harvesting any agricultural or horticultural commodity.

In general, the new law provides that gasoline shall be treated as used for farming purposes if it is used:

1. By the farmer or any other person in connection with cultivating the soil, or raising or harvesting any agricultural or horticultural commodity, including the raising of livestock, poultry, etc., on the farmer's own farm.

2. By the farmer in the operation, management, conservation, improvement, or maintenance of his farm or its tools or equipment.

3. By the farmer in handling, drying, packing, grading, or storing any agricultural or horticultural commodity in its unmanufactured state, but only if the farmer produced more than one-half of the commodity which he so treated during the period for which the claim is filed.

4. By the farmer in connection with the planting, cultivating, caring for, or cutting of trees, or the preparation (other than sawing into lumber, chipping, or other milling) of trees for market, but only if the planting, etc., is incidental to his farming operations.

No refunds of tax are allowed on gasoline used off the farm, such as gasoline used on public roads or highways in transporting family members or workmen, equipment, livestock, crops, feed, etc. Also, no refunds are allowed for tax on gasoline used in processing, packaging, freezing, or canning operations.

Farmers are also given special relief from the Federal excise tax on diesel fuel and special motor fuels used on a farm for farming purposes.

Farmers who expect to file claims should keep sufficient records to enable the Internal Revenue Service to verify the accuracy of the amount claimed.

Commissioner Harrington said that regulations relating to the new law will be issued as soon as possible.

Here is a facsimile of form 2240:

FORM 2240

UNITED STATES TREASURY DEPARTMENT—
INTERNAL REVENUE SERVICE

Claim for refund of Federal tax on gasoline used on a farm—1956

See instructions on reverse side. Please print.

1. Name _____

Address (number and street or rural route)

_____

(City, town, or post office) _____

(zone) _____ (State) _____

2. Total gallons of gasoline purchased after December 31, 1955, and used on the farm before July 1, 1956, for farming purposes _____ gallons.

3. Rate of Federal tax _____ $0.02

4. Amount of refund claimed (line 2 multiplied by line 3) _____ $

I declare under the penalties of perjury that this claim has been examined by me and to the best of my knowledge and belief is true and correct.

Danger in Domestic Textiles

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. POFF. Mr. Speaker, by reason of our low tariff rates on uncontrolled importation of foreign textile finished products produced by cheap foreign labor, our domestic textile industry, including synthetics, apparel and other finished textile mill products, is fast becoming the sick man of the American industrial economy. This industry, which employs about 14 percent of our manufacturing wage earners, has in recent years been compelled by unfair competition from abroad to curtail production, shorten the workweek and discharge temporarily or permanently over 260,000 employees. Since 1947, domestic cotton manufacturers' exports have dropped from $748.8 million to $242 million. During the same period, foreign imports have increased from $24 million to $123 million. These imports now supply 30 percent of the domestic gingham market, 30 percent of the cotton blouse market and 70 percent of the velveteen market.

What accounts for this tremendous increase in imports and this alarming threat to our American textile manufacturers? Approximately 27 percent of the production cost of cotton cloth is wages. The average Japanese textile worker's wage is 13 cents an hour, as compared to our $1.35 an hour in the United States. It is unthinkable to expect the American worker to compete at this wage level with Japanese workers, and the manufacturer himself, faced with this fixed production cost, has no flexibility with which to meet foreign prices on the finished product. As a matter of fact, the cotton manufacturer is faced with still another inflexible factor which does not face his foreign competitor. About 53 percent of the production cost of the cotton cloth is raw cotton whose price to the American manufacturer is sustained at an artificially high level by the domestic cotton price-support program. Cheap foreign cotton is not available to him as it is to his foreign competitor, because America has placed an import quota on raw cotton of 29,000 bales. Compared with the 9 million bales required by the American manufacturer, this quota is not a drop in the bucket.

Those of us interested in the welfare of the American cotton manufacturer and his employees cannot understand why America will impose a quota on a cheap foreign raw-product import to protect domestic growers, but refuses to consider a quota on importations of the cheap foreign-finished product to protect the American manufacturer and his employees.

For similar reasons, we fail to understand why there continues to be such an unfair balance in tariff rates between the United States and foreign competitor

nations. According to the 1953 figures, which are the latest presently available to me, the United States tariff rate on imported finished cotton product was 21.55 percent. On the other hand, Britain's tariff rate on cottons was 30 percent, Italy's up to 25 percent, Germany's up to 30 percent, and Canada's up to 27.5 percent. With respect to synthetic textile products, America's tariff rate on foreign imports was only 19.7 percent, whereas Norway's was 22 percent, France's 20 to 25 percent, Italy's 25 to 27 percent, and India's 50 percent.

I do not profess to know whether the proper solution is an import quota or an increased tariff or a compromise combination of both. However, I do know—and every domestic manufacturer and worker will bear me out—that unless some firm and positive action is taken soon this Nation faces the bleak borders of bankruptcy of the domestic textile industry—an industry which is not only vital to our economic health in peacetime but essential to our very national security in wartime, when foreign imports might be suddenly and completely cut off.

Mr. Speaker, all of us are concerned about the economic well-being of the Japanese. We are encouraged to hope that in the unhappy event of war Japan would be an ally. Indeed, we have been so concerned about Japan's welfare that we have used American taxpayer dollars to rebuild her shattered industries. The irony of the fact is that we have furnished the capital to install the very machinery which, with subsubsistence wage levels, produces textile products which are undermining our domestic industry. It is one thing to say that we should help the Japanese, but it is entirely a different thing to say that we should do so by hurting our own American citizens.

Congressman McGregor's Schedule of Meetings in the 17th Ohio District

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. McGREGOR. Mr. Speaker, having been assured by the leadership that the Congress will not be in session during the latter part of August and September, I will again this year follow the procedure of holding meetings in the courthouses of the seven counties in my district.

While a Congressman is expected to have a broad grasp of national and international matters, I have always deemed it most advisable to keep in touch with the people of my district so that I might have their views and endeavor to be of service to them in their personal problems. I will be at the courthouses in the various counties as per the following schedule:

Monday and Tuesday, August 27 and 28, Ashland.

Wednesday and Thursday, August 29 and 30, Mansfield.

Friday and Saturday, August 31 and September 1, Coshocton.

Tuesday and Wednesday, September 4 and 5, Delaware.

Thursday and Friday, September 6 and 7, Newark.

Monday and Tuesday, September 10 and 11, Millersburg.

Wednesday and Thursday, September 12 and 13, Mount Vernon.

Weekdays, 9 a. m. to 4 p. m. Saturday conferences will last only until noon, when the courthouse closes.

In the past these meetings have been most successful, and it is surprising how much can be accomplished when a citizen and his Congressman can sit down and talk over national and personal problems.

No appointments are necessary for these conferences, and I urge any or all of my constituents to meet with me on the date most convenient to them.

With the knowledge thus obtained, I know I will be better able to truly represent them in the Congress of the United States.

Mother of the Year

EXTENSION OF REMARKS
OF
HON. JOHN J. BELL
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. BELL. Mr. Speaker, Members of the House of Representatives, I have the pleasure to announce that a constituent of mine, Mrs. Maria Reyes, of Beeville, Tex., has received the distinct honor of being designated mother of the year by the cadet corps of our great Texas A. & M. College on Mother's Day.

Mrs. Reyes, one of our fine Latin-American Texans, does not speak English too well, but in spite of this fact, she has managed to grow enough cotton to put 5 of her 8 sons through Texas A. & M. College. Another son, Marcarito, is an Aggie senior this year. Two younger sons, now in high school, plan to enroll at A. & M., also.

Mrs. Reyes has reared six daughters, and through her inspiration and efforts, has given them the help and encouragement to receive college educations.

Three of her sons served their country in the Armed Forces during World War II. Two returned as majors and one as a lieutenant colonel.

It is apparent that the cadet corps of A. & M. College chose wisely and well in selecting this great woman for mother of the year. It is on homes like these that our great American tradition is founded. I know all Texas is proud to claim Mrs. Reyes and recognize her contribution to her State and her Nation. It is with pride and humility that I commend her to you, the Members of the House of Representatives, as a wonderful mother, a fine Texan, and a splendid American.

National Congress of Petroleum Retailers Files Application for Trade Practice Conference

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from Mr. George J. Burger, well known to many of my colleagues as the vice president of the National Federation of Independent Business, I include a copy of the letter to which he refers addressed to the editor of the Service Station News inasmuch as I think it will provide much food for thought and reflection:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., May 17, 1956.

Hon. JAMES ROOSEVELT,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: You will note the attached letter which speaks for itself.

In view of the extensive action you gave these problems as chairman of the Subcommittee of the House Small Business Committee, it would strike me that all independent members of the gasoline trade should realize the action of your committee in their behalf and they should put all emphasis on support of such constructive action that would eliminate the cancer that is destroying independent business establishments in the gasoline serving industry.

You are privileged to use these comments as you deem fit in the CONGRESSIONAL RECORD.

Sincerely yours,

GEORGE J. BERGER,
Vice President.

MAY 16, 1956.

EDITOR, SERVICE STATION NEWS,
St. Louis, Mo.

DEAR SIR: In reviewing the May issue of your publication I noted with considerable interest the front page story National Congress of Petroleum Retailers Files Application for Trade Practice Conference.

Not being unduly critical of the action planned, we are just wondering whether such planning will bring about the long overdue relief to the many thousands of independent filling-station operators throughout the 48 States. It's a matter of public record as to the plight facing the efficient independent filling-station operators due to what appears to be the control exercised over their independent operations to serve the public.

This statement is confirmed by the actions of the Small Business Committees of both the House and the Senate in due public hearings during the past year, and the entire proposition was exposed in the first instance by the Senate Small Business Committee early in 1941, so it is our honest opinion that if the independent filling-station field is to get the long overdue and immediate relief, trade-practice conference through the Federal Trade Commission will not solve their basic problems.

The writer has had some experence with these trade-practice conferences as it applied to the rubber-tire industry. Although those rules were instituted in October 1936, here some 20 years later we find no attempt upon the part of the Government agency to vigorously enforce those rules.

Wholly in the interest of independent business of all descriptions, which would certainly include a substantial membership of independent filling-station operators in the federation, and merely as a help to them, it would strike us that all efforts should be used to bring about immediate relief so that the free enterprise system can actually operate in the independent filling-station field through:

1. Similar action to be instituted individually by gasoline suppliers filing their prices under the Fair Trade Acts, as has recently taken place by certain leading companies in the State of New Jersey. Such action, we repeat, must not be by collusion, but by the individual action of the suppliers.

2. Due to the disclosures made through congressional committees beginning in 1941, and more recently through the splendid actions of the Small Business Committees of the Senate and the House on this problem, it would strike us that the only permanent correction for the protection of independent filling-station operators is the complete divorcement of the gasoline supplier operating in the retail field through their own setups.

Bear in mind that the federation is committed by its nationwide membership of 100,000 or more for all-out vigorous enforcement of the antitrust laws. In fact that is the principal and main objective of the federation to protect independent business, and in view of this we make this suggestion as to the proper approach in correcting the cancer that is slowly but surely destroying independent establishments where certain large interests in the production field are operating in the retail field through their own setups.

These comments are made wholly for the best interests of the people your publication serves.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

A Tribute to Our Defenders

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. IKARD. Mr. Speaker, my attention has been called to a short article that appeared in the Coyote News, the Wichita Falls, Tex., high school bulletin. The article is entitled "A Tribute to Our Defenders" and was written by Albert Swarts, a senior in the Wichita Falls High School. I think this is a very fine and timely article as Memorial Day approaches and I would like to insert it in the RECORD.

A TRIBUTE TO OUR DEFENDERS

Memorial Day is drawing near, and all should stop for a moment to honor those men who have sacrificed their lives to protect this country and its ideals. This country, with its fast pace of life, often forgets these men and the cause for which they fought after its way of life is out of danger. These men, however, deserve to be remembered as long as the stars and stripes fly in the sun.

These men loved peace and life as well as any person living today, but they also loved democracy and were not willing to sacrifice their freedom for personal safety. They spilled their blood on soil far from home for ideals often taken for granted by their relatives and friends, but they preserved the freedom of these friends. These men would be greatly dishonored if the people they protected should forget the principles they saved. Deep thought on this matter is in order for Memorial Day of 1956.—Albert Swarts.

H. R. 5789

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. COON. Mr. Speaker, I have received several copies of a letter in the Oregon Labor Press which is the official publication of the Oregon State Federation of Labor and Portland Central Labor Council. This letter shows very clearly what a member of the Electrical Workers Union 125 thinks of President Eisenhower's partnership plan, and especially of H. R. 5789, the John Day bill. Under leave to extend my remarks, I wish to include the following:

DEPENDS PARTNERSHIP PLAN

To the Labor Press:

I have just read Senator NEUBERGER'S report in the May 4 issue of the Labor Press. As a member of a union which enjoys excellent relationships with electric utility companies, and which has endorsed H. R. 5789, the so-called John Day partnership bill, I cannot let some of the misrepresentations contained in the Senator's report go unanswered.

The Senator states as a fact that the cost of John Day Dam will be $358 million. The truth is that this is by no means a settled issue. In a letter to CHARLES BUCKLEY, chairman of the House Committee on Public Works, the Secretary of the Army states that the estimated cost of $310 million for the modified John Day project is considered reasonable.

Furthermore, the United States Army Board of Engineers for Rivers and Harbors agreed at a hearing held in Washington, D. C., January 19, that the dam should be built at a height several feet lower than originally planned. Staff members of the Corps of Engineers have indicated this modification will substantially reduce the cost of John Day from the original estimate of $358 million.

It is also a fact that H. R. 5789 specifically says that any cost over $310 million shall be paid by participating utilities. Thus, in John Day, the non-Federal participants would pay not only for the entire cost of the power features of the project (above $273 million), but also agree to pick up the tab for any costs above the estimated total.

Congressman CLIFFORD DAVIS of Tennessee, after the 1-day "quickie" hearing on July 26, 1955, promised a full and complete hearing on the John Day bill during the current session of Congress. So far, he has not kept that promise.

If Senator NEUBERGER would help to get a hearing on this bill, the testimony would show that the cost of power from John Day under the partnership plan will be comparable to that from the other federally owned plants on the main stem of the Columbia River system.

Over the entire 50-year contract period for John Day power, its estimated cost is 2.87 mills per kilowatt-hour with private financing, which provides for State, excise, and Federal income taxes. This compares very favorably with the estimated cost of 2.7 mills per kilowatt-hour at the Dalles project, which is federally financed.

If a number of tax-free municipalities or State power commissions enter the partnership program for John Day, it is estimated that the cost of power will be 2.7 mills (or less) per kilowatt-hour.

I cannot help but be amazed that Senator NEUBERGER still continues to compare Bonneville's average industrial rate to the average industrial rate charged by one particular private utility. Anyone who has even the vaguest knowledge about the electric utility business knows this comparision is as phony as a $3 bill. It is rather like comparing the tree in the woods to the cost of a delivered crossarm.

BPA sells energy to 18 industrial customers. Five of these are aluminum reduction plants that use more electricity than medium sized cities, and pay less than public or private utilities because they can buy continuous power around the clock at high voltage. The Senator compares the price of power sold by BPA to these 18 industrial giants with the average price which a private utility charges for all industrial use, starting with 1-man garage workshops.

If we look at the private utility customers using 3,000 kilowatts or more, we find the average rate to be 3.5 mills per kilowatt-hour, and this is just about what BPA would charge for the same service.

It seems to me that all of us had better stop using, and swallowing, fake arguments; and take a good long look at the facts of this so-called power issue.

JACK KEGG,
Electrical Workers 125.

PORTLAND.

Congressman Miller's Record on Public Power

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent, I insert the following remarks in the Appendix of the RECORD and a copy of a letter I am sending to the Honorable MICHAEL KIRWAN, of Ohio.

Mr. Speaker, on May 22 the gentleman from Ohio made a serious charge against me in stating, "Nebraska has voted against every State that wanted public power." The gentleman from Ohio [Mr. KIRWAN] was referring to seven votes which occurred on May 2, 1951. He was using this as his excuse for voting against public power and not supporting the administration's request which had budget approval for the 230-kilovolt line from Fort Randall, S. Dak., to Grand Island, Nebr. His motion to strike this item from the bill denies the REA's of Nebraska a right to get public power. According to press reports he said, "This public power project would go in over my dead body." He also made the statement on the floor of the House that he doubted "if I would vote for the

second coming of Christ." This was in bad taste and offensive and to his credit, he did delete it from the permanent RECORD. It is a rare occasion when a Member's motive or votes or religion is attacked on the floor of the House.

The letter I have written to Mr. KIRWAN and which appears as a part of these remarks, shows that there are a total of 371 reclamation, hydroelectric plants, and flood-control projects which have been presented to the House in the last 14 years since I have been a Member. I have challenged Mr. KIRWAN to show where I have failed to support legislation or the appropriations for all but 4 or 5 of these projects. In fact, the criticism I get is that I have been a bit too liberal. I have always felt that reclamation, public power, and flood-control projects were an investment in the future of America. They return dividends, they are needed for an expanding population.

Close examination of my voting record will refute the charge that I have voted against "every State who wanted public power."

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 25, 1956.

Hon. MICHAEL KIRWAN,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: I have just reviewed the debate we had in the House on May 22, 1956, in which you made some serious charges that the Nebraska delegation, and A. L. MILLER in particular, on May 2, 1951, failed to support seven rollcalls which you claimed was a vote against public power. You have stated, "Nebraska has voted against every State that wanted public power." The records, of course, deny this statement. The vote you refer to occurred on May 2, 1951. This was in the midst of the Korean war, which was not going well for this country. The budget was out of balance $14 billion. The votes I made to cut Southeastern Power Administration and the Southwest Power Administration was in support of an amendment made by Democrats. It was a small cut. One in the direction of economy. Both votes prevalled. The House voted with the Nebraska delegation and it was a Democrat-controlled House. I also voted for Mr. TABER'S motion to cut all appropriations including reclamation and power projects by 5 percent. Again it was an economy move and could not possibly be considered having voted against public power.

Now I want to cite to you my record of voting for reclamation projects and for public power. In the last 2 years I have voted for the Chief Joseph in Washington; Washita in Oklahoma; the great upper Colorado project with its numerous reservoirs and powerplants. The Trinity River project in California which is a great public power and irrigation project; the Ventura project in California, and others.

You will find on page A4107 and A4108, of the May 22 CONGRESSIONAL RECORD a list of hydroelectric plants either constructed and operated or to be constructed and operated by the Bureau of Reclamation. This list was put in by our colleague, JOE L. EVINS, of Tennessee. There are a total of 72 projects in all—59, while I have been a Member of the House, have been considered. I have been in support of everyone of the 59 Bureau of reclamation projects. I challenge you to show where I have failed to support legislation or appropriations for these projects. I list them as follows:

Hydroelectric powerplants

CONSTRUCTED AND OPERATED BY THE BUREAU OF RECLAMATION

State	Project	Name of plant
Alaska	Eklutna	Eklutna.
Do	do	Little Eklutna.
Arizona-Nevada	Boulder Canyon	Hoover.
Do	Parker-Davis	Davis.
California	Central Valley	Folsom.
Do	do	Keswick.
Do	do	Nimbus.
Do	do	Shasta.
Colorado	Colorado-Big Thompson	Estes.
Do	do	Flatiron.

Wyoming	Missouri River Basin	Bald Ridge.
Do	do	Fremont Canyon.
Do	do	Hunter Mountain.
Do	do	Sheridan.
Do	do	Sunlight.
Do	do	Thief Creek.

AUTHORIZED TO BE CONSTRUCTED BY OTHERS

California	Central Valley (USCE)	Iron Canyon.
South Dakota	Missouri River Basin (USCE)	Big Bend.

If you will refer to your own report on pages 5 and 6, you list all of the appropriations for reclamation. There are 44 individual projects for irrigation and power. I challenge you to show where I failed to support legislation or appropriations for any one of these reclamation and hydroelectric plants. On pages 10 to 17 inclusive, are listed 299 projects for the Corps of Engineers. They are flood control and hydroelectric plants. The record will show that I have supported legislation and appropriations for all but 4 or 5 of these projects. Again I challenge you to show that I voted against power in these projects.

It was my amendment to the appropriations bill last year that placed 8 new irrigation and power projects in the Public Works legislation. I believe this was much to your discomfort.

The record will show that I have voted for steam plants for TVA; I have voted for all of the money to increase the appropriations for REAs. I have said repeatedly that these appropriations were an investment in the resources of this country. I complained bitterly on March of 1952, and you will find it on page 3066 of the RECORD of that date, when I said, in part "It comes to my attention that no new starts have been the Congress and the administration for some time and if this program continues, the present irrigation projects will have been finished and we will be without a new start for irrigation projects—I earnestly hope that the policy of the Government and the Committee on Appropriations might be changed so that we can proceed with the orderly development of feasible irrigation districts—electric power makes irrigation feasible—when the Congress spends money for the development of power projects that money and the fruits of this thing ought to be for the benefit of the people of the United States—the policy has been that there should be no new starts, this must be changed. I repeat, these new projects plus electricity, adds new wealth, brings new business, taxes, and security to our Nation. The resources must be developed to meet the needs of an expanding population." I believe, sir, that each year the record will indicate that has been my attitude on public power.

As a ranking member of the Interior Committee and chairman in the 83d Congress, we were diligent in protecting the rights of the preference customers getting public power.

I am a little surprised, sir, that you would attempt to mislead my colleagues and the country by stating that I have failed to support public power projects. The record denies such an allegation. I am wondering, also, that if I was wrong, as you say I was, in not supporting public power projects, that if you now consider your vote, which is against public power and the REA's of Nebraska, is right?

I think it is most unfortunate that you have used your position as the Democratic chairman of the subcommittee, to make the motion to strike the 230 kilovolt line from the appropriations bill when it was approved by the Bureau of the Budget and the Republican administration. I think it was unfortunate that you stated, and I quote the press, "They will get it only over my dead body." You are in a powerful position to defeat the appropriation, but, sir, it is a vote against public power.

I note that you deleted the statement you made in the debate when you said, "I doubt if the gentleman from Nebraska would vote for the second coming of Christ." That, sir, was not in good taste and to some, quite offensive.

I can only conclude from your action on the floor that you have attempted to mislead the Congress and the country with the hope that you might gain some political advantages in Nebraska. I know your hopes will be in vain. I can only say that if I had voted as you have been voting, my people would not be returning me to Congress with such a handsome vote.

I expect, sir, to place this letter and report in the appendix of the CONGRESSIONAL RECORD. I would again urge that you examine my record in the project list in this letter. If you will do that and examine my voting record you will find that it is as good as most Members in the House on public power. Your citation of the seven votes on May 2, 1951 was not against public power, they were for economy in our country when we were losing a war and had a $14 billion deficit facing the American people.

The hearings on the 230-kilovolt line will be held in the committee of the other body on May 31 or the early part of June. I believe it will again be presented to the House as a conference matter. I trust you will use your influence and support public power as I have done in the past.

Sincerely yours,

A. L. MILLER,
Member of Congress,
Fourth District, Nebraska.

Small Business Victory

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ROOSEVELT. Mr. Speaker, last Monday, May 21, the 218th name was signed to the petition to discharged H. R. 11, the equality of opportunity bill. On that day the chairman of our committee, the gentleman from Texas [Mr. PATMAN], gave out a press release thanking and congratulating the 218 Members who signed this petition. I failed to see anything in the local press on this release, and it occurs to me therefore that the Members would be interested in knowing about the press release of the gentleman from Texas [Mr. PATMAN].

On Tuesday, the day following the completion of the petition to discharge H. R. 11, the House Committee on the Judiciary met and reported another bill on this subject. This is bill H. R. 1840. I am not at this time prepared to comment on the relative merits of the two bills; I simply call attention to the fact that our chairman [Mr. PATMAN] has offered his congratulations to the Members who signed the discharge petition on his bill; and I likewise congratulate those Members.

STATEMENT OF WRIGHT PATMAN, MEMBER OF CONGRESS—SMALL BUSINESS VICTORY: 218 MEMBERS OF THE HOUSE SIGN PETITION TO CALL UP H. R. 11

Two hundred and eighteen Members of the House of Representatives have now signed the discharge petition to call up H. R. 11, which means that this bill will definitely be acted upon by the House.

The 218 Members who signed this petition are to be warmly congratulated, both for the interest they have shown in preserving independent businesses in the United States, and for taking this affirmative action to pass this needed legislation.

H. R. 11 will strengthen the antitrust laws and plug the loophole created by the Supreme Court in the one antitrust law which affects the everyday practical operations of every small business in the United States. The bill will restrain abuses of power by which big businesses destroy equally efficient and even more efficient small businesses. This is the abuse of power which is exercised through price discrimination.

The House Rules require that after completion of the discharge petition, 7 days must pass before the bill can be taken up and voted on, and furthermore, that it be taken up only on any 2d or 4th Monday after expiration of the 7 days. This means that the bill will be taken up and acted on by the House on Monday, June 11.

My belief is that a great majority of the House is overwhelmingly in sympathy with preserving the free-enterprise system, which means restoring equality of opportunity for small business. The bill will simply make it illegal for any seller to engage in any discriminatory pricing practice which substantialy lessens competition or tends to create a monopoly.

I predict the bill will pass. Small-business people all over the United States will hail this as a great victory.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. LESINSKI. Mr. Speaker, on the 28th of May the Armenians celebrate the 30th anniversary of the short-lived independence of the Republic of Armenia. This event which marks their brief independence between the years 1918 to 1920 causes one to reminisce on the principles of a great President of the United States, Woodrow Wilson, who actually believed in the freedom of all nations. He was not one to pay lip service to gain votes but acted with sincere effort to produce harmony and individualism in people throughout the world. What a different picture there is today.

Soviet Russia has consistently attempted to annex properties of foreign nationals as a guise of progress to its peoples, to plunder for the purpose of supplementing its treasuries, and to raid to obtain additional recruits for its slave-labor camps.

Following World War I in 1920, the Soviets took over the Republic of Armenia. The same year they also attempted to take over Poland but were defeated. Both these nations were looted, devastated, and unprepared to withstand these menacing hordes. Fortunately, Poland had assistance from America and France which helped defeat these ravaging savages.

The freedom of the nations I have mentioned and others was established by people with foresight and vision to the future. President Wilson recognized the practicality of independence of various nations. His foresight is woefully lacking today among administration circles for in the interests of peaceful coexistence, no real effort is being put forth to bring about any stability in the world.

The great ado about the Geneva Conference only brought about more confusion among Americans and throughout the rest of the world. What was accomplished; certainly no attempt was made to reestablish the right of self rule to the rightful people.

The Geneva Conference was actually brought about through Communist subterfuge, although a venerable gentleman from the other body is credited with having initiated the proposal. And, of course, the present administration fell for it hook, line, and sinker.

The Russians by their indirect interjection have gained beyond their expectations. They gained not only knowledge of our advancements in medicine, nuclear physics and other fields, but also gained in the implementation of exchange programs of visitors in vari-

ous nations. The seven Russians who visited America last year were typical examples. They were not just journalists but were professionals in various fields. From their trips they gleaned valuable information for the U. S. S. R. They are so far behind in Russia that they have had to buy innumerable items from us, such as a complete window assembly to be reproduced in Russia. Their constant boasting about their progress is I believe deflated by just this one item.

What did the present administration gain? Only a stroke of propaganda for peaceful coexistence. That makes many of us who are thoroughly familiar with Russia's actions not only in recent years but also in centuries past firmly convinced that the Russians are working only for their own benefits. Any agreements or treaties are simply scraps of paper for us to adhere to but for them to benefit by and forget at the opportune moment.

The purpose behind the present moves of Russia for peaceful coexistence is to neutralize Western Europe and Asia, to destroy NATO and SEATO and to isolate America.

Today, in spite of the attempt to follow many of the Roosevelt and Truman policies, the present administration is allowing itself to become more and more entrenched in an isolationist position. For this trend, we certainly have no cause to rejoice in America.

For instance, the so-called relaxation of terror in the satellite nations might have some truth to it, but it really is of no consequence. Russia has not and will not relax her complete military and police domination and policy control over any of the nations behind the Iron Curtain. She has willfully destroyed leaders of these countries and to a degree the spirit of active participation but never the desire for self rule.

Presidents Wilson, Roosevelt, and Truman were controversial figures. Anyone who has the qualities of leadership and the ability to act when necessity arises will always be a controversial figure. This, of course, is not true today. So we may justly assume that we have a figure at the helm of our Government who will never be controversial.

To those of us who pray and hope for the reestablishment of a free and independent Armenia and of the other nations, the present looks hopeless unless this conglomerate giant falls of its own weight. From all indications, this is not immediately possible.

Eliminate Secret Agreements Under Antitrust Laws

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ROOSEVELT. Mr. Speaker, last Thursday I introduced a bill, House Resolution 11454, to amend section 4 of the Sherman Act to prescribe a procedure with respect to consent judgments, decrees or orders and for other purposes.

The House Small Business Committee has had under study and investigation the effect of consent decree procedures upon small business. There is no question that small-business men can be benefited by the negotiation of consent decrees in antitrust actions brought by the Department of Justice. Small-business men need speedy and prompt relief from monopoly practices and often a consent decree may avoid long protracted litigation lasting 15 years or longer.

The Department of Justice may also benefit from the settlement of an antitrust case by consent of the parties. As pointed out by Judge Barnes in testifying before the House Small Business Committee in March of this year:

> The division is caught in a vice between increasing complaints of violation and decreasing appropriations * * *. Since savings in time generally spell like savings of men and resources, consent settlements mean lower cost per judgment entered. And, more important, it means quicker relief to the parties adversely affected by the acts charged in the complaint.

While these objectives are laudable there remains serious defects in the procedure by which consent decrees are negotiated and accepted by the courts. The purpose of my bill is to remove such defects without detracting from the advantages that can be obtained through the use of consent decrees.

A consent decree, under the procedures now in use by the Department of Justice and the Federal Trade Commission, is in effect a private settlement between the Government and an antitrust defendant, resulting from secret negotiations and compromises.

The court in accepting such consent decrees has no record or objections before it, upon which it can make a determination whether in fact the compromise between the Government and the antitrust defendant is in the public interest. As stated by Judge Barnes in his testimony on March 29, 1956, before the House Small Business Committee:

> Though consent judgments bind both parties and estop future de novo proceedings involving matters covered, their provisions ofttimes receive only cursory judicial scrutiny. * * * These facts, it seems clear, support one commentator's conclusion that consent "procedure permits no conclusion of independent court determination."

How then is the public interest, and in particular the interest of small business, to be protected?

I submit that the only way to adequately protect these interests is to provide that any consent judgment, decree, or order in any civil proceeding brought by the Department of Justice or the Federal Trade Commission under the antitrust laws or the Federal Trade Commission Act should not become final for a period of 30 days, during which time any person who may be aggrieved by the proposed judgment, decree, or order may formally make to the court his objections and have the same considered by the court.

Such a proposed procedure is not a reflection upon the integrity and the ability of the Department of Justice, whether it be under a Democratic or a Republican administration.

However, as stated by Judge Barnes, in consent decree negotiations—

> Shirt-sleeve conferences replace formal court trials; the give and take of bargaining supplants the atmosphere of an adversary proceeding.

An adversary proceeding is, of course, the basis of our system of jurisprudence; and certainly the history of Anglo-American jurisprudence has proved that the adversary proceeding best protects the rights of interested parties and is the best and surest means of ascertaining the truth in disputed matters. Consent decree negotiations, however, take away the safeguards inherent in adversary proceedings.

While the informality of shirt-sleeve negotiations may upon occasions, in the words of Judge Barnes, "resolve issues of fact, proof of which would be difficult if not impossible in a contested suit," upon other and probably the majority of occasions this same informality will result in the Government relying upon or being influenced by statements on the part of the defendant, which will never need to stand the tests and safeguards of either trial or public scrutiny. There are other factors inherent in the present consent decree procedure which further put the Government and the public interest at a disadvantage. One is the fact that the Antitrust Division is admittedly understaffed. In discussing the consent decree negotiations between the Department and the United Fruit Co., Judge Barnes stated that—

> Underscoring the complexity of our task is the fact that four law firms in Washington, New York, Boston, and New Orleans, in addition to United's own law department, now represent United Fruit * * * The Antitrust Division, in sharp contrast, during 1954 had only one man—albeit a capable and experienced one. * * * Beginning with 1955, I was fortunate enough to bring into the case * * * a man versed in trial work, who, in addition, had some 20 years of antitrust experience. Even now, however, our staff consists of too few lawyers, in comparison to the galaxy on the other side.

Such disparity in attorneys does not, of course, mean that it is impossible for a few representatives of the Department of Justice adequately to protect the public interest against a host of corporate attorneys. It does mean, however, that the job is extremely difficult and that the Government negotiates under a definite handicap.

Further, according to Judge Barnes, it is not only announced policy of the Department of Justice, but also an economic necessity, that Government antitrust cases be compromised and not brought to trial. The Government then indeed is in a poor bargaining position in negotiating the decree; and the Government's lawyer would appear to be subject to heavy pressure to take whatever he can get in a form of a compromise, even though this falls far short of the real belief which is needed adequately to protect the public interest.

There are also other pressures upon the Government representative to accept

less from the defendant than what the public interest requires. Present consent decree procedures may be long drawn out affairs. The Government lawyer negotiating such a decree, as a practical matter, does not want to see all of his work go for nothing. He may—and in the utmost good faith—rationalize away some of the dangers of a proposed consent decree in order to reach a compromise which the defendant is willing to sign. Or the Government lawyer may face a more practical problem—the fact that agreeing to a consent decree is a lot easier than preparing for a long and difficult trial. And finally, even though the Government were prepared for trial, there must inevitably lurk in the minds of the Attorney General down to the lowest employee in the Department of Justice the question—why take a chance on losing the trial when a consent judgment can be entered into which will look well for the "record?"

These criticisms of the consent decree procedure should not be taken as impugning the motives and good faith of the hard working and overworked officials of the Department of Justice and the Federal Trade Commission. Bad decisions, however, can be made with the utmost of good faith. That, of course, is the reason why both our judicial and administrative system always carries with it the right of review. My bill, in some measure, will make possible a review by the court of what has heretofore been a private and secret compromise between antitrust defendants and lawyers in the Department of Justice. At the same time the basic values of the consent decree will be fully retained. The only loser will be he who has at first achieved an unfair and harmful advantage. The gainers will be all who have a right to ask that the Government consider their rights also.

Mr. Speaker, I earnestly recommend this bill to the members of the Judiciary Committee and ask my colleagues to give it careful consideration.

Don't Damn All Dams

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, May 28, 1956

Mr. WATKINS. Mr. President, much has been said in recent months about the alleged adverse effects that construction of water-storage dams would have upon wildlife and recreation. It is gratifying to me that one of our leading sports magazines has now seen fit to look at the other side of the coin, and present for its readers an article giving the positive contributions that may be made to conservation and wildlife propagation by reclamation reservoirs.

I request unanimous consent to have this article, Don't Damn All Dams, reproduced in the Appendix of the RECORD. The article appeared in the April 1956 issue of Field and Stream, and I urge its reading by all who are interested in water-resource development and conservation, both of which may be achieved in carefully planned reclamation projects.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T DAMN ALL DAMS
(By Frank Dufresne)

The game protectors said it was just an average day. In the lakes below us 30,000 Canada honkers were starting to move out for the afternoon feeding. While we watched from a high spot on the road, flack after flock took off and formed into wavy ranks under the high wind clouds. Their haunting cries echode like fanfares of mellow horns in the sky as the great flocks cleaved into family groups, wheeled shining breasts against the October breeze, and began floating down to the yellow stubble.

Thirty thousand flying geese will quicken the pulse of any man. But that wasn't all. Twice that many ducks—a scurrying horde of mallards, sprigs, gadwalls, teals, baldpates, redheads, canvasbacks, ringnecks, ruddies, bluebills, and wood ducks—were also winging off the big waters to feed in the weedy ponds. Ten thousand coots, more or less, dabbled along the shorelines. Yet the Washington State game men called it just a routine show.

We heard only a few shots. In an expansive country like the Columbia Basin there is plenty of space for hunters to spread themselves and pick their targets. On the drive to the Ephrata airstrip, we'd seen gunners working their dogs along the hedgerows for Chinese pheasants and Hungarian partridge. Others were climbing the rimrock for chukars. If you looked close you'd note that some bird shooters had carbines slung across their shoulders in case they jumped a mule deer.

We belted ourselves in the small plane, and Supervisor Frank White, of the Washington State Game Department, took us upstairs for an air view. He pointed down at a couple of men in a rubber boat plugging for bass along a margin of bulrush. In an indigo pool, once a canyon fit only for rattlesnakes, some trout fishermen were flycasting for rainbows. But there was nothing special about any of this, said the game department field boss; all fall it had been the same. Game and fish stocks were on the upswing, and there was plenty of leg room for sportsmen to ramble around until they found what they liked.

Nothing unusual in all this, we were told. But it hadn't always been that way. First, there had to be a kind of miracle.

There had to be a coming of water to an arid wasteland, sun scorched for ages. That meant building a dam—a type of structure not generally designed to make sportsmen happy. But this dam was different. There was an enormous natural basin of more than a million acres of scablands and sagebrush, and it desperately needed water. Blocks across the lower Columbia River had already fouled up most of the fish runs; so building the Grand Coulee Dam could do little worse. Anyway, the Federal Government's blueprints promised a degree of participation by wildlife interests. This was an astonishing—unheard of—development, and the Washington Game Department lost no time in getting itself a toehold. O. K., build the dam, it told the Federals—but share the water fairly. No hogging by power people; no deadly drawdowns that kill off fish; no hindteat sucking for waterfowl and other game; no grasping of authority. Let's have some teamwork.

The Grand Coulee Dam, almost a mile long and standing 570 feet above bedrock, is the most colossal batch of cement ever poured across any river. Since the dam's completion, in 1941, the river has backed upstream 151 miles, until it extends well into Canada and impounds some 10 million acre-feet of water. And it possesses a second wonder, the grand gimmick that is transforming the Columbia Basin into one of the most important hunting and fishing grounds in America. They call this device the equalizing reservoir.

Our little plane droned in lazy eight's as young Supervisor White motioned to a barrier of lava rock rising above the dam and separating it from the Columbia Basin, where irrigation was urgently needed. A dozen gigantic pumps had been installed to suck water from the dam up 280 feet into the equalizing reservoir. From this pipe-fed lake, which is now 27 miles long, more than 5,000 miles of canals, ditches, siphons, and tunnels lead along both sides of the project to wet down the million acres of thirsty soil, producing in the bumpy terrain several hundred pools and ponds. Here and there throughout the basin, standing guard like so many watchdogs against water waste, are more pumps powered by Grand Coulee turbines, and they keep picking up the overflow and using it over and over again, even boosting it into high fields, whose rich lands had lain dry and dormant for centuries. When the water finally tumbles back into the Columbia River again near Pasco it has done a multiplicity of jobs.

To the game department every new plot of parched earth turned lush with river water spells more birds and mammals. Every filled gully, every sinkhole and alkaline puddle freshened by the pumps of the equalizing reservoir means more trout and bass. Director John A. Biggs, who yields to no man when it comes to gnashing official teeth at barriers flung across Washington's rivers, admits the Grand Coulee is different. "You can't damn all dams," he says. "We can work with this one."

What they had to work with was an utterly unproductive area. In the big bend of the Columbia, where the ancient riverbed is gouged from 300 to 2,000 feet deep, there is a huge parcel of land famed for its weird formations of porous volcanic rock, scablands, and arid bottoms sparce with sage, rabbit brush, and such plants as could pinch along on from 6 to 10 inches of rainfall a year. On its southwest border the Hanford Atomic Works is a mystery factory surrounded by miles of similar desolation.

Like the rain that came at long intervals, the wildlife was thinly spread. Such lake waters as could support fish life were mostly taken over by undersized spiny ray and trash species. "There wasn't much to lose," says Biggs. "Anything we could salvage figured to be clear gain. So we rolled up our sleeves and pitched in."

The dam builders altered the landscape on a titanic scale with their bulldozers, pumps, and blasting powder. But they were no busier than the Federal fish and game biologists. The Washington Game Department, carrying its own dreams and its own fistful of blueprints, managed to keep in step. As fast as new lakes showed over the sagebrush they were studied and tagged for development. If the waters were deep enough they were planted with rainbow trout, even though it required wholesale poisoning of suckers, chubs, squawfish, and carp. To date, 10 such lakes, 2,500 acres in all, have been treated with 140,000 pounds of derris root.

Now the rejuvenated waters bid fair to produce annually close to 500 trout to the acre. The fish will average 10 inches in length; the size dubbed blue plate special by the Department because of its high acceptability by the public.

Shallow bodies unfit for trout, plus other waterways that could not be manipulated to shut out undesirables, are being managed for largemouthed bass, crappies, yellow perch,

and catfish. Results are amazing. Where the piped waters wash over new bottoms wealthy with natural nutrients and fertilizer from the sheep that once grazed on the land, the fish are growing like Jack's beanstalk. Already, young bass in the Equalizing Reservoir are topping 6 pounds, and there are more of them than the average fisherman ever dreamed of seeing. The place is a cinch to become a national hotspot.

In the trout pools, of which there are uncounted numbers, rainbow trout fry reached a length of 9 inches in 4 months, a phenomenal growth. With fish stocks zooming, seasons have been set at 6 months. As the basin absorbs its fill of water, underground pressures and seeps cause new lakes to pop up unexpectedly in the desert, driving the biologists slightly daffy with the possibilities for fish culture. Don't start damning the dams around these fellows; they haven't any time to listen. They're too busy planting fish. And to make sure that anglers have a fair chance to catch these fish, the State game people are cinching public-access rights to every body of water stocked from their hatcheries. This means there will be auto roads over which a man can drive his boat trailer to lakeside, campsites, and the like.

Gunners are getting their share of the breaks, too. A grid system of publicly owned upland-bird tracts blankets the project, assuring safe breeding places. In every case where public access to fishing lakes is established, equal rights are extended to waterfowl hunters.

The spontaneous movement of pheasants into the greening valley is being stepped up with hatchery birds. Refuges to insure survival of quail, partridge, and grouse—no matter how heavy the gun pressure—are in the program. Meanwhile the Department has teamed with the United States Fish and Wildlife Service to create a major waterfowl area along Crab Creek, part of it inviolate sanctuary, the rest open to harvest by hunters. However, the State would not go along when the National Park Service planned to take over the Equalizing Reservoir and set up what the State considers an overfancy and costly system of buildings, bans, and permits. They wanted it kept simple—a place where the outdoorsman would feel as free from redtape as it is possible to be. And finally, the State men wanted to run their own end of the show, not cede it to the Federal brass hats.

The State is considering old prejudices. Dams ruin fishing? Frequently, but not always. Not when a fish and game department is given a chance to carry out some of its own ideas. What's happening near the Grand Coulee is big news because of this fact. There are going to be more, many more, dams across our rivers. For all such projects, there are valuable lessons to be learned at the Grand Coulee.

Not that it is all milk and honey, of course. The level of the Equalizing Reservoir will vary 30 feet in a year, which is certainly not good for natural spawning. In the trout lakes there will be little or no natural reproduction, and that, strangely enough, is O. K. with the game department. It plans to plant a million fry each year, and says that the enormous yields it has in mind could never under any circumstance be accomplished by natural spawning. Nesting chances for waterfowl will be no better, but probably no worse, than before the project.

In the big view, things are working out well in central Washington's great water development. It's as close to being one happy family as you could reasonably expect of such diverse interests as the Bureau of Reclamation, Soil Conservation Service, Fish and Wildlife Service, State Park Service, Game Department and a host of other agencies. There's a 50-year signed agreement between the United States Department of the Interior and the State game department. Friction squeaks are being kept greased by regular meetings. Each faction is learning to respect the other's job.

Great gains are in the crystal ball for hunters, too—especially wing-shooters. Upland varieties available already include valley and scaled quails, Hungarian and chukar partridges, sage and sharp-tailed grouse, mourning doves and pheasants. To these you can add a dozen varieties of ducks and 3 or 4 kinds of geese; additional flights pour into the new flyway with every stroke of the electric pumps at Grand Coulee. When the irrigated farms are in full crop, the bird populations promise to be ten times greater than in the predam years.

The ranchers who must play host to game and gunner, and whose cooperation is vital, are being wooed by the game department. There will be no excuse for the hunter who cuts a wire fence or who leaves a gate open; cattle guards, paid for by the department, are being installed. Multiflora rose plants to the tune of 370,000 were handed out gratis in 1 year. In 3 years the plants, set 18 inches apart, grow to 4 feet and the fence they make is not only bullproof but impenetrable to anything bigger than a pheasant or a cottontail rabbit. This growth, plus wild acres of sage and other native hardies, means there is no problem of adequate cover.

Already some of the farmers are finding out that their best crop is likely to be game, not grain. Many waterfronts will be developed. Duck clubs will sprout along with corn and cabbage. This is one of the reasons why the State game department is pushing hard on its public-hunting plan. With 90,000 acres of the basin already under its control, it is shooting for 100,000. It figures that raising game is only half the job; the other half is to help hunters reap the crop.

Part of this hunter-managed area we saw real close on our final day in the basin. Jackknifed in our goose pits far out on the yellowed stubble, we heard the first mellow horns in the sky. The great flocks split apart under the evening-tinted clouds, and a band came our way. The birds spotted our profile decoys and came swinging past to scout the layout. The band split, and one group, yelping its suspicion, veered sharply away. The smaller flight wheeled back against the wind. We peered out from under the chicken-wire and wheat-straw matting, throats pulsing. The geese, now silent, came gliding in over the decoys and with outstretched black legs began floating down toward the cut wheat.

Boner at Salerno

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the Indianapolis (Ind.) Star of May 24, 1956:

BONER AT SALERNO

Former President Harry S. Truman has a gift for thoughts generated in a vacuum and expelled through a void. If any new demonstration were needed that his vocabulary has long since outgrown his discretion, it was provided in the reverberating Salerno incident.

Mr. Truman, out of the vast military cunning derived from World War I service as an artillery captain, took one look at the cliffs of Salerno during his current European tour and opined offhand that the sanguinary Battle of Salerno and the Anzio Beach landing were "totally unnecessary and planned by some squirrel-headed general."

The remark was not the kind that should come from a former President of the United States, speaking to newspaper reporters with the full knowledge that his words would make headlines around the world. Evidently, this time, even Mr. Truman came to a belated recognition of this fact. Through his secretary, he denied that the statement was directly his, and guessed that he may have been repeating what a reporter said to him, merely as a joke.

To tell loved ones at home that their sons died at Salerno needlessly and through the whim of some "squirrel-headed general" is a ghastly idea of a joke.

It is a fair suspicion that Mr. Truman was not concerned with all this, but that he had in mind that Gen. Dwight D. Eisenhower was Supreme Commander of Allied Forces in Europe during the war, and that there is a political campaign brewing in the United States in which Mr. Eisenhower will figure prominently.

Mr. Truman has never been notably careful with logic in discussing his political opponents, even indirectly.

Remarks by Eugene M. Zuckert at Industrial Nuclear Technology Conference

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. PRICE. Mr. Speaker, one of the most able members of the Atomic Energy Commission has been the Honorable Eugene M. Zuckert. Following his retirement from the Commission last year, Mr. Zuckert retained an active interest in our Nation's atomic-energy program.

He has been a student of the atom for several years. He combines his knowledge of our atomic-energy program with a long business and administrative experience that makes invaluable his suggestions and contribution in this field.

Because of Mr. Zuckert's background in government and in the atomic-energy program, I recommend most highly to my colleagues the remarks which he made in addressing the Industrial Nuclear Technology Conference, cosponsored by Armour Research Foundation and Nucleonics magazine at Chicago, Ill., on Wednesday, May 16.

Under leave to do so, I extend herewith Mr. Zuckert's remarks:
